Importing gold is not a function of the Government; it is part of a banker's private business. He obtains gold abroad, and brings it to this country, when the rate of exchange is sufficient to pay for freight, insurance, and loss of interest during transit, and to yield him, in addition, a reasonable profit. When the Secretary explained, last April, that the reason why gold was not engaged was "the loss of its interest during transit," he was simply saying that the exchange market did not yet yield a large enough profit to tempt a gold-importer. This profit the Treasury obligingly undertakes to provide by lending him money for nothing. If this is a proper use for Government money, we fail to see where the line is drawn. What is to hinder some benevolent autocrat of the Treasury hereafter from announcing that, the price of stocks having reached the point where recovery ought to have ensued, and believing the reason why no recovery ensued to be the lack of available capital to purchase them, the Sub-Treasury is authorized to advance money free of interest to national banks undertaking to buy stocks? We do not suppose Mr. Shaw will admit the fairness of the parallel; but to us it seems the *reductio ad absurdum* of his whole expedient.

As to the permanent effect of the Treasury's offer, we profess doubts. Aside from its impropriety as a measure in public finance, the project of helping gold imports by making them cheaper is economically crude. The large forces which govern the movement of gold, from one market to another, make small account of such petty expedients as this. "Special facilities" such as Secretary Shaw's have been offered at times to gold importers by banks in foreign cities, and they were sometimes effective in diverting, from one destination to another, gold already in motion. But they never caused gold export from any market which would not have exported gold without the "special facilities" to foreign buyers. If, as is probable, this market should receive substantial sums of gold from Europe in the near future, it will not be be-

cause of the Treasury's allowance to the banks, but because our bankers have borrowed so heavily abroad, to bolster up their pending operations, that they have turned the balance of international exchange heavily in our favor.

NEW LIGHT ON THE GALLICAN CONTROVERSY.

Pius X., in his Encyclical of August 10, rejected the Separation act *in toto*, and declared that the *Associations culturelles* required by it were incompatible with canon law. He further stated that the French bishops in assembly had rejected the plan of associations, writing: "Knowing your way of thinking, . . . we see that we should confirm by our Apostolic authority the nearly unanimous opinion of your assembly. For this reason, speaking of the *Associations culturelles* as the law imposes, We decree that they absolutely cannot be formed without violating the sacred rights that concern the very life of the Church." Recent disclosures in the *Temps* and *Siccle* give us what actually occurred late last May, when, by command of the Pope, seventy-four French bishops met in the archiepiscopal palace at Paris. At the session of May 30 they voted an address of loyalty to the Supreme Pontiff, and disapproved the Separation act in principle by a virtually unanimous vote. It has been charitably suggested that the two dissenting voices were those of certain very aged bishops whose eyes failed to distinguish between the *oui* and *non* of the typewritten official ballots. Next day, after long discussion and while still condemning the legal associations as an unjust stipulation, the bishops voted, 48 to 26, to comply with the law, and approved an elaborate report of the Archbishop of Besançon, providing for parish committees at once conformable to canon law and the Separation act.

We have no desire to dwell upon the unhappy discrepancy between Pius X.'s Encyclical and the facts of the bishops' assembly. We should, indeed, hardly touch upon a subject chiefly of Roman Catholic interest, if it were not that the revelation of the true attitude of the French bishops opens an opportunity for a *modus vivendi* under the Separation act. The Encyclical, in spite of its uncompromising tenor, does actually leave a loophole for compromise. The Gallican Church, through its bishops, has adopted a plan for retaining its churches under the law. That plan might yet be adopted at the Vatican, as we shall see, without formally reversing the dictum of an infallible Pope. The report of the Archbishop of Besançon still serve as a basis for religious peace in France. The Pope may have ignored

it for tactical reasons; he has never expressly rejected it.

The plan is simple in the extreme. The Gallican Church is willing to set up in each parish a building association (*Association fabricienne*). Clerics must predominate in the membership, which subscribes to an elaborate declaration of fealty to the Catholic Church, and more immediately to the bishop. But the administrative functions of each association will be chiefly exercised by a smaller executive committee (*conseil d'administration*), with the curé as chairman. This committee, in behalf of the association, will maintain the parish services, keep the buildings, pay priests and employees, and in general assume the financial responsibility for the parish. What an *Association fabricienne* is to the Church—a simple revival of an historical name and order—would be to the State an *Association culturelle* in entire conformity with the Separation act. It is, Mgr. Fulbert Fétit admits, a question of words, but words, he added, "have their influence and also their destiny whether for good or evil."

When Pius X., it is reported, learned that the French bishops had voted nearly two to one in favor of the above plan, he exclaimed: "They have voted against me—they have voted as Frenchmen"; and, as we have seen, a few weeks later the Encyclical gave the impression that the bishops had almost unanimously pronounced against any compliance with the Separation act. But, happily, the Encyclical also contained this clause:

Putting aside these associations, which consciousness of our duty forbids us to approve, it might seem opportune to examine if one may lawfully try in their place some other sort of association at once legal and canonical, and thus preserve the Catholics of France from the grave complications which menace them.

Now, since two-thirds of the bishops of France have actually approved a form of association which seems to them "at once legal and canonical," the way should still be open to a reconsideration at the Vatican. The same influence that induced Pius X. to misconceive the mind of the Gallican Church, should be capable of perceiving, on maturer deliberation, the true import of the vote of its assembled bishops. Meanwhile, time pleads the cause of the French bishops eloquently. If compliance was expedient with expulsion from the churches six months away, it may be said to be urgent when only three months stand between the faithful and expropriation.

That the Gallican Church will obey the Pope implicitly, whatever his final decision, admits of no doubt. If he desires what the bishops have variously called "warfare" and "passive resistance," they will loyally undergo the hardships of the campaign. But it would be highly deplorable if the Head

of the Catholic Church should persistently reject the counsel of the French bishops on a matter in which they are peculiarly fitted to judge. They assume that the requirements of the Separation act, while oppressive, will be carried out in good faith; that the State will recognize genuinely Catholic associations, and will give no countenance to those of a fraudulent sort. Pius X. assumes the contrary, unless indeed the Encyclical of August was a conscious overstatement for purposes of negotiation. That negotiation may soon lead to adjustment, is much to be hoped.

GERMAN AND AMERICAN BUSINESS METHODS.

The Emperor's appointment of Bernhard Dernburg as head of the hitherto mismanaged Colonial Office has created a veritable sensation throughout Germany. This is not merely because Dernburg, a Jew of the pushing and aggressive type, has succeeded a prince of the royal blood, or because he had not hitherto held a Government place. It is announced that he represents "up-to-date American business methods," and that his successful introduction of Yankee ideas, garnered in a New York banking office, into the management of his bank, attracted the Emperor's attention. Whatever may be said of his choice, which certainly reveals the Kaiser as a man of broad ideas, and without racial prejudice, it will unquestionably, like the organization of the new Amerika Bank in Berlin by American and German capitalists, increase German interest in our industrial and financial conditions.

What is the difference between our business methods and those of the Germans? A French journalist, Jules Huret, who recently published a book on this country and is now writing for the *Paris Figaro*, declares that during five months in Germany nothing has struck him so much as the frequent suggestions of America, not only in the industrial life, but in the appearance of the streets of the great cities. He is amazed at the way the business men plunge boldly into great enterprises. Analyzing more closely, a German writer, Theodor Vogelstein, whose elaborate study of the "Style of American Business Life" has just appeared in the *Süddeutsche Monatshefte*, finds many points of difference. He is particularly impressed by the concentration of the various trades in certain sections of our cities, and by the contentment with which business rivals conduct their affairs side by side. This is illustrated by the wholesale dry goods and leather districts in New York, and is, by the way, a return to mediæval conditions, when trades-people were compelled to live in given quarters. The readiness with which Americans resort to telephone, telegraph, and

the railroad train, and the nonchalance with which the San Francisco business man steps on the cars for New York—as if he were going to a nearby suburb—fairly astound Herr Vogelstein.

The greatest differences he notices are the most significant—the independence, sturdy self-respect, and self-reliance of the American, whether he be an office-boy or the senior partner. Every office-boy aims to head the firm, and every clerk expects to be a millionaire. It is regarded as an extraordinary phenomenon in Germany if a subordinate without means is elevated to a partnership; something which happens here every day. The obsequious bowing and toadying of inferiors to their employers so frequently seen in Germany are foreign to this country. Indeed, the respect with which the head of a great house treats a \$5 a week employee and takes his suggestions is equalled, in Herr Vogelstein's eyes, only by the familiarity of the Western workman with his boss, which injures neither, and in no wise detracts from the efficiency of the business. The readiness of the American middle-class employee to assume responsibilities and act independently is also a revelation to a foreigner. The absence of the elaborate business reference, so usual in Germany, Herr Vogelstein also notes. In America an applicant for a situation is "sized up" on his looks and then put to work. Young Germans are generally crestfallen at the failure of their official-looking certificates of proficiency to attract any attention in New York offices.

But if the average American is far ahead of the German in aggressiveness, push, and readiness to assume responsibility, the German leads in the thoroughness of his general and his commercial schooling. We are only just beginning to get schools of commerce in this country and high-class business colleges. In the Emperor's domain this kind of education has been carried much further, the first school in Berlin for business instruction having been founded in 1791. Just now an elaborate school of this character has been opened in that city to give the merchant or business man a specially adapted scientific training. Its object is twofold: the supplementing of the pupil's general education and the increase of his technical knowledge. Young business men who have passed through the apprentice stage are the students sought, and for them it is meant to be what the war college is to the army officer and the post-graduate year to the medical man. Accounts of other similar schools are given in the current *North American Review*. Such methodical training as the German boy who enters a business or a bank gets is something quite unknown to us; nor do our young merchants or bankers often think it wise to travel abroad or enter foreign em-

ployment. Young German students of good family can be found in every capital, willingly exiling themselves for a couple of years for the sake of the experience and the language to be acquired. And it is through trained young men of this kind, who are equipped to study a market and then supply its needs, that Germany has obtained, for instance, her extraordinary position in the South American trade.

Louis J. Magee, to whose admirable articles on "The American and German Peril" we have already called attention, is equally struck with the greater thoroughness of the Teuton education. He finds, too, after years of residence there, that the German mind is more friendly to order, clearness, precision, and organization; as a result the strength of the German business machine is relied upon, instead of the daring resourcefulness and independence of decision so often called in by us "to save a situation where correct procedure means catastrophe." Herr Vogelstein admits that the heavens might fall before a subordinate of his country would violate a superior's order even if it meant a great loss to the business. Because of this attitude the naturally conservative German is far too apt to get into ruts or to submit patiently to much red tape. This is only partly counterbalanced by his greater readiness to apply the latest teachings of science to his industry. Altogether, we are inclined to think that what the Kaiser hopes from Herr Dernburg is the thing popularly known as American "hustle"—the ability to go right to the point, to decide quickly, to act aggressively by means of simple and direct methods.

LITERARY TEACHING VS. TEACHING LITERATURE.

A good deal of recent educational discussion has concerned the teaching of a subject that possibly cannot, in the ordinary sense, be taught, to wit, literature. It is evident that one may teach the language in which any work of literature is written; one may also teach the biography of writers or the history of literary tendencies; whether one can inculcate the direct appreciation of literature, which is, after all, the main affair for your schoolboy or college student—is more than doubtful. A statistician will cry aloud that there are hundreds of chairs devoted to literature, ancient and modern, but the question is not the number or dignity of the chairs, but what is actually taught therefrom. An actual analysis of results would, we believe, show that professors of Greek, Latin, French, German, etc., taught their respective languages, and that professors of English taught sometimes philology, again literary history—useful studies in themselves—but only in rare instances literature itself.

This does not evince an inferiority in teachers of English as a class; it merely indicates what has been known since the Attic Age, that the contemporary tongue is about the poorest medium for initiation into literary appreciation. The Athenian youth got his letters largely from the, to him, quite exotic dialect of the Homeric epos. The Roman youth drank of the Pierian spring by way of Greek; the youth of the Middle Ages sought literature in the Latin writers; the Renaissance found Greece again, and the nineteenth century has discovered its "new humanities" in the literatures of modern Europe. In every case, be it noted, available pedagogical values have inhered, not in the contemporary, but in an ancient or, more often, a foreign tongue. It needs no argument that the disciplinary and probably the literary value of English for a German is twofold that for an American or Briton. In fact, it is only of recent years that teaching the native literature has in any land been put on a par with teaching foreign tongues, and the worth of the innovation is still measurably on trial.

The fallacy of teaching a French collegiate student Molière, an Englishman Shakspeare, a German Goethe, is that you use good academic hours and stipends in forcing him to read what, as a man of culture, he ought to read on his own account. The Englishman who has lived with his Sophocles, or even with his Corneille, has the open sesame to Shakspeare; nor does the student who has really mastered his Dante need any especial guidance for Milton. On all practical grounds, the collegiate teaching of English has in many minds a supererogatory look. It is defensible, we take it, merely on the theory that many horses and students must be not only led to water, but made to drink. In other phrase, the elaborate provision of courses in modern English literature is largely a substitute for culture in the home—frequently a tardy and poor substitute. In the schools English may fairly be regarded as a missionary enterprise, and needs no apology; in the university proper it is obviously on an equality with the other languages and literatures. In the colleges, lacking a sound disciplinary basis, it is at a moral disadvantage, and properly. It rarely is as exigent as the other language courses; it rarely is as suggestive as regards formative appreciation. Many a student dates his awakening from "The Cid," "Laokoön," "Faust," the "Divine Comedy"; a few are lucky enough to have Homer, Virgil, or Plato as their initiator; how many can honestly impute their æsthetic conversion to Shakspeare, Spenser, or Wordsworth, as expounded in the classroom? In fine, if a boy has the established habit of reading, English courses are time-wasting; if he has not, the beauties of a foreign author, somewhat laboriously attained,

are more likely to get under his skin. Probably the best-read college students—in English, we mean—are Oxford undergraduates of the ambitious sort; and everybody knows that they read as they breathe, without benefit of faculty. Social differences count for something in the matter; but the query seems pertinent, in view of Oxford's literary supremacy, May not the best way to teach English be to teach something else, possibly the classics?

However this be, the professor of English may often seem to be under the unenviable disadvantage of teaching in cold blood and without a disciplinary basis what the teachers of Greek, Latin, French, German, and Italian teach better by indirection. For, if the teaching of literature is, as we have hinted, extremely difficult—because not facts but a state of mind is to be inculcated—literary teaching is easy, nay, an inevitable by-product, with every professor who has the love of letters and an available fund of human sympathy. The man whose mind is stored with literary parallels, whose browsing has ranged over wide fields of letters, whose experience of life has brought confirmation of the intuitions of the poets and dramatists, of the wisdom of the philosophers, cannot but make his teaching count for taste. May not the problem of teaching literature in the colleges be merely to man the faculties with humanists of this sort?

This editorial will have been much misread if anybody imagines that we would incontinently put all the English professors upon the Carnegie Fund. We do all honor to those whose resourcefulness has prevailed over the disadvantages of the subject; our hats are off to those rare souls who, under the guise of teaching English, do actually profess most suggestively things in general, and the issues of human life. We respect heartily the teachers of English in the primary and secondary schools—true evangelists *in partibus*. But we are convinced that the whole matter of collegiate English needs an honest weighing from the point of view of educational values, for at our great universities such studies seem to be gaining a questionable preponderance. More generally, it should be asked whether much time or money should be spent in the vain attempt to teach literature as such. In how many colleges and universities do elaborate schedules of courses in literature only give ironical prominence to the complete absence of literary teaching! But it is always easier to contrive methods than to find men.

A PROVINCIAL EXHIBITION.

Ghent, August 20.

For the third time I have come to see the international exhibition of painting, sculpture, and black-and-white that Ghent

holds every three years, and for the third time I wonder to find so large and important a show in so comparatively small a town. Really, in London, until the days of the International, there was no exhibition of contemporary work that could approach it in breadth and excellence and ambition. In the Royal Academy, even in the New Gallery's annual summer show, the effort is to keep out the foreigner, or at least to keep him in the background. At Ghent, the effort is to attract him and give him every prominence. The galleries, in the Casino of the town, are admirably arranged, the walls hung with a quiet neutral gray, the works well spaced and balanced.

In the work exhibited nothing is more striking than the indifference to the academic, the conventional. In Belgium you might think art was now but one insistent protest against convention. The foreign artists are chiefly English and French, with here and there an American, a German, a Dutchman, a Spaniard; and in very few cases do they represent the academic bodies at home. From the old Salon, I discovered only M. Pointelin, M. Bail, and M. Henri Martin; from the Royal Academy, only Mr. Brangwyn and Mr. Strang, such new associates that they have not had time to become academical, and Alfred East, who has no paintings and but one print. It is the independents who appear in force—artists like Louis Legrand, Caro-Delvaile, Aman-Jean, Hochard Garrido, Charles Guérin, the most modern of the modern group at the new Salon; members of the International Society and the new English Art Club, the two bodies in England supposed to lead the opposition. It is needless for me to describe their work in detail, for there is little, if anything, that they have not already shown in Paris and London. The portraits by Mr. Sannon, Mr. Sauter, Mr. Lavery, the landscapes by Mr. Priestman, Mr. Muhrman, Mr. Peppercorn, the fantasies by Mr. Conder, the prints by Mr. Pennell, E. J. Sullivan, Morley Fletcher,—all these I have written about in the *Nation* not so many months since; as I have also about the paintings and prints by the Frenchmen who contribute what is interesting to point out. These are the things of foreign art which give its character to the exhibition at Ghent, as, indeed, they are the straws that show the way the wind of art is blowing all over Europe.

To return to the Belgian work is to see how entirely the Belgians have been influenced by the spirit of revolt. They are only too self-conscious in their emancipation; and self-consciousness, if it may do much for movements, seldom does anything at all for art. Their work shrieks at you from every side. You seem to see them, like Ibsen's young man, waving the banner of freedom in your face. And, to be honest, they are just a trifle belated in their belligerent rebellion—just as Ibsen's young man nowadays is decidedly old-fashioned. Theories of art, formulas, recipes, that have come and gone and been forgotten in Paris, are persevered in with, it must be confessed, a genuine vigor and ability that seem wasted in their present application. Screaming color, purple and blue shadows, *pointillisme* gone mad, hrush marks exaggerated to the point of caricature, the gruesome in subject, the grotesque, an ex-

cess of naturalism—all that a bewildered public has a way of jumbling together under the one convenient term, impressionism, confronts you at every step. The difficulty is that that which was done by the leaders of the various movements in grim earnest, in a determined and earnest search after truth, becomes affectation in their followers.

As I have said, however, ability there is and that in good measure. M. Claus and M. Buysse have both accomplished fine work in their close and careful study of the effects of light and atmosphere, and both are seen at their best. M. Buysse, in rendering the pale light of the sun rising over the tranquil canal and the passing away of the storm from the low canal-crossed land of Flanders, is more subdued and tender than he showed himself in the treatment of his earlier, more brilliant themes. Tenderness is not exactly a quality I can imagine M. Claus caring to cultivate, but he has seldom, if ever, been as quiet and restful as in one of his September mornings, with the mists still shrouding the peaceful meadow land, where one woman, a vague form in the grayness, drives her two cows to pasture. But he returns to his more usual manner in another September morning, where the trees in a heavy line rise against a golden sky so brilliant you blink as you look at it. But M. Claus is sobriety itself when compared to M. Van Rysselherghe, who has pushed *pointillisme* to such an extreme that I hope no artist again will be tempted to emulate him. He has two nudes, one a scheme of blue dots, the other a scheme of crimson dots, that refuse to resolve themselves into anything save dots, no matter at what distance you may stand from them. But his most ambitious performance is a large group, portraits of distinguished Belgians, Maeterlinck among them, in which every figure and every detail of the background—the well-filled bookcase, the vase with its bunch of gay flowers—are all carried out elaborately by the same series of dots. That he had the courage and the patience to adapt his technique to so elaborate a theme and to adhere to it throughout is extraordinary—but deplorable. He has only succeeded in making his canvas look like one of those tedious mosaics where the craftsman endeavors to achieve the pictorial completeness for which his medium was never intended.

If there is a great deal of work of this kind, it is only fair to explain that there is also a good deal in which independence proclaims itself with greater moderation. The painting by M. Léon Frédéric has always interested me. It has, I admit, an unpleasant hardness, a flatness, a crudeness of color—qualities that, at times, recall Holman Hunt. But it has also a seriousness that compels respect—a knowledge and vigor Holman Hunt could never pretend to—and his large group of peasants, in blouses, sitting round the rough table of a little café, is so simple and scholarly in technique that it comes as a positive relief. M. Frédéric has treated the figures as if they were so many pieces of still-life, and yet with a sympathy that has a certain solemnity highly impressive whether you will or no. M. Ensor, in his own way, shows that he does not believe sensationalism to be the only al-

ternative to the academic. He can make a street in Ostend amusing by the way he sees it; he can get quality out of its houses, color out of their red roofs, without extravagance of vision or eccentricity of technique. M. Khnopff does not contribute; but there are two church interiors, gray, quiet, solemn, that he might have inspired, by M. Alfred Delannois. And Willaert, Wytsman, Verstraete have careful, if not over-fresh or stimulating work.

Nor must I give the idea that all the work from abroad has been chosen for its eccentricity and extravagance. It is a pleasure to see again the portraits and landscapes M. Cottet, at various times, has had at the old Salon; the vague, pale, shadowy lady in violet, by M. Aman-Jean, and one of the little impressions of Quebec, white under its mantle of snow, by Mr. Morrice, that were exhibited in Paris this year. Here, too, is one of M. Le Sidaner's dim, ghostly gardens; and M. Le Sidaner, if his mannerisms are unmistakable, does not thrust them upon you—he has at least this in common with M. Aman-Jean, that he asserts himself by the subdued note he strikes in the midst of the competitive clamor. The sombre landscapes and river-sides, all murky browns, dull reds, tawny golds, of Mr. Muhrman, hold their own by the same power of reticence, and sometimes by a tragic grandeur M. Aman-Jean and M. Le Sidaner have never yet attained.

Other quiet canvases, full of the distinction restraint can give, are hidden away in the more remote corners or reveal themselves on the second and third round of the galleries, many showing the ever-increasing influence of Whistler; portraits that never would have been painted save for him, streets and seas as they never would have been seen had he not first recorded them in just these aspects on his canvas. The growth of Whistler's influence, now so marked, is one of the most hopeful and promising signs of the day. Cleverness may astonish for the moment, but nothing is more fatiguing in the long run. It sends you hack with renewed zest to the dignity and reserve that the Old Masters had the intelligence to prize above display, above the meretricious facility of the studios.

There is less tendency to the clever in the Black-and-White Section, so that one regrets it has not been made a more important feature. There is not more than enough to fill two small rooms, but what there is has been well and discreetly chosen. It comes almost altogether from London, transposed bodily, you might fancy, from the show of black-and-white the International Society gave last winter in London, with the addition of a series of drawings by M. Renouard.

The sculpture is not so satisfactory. You would think the countrymen of Constantin Meunier could hardly countenance the inane and banal performances that fill the sculpture court, the smooth and pretty and characterless faces of the portrait busts, the old and well-worn poses and gestures of the statues. In such company Alfred Gilbert's one contribution, a bust in plaster, tinted—"Buste de Ch. Popp. Portrait"—seems but the more distinguished. There is such vigor in the modelling, such vivacity, such force, it has

the effect of real flesh and blood suddenly dropped into the middle of a troupe of puppets. And it is the artist who can do this fine, virile work, whom the Academy, though it claims him, has allowed to become an exile from London, and to set up his studio in Bruges. Say what I may about the excess of eccentricity into which many Belgians have plunged headlong, excess is healthier than the stagnation, the calm acceptance of the commonplace, that makes London's Academy the rubbish hole it is, and even the old Salon a hyword among artists.

Correspondence.

ACQUIRING LANGUAGES.

TO THE EDITOR OF THE NATION:

SIR: I venture some comments on the matter of Professor Lodge's article on teaching Latin in the *Nation* of August 30. Everybody knows that *In der Beschränkung zeigt sich der Meister*. The principle thus enunciated is sound in pedagogy as in most other things. But there is danger, I think, that concentration may begin too early. No one will deny that a student's ability to read a foreign text depends largely on his general knowledge. There are many words in every classical writer that cannot be interpreted from the dictionary; their meaning must be deduced from the context. The same student will find Homer easy because the thoughts are simple, and the "Phædo" difficult because the reasoning is, for the most part, beyond his intellectual reach. The obstacle is not the vocabulary as such, but the special sense in which many of the words are used. For the same reason, Greek lyric poetry is more difficult than epic poetry or than prose. It is no uncommon thing to come across passages from Greek or Latin authors that puzzle us if we do not happen to know whence they are taken, although we may know the general meaning of every word.

While it is true that many of our textbooks for the study of both ancient and modern authors contain entirely too much matter that is more or less irrelevant, the question has another side. Such matter, if judiciously selected, will have a permanent value to the learner. Let me refer to an item of personal experience. When a student at college, I read Horace, among other Latin authors. We got very little in class except what is found in Lincoln's edition. Some years later I read the same author with Professor Teuffel. But what a difference! Although he devoted an entire semester to the odes in the Sapphic and Alcaic metres, he threw such a flood of light upon the Venusian hard that I seemed to have passed from the "mellow light of the silvery moon" into the blaze of the noonday sun. Yet in both cases we had the same man's works before us. Recently one of my best students in Greek, who has since attained some distinction as a mathematician, said to me: "I am not sure that I know the Greek alphabet entire; but I learned many things in connection with Greek that I have not forgotten."

It is to be feared, if teachers lay too much stress on the mere vocabulary of an

author, they will be constrained to neglect the culture side of the classics, culture being, after all, the most important part of an education. For I assume that it needs no argument to prove that a man may read Latin and Greek fluently and be a boor none the less.

One more point. Among college students I suppose fully three-fourths prepare their lessons in Greek and Latin with the help of "ponies." Their solicitude extends no farther than the recitation. With such helps, a fair show can be made with a small expenditure of time and effort. If then, we assign lessons of such length that we shall, after all, get a good deal of work out of this sort of student, we shall completely overload the other fourth that is more concerned to know than to appear to know. But if, with every *pensum* of text, we require a good deal of illustrative matter to be prepared in connection therewith, we shall put all our students more nearly on the same level. Dealt with in this way, the most indifferent can hardly fail to retain, beyond their college days, something of what they prepared for class.

I fully agree with the principle that we should read much text and little commentary, provided we put the proper stress on *much*. In this direction, our college manuals, it seems to me, are getting worse and worse. Most of our commentators and annotators forget that, if they begin the tale of "Troy divine" with Leda's egg, they will not get to the siege at all. The question is not, "Who can suggest a remedy?" but "Who can secure its general application?"

CHARLES W. SUPER.

Athens, O., September 3.

STUDYING LATIN.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of August 30, Prof. Gonzalez Lodge suggests that the learning of a larger Latin vocabulary would greatly help students of the language. I am sure, however, that many of Professor Lodge's fellow-craftsmen feel that his "remedy" falls far short of meeting the real difficulties of the case. The acquisition of a vocabulary is certainly a matter of prime importance; but do not all of us know that sometimes the hopeless thing about a sentence in a foreign tongue is precisely the fact that all of the words seem perfectly familiar, and yet we cannot budge an idea out of them? And learning Professor Lodge's two thousand words is a far heavier task than it may at first seem to be. If each word had just one stock meaning, learning a vocabulary would be a comparatively easy matter. But many—let us say, such a large majority—have a variety of uses, so that two thousand easily swells into anywhere from six to ten thousand, and the wrong meaning often obscures the sense of the passage completely. Take the frequently recurring words *ingenium*, *judicium*, *consilium*, *quaestio*, *officium*, *atrox*, *ferox*, *ratio*, and *quodquod* and it is easily seen that they prove great stumbling blocks.

Another point touched upon by Professor Lodge was the fact that so many Latin words suggest a suitable (or, at least, a fair) meaning from the mere fact of their resemblance to the English word. True;

but this advantage is very largely counterbalanced by the fact that so often the English word thus suggested fails utterly to give the true meaning; it diverts the course of thought into a wrong channel, and too often keeps it there by the force of the association of sound. *Frequens, ambitio, petitio, intercessio, crimen, injuriam defendere, audax, honestus*; what teacher does not instantly recognize how these words illustrate the difficulty? They are merely samples of a large class.

Then, too, no amount of vocabulary will obviate the great difficulty of the intricate syntax with its endless possible arrangements and combinations. The three familiar words, *classis secunda tempestate*, meet the student in Tacitus (Agric. ch. 38 end). He begins to wonder: Is *classis* feminine, as it ought to be, or one of those numerous masculines (*ammis, axis*, etc.)? He turns to the lexicon; it is feminine. But now, is it a second *fleet* or a second *tempest*? If the book had *secundā* or *secundā*, he would know at once. But there he is; bothered, and not knowing how to settle the question; and perhaps it never occurs to him that maybe *secunda* does not mean "second," nor *tempestate* mean "tempest," but that *favorable weather* is a possible meaning he had never thought of.

I come now to the matter of school editions of the Greek and Latin authors. They nearly all err—and err grievously—in not giving help enough. One simple and partial remedy would be to mark quantities where they can be helpful. Why not give the boy (or young man) the advantage of receiving as much help for his eye as a good speaker would have given his auditors by careful enunciation? Afraid of making it too easy? "Difficult languages they are, and difficult languages they must remain," wrote Prof. W. G. Hale, and comparatively few editions recognize the difficulties sufficiently, as is proved by the many questions some of the best and most faithful students find it necessary to ask, and *also* by the large sale of translations.

CHAUER'S REVISION OF HIS WORK.

TO THE EDITOR OF THE NATION:

SIR: It will be of interest to Chaucer students to learn that, in addition to the differences noted by the late Henry Bradshaw as characteristic of the "Canterbury Tales" framework or "links," there is another such difference, of even more suggestiveness in some respects. When comparing the two editions by Caxton of the "Canterbury Tales," the results of which comparison were printed in "Modern Philology" (volume iii.), I remarked on a shorter and clumsier form of the interruption to "The Monk's Tale," which appeared in the earlier Caxton. I now find this form existing in several manuscripts and one other print, the de Worde of 1498; the manuscripts are Selden B 14 of the Bodleian, the two at Trinity College, Cambridge, Sloane 1686 of the British Museum, and Harley 7333 of the same library, the last being the copy of the "Tales" transcribed from Shirley. Furthermore, Additional 5140 of the Museum began a copy of the shorter form and then, cross-

ing it out, proceeded with the longer form which we now know.

This variant in the "Monk's end-link" seems to me especially interesting from the glimpse which it gives us of Chaucer revising and improving his own work. A fuller note, with the text, will be published in the near future.

ELEANOR PRESCOTT HAMMOND.

Oxford, England, August 26.

VOLTAIRE'S FAITH.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of August 16 I have just noticed a letter headed "Voltaire's Faith." Mr. Howes, who speaks in most friendly terms of my article, asks where I got certain information with regard to Voltaire's religious belief. My reply is simple. My information is obtained wholly from Mr. Tallentyre's "Life of Voltaire," p. 501, which contains the following words:

A few days earlier, on February 28, at the earnest request of Wagnière and at a moment when he solemnly believed that his last hour had come, Voltaire had written down, clearly and firmly, his real faith:

"I die adoring God, loving my friends, not hating my enemies, and detesting superstition. February 28, 1778. Voltaire."

So far as a few weak words can express any man's attitude towards the Supreme Being and his own fellow-sinners, this confession expresses Voltaire's.

It is still preserved in the National Library at Paris.

I have relied on Mr. Tallentyre's statement which must, I conceive, be true, unless, what is in the highest degree improbable, he has committed some extraordinary blunder. There is nothing in the declaration attributed to Voltaire which is inconsistent with his known attitude toward religion, nor, as it seems to me, is there anything in the facts stated, I believe with accuracy, by Mr. Howes, which need make one doubt that Voltaire really signed the declaration of belief attributed to him by Mr. Tallentyre.

YOUR REVIEWER.

Oxford, England, August 28.

THE CAREER OF THOMAS WILLIAMS.

TO THE EDITOR OF THE NATION:

SIR: May I add a word to your review of my "Life and Speeches of Thomas Williams" in your issue of August 2?

Chief Justice Mitchell of our State Supreme Court said to me soon after the appearance of the volumes: "His was a name to conjure with in the days before and during the civil war. I heard him once; he was a magnetic speaker, like Blaine." Like that statesman, too, he roused an intense following and intense opposition; but his main contentions generally succeeded in the end. His was the greatest voice in breaking down Jackson Democracy in Pennsylvania; he was the chosen spokesman and manager in the construction of a coherent party on the remains of what he was so effective in destroying. To be very instrumental in "downing" the dominant party in the Keystone State and building another is an achievement of no small proportions, and I can hardly agree that it is either local or unimportant. Movements in politics have their beginnings in opposition, and, as a whole, are no more "coherent" than caterpillar, chrysalis, and butterfly; co-

herent or incoherent, Williams's speeches voiced each successive stage as did no other in Pennsylvania. For this reason "Speeches" is an equally important part of my title with "Life"—and, if "Speeches," then *two* volumes, of necessity—a necessity that the author regretted quite as much as his kindly reviewer.

Speeches are notoriously disappointing reading; but if they produce the results out of which history is made, disappointing or not, they are worthy of study in any first-hand investigation of a period. A Life of W. J. Bryan without his chief speeches—what would it be? I cannot conceive such a book. The speeches might be judged of no value, and disappointing, but no first-hand student of American history of the past decade could leave them out of his study. I am not speaking as a Pennsylvanian, either by birth or education—for I am neither—when I say that Pennsylvania is a *Keystone* State, in history, in more fields than one, and it is this element which has attracted my interest, as an historical student, and is the basis of my conviction that many movements in her history are vital and not local to American history, as similar movements would be in many other States.

BURTON ALVA KONKLE.

Swarthmore, August 28

Notes.

Maine's "Ancient Law" has been thoroughly edited by Sir Frederick Pollock, and will be published immediately by Henry Holt & Co.

Dr. Bradley Gilman has turned his experiences in the Holy Land into a book entitled "The Open Secret of Nazareth," soon to be published by Thomas Y. Crowell & Co.

Prof. William Lyon Phelps of Yale has selected nine of the more personal and less critical of Stevenson's "Essays" and published them with a brief Introduction (Scribners).

The Dramatic Section of Heath's Belles-Lettres Series is to contain Gascoigne's "Supposes and Jocasta," edited by Prof. J. W. Cunliffe, and Swinburne's "Mary Stuart," edited by W. M. Payne.

The *Century* in 1907 will return to its old predilection for Civil War subjects. The principal continued story will be Frances Hodgson Burnett's international novel of English and American life, "The Shuttle."

Four more volumes of Scribner's Pocket Edition of the Works of George Meredith have come out, leaving only another four to complete the set. It is a useful edition, clearly enough printed, but without distinction in appearance.

The *Century* Co. has these books on its autumn list: "Seeing France with Uncle John," by Anne Warner; "The Châteaux of Touraine," by Maria Hornor Lansdale; "Don-a-Dreams," by H. J. O'Higgins; "In the Days of the Comet," by H. G. Wells; "Addresses of John Hay"; "Lincoln the Lawyer," by F. T. Hill; "Georgie," by Dorothea Deakin; "A Modern Madonna," by Caroline Abbot Stanley; "Ring in the New," by Richard Whiteing; "The Upstart," by Henry M. Hyde; "A Book of

Music," by R. W. Gilder; "The Treasure of Peyre Gaillard," by John Bennett.

The Arthur H. Clark Company announce for this autumn: "Documentary History of Reconstruction, Political, Military, Social, Educational, and Industrial," in two large volumes, edited by Prof. Walter L. Fleming; Morga's "History of the Philippine Islands," two volumes; Farnham's "Travels in Great Western Prairies"; De Smet's "Oregon Missions," and Palmer's "Travels Over the Rockies," edited by Dr. R. G. Thwaites; vols. 42, 43, 44, and 45 in the Philippine Islands Series, edited by Blair and Robertson. The series "Early Western Travels: 1748-1846" will be completed by the Analytical Index, occupying all of Vol. 31.

We have just had a pretty large dose of the great Mrs. Montagu in Mrs. Climençon's two volumes (with the threat of many more to follow). Nevertheless, John Murray will soon bring out a sketch of "Mrs. Montagu and Her Friends," by René Huchon. This, however, is not so much a biography of the Queen of the Blue-stockings as a study of her work, which for the most part has been neglected by other writers. Another book, to be published by Blackwoods, will give the lives of several of Mrs. Montagu's distinguished female contemporaries and of later women. A. J. Green-Armytage, who writes the book, calls it "Maids of Honor."

Several art books will be issued this autumn by Messrs. Cassell, including "Landscape Painting in Oil Color," by Alfred East, A.R.A., illustrated by reproductions in color of pictures and sketches by the author; "The Old Engravers of England in Relation to Contemporary Life and Art," by Malcolm C. Salaman, with illustrations from the works of the leading engravers of the seventeenth and eighteenth centuries; "Porcelain: a Sketch of Its Nature, Art, and Manufacture," by William Burton; a new color book by Walter Crane, entitled "Flowers from Shakespeare's Garden"; and a fine art edition of "Don Quixote," with Doré's illustrations—a companion work to "The Doré Dante" and "The Doré Milton." Among other works in the list are "Wander Pictures," in which Mr. Bart Kennedy relates his experiences as a tramp in England; "Westminster Abbey: Its Story and Associations," by Mrs. A. Murray Smith, daughter of the late Dean Bradley; a new work by Mr. Richard Kearton, entitled "Nature's Carol Singers," with illustrations from photographs by the author and his brother; and "The Cathedrals of England and Wales: Their History, Architecture, and Associations," in two elaborately illustrated volumes.

The autumn announcement list of Dodd, Mead & Co. includes the following: "John Cable," by G. B. McCutcheon; "The Far Horizon," by Lucas Malet; "Prisoners," by Mary Cholmondeley; "The Subjection of Isabel Carnaby," by Ellen Thorneycroft Fowler; "The Face of Clay," by H. A. Vachell; "The Chase of the Golden Plate," by Jacques Futrelle; "The Seventh Person," by Benjamin Brace; "The White Plume," by S. R. Crockett; "The One Way Out," by Bettina von Hutten; "Billy Boy," by J. L. Long; "The Swarm," by M. Maeterlinck; "Historic Buildings of America," by Esther Singleton; "Rome Described by Great Writ-

ers," by Esther Singleton; "The Heart of Music," by Anna Alice Chapin; "Versailles and the Triangles," by M. Nohlac; "Cathedral Cities of England," by George Gilbert; "Twenty Years of the Republic," by H. T. Peck; "A Life of Charles Dickens," by G. K. Chesterton; "Emma, Lady Hamilton," by Walter Sichel; "Through Five Republics of South America," by Percy F. Martin; "Liberia," by Sir Harry Johnston; "The Life of Marie Antoinette," by M. de la Rocheterie; "The Great Company," by Beckles Willson; "A History of Scotland," Vol. IV., by Andrew Lang; "The Empire of the Hapsburgs," by A. R. Colquhoun; "Sir Joshua and His Circle," by Fitzgerald Mollo; "George Eliot," by A. T. Queller-Couch; "Brain and Personality," by Dr. W. H. Thomson; "The Wit of the Wild," by Ernest Ingersoll; "The Expositor's Greek Testament," Vol. IV., by W. Robertson Nicoll; "American Book Prices Current, 1906," by L. S. Livingston; "The Key of the Blue Closet," by W. Robertson Nicoll.

Scribners announce the following books: "Stories of Early New York History," by Sherman Williams; "Stories of American Explorers," by Wilbur F. Gordy; "History of Ancient Civilization," by Charles Seignobos, translated and edited by Arthur Herbert Wilde; "Studies in the Book of Job," by Francis N. Peloubet, D.D.; "Two-Legs," by Carl Ewald, authorized translation from the Danish by Alexander Teixeira de Mattos; "The Stones of Paris in History and Letters," by Benjamin Ellis Martin and Charlotte M. Martini; "The Robberies Co., Ltd.," by Nelson Lloyd; "Liberty, Union, and Democracy: The National Ideals of America," by Barrett Wendell; "A Frontier Town and Other Essays," by Henry Cabot Lodge; "The Russian Grandmother's Wonder Tales," by Louise Seymour Houghton; "Industrial America," by J. Laurence Laughlin; "Camp Fires in the Canadian Rockies," by William T. Hornaday; "The Northmen, Columbus, and Cabot, 985-1503," edited by Julius E. Olson; "The Apostles' Creed in Modern Worship," by William R. Richards, D.D.; "A Whimsey Anthology," by Carolyn Wells; "Radioactive Transformations," by Ernest Rutherford; "The Integrative Action of the Nervous System," by Charles S. Sherrington; "Court Beauties of Old Whitehall: Historiettes of the Restoration," by W. R. H. Trowbridge; "The Scottish School of Painting," by William D. McKay; "Bible Side-Lights from the Mound of Gezer," by R. A. Stewart Macallister; "The Knowledge of God, and Its Historical Development," by H. M. Gwatkin, D.D.; "Felicity in France," by Constance Elizabeth Maud; "Drawings of Leonardo da Vinci," with Critical Introduction by C. Lewis Hind; "My Garden," by Eden Phillpotts; "Mungo Park's Travels in the Interior District of Africa"; "Chevalier Bayard," translated by Sara Coleridge; "Christian Theism and a Spiritual Monism," by the Rev. W. L. Walker; "The Legend of Ser Perceval," by Jessie L. Weston; "Ornamental Design," by T. E. Harrison and W. G. P. Townsend; "First Age of Christianity," by John J. I. Dollinger.

The *Vossische Zeitung* of Berlin has unearthed from the records of the University of Königsberg a full report of the "salary and emoluments" paid to the professor of metaphysics and logic, Immanuel Kant,

at the time of his death, February 12, 1804. Kant drew salary in a three-fold capacity, as a professor ordinarius, as a senator, and as the senior of the philosophical faculty; and he was also entitled to "extraordinary" additional emoluments. The total income from these four sources was 749 thaler, 23 groschen, and 10 pfennige. In addition, as professor of metaphysics and logic, he was entitled to 44 bushels of rye and 8 cords of wood.

The rector of the past academic year in Berlin, Prof. Hermann Diels, at the close of his official career as head of the university, delivered an interesting discourse on the subject of the International Mission (Aufgabe) of the University. His text was furnished by the exchange of professors inaugurated between America and Germany during the speaker's official year. Professor Peabody of Harvard, who went to Berlin, had declared that a foreign lecturer could do justice to himself and his subject only if permitted to speak in his own language. With this, Professor Diels fully agrees, especially should the lectures be on literary and kindred subjects. The revival of Latin as an international language of learning is, for practical reasons, too, out of the question. Nor does Diels think that the Esperanto, or indeed any mechanically contrived language, will ever answer this purpose. He holds that there is but one feasible solution of the problem, namely, the recognition on perfect equality of the three leading modern tongues, German, English, and French. Such a linguistic "Dreibund" the speaker pleads for as an acceptable *sine qua non* for the perfection of the scheme of exchanging professors, and for solving the international mission of the modern university.

Société Française de Bibliographie is the name of a society organized in Paris with Maurice Tournoux as president and Henri Stein, the editor of *Bibliographie moderne*, as secretary. Gen. Darboux and Léopold Delisle are honorary presidents. The originators of the society have laid out a comprehensive plan, including such undertakings as a bibliography of historical literature, of the history of art, of cartography, an index to periodical literature, etc. But their first efforts will be devoted to three tasks which, rightly, they have deemed to be of prime importance: to improve the bibliographical records of current French literature; to revive D. Jordell's *Répertoire des Revues*, and to establish, with the coöperation of public bodies, a bibliography of official literature.

The problem of the bibliography of official literature received particular attention at the recent meeting of the Verein Deutscher Bibliothekare in Berlin, where it was presented by two papers, one by G. Maas, the other by Dr. Wolfstieg, who will be remembered in this country from his visit to the Conference of Librarians in St. Louis in 1904. The lack of organization in issuing and recording the publications of public bodies throughout the world was very forcibly brought out and a plan presented for the remedy of the present unsatisfactory conditions, as far as Germany is concerned, through the organization of recording offices in the various States in the empire and a central imperial office. The other proceedings of the conference, as published in the

July-August number of the *Zentralblatt für Bibliothekswesen*, included a description of the organization of the seminar libraries at German universities and their relations to the university libraries, and a new paper on the "Gesamtkatalog" by Dr. Boysen of Königsberg, followed by a lengthy discussion. Dr. Boysen urged the extension of the Prussian alphabetical catalogue to cover all the larger German libraries, and its printing in book form, with supplements in annual volumes and on cards. His views were combated by some of the speakers. In the meantime the work on the catalogue continues; on the 16th of June the 1,000th package of title slips was sent out from Berlin, and the comparison of titles had reached the heading Choler.

The Library of the University of London, to be officially opened by Lord Rosebery on October 29, and containing nearly 60,000 volumes, is a remarkable collection, accessible to all students. The nucleus comprises the libraries of George Grote, the historian, consisting mainly of Latin and Greek classics as well as historical works, and of Prof. Augustus De Morgan, a valuable collection of mathematical works. To these have been added by the Goldsmith's Company Prof. S. Foxwell's library on social and political economy. Both Grote and De Morgan were collectors of special books, so that each of these collections contains a vast number of excessively rare and interesting volumes which, published in nearly every case in small numbers, are to-day the despair of the book hunter. They were both also in the habit of writing in their rarities bibliographical and historical notes concerning either the particular book or the author, and these inscriptions will be of high value to the compilers of the forthcoming catalogue.

Even the exacting Dr. Johnson was not disposed to demand perfect veracity in lapidary inscriptions; still, the scientific virus has so permeated us that we prefer at least to shed our tears over the right grave. In 1863 Arsène Houssaye discovered what he believed to be the grave of Leonardo da Vinci at Amboise, and had the remains removed to the modern church where there is a monument to him. According to tradition, Leonardo, who died in 1519, "in the arms of Francis I." (a doubtful legend), was buried in the Church of St. Florentin. This church was demolished a century ago, its site being levelled to form a little square. Houssaye had a theory that the coffins, which were in the crypt of the church, might not have been removed; and so he dug for them, and in due time came to a lead coffin containing the skeleton of a man five feet six inches tall (Leonardo's height) and a skull greatly resembling the shape of Leonardo's head, in the portrait by himself painted in his old age. Houssaye found also bits of a gravestone on which he could decipher the letters I. N. C. and E. O., which he naturally assumed formed part of VINCI and of LEONARDO. Still Houssaye did not succeed in persuading everybody that he had indeed recovered the bones of the great artist, and now we learn that a new excavation is to be made at Amboise in the hope of settling the question.

In England a committee has been organized for the purpose of erecting a monument to Livingstone in the heart of Africa, at

Chitambo, east of the Bangweolo See, on the exact spot where the great discoverer breathed his last and where, as is reported, at the foot of a high tree his heart lies buried.

The inventor of Volapük, the Prelate Martin Schleyer, recently celebrated the seventy-fifth anniversary of his birth in Constance, where he is living in retirement. He is still at work on his world language and is confident that notwithstanding the growing popularity of Esperanto, Volapük is to be the international language of the world. In addition to grammars and chrestomathies of his "world language," Pater Schleyer has published several religious anthologies and is editor of a monthly for Catholic Church music called *Sionsharfe*. He is credited with an acquaintance with eighty languages.

The international Congress for the History of Fine Arts (Kunsthistorischer Kongress), which had been invited to meet in Stockholm this autumn, cannot now be held, as the Swedish capital city has for several reasons been compelled to withdraw the invitation. As no other place had extended an invitation, the newly appointed committee of arrangement, of which Prof. Dr. Joseph Stoyzowski of Graz is the chairman, announces that the next convention will not be held until 1907. The place has not yet been determined.

Under the title "Monumenti d'Arte Medioevale e Moderna," Danesi (Rome) has begun the publication of a series of reproductions of the works of mediæval and modern art, with the intention of providing at low cost carefully selected and well executed illustrations of the history of art for the use of schools and amateurs. The range of both subjects and sources is fairly indicated by the first part issued. It includes two pages from a Syrian manuscript of the Gospels in the National Library at Paris; the Madonna of the Cripte Vaticane by Melozzo da Forlì; an eastern sarcophagus, attributed to the period between the third and sixth centuries, from the Colonna Palace, at Rome, and the twelfth century columns of the cloister of the too little known church of the Santi Quattro Incoronati, at Rome. Each issue includes brief descriptions of the plates and a list of references to sources of more detailed information.

S. W. Fletcher's "How to Make a Fruit-Garden" (Doubleday, Page & Co., New York) gives practical hints in a somewhat overworked field, but the suggestions are sound and the strict directions are safe. The book, although rather awkward for field use, should serve a good purpose in the hands of amateurs. When we remember that many of the striking advances in photography and in horticulture have been due to enthusiastic amateurs who have spared neither time nor money in the realization of their dreams, we can heartily welcome every work like the present, which may further stimulate them to activity.

To those who are fond of Italian, Bilancioni's "Dizionario di Botanica generale" (Hoepli, Milan), will come as a delightful surprise. It is a successful attempt to place within a very narrow compass the essential facts established in the histology and morphology of plants, and also the very newest views regarding their physiol-

ogy. Here one finds the startling innovations produced by the influence of the theory of the "ions," all of the changes being presented in a conservative manner. It seems a little strange to find in these extremely modern pages occasional references to such vanishing hypotheses as that of "od." It may possibly be thought by Dr. Bilancioni, that in these days of speculation in physiology, it is well to show his readers some of the driftwood as it floats past. One can honestly say that this charming volume, well-printed and daintily bound in vellum, adds another proof of the old saying that dictionaries are the most fascinating books.

To those who take pleasure in reading of the slaughter of large numbers of wild beasts Lord Hindlip's book on "Sport and Travel: Abyssinia and British East Africa" (A. Wessels Co.) may be safely recommended. It is true that there is nothing extraordinary in the tale of his adventures and the list of his exploits is rather monotonous, but he writes simply and good humoredly with no pretence of being anything more than the sportsman that he is. His general observations on the countries he visits are honest if not profound. We note that he has a hearty dislike for the Abyssinians, a people about whom different observers seem to form very different opinions. As a British traveller and later settler in East Africa he is full of complaints of the Foreign Office, which at the time of his visit had jurisdiction over the region. Judging from other evidence these complaints were not without good foundation, but we may hope that now that the colony has passed under the control of the Colonial Office, where it belongs, matters are going better. The seventy-two illustrations from photographs are well-selected and well taken.

Except for its place in a series it is hard to see why anyone should have issued the large tome on "Wessex" (Macmillans), painted by Walter Tyndale and described by Clive Holland. For a guide-book it is too heavy in bulk and too full of irrelevant matter; for a serious history it is too ill-arranged and indefinite. As an advertisement of Wessex it scarcely carries conviction either by its pretty but "fancy" illustrations or by its turgidly enthusiastic descriptions. On the contrary, the general impression left will be first how little of architectural interest there is in Wessex proper, seeing that Bath and Winchester are on its extreme limits, while Glastonbury and Wells are admittedly in "Outer Wessex"; secondly, how little part Dorsetshire has played in English history. The last chapter contains eulogies on Thomas Hardy. The wanderings of the unhappy Tess are carefully detailed for us, and the topography of the other novels is handled with reverent minuteness worthy of M. Sabatier at Assisi. But unless we belong heart and soul to what the writer proudly calls the "ever-widening . . . circle of his (Hardy's) admirers," we shall find more agreeable reading in the earlier chapters, where the accounts of Spanish and French invasions, the Civil War, Monmouth's rebellion, and smuggling on the South coast, are given with some spirit. The book is, however, marred by unpardonably slipshod writing, such as relatives so far

separated from their antecedents as to produce unintelligible phrases. When our ears and eyes are vexed by dreadful words like "disarticulated" and "begaitered," or when our souls are oppressed by rhapsodical gush such as the chapter on "The Four Seasons in Wessex," we regret that a book so large, so long, and so sumptuously got up should prove on closer acquaintance so great a disappointment.

Letters of Mazzini to Aurelio Saffi and members of the Craufurd family have been collected in a volume and published at Rome and Milan by the Società Editrice Alighieri. Driven from Lausanne by the ill-will of the Swiss Government, Mazzini wrote the first of these letters from Geneva early in 1850, to his "friend and colleague," Aurelio Saffi, a Roman noble, who with Mazzini and Armellini had constituted the Triumvirate of the Roman Republic in 1849, and who was at this time one of the three who made up the Società Editrice of the *Italia del Popolo*. This paper was the organ of the Italian propaganda which Mazzini had first issued during the last days of the defence of Milan, in 1848, and had recently resumed in Lausanne. The correspondence covers a period of over twenty years and closes eighteen days before Mazzini's death. More than half of these 369 letters are addressed to Saffi, and the rest to members of the English family into which Saffi married, Georgina and Kate Craufurd, and their mother, Sophia Craufurd. Some few of the most important of these letters have been already published, wholly or in part, either in Saffi's or Mazzini's collected works and they were doubtless those "family papers" of which Saffi says that he made use in the volumes of Mazzini's writings which he edited. The publication of this volume, therefore, adds nothing of historical importance to what was already known by students of the movement for Italian independence, but its value lies rather in the intimate view of this Italian idealist in his daily, untiring effort to further the awakening and liberation of his people. He refers constantly to his manifestos, addresses, open letters and circulars; to articles and reviews; to the organization and work of the Italian National Committee, the Central European Democratic Committee, the Friends of Italy and the Party of Action. The letter to Saffi on the death of his mother (p. 99), on the pro-dictatorship of Sicily (p. 228), to the wife of Liberatori declining to stand as god-father for her son (p. 309), and the passage referring to Garibaldi (p. 380) are, perhaps, especially noteworthy for elevation of thought. The book is well supplied with explanatory notes. It has an imperfect index, and the long list of *errata* does not correct all of the numerous misprints.

While there is no dearth of material on the general subject, John Cotton Dana's "Notes on Bookbinding for Libraries" (Library Bureau, Chicago) covers a field and renders a service all its own. The problem with which it deals is purely a library problem, and, more particularly, a public library problem. It makes no pretence of contributing anything to the art or craft of book making; its aim is to give to librarians such an elementary knowledge of this craft that they may intelligently decide upon the methods and ma-

terials that are best adapted to their needs. The point of view is purely the economic one—how shall the library bind its books so as to secure the largest possible service at the least cost. The answer to this, as shown by Mr. Dana, is by no means a simple one, depending on such considerations as the class of literature to which the book belongs, the degree and permanence of its popularity, the rapidity with which it may be read, the quality or thickness of its paper, the character of the community, and many other similar questions. For this reason, general rules are pronounced dangerous, and each librarian is urged to study the problem for himself, and in each class of books adapt the binding to the particular use they are to receive. American librarians are severely scored by Mr. Dana for the general indifference to this matter which they have heretofore shown. "One may frankly say that the character of binding done in nearly all libraries in America has been, up to the present time, a discredit to the library profession. We owe it to ourselves to take up this craft, and do what we can to elevate it." That this small volume will be an important factor in bringing about this improvement is evident from the attention and favor it is receiving in the library profession. Library commissions are recommending it, and it is likely to become the standard text book on library binding in summer schools, apprentice classes, and in the more elementary of the regular library schools.

Under the title of "The Cambridge Press" (Dodd, Mead & Co.), Robert F. Roden has written a history of the first printing press established in English America, and he has added to this a bibliographical list of the issues of this press, which existed from 1638 to 1692. The present volume represents the second in the valuable little series of "Famous Presses," which was inaugurated by Lewis Buddy, 3d, of the Kirgate Press, with "Horace Walpole and the Strawberry Hill Press, 1757-1789." In the summer of 1638, a ship bearing a printing press, a printer, and three pressmen arrived on the shores of New England; the printer being Stephen Daye. In the same year the press was set up at Cambridge. One of the earliest and perhaps the most celebrated of the issues was "The Bay Psalm Book." Stephen Daye's work and that of his various successors is fully treated by Mr. Roden, who also devotes an entire chapter to the Indian books, the issue of which covered the years 1654-1691. It is interesting to know that the actual press which Stephen and Matthew Daye used is still preserved. After various wanderings in Boston, Connecticut, New Hampshire, and Vermont, it was found in Windsor County, and presented to the Vermont Historical Society. We wish we could say that Mr. Roden has made an entertaining volume from the material in his hands; but perhaps he would resent the imputation of being entertaining. He certainly has made a valuable and useful book, and if it is in parts rather barren reading, it is because the history of the first press established in English America is not a very fruitful theme. It is to the historian of early presses in America and to the bibliographer and the collector of early American imprints that this book

must of necessity appeal. To the student of the history of typography it does not offer great interest. The period at which these presses did their work was a time when, even in Europe, typography was upon the wane. We cannot help feeling that an opportunity was missed typographically in the make-up of the present volume. The fonts which were used in the seventeenth and eighteenth centuries in England suggest themselves so obviously as appropriate, that it is not easy to see why the printers should have chosen a type evidently influenced by the modern revival,—from which one can scarcely imagine anything more remote than the first Cambridge Press.

ANOTHER VOLUME OF THE CAMBRIDGE HISTORY.

The Cambridge Modern History, planned by the late Lord Acton, Regius Professor of Modern History. Edited by A. W. Ward, Litt.D.; G. W. Prothero, Litt.D., and Stanley Leathes, M.A. Volume IX. Napoleon. New York: The Macmillan Co. \$4 net.

After a considerable delay the publication of this great historical undertaking has resumed its onward march, and the present volume brings it down to the days of our fathers. The period covered extends from the treaty of Kutchuk Kainardji in 1774 to the death of Napoleon Bonaparte in 1821, but nineteen-twentieths of the narrative lie between the overthrow of the Directory in France in 1799 and the end of the Second Congress of Vienna in 1815. These sixteen years occupy 771 pages. But they are years full of immense events which have proved momentous for succeeding generations, years not only of war, but of extraordinary and far-reaching political changes in almost every part of Europe. They are dealt with in twenty-four chapters, from the pens of sixteen writers, five of whom belong to the European Continent, viz.: Professors Pariset, Guiland, and Stschepkin, Dr. Pflug-Hartung, and Major-Gen. Keim. Among the English contributors, Messrs. Fisher, Oman, and Wilson, and Drs. Ward and Holland Rose have appeared in former volumes; Mr. Wickham-Legge, Mr. Gooch, and Col. Lloyd are new acquaintances. The general level of quality is well-sustained. It is perhaps not so high as in the first two volumes—"Renaissance" and "Reformation"—but it strikes us as rather higher than in the last preceding volume, that on the French Revolution. It resembles all the preceding volumes, as a whole, in its business-like tone. The strict abstinence from anything like rhetoric makes it almost arid, a bare record of facts, from which not only graces of style, but even general reflections and characterizations of persons are scrupulously excluded. Seldom has any book written in our tongue conformed itself so strictly to the modern doctrine that historical writing is to be above all things "scientific," scientific not merely in the sense of Thucydides or Mommsen, but in the sense of the Johns Hopkins or Columbia University Studies, scientific not merely in respect of accuracy and precision, but in the barring out of whatever is calculated to appeal to imagination or to emotion. The general reader, if that creature of the last

generation now reads anything beyond newspapers and novels, may find the Cambridge Modern History dry, but the historical student certainly finds it useful. The narrative is careful; it is clear, and it is as minute as exigencies of space permit; while the bibliography alone, occupying 121 pages, is an aid which everyone who consults it will find of great value. So full is it that one cannot help regretting that it has not been made even more serviceable by a brief indication of the respective merits of the books mentioned. The specialist does not need such indications, but the young scholar often finds them helpful; and though they are not required for all the books named, one wishes for them where it happens that several writers have treated the same topic, and it becomes important to know who is most worthy of confidence.

It is a result of the severe plainness of style that there is comparatively little difference in literary quality between the various writers by whom this volume has been prepared. Some, however, present their facts in more telling and vigorous language than others. Some show more skill than others in selecting out of the mass of facts those that have for us to-day the greatest interest. Among the writers three strike us as specially successful. Dr. Ward, the master of Peterhouse, and one of the editors of the series, gives us two chapters on the Congress of Vienna, the earlier Congress of 1814, and the later, after Napoleon's return from Elba, of 1815. He has a most difficult task in tracing the jealousies, the intrigues, the constantly varying combinations of Powers which went on during many months while the tremendous business of resettling Europe and rearranging the territories of its monarchy was being handled. His wide learning and a scholarship both critical and exact are needed for this task. Dr. Ward has shown these qualities and given us an extremely valuable account of the negotiations which gave to Europe an international system that lasted for more than forty years, till it was broken up in Italy in 1859, and in Germany in 1866. He is rather more tender to the Congress than the Liberals of the last generation were, either in Germany, in France, or in England, and he shows us how even in restoring despotic governments it left foundations beneath them on which free institutions were afterwards erected.

H. A. Fisher has in this volume nothing quite so brilliant as the narrative of Bonaparte's *coup d'état* of the 18th Brumaire, which he contributed to Volume VIII. But two of his chapters are of high excellence. That on the French Codes (Chap. viii.) presents a concise, lucid, and instructive view of the methods by which these famous pieces of legislation were constructed, and of Bonaparte's own share in them. We quote one passage:

Eye-witnesses have described the vivid and animated drama which was enacted whenever Bonaparte came down to preside over the Council Chamber in the Tuileries. A chink of arms, a roll of the drum under the arcades, and then as the door opens and the usher calls, and the councillors rise in salutation, the master steps briskly up to his green table on the dais, nods to Cambacérès on his right, to Lebrun on his left, signs to his Council to be seated, and with his "Allons, Messieurs, commençons," sets the debate aflame. Under the consulate

these discussions were free, vivacious, and unembarrassed; and when the First Consul presided in person—and he presided over thirty-five of the eighty-seven sittings devoted to the Civil Code—they were generally prolonged till a late hour in the evening. His, too, was the most quickening spirit in debate. With little legal learning, save what he had gathered from snatches of reading or from the talk of Tronchet and Portalis, and devoid of the scholarly temper of the professional draughtsman, he possessed so luxuriant an intellectual nature, so lively a power of concrete vision, so keen an instinct for the large issues of politics, that his contributions to the discussion were a series of splendid surprises, occasionally appropriate and decisive, but always stamped with the mark of genius and glowing with the impulses of a fresh and impetuous temperament (p. 151).

In another chapter (xxiv.) the editors, making a concession to a curiosity that is rather human than scientific, have set Mr. Fisher to describe the six melancholy years of exile at St. Helena which closed Napoleon's career. These years have little historical importance, except in so far as (and that to no great extent) they enlarge our knowledge of Napoleon himself. But it is right to find room for them. *Sunt lacrymæ rerum et mentem mortalia tangunt*. In the last pages Mr. Fisher gives some general remarks on the fallen Emperor's character and career, which are a fitting epilogue to the volume.

M. Pariset, professor of history at Nancy, sketches the internal history of France during the Consulate and Empire in two chapters, remarkable for the art with which the salient features of Napoleon's government are disengaged from a mass of details and set intelligibly before us. He helps us to realize the constant change in institutions, and in the men by whom the institutions were worked, which went on in the fifteen years during which this amazingly active man ruled France by a constant personal supervision, while he was at the same time occupied with incessant diplomatic negotiations, and, during many months, with leading his armies in the field. There is so much to tell that we are sometimes disappointed at not hearing more about the causes of events, or about their consequences. The murder of the Duke d'Enghien, for instance, is dismissed in a few lines; and we hear less than we wish about the real state of opinion in France all through these changeful years, and the extent to which the reaction against revolutionary ideas had gone. This, however, is perhaps unavoidable, considering how much of the volume has been allotted to warlike operations.

There is comparatively little about the internal history of other countries than France, though Russia receives one chapter, England and Ireland another. This latter is from the pen of G. P. Gooch, a young scholar from Cambridge (England) of high promise, and is done with care and judgment. He handles Pitt, round whose figure there still surge the waves of controversy in England, with fairness, and, what is perhaps harder, is betrayed into no expression of feeling when he comes to the Irish part of the story. It is a pity that Mr. Gooch has been kept within the narrow limits of thirty-six pages, for the personalities of Pitt, Fox, and others of that time deserved to be dealt with a little more fully; and the Irish Rebellion of 1798, an event important in its conse-

quences, also required a fuller treatment, especially to show the importance of the Northern movement supported by the Ulster Presbyterians.

Germany is handled not as a separate department, but in connection with the successive Napoleonic wars, a method perhaps inevitable, but not conducive to a clear view of the internal changes which went on, and which were specially fruitful in the Prussian Kingdom. Nothing is more remarkable than the contrast between the apparent want of national feeling in the first years of the revolutionary wars, and the passionate outburst of patriotism which marked the close of the conflict. When the French annexed the left bank of the Rhine, Görres, one of the most conspicuous German public writers of the time, accepted the severance from Germany of a large German population with the words, "The Rhine was created by nature to serve as the boundary of France" (p. 91). This indifference soon disappeared; and every year that passed after the battle of Jena stirred the spirit of the nation more and more. The arrangements of the old Romano-Germanic Empire were practically knocked to pieces by the treaty of Lunéville, in 1801, and the Empire itself virtually extinguished by the formation of the Confederation of the Rhine, in 1806, close upon which followed the renunciation by the Emperor Francis II. of the Imperial title itself. New combinations were formed, and territories transferred from one province to be bestowed on another. Thus, respect for antiquity and legal right was impaired, while at the same time the anger of the people was roused by the insolence with which the French conquerors abused their predominance. Napoleon created anew the sentiment of German nationality, and may almost be called the creator of the new German Empire.

This volume, which is entitled "Napoleon," might equally well be entitled "The French Revolution at Work Outside France." It records two immense and far-reaching changes in world history. One is in a sort of sense "change chiefly material." It is the destruction of a whole congeries of institutions which had come down from the end of the Middle Ages, along with the disappearance of old boundary lines and the substitution of new ones. This was primarily the work of Napoleon's conquering activity, which spared no country south of the Baltic. The other change lay in the intellectual and moral attitude of men towards their institutions. The enunciation of those general principles which were deemed to be summed up in the words, "Liberty, Equality, Fraternity," the decline of respect for tradition and for authority, the assertion of the right of the individual to pursue happiness, or at any rate, his own purposes in his own way—all these notions which had found their first and most vehement expression in France followed round Europe the battalions of the man who was doing his best to stamp them down in the country whence those battalions came. They have taken a long time to permeate men's minds in the lands traversed by the French armies, and in some of those lands the progress was at first so slow that one can hardly connect it with any French influence. Only within the last two years has the revolutionary spirit shown its power

in Russia. But that breaking up of the hard soil which was needed before the seed of the revolution could germinate was accomplished in Napoleon's days.

He was in no sense the author of this great movement of change; nor indeed can any man or group of men be called the authors of what was a result of a long series of disintegrating events and (in a sense) of the general progress of the human mind. But his personality is so much the most striking, his action was so much the most pervasive, that he seems to fill the canvas in any picture of those times. We find in this volume no attempt to present a full and exact view of his character and gifts, nor to give any general estimate of what revolutionary France did for mankind. But the record of his activities in so many different fields conveys the most forcible impression of his extraordinary powers. His pure capacity for thinking hard and thinking swiftly has been seldom equalled and never surpassed. He who would find a parallel for it is inclined to go back as far as Julius Cæsar, the man who most deserves to be called, like Napoleon, at once a destroyer and a creator. When we read of the work Napoleon did in so many different fields at once, and remember that he rose to the summit of his power while still a youth, with no advantages of family or wealth, we see in him something that seems unlike the ordinary sons of men, something that may be called not human at all but dæmonic. To account for such a rise one is obliged to remember what the conditions of the time were. Within France the old institutions and habits had been so completely broken to pieces that there was no obstacle left to bar the progress of an adventurer. The path lay open to intellect and audacity. When intellect and audacity bring a man to the top in his youth, their force is intensified in a two-fold way. The impression made on the world is greater, and that impression disposes people to rally round the rising hero, to acclaim him, to abase themselves before him. The rising hero is himself confirmed in his own self-confidence, and ventures on bolder steps, whose very boldness, by terrifying his opponents, goes far to insure his success. Such a swift career of victory as Napoleon's so struck the imagination of men as of itself to sweep obstacles out of his way. There is thus a solid truth in the proverb that Fortune favors the young as well as the bold.

It may seem more extraordinary still that the master of France became so soon the master of Continental Europe. But it must be remembered what Europe then was. The old monarchies had gone on in their old ways, with old-fashioned administrations, old-fashioned armies, officers and generals mostly incompetent, because appointed from an aristocratic class within which merit counted for little toward promotion. The First Consul found to his hand armies already accustomed to victory. He found capable officers who had themselves risen by their capacity. Add to these facts the still more decisive fact that there was as little political genius among the statesmen of Austria, Prussia, Russia, and Spain as there was military genius among the soldiers (Suvorov is, perhaps, the chief exception, and Suvorov never faced Napoleon on a battlefield), and the dazzling triumphs

of Napoleon become more intelligible. The presence in Prussia of a Bismarck or a Moltke might have made a great difference. Nevertheless, when all has been said, Napoleon's personality remains a unique one not only in his own generation, but in the modern world. Had he not become intoxicated by the faith in his own star which led him to attempt the conquest of Spain and Portugal before his hold on Central Europe had been further strengthened, and had his physical condition remained after 1810 what it was in before he had reached forty, he might have continued master of Europe till the malady which had carried off his father carried him off also.

ARISTOTLE'S ETHICS.

Aristotle's Theory of Conduct. By Thomas Marshall. London: T. Fisher Unwin; New York: The Macmillan Co.

During the past hundred years more books have been written about Aristotle's "Ethics," and mainly the Nicomachean treatise, than any other work of Aristotle; but they have not, on the whole, been distinguished for intellectual power. Minds of more than ordinary force have endeavored to give truthful representations of the Stagirite's moral views; but their accounts have been pretty uniformly tinged with their authors' own opinions. For anybody who may resort to the original, the most useful aid will be J. A. Stewart's "Notes." The presumption that the reader of Mr. Stewart's work has the original text before his eyes may perhaps palliate its ceaseless and glaring misrepresentations. It is, in fact, not Aristotle's ideas of morality, but those of Mr. Stewart, that are there to be found. Often they involve conceptions that no dweller in Athens in Alexander's time could be supposed to have; sometimes they are the most modern ideas; often they are simply the doctrines of Kant or of a Kantianized Platonism. There are not wanting cases in which Aristotle is represented as saying what in other passages, or even in the very passage interpreted, he categorically denies. Moreover, Mr. Stewart's work, although almost indispensable to the student of the Greek text, is too narrow in scope to answer the purpose either of the student of philosophy or of the general reader. He never, for example, except in the most desultory manner, touches upon the question when and how the existing text came into being. We speak of the general reader, because Aristotle's work, unlike modern treatises, is not chiefly occupied with the theory of morality. Its main purpose is practical; namely, to aid men to behave on all occasions with moderation and good sense. In that respect it is certainly one of the most interesting and improving books that ever was written. Mr. Marshall gives a skilful paraphrase of the whole treatise, intermingled with explanatory remarks showing the relation of what is said to the state of Athenian society at the time, etc., while at the bottoms of his pages he skims the cream of the Greek text, for the benefit of those who though they can enjoy that language in bits, would lose patience on being asked to read long passages.

The plan is admirable, and is well carried out. The practical parts of the work

could not have been rendered more judiciously; so that the volume makes agreeable and profitable reading.

The work has, however, certain shortcomings. Mr. Marshall is capable of making somewhat sweeping assertions that seem to be supported but by the slenderest of premises. We do not know how he has ascertained that the Athenians of Aristotle's day did not regard the great works of sculpture and architecture as worthy of any deep admiration; but (p. 217) he gives us his word that "to regard them as ennobling agencies for the education of mankind would have seemed nonsense to an educated Athenian. . . . To admire art is not vicious; it is a permissible relaxation; it relieves moodiness and low spirits—so Aristotle and Pericles seem to have thought, but their admiration did not go much further." In like manner, it seems to us that Mr. Marshall is over-confident of the completeness of the historical record, when he avers (p. 174) that the problem of free will was not raised as a serious difficulty until the fifth century of our era. For, not to speak of the fact that the debates on that subject mentioned in Saint Augustine's "Confessions" took place in the fourth century, it is difficult to believe, when the Stoics, from Zeno down, insisted on Destiny, while Epicurus and his followers were emphatically for free will, that the endless disputes between these sects on every other conceivable question should never have touched this one; especially after Parmenides had asserted the universality of Necessity, and Socrates that the man who knew virtue would inevitably pursue it, while Aristotle puts forth the doctrine of free will with no hint of its being a novel idea, but rather the reverse.

The whole volume is more or less tinged with the author's attribution to Aristotle of an opinion to which he himself happens to be personally predisposed. This opinion is that the distinction of right and wrong is an artificial creation of men, or at any rate that their bounds are so. His only formidable reason for attributing the opinion to Aristotle lies in a single sentence which that philosopher set down on the first sheet of papyrus of his manuscript. Namely, having remarked that the whole inquiry is a political one (which was the natural point of view to a Hellene), and that, as such, it cannot be expected to do more than to render the matter clear, since scientific exactitude does not belong equally to all subjects of reasoning any more than to all handiworks, he adds: "The ideas of the honorable and right, as politics treats of them, present so much divergence and anomaly (*διαφορὰν καὶ πλάνην*) that they seem due to instituted law alone, and not to nature" (*ὥστε δεκτὴν νόμου μόνον εἶναι, φύσει δὲ μή.*) This sentence arrests attention, and at first sight appears to support Mr. Marshall's view. But on re-reading it we remark that it is not a categorical assertion; that Aristotle does not even use the expression, "it seems to me," but merely says that so it seems from the point of view of politics (*περὶ ὧν ἡ πολιτικὴ σκοπεῖται*). Moreover, the utterance stands quite alone. Mr. Marshall is able to bring no other passages to its support, except those in which it is said that conduct is the subject of praise or blame, as if this were not true on any ethical theory, and more so on almost any other than on

the one he attributes to Aristotle. Finally, in the fifth book, we come upon a categorical and emphatic denial of the truth of the doctrine in question. What does Mr. Marshall say to that? He simply uses the higher critic's routine method of dismissing difficulties, by supposing that the reporter of the particular lecture misrepresented in that part of the fifth book misunderstood what Aristotle had said. If we suppose, he says, that such utter misunderstanding took place, and that Aristotle never revised the report, there is nothing to prevent our believing that Aristotle said just the opposite of what we read in the text. He is quite right there: on such terms, we can give any interpretation we like to any passage.

For our own part, we entertain no doubt that the manuscript of the Nicomachean "Ethics," though assuredly not intended for publication, was prepared by the hand of Aristotle himself. One of several valid reasons is suggested by the title of the longer exposition, "Nicomachean." Nicomachus was the name of Aristotle's father and of his son. Half a dozen ancient authorities tell us that the work was dedicated to the latter by Aristotle. It is altogether probable that this was the case. But surely Aristotle would not have dedicated a work he had not himself written. During the many years through which the manuscript was in use in the school it is natural to suppose that annotations, such as cross-references, would have been inserted in it; but that any change of its main doctrine should have been permitted is quite incredible. The history of the Aristotelian texts ought to be investigated by a comprehensive, objective, thoroughly scientific and well-considered method; and that done, the present practice among even eminent critics of suggesting inconsiderately that this or that sentence, or even chapter, is spurious, should be discredited.

As for the present question of whether Aristotle regarded the distinction of right and wrong as wholly conventional or not, we have only to read the text just as it stands, and we obtain a result that is consistent and intelligible in every particular. He would have shown himself a poor rhetorician if he had planted himself upon immovable ground in his opening lecture. It was far better to let the mixed audience understand that every theory would receive fair examination at his hands. Mr. Marshall's method, however (if such it can be called), leads him into such a slough of contradictions that he is at length obliged to declare that Aristotle addresses his treatise to the kind of people who do not care to carry their beliefs to their logical consequences.

The weak spot in Aristotle's treatise considered as an aid to the practice of virtue is that he assumes man to have an immediate power of will which, without any previous preparation, can be summoned upon emergency to overcome any temptation. It is the usual error of the partisans of free will. He recognizes, indeed, that a given virtue can be acquired only by habituation; but he seems to think that a person who does not possess the virtue in question is able, on occasion, to behave as if he had acquired it. Great as his discoveries in psychology were, he had never found out that repeated performances of any action in vivid and detailed imagination—say, for

example, in imagining that one moves one's right foot round a horizontal circle clockwise, while one moves one's right hand round a parallel circle counter-clockwise—is almost as effectual in creating a habit of so acting, as if the outward acts were really performed. We now know that that same action—the same in quality, if not equal in intensity—that is performed when we really act, is also performed when we vividly imagine we act; only, in the latter case, we add to that exertion an opposite exertion inhibiting it. This principle could not be directly applied to the cultivation of a habit of activity, since along with the habit of making the desired exertion one would equally be growing a habit of inhibiting the exertion. But in a self-warfare against any of the innumerable vices for the cure of which a habit of inhibition is alone required, this method is advantageous.

RECENT FICTION.

The Treasure of Heaven. By Marie Corelli. New York: Dodd, Mead & Co.

To give the lady her due, Miss Corelli's latest story is by no means lacking in power. Lacking in distinction, it of course is; but it has more dignity of substance and less indignity of style than anything of hers we have hitherto seen. The opening chapters move on stilts. The people are wooden people, speaking in the dialect of melodrama. But when the real narrative gets into its stride, forgetting about Miss Corelli and her theories, matters are different. The central motive is a strong one: an old man, and a very rich one, wearying of the emptiness of his life, setting out, disguised, afoot, and nearly penniless, in quest of the treasure of Heaven—love. How by great pain he achieves at the eleventh hour the quest constitutes a theme of really epical quality. Not that the power of "The Treasure of Heaven" is an epical power; but the book has, unlike most current novels, a certain animus, a suggestion, at least, of something large and sound. It contains also good characters and episodes. David Helmsley, the aged millionaire tramp, is himself an appealing figure. The pathos of his lonely pilgrimage is, if obvious, not more so than it would have been in the hands of the Gadshill romancer whom Miss Corelli's audience, at least, does not pretend to have outgrown. The character of Matthew Peke, herbalist and born wayfarer, asks no favors of anybody; nor do Miss Tranter, Feathery Joltram, and the rest of the rustic crew at the "Trusty Man." More doubtful persons appear, notably one Arbroath, a bigoted, meddling, and immoral parson, whose selection as arch-rascal of the story would seem to indicate that the author regards a parson as a little more dangerous member of society than a reviewer—toward the latter unfortunate she directs a number of incidental thrusts, intercalated here and there, somewhat gratuitously, it should seem, and yet with fell purpose. All the poor people met by Helmsley in his wanderings treat him with uncalculating kindness; it remains for him to be brought back from death and nursed to happiness by the good angel from whom (but not in the way of matrimony) he is to win the longed-for love, and

who, when he presently dies, is rewarded, illogically but fitly, for the purposes of romance, with the inheritance of his curse of wealth. It would be easy to make game of this book, but we suppose Miss Corelli will admit that even a reviewer may have his better moments, and will allow us to express the opinion that there are many worse kinds of popular fiction than that of which she here shows herself to be capable.

Witch's Gold. By Hamlin Garland. New York: Doubleday, Page & Co.

According to Mr. Garland's "Foreword" this is more properly a restoration than a reprint. Originally written in much the same form and with the same title, it was cut down to meet "the needs of a serial publication," and printed under the title "The Spirit of Sweetwater." It is now restored, and published in that ornate and expansive form reserved for holiday reprints. We are not sure that it has deserved such honor. The story does not represent Mr. Garland at his best; it is simply an amiable frontier romance, altogether barren of the grim power of "Main-Travelled Roads," though it was apparently written at about the same time. In that remarkable collection of tales Mr. Garland showed himself a prophet of the plains. He succeeded in interpreting the farm life of the Middle West in broad human terms; the and the sordidness, to be sure, rather the beauty of it; but this with a peculiarly healthy-minded intensity of concentration upon the facts with a view to getting the truth out of them. We know nothing more spontaneous and of the soil in American literature. "Witch's Gold" does not give us this impression. The intimations of the "Foreword" explain the fact. Some years ago Mr. Garland travelled in Colorado for the avowed purpose of collecting literary material—we will not say making copy. He had in mind a moral situation as basis for a story, and accidentally picked up from the conversation of two miners an anecdote which promised to be useful in enforcing that situation. This is one way of working toward fiction, and it has its merits; but it cannot possibly have been the way in which "A Branch Road" or "Among the Corn-Rows" was written. There he did for the life of the small farmer what Bret Harte did half a century earlier for the miner. Harte's vein ceased pretty soon to yield pay ore of the first quality; and it cannot be said that the last decade has produced from Mr. Garland all that was hoped for. Is it in the nature of things that the interpreter of life through local American conditions should so quickly find himself out of voice?

A Midsummer Day's Dream. By H. B. Marriott Watson. New York: D. Appleton & Co.

A delightful bit of romantic foolery. To be sure, the sprightliness of the hero lapses now and then into sheer silliness; but it is hard to represent in print that mere bubbling over of animal spirits which is so tolerable in real life. The sketch is a record of certain amorous adventures contingent upon an out-of-doors amateur rendering of the "Midsummer Night's Dream." The principal motive is a mystery connected with the finding and trailing of a wo-

man's shoe. In the course of his search the hero is constrained to make love pleasantly if somewhat indiscriminately; and there is plenty of chance in "Titania's Glade" for comfortable philandering. Titania is married and therefore immune from his attentions, which wander among Hermia, Helena, and several of the fairies. Everybody falls in love with him, but this seems rather desirable. In fact, the whimsical tone of the book is so well maintained that all its absurdities of situation and incident take on an amiable glamour. Nothing that is so is so, and all things are justifiable. Wherefore it may be said that the author has not profanely connected his extravaganzas with the greatest of romantic fantasies.

The Shock of Battle. By Patrick Vaux. New York: G. P. Putnam's Sons.

Mr. Vaux, the title-page informs us, is the author of "Thews of England." We have not read that work, but there is ample evidence before us as to what its character would have been. Like the present story, no doubt, it suggested an advance upon the swashbuckling romance comparable to the advance of the motor car upon the bicycle. The romancer speaks in terms of battleships, and flings squadron against squadron with the ease of a chess player. He is, withal, a ruthless god of the machine, preferring open slaughter to hair-breadth escapes, and by no means grudging of gory detail. He writes as a war correspondent who, being the inventor of his war, is naturally omnipresent and omniscient; and the journalist whom he uses as spokesman is rather a pale phantom. For the rest, Mr. Vaux is an enthusiastic "rooter" for England, in the imagined contingency, shortly to be faced, of war with Germany. He paints the Germans as treacherous brutes, and, if not poltroons, hopeless blunderers. He sweeps them from the sea with much promptness and fortitude. He writes with animation and vividness. As a piece of imaginative journalism the book may rank about with Mr. Wells's prophetic flights.

Charles Lever: His Life in his Letters. By Edmund Downey. Edinburgh: W. Blackwood and Sons. New York: Charles Scribner's Sons. \$5 net.

Hitherto there has been no satisfactory record of Lever's literary life. On his death, in 1872, a biography was written by Fitzpatrick, full of detail and in the main accurate. But Fitzpatrick concerned himself chiefly with Lever's early career, nor had he access to the mass of correspondence which Mr. Downey has been able to use. The present work consists almost entirely of letters, and in them Lever discusses his money affairs, his family life, and especially the evolution of his numerous novels and occasional articles. The correspondence with John Blackwood (1863-72) illustrates once more the ideal relations that the great publishing house was able to maintain with its contributors. Lever's articles were often rejected by Blackwood, and his novels when they ran as serials in *Maga* were subject to the severest criticism, but it was all done with so much tact that even the hot-blooded Lever never

took offence. On the last evening of Lever's life he entertained the Blackwoods at his villa at Trieste, and it was Blackwood who took charge of everything and laid his old friend to rest in the British Cemetery, in June, 1872.

In Ireland nowadays one hears little of Charles Lever or his novels. Of the man himself there are few local memories. A great part of his life was spent on the Continent, first in Brussels, and later in Florence, Spezzia (where he held a sinecure as consul), and Trieste, where, to his great chagrin, his consulship involved much work and the unlimited entertaining of naval officers, a class of men with whom he had nothing in common. "The constant intercourse with creatures of mere action," he writes to Blackwood in 1865—"with creatures of muscles, nerves, and mucous membranes, and no brains—becomes one of the most wearing and weakening things you can imagine." This was after a visit from the English fleet, during which he "insulted the ward-room and d—d the cockpit, and even sneered at the admiral," in the vain hope that the admiring but brainless blue-jackets would give him a day's leisure for writing. From Ireland he was exiled by no such oppressive admiration. When, after five years of medical practice in Brussels as a young man (1837-42), he settled down near his native Dublin, and took over the editorship of the *Dublin University Magazine*, he meant, no doubt, to spend his literary life in Ireland. But though he could always fill his house with the most interesting men of the literary world of Dublin and London, he was coldly received by official Irish society. He never forgave the snubs that he endured from the Viceroy Lord de Grey when he tried to take part in public life; and (what was far harder to bear) men like Carleton, the novelist, and the "patriotic" set attacked him in the press, asserting that he had made Irishmen ridiculous in English eyes by the caricatures in his novels. In 1845 he returned to the Continent, and Ireland was never to see him again, except at long intervals, when he would spend a day or two dining out and playing whist in Dublin.

Lever fixed forever the English notion of the rollicking Irish dragoon. His personages have always appealed to English rather than to Irish tastes, a fact which he found extremely mortifying. Nothing angered him so much as to be told by Irish critics that his types were anachronisms, and he often defended himself by pointing out the original—always, of course, some eccentric. He was far too sensitive to make a successful editor, and the nervous worry of editing the *D. U. M.*, as it was popularly called, nearly shattered his robust health. Most of his novels were written abroad, where he rejoiced in the sunshine and the freedom from conventions. He made a large income by his enormous industry, and more than once had so many novels on the stocks together that he found it safer to be anonymous, except in the case of one or two, lest he should be suspected of over-production. All that he made he spent forthwith, and almost every letter to Blackwood contains a few fervent phrases of gratitude for a timely check that would float the family in luxury for a few weeks more.

Lever hated intellectual women: "We

never see him," writes Mrs. Browning in Florence; "it is curious . . . in fact, he lives a different life from ours; he is in the ballroom, and we in the cave, and peradventure he is afraid of the damp of us." "It was amusing," says a friend, "to observe his transparent manœuvres to avoid Mrs. Trollope as a whist-partner; and it was equally amusing to observe Mrs. Trollope's undisguised desire to secure Lorrequer as her partner."

The letters are well worth reading. Lever wrote in haste and illegibly so that on almost every page some word has to be supplied by conjecture. Of his brilliance, the wit and geniality that endeared him to all, there is plenty of evidence, and these two volumes will probably be read when his novels are never taken from the shelf. At present, one meets here and there a boy of old-fashioned tastes who prefers Lever to Kipling, but to most people "Charles O'Malley" is merely the name of a minor classic that one need not read. Mr. Downey's book has good portraits and is well got up.

Literature of Libraries in the Seventeenth and Eighteenth Centuries. Edited by John Cotton Dana and Henry W. Kent. Chicago: A. C. McClurg & Co.—Vol. 1.: *The Duties and Qualifications of a Librarian.* By Jean-Baptiste Cotton Des Houssayes.—Vol. II.: *The Reformed Librarian-Keeper.* By John Dury.

This series of sources of the history of librarianship in former days is most welcome. The two volumes before us and the four that are promised (see the *Nation* for August 2) form together a collection that should be studied by all library workers, and that might well be read by any student of educational and intellectual history. Unfortunately, the price is high and the edition small: 250 copies at \$12 for six volumes of less than 100 pages each. The address which the Abbé Cotton Des Houssayes delivered before the General Assembly of the Sorbonne on his accession as librarian to that learned body, in 1780, is a scholarly and eloquent picture of the ideal librarian:

A librarian truly worthy of the name should, if I may be permitted the expression, have explored in advance every region of the empire of letters, to enable him afterwards to serve as a faithful guide to all who may desire to survey it. . . . The superintendent of a library, whatever be its character, should be no stranger to any department of learning; sacred and profane literature, the fine arts, the exact sciences, all should be familiar to him. A diligent and indefatigable student, ardently devoted to letters, his sole and abiding aim should be to make sure their advancement. Especially should the superintendent of such a library as yours—which is not, by right, designed for the public—if he desires to increase the reputation of the illustrious society which he represents—if he also desires to give proofs of its devotion to learning—receive all its visitors, whether scholars or simply curious, with an assiduous attention, so polite and kindly that his reception shall appear to each one the effect of a distinction purely personal. . . .

The second volume in the series, John Dury's "Two Copies of Letters Concerning the Place and Office of a Librarian-Keeper," is preceded by a biographical sketch, by Ruth Shepard Grannis, chiefly telling about the author's travels and activity in the interest of Protestant Church Unity, but without explaining the connection between

the present publication and his other activities. Still, there was such a connection. After more than fifteen years of travels in Holland, Germany, Denmark, and Sweden, John Dury married, in 1645, an Irish lady and remained thereafter for ten years in England. Here he became associated with that small band of educational enthusiasts and reformers, whose leader was Samuel Hartlib, the philanthropist and friend of Comenius. In 1649, Hartlib published a work by his friend, entitled "The Reformed School," in which the latter advocated advanced ideas in education, anticipating many of Fröbel's and Herbart's principles. The work met with some criticism, and Dury replied to his critics in a supplement, which was accompanied by two letters to Hartlib on the subject of library management. The volume also contained "the description of one of the chiefest libraries which is in Germany, erected and ordered by one of the most Learned Princes in Europe" (namely, the library in Wolfenbüttel). The present reprint contains only the two letters; a translation of the Latin description of the library at Wolfenbüttel where eighty years later Lessing became librarian, might well have been included.

Dury's ideas of library management were not based on actual experience, but he had thought deeply on the subject, as he, during his travels, must have had occasion to use libraries in many lands. He is particularly concerned with university libraries. As in educational matters and in the question of religious toleration, so he is ahead of his time in matters of library "keeping." He regards as the constituency of a university library not only the members of the university of which it forms a part, but the world of scholars in any country; librarians, he says, "ought to become agents for the advancement of universal learning." John Dury even anticipates President Eliot's plan to stock "dead" books separate from the "live" ones:

Discretion must be used and confusion avoided, and a course taken to distinguish that which is profitable from that which is useless; . . . yet because there is seldom a fine book wherein there is not something useful, and books freely given are not to be cast away, but may be kept, therefore I would have a peculiar place appointed for such books as shall be laid aside to keep them in.

J. G. Schelhorn mentions Dury's Librarian-keeper in his "Anleitung für Bibliothekare und Archivare" (Ulm, 1788-91), among books of value to libraries; since then it seems to have been forgotten until Richard Garnett called attention to it in a paper read before the Library Association of the United Kingdom, in 1884. Eight years later the first letter was reprinted by Mr. McAlister in *The Librarian*, with an historical introduction, and the following year, 1893, J. Kemke published an account of it in the *Zentralblatt für Bibliothekswesen*.

The Training of Boys' Voices. By Claude Ellsworth Johnson. Oliver Ditson Co.

The author of this little volume, who is organist and choirmaster in a New York church and vocal teacher at the National Conservatory, declares that never before in the history of music has the singing of children been so much a matter of popular interest as at present. Schools every-

where, both public and private, are providing instruction in music reading, and every year there is a greater number of churches which rely upon boys to lead the religious worship in song. Quality is here, as in so many other things, far more important than quantity. In some cases cathedral services are rendered by twenty soprano boys. Smaller churches do not need so many, "provided that all are well trained and developed." In other words, large numbers are not so much of an advantage as thorough training. A good teacher is therefore a requisite; but as the training of children's voices constitutes a department of voice culture for which some special preparation is required, Mr. Johnson has written his treatise to assist in such preparation.

Inasmuch as, up to the time of maturity, the voices of boys and girls are alike, both having a natural soprano, why is it that boys are favored in the forming of church choirs? Is it because of the *mulier taceat in ecclesia*, or some other survival of masculine tyranny? No, it is simply because of the greater delicacy of the feminine organization. Boys are better fitted for any extraordinary efforts, such as those involved in singing before the public, in choirs, etc. Girls, our author maintains, "ought not to be taxed with serious vocal work until the system has completely settled after the change to womanhood." They have only one voice, which develops gradually, whereas a boy's larynx is so much that a new vocal organ is practically the result. And the boy-voice is richer, and has more musical value than the girl-voice. Hence it is that, through the long flight of centuries, the singing boy has maintained his place in the choir stalls, while the girls were excluded.

Even boys, however, though more robust than girls, should use their voices gently at first. Soft singing is the method which alone leads to musical results. This is perhaps the most useful of the lessons dwelt on by our author. It suggests the query whether the reason why so few American men have become famous singers is not to be sought in the fact that the American boy is so preposterously noisy. Mr. Johnson strongly disapproves of teachers and parents who urge their children to speak and sing loud, thus causing them to force the "thick" register of the voice in range and power until it becomes reedy, coarse, and harsh, like that of children who scream in the streets. These disagreeable qualities, he maintains, "are not natural, but acquired, for children reared in refinement have sweet voices." Perhaps this statement is too sweeping. Some children naturally have ugly voices, as some have ugly faces. But it is certainly true that screaming in the streets spoils child-voices by the wholesale, and that the American boy's voice is like the average steam whistle in being about a hundred times louder than it need be for its purposes.

Mr. Johnson accepts John Curwen's names for the three registers of the voice: "Thick," "thin," and "small," which have much to commend them, and he believes that the secret of success in beginning with children's voices consists in the immediate production of their middle and upper register tones. His remarks on voice training

are commendable, and he supplies several pages of dally exercises for the voice. To the selection of music for boys' voices the final chapter is devoted, and there is a twelve-page list of choir music for boys' and men's voices.

Slavery and Abolition, 1831-1841. By Albert Bushnell Hart. The American Nation. Vol. XVI. New York: Harper & Bros. \$2 net.

There can be little save praise for Professor Hart's contribution to the series which he is editing. The volume does not, indeed, observe very closely at all points the professed chronological limits; its description of the incidents of slavery, in particular, applying in general to the whole period from 1830 to 1860. As he points out, however, plantation life changed but little in character during the generation which preceded the Civil War, and narrow limits of date are not material. The narrative of events, on the other hand, is kept well within the announced bounds.

The plan of the series necessitates the treatment in this volume of a few topics not closely connected with either slavery or abolition. Such are the accounts of American social characteristics from 1830 to 1860, the intellectual life of 1830-1840, the development of transportation, and the panic of 1837. The two subjects, however, on which Professor Hart has most to say, and around which centres the main interest of the volume, are the institution of slavery and the movement for abolition. The description of the theory and practice of slavery forms easily the best summary view of the "peculiar institution" to be found in the pages of any recent writer. In a series of chapters on slavery as an economic system, the relations between the slaveholder and his white neighbors, the free negro, plantation life, the control of slaves, the slave market, the argumentative defence of slavery, and the complicated interstate and international relations, we find the essential elements of the institution systematically set forth. At best it is a damning exhibit; for while Professor Hart writes with impartiality and restraint, the mere recital of facts, drawn as these are from unimpeachable sources, constitutes a convincing demonstration of the inhuman nature of the system.

Of the work of Garrison there will doubtless always be diverse interpretations and appraisals. Professor Hart's estimate is, we think, both sympathetic and just, though his pages do not give a very vivid impression of the "warmth and glow" which characterized much of the earlier abolition movement. On the whole, however, the figure of Garrison does not become the less imposing because its lines are more truthfully drawn and his place among contemporaries more accurately defined. The fundamental distinction, often overlooked, between abolition and anti-slavery is clearly brought out, as is the effect of the organized opposition to slavery on public opinion and conduct in different parts of the country. The final chapter, on the general influence and achievements of abolition, forms a thoughtful and judicious summary.

Of the maps, those showing the geograph-

ical distribution and progress of slavery and the slave trade from 1830 to 1850, and the routes of the "underground railroad," are especially noteworthy. The bibliography is unusually full: MacDonald's "Jeffersonian Democracy," however (p. 326), should, of course, read "Jacksonian Democracy." The text shows an unexpected number of typographical errors.

Cornish Saints and Sinners. By J. Henry Harris, with numerous drawings by L. Raven-Hill. New York: John Lane. \$1.50.

This book is of the familiar type—rather more common in the British Isles than in America—which describes the vacation rambles of a few friends. It is written, like most of them, in the first person; its plot, a simple itinerary, is slighter than usual; and the characterization of the author's fellow-travellers, Guy and the Bookworm, is of the most conventional sort. The customary American Phyllis, who is introduced to enliven the narrative, might have been omitted without loss to Mr. Harris's reputation, but no one will be disposed to take offence at the good-humored absurdity of the portrayal. It is more of a pity that the author tried for humor—and arrived at smartness—in narrating some of the traditional tales and legends of the Cornish people. It is a cheap and easy device to treat the story of Tristan and Iseult as a scandal "not wanting in interest for the upper crust," or to talk about the "whitewashing of Jenefer" (Guinevere); and travesty, to be worth while, should be more cleverly done. Yet, in spite of these mistaken efforts, most of the book is agreeable reading, and Mr. Harris shows real interest in Cornwall and sympathy, mixed with a certain condescension, for the people he describes. He has some good anecdotes of smugglers and wreckers, a few unspoiled folk-tales, and plenty of amusing sketches of persons and places. No one who has ever visited Cornwall, or who has known any of the similar fishing populations the world over, will fail to take pleasure in his description of the village people standing Sunday morning by their garden gates, looking "up-along" and "down-along" and "athwart" the streets; or in the account of Uncle Tom at his post:

Did he ever tire of looking at the sea? Not that he was aweer on. The vish was in the zay, an' th' wind was in the clouds, and what else was there in this world worth looking at? Man and boy, he had followed the sea till his hair was white, until he knew its coquetries and passions, and generation after generation before him were sailor-fishers, until "the salt was in his blood." The old man's eyes were wild-violet-blue, and a mystic light came into them when he said that at times the sea "called" to him, and "ef so be I had my way, I'd die at zay, and be buried in salt water, like Jan Tregose."

The illustrations, like the text, are partly characteristic local sketches and partly attempts at the comic.

From a Cornish Window. By A. T. Quiller-Couch. New York: E. P. Dutton & Co. \$1.50 net.

This collection of papers has other points of resemblance to Mr. Benson's recent book than that of title. Indeed, this Cor-

nish window of "Q.'s," though it opens upon a busy little harbor on the North Coast, obviously commands also, as if in mirage, the towers of Oxford. But the Cornishman has less to do directly with academic themes, and his speech is freer and more direct. He is neither don nor dilettante. He speaks as a university man rather than like one; as one who is content to have left the learned cloister for all-out-doors. While Mr. Benson is bowing his way across his quiet quadrangle, "Q." is, it may be, riding a gale along the Cornish shore. ". . . There was nothing to hurt, as yet: the boat was shaking off the water like a duck, and making capital weather of it; we told each other that once beyond the Rame, with the sea on our quarter, we should do handsomely." Not every honest man is a yachtsman, and some powerful writers have been without interest in sport of any kind. Mr. Benson, with a respectable athletic career behind him, admits his present indifference to sport and distrust of it. Mr. Quiller-Couch dates the fall of the year by that day on which his boat is hauled up for the winter; and is, moreover, an ardent follower of cricket.

There is much variety in this miscellany, or series of miscellanies, arranged by the calendar; but nothing therein is labored or affected. It is excellent talk, as flexible, suggestive, and responsive to suggestion, as good talk should be. Of its substance we need not here speak at length; incidentally it contains some interesting criticisms to which brief attention may be called. There is no uncertain note in what is to be said of the poetry of Imperialism:

Well, let us kick up what dust we will over "Imperial ideals," we must admit, at least, that these ideals are not yet "accepted of song"; they have not inspired poetry in any way adequate to the nobility claimed for them. Mr. Swinburne and Mr. Henley saluted the Boer war in verse of much truculence, but no quality; and when Mr. Swinburne and Mr. Henley lacked quality one began to inquire into causes. Mr. Kipling's *Absent-Minded Beggars*, *Muddled Oafs*, *Goths*, and *Huns* invited one to consider why he should so often be first-rate when giving the lie to his pet political doctrines, and invariably below form when enforcing them. For the rest, the Warden of Glenalmond bubbled and squeaked, and Mr. Alfred Austin, like the man at the piano, kept on doing his best. . . . I don't doubt they were, one and all, honest in their way. But as poetry their utterances were negligible. As writers of real poetry the Anti-Jingoes, and especially the Celts, held and still hold the field.

The critic goes on to show that the Imperial bards are lacking in sincerity, in a sense for justice, in "recognition of the human soul"; and so leads to the forcible conclusion that "man cannot support himself upon assurances that he is the strongest fellow in the world, and the richest, and owns the biggest house, and pays the biggest rates, and wins whatever game he plays at, and stands so high in his clothes that while the Southern Cross rises over his hat brim it is already broad day on the seat of his breeches." Mr. Quiller-Couch is no quietist; his plea is for that sense of justice as contrasted with might which has inspired all art of the first order. He gives honor where honor is due, gratefully commending such verse as Kipling's "Flag of England" and Henley's "England, My England." Poets should, he is confident, con-

cern themselves with the important events of contemporary life. The common opinion to the contrary, "is merely the complement of that 'Art for Art's sake' chatter which died a dishonored death a short while ago, and which it is still one of the joys of life to have outlived. You will remember how loftily we were assured that Art had nothing to do with morality; that the novelist, *e. g.*, who composed tales of human conduct, had no concern with ethics—that is to say, with the principles of human conduct: that 'Art's only business was to satisfy Art,' and so forth. Well, it is all over now, and packed away in the rag-bag of out-worn paradoxes; and we are left to enjoy the revived freshness of the simple truth that an artist exists to serve his art, and his art to serve men and women."

With this brief taste of quality, the book and the reader may be left to each other.

Edgar Allan Poe. The Man: the Master: the Martyr. By Oliver Leigh. Chicago: The Frank M. Morris Co.

Some day, so Mr. Leigh assures us, he intends to bring out a compendious work on Poe. Meanwhile, he is obliging enough to stay our stomach with this wafer-like volume by way of makeshift. As a self-constituted authority on the subject he is naturally very severe with every one else who has ever written about it. One of the papers or "notes," of several successive layers of which the book is composed, consists of a vigorous denunciation of recent editors, biographers, and critics. Only two have succeeded in satisfying him—Mr. Stedman and Mr. Mabie, who ought to be very thankful at securing by good luck what was probably unobtainable by any exercise of human foresight. A brief quotation will illustrate Mr. Leigh's critical manner—we can hardly say, manners:

That the author of these elegant extracts [from Mr. Woodberry's "Life of Poe"] has the advantage of poor Poe in that "he belongs to the men of originally perfect power" and not to mere gentlemen of culture is probably true. That Prof. Woodberry is—or was—a powerful poet was impressed on the public mind by his cordial reviewers in the select literary papers, about the time his "power" produced the biography. The title, if memory serves, of his poetry book was "The North Shore Clock and other Poems." It was pronounced a striking piece, but has not recently been heard in these Western parts, though Connecticut products as a rule are quite popular here.

To judge from this and other specimens of his criticism, Mr. Leigh's chief qualification for his contemplated *opus* is to be found in the circumstance that some years ago he discovered in the Astor Library a satire, signed Lavante, on Griswold's "Poets and Poetry of America." This poem he ascribed to Poe and reprinted with an argument to sustain his ascription, under the pseudonym of "Geoffrey Quarles." Apparently, however, the exhibit carried very little conviction to either editors or critics. And now in his second note he reasserts himself, epitomizes his argument, and illustrates the satire with a running and connective commentary. The argument, as so abbreviated, does not seem very cogent—and as for the poem, while it may be Poe's, it might just as well be any one's else who could versify and read Pope.

The most interesting thing in the book, however, is a portrait, or rather two por-

traits, of Poe, intended to emphasize the irregularities of his head and features. One is the lateral reverse of the other; and the upper is split down the middle in such a way as to show, when one or the other flap is raised, what the poet would have looked like, if the design of either side had been carried out symmetrically. The effect is very curious.

Drama and Music.

The new plays of the current week in New York do not require much critical comment. "The Dear Unfair Sex," a farcical comedy by Inglis Allen, a young Englishman who has written some bright sketches for *Punch* and the magazines, as well as one or two longer stories, is clever boy's work, but too imitative and improbable to merit serious attention. It does, however, contain a promise of more valuable work hereafter. A certain inventiveness, for instance, is exhibited in the new turn given to the now somewhat stale and discredited situation in which a reputable married woman is made to visit a bachelor's rooms, alone, at midnight. The motive of the visit is wholly improbable, not to say preposterous, even for farce, but the course of the bachelor, in promptly sending for the lady's husband, telling him the truth, and inviting him to help in the salvation of the woman and the suppression of an imminent scandal, is not only natural, but essentially dramatic. This novel expedient—which is, nevertheless, entirely reasonable—not only revived interest in a play which was on the verge of failure, but left the final outcome in uncertainty, thus offering an opportunity for a capital last act, which would have ensured the success of the piece if it could have come earlier. Unfortunately, the character of the heroine is so overdrawn in the first act as to be fully as unsympathetic as it is incredible, and neither the personal charm nor admirable art of Miss Ellis Jeffreys could make it plausible or tolerable. The play, therefore, may be dismissed with this brief notice, but the performance of it deserves a few lines of special commendation. It is gratifying to know that the English stage is still capable of supplying a travelling company of so high a general level of excellence. The piece, which might have easily degenerated into clumsy farce, was played throughout in the right spirit of light comedy, with ample vivacity, but no exaggeration. Miss Jeffreys once more proved herself a very adroit and delightfully humorous actress, and Mr. Cartwright displayed rare versatility in the character of the abused and afterward masterful husband. Mr. Gerald Lawrence played an ungrateful part with fine tact, and Mr. George Giddens furnished as hilarious a bit of broad comedy as has been seen here in years, and that, too, without exaggeration or offence of any sort. Nor were the minor characters of far inferior quality. It is to be hoped that the combination will be seen in some more valuable play.

Concerning the English version which Langdon Mitchell has made of Gordin's "Kreutzer Sonata" few words are needful. He has acquitted himself of his task well

enough, but it is not easy to discern why he or anybody else should have undertaken it. The piece is essentially disagreeable, in character and atmosphere, and neither the theatre nor the public has been benefited by its translation from the Yiddish. Undoubtedly it contains some notable theatrical opportunities for an actress of the calibre of Madame Kalich, who rises in it to a high pitch of emotional exaltation. She is an actress of distinction and power, whose advent upon the English stage is welcome, but it is to be hoped that hereafter she will seek to exhibit her talents in more wholesome, nobler, and more inspiring forms of drama.

A practical step has at last been taken to perpetuate the memory of the late Sir Henry Irving in England. At a meeting of the committee of the Actors' Association, in London, it was decided to call a public meeting for October 1, and Sir Squire Bancroft has promised to preside. No details have so far been arranged, but it is expected that the gathering will take place at His Majesty's Theatre.

Why should the State of Maine produce nearly all the great singers of this country? Annie Louise Cary, Lillian Nordica, and Emma Eames are three of them, and now it appears that the young American soprano, of whom all Europe is at present talking in terms of rapture—Geraldine Farrar—was also born in Maine, at South Paris. Miss Farrar took part the other day in the Mozart Festival at Salzburg; and what the eminent Viennese critic, Richard Wallaschek, wrote of her on this occasion is typical: "The brilliant Miss Farrar took the hearts of the festival public by storm. Two days after her first appearance it was impossible in all Salzburg to buy another picture of her. This fact indicates better than a long description the impression she has made here. It is not easy to describe her in a few words. Her voice sounds dark at one time, bright at another; her artistic personality affects one as being both serious and sparkling, fickle and faithful."

Pianists might do something toward rescuing their recitals from disfavor by reviving some of those marvellous operatic fantasias of Liszt with which he used to attract large audiences. In this connection it is of interest to recall what happened in Berlin a few winters ago. Busoni gave a series of concerts at which he revived a number of those fantasias. They aroused the enthusiasm even of Dr. Leopold Schmidt, critic of the *Tageblatt*, who is not a Lisztite, but who admitted that these "Don Juan," "Rigoletto," "Robert the Devil," "Lucrezia Borgia," etc., fantasias of Liszt were as entertaining as ever. "It seems to me," he added significantly, "that if we are to be called on to admire the art of playing the piano, such programmes are much more suitable for concerts than the customary sonata programmes with their serious educational physiognomy. The audience was evidently of the same opinion, for it was genuinely enthusiastic."

While these fantasias are for the most part for concert pianists only, it is well to bear in mind what that perspicacious and peppery pianist-teacher-critic, Hans von Bülow, once wrote: "Some day I shall make a list of all those Liszt pieces which the

majority of amateurs will find much easier to master and digest than the chaff of a Thalberg or the wheat of a Henselt or Chopin. But the edict has gone forth that the name 'Liszt' as composer for pianoforte means pieces of such gigantic difficulties as to be practically unplayable. 'Tis a harmless yet none the less foolish prepossession of the ignorant, like numberless others."

Whether Bilow ever carried out the plan referred to is not known to the writer of this paragraph. But there is an admirable collection of such pieces edited by Mr. August Spanuth and published by the Oliver Ditson Company. It comprises two of the "Dream of Love" nocturnes, the "Dance of Gnomes," "Murmuring Wood's," two "Consolations," "Ave Maria," "On Lake Wallenstadt," "Pastorale," "At the Spring," "Longing for Home," "Gondoliera," "Album Leaf," and eight other favorite pieces, besides a biographic and critical introduction. Another of Mr. Spanuth's volumes in the same edition includes ten of the Hungarian rhapsodies; a third, twenty of the Liszt transcriptions of pieces by Chopin, Franz, Gounod, Mendelssohn, Paganini, Rossini, Schubert, Schumann, Alabieff, Verdi, and Wagner. These three volumes cannot be too highly commended to all advanced students and pianists. Of the famous Liszt études the best edition, perhaps, is that published by Augener & Co., with an admirable introduction by Edward Dannreuther, who calls attention to Liszt's incessant striving for perfection as shown by his frequent revisions of his own works.

The late Sir George Grove's book on Beethoven's symphonies has appeared in a German translation—an honor he deserved and would have appreciated, though hardly expected, for he was modest, and when he wrote that book he was quite afraid of the professionals and anxious to emphasize the

fact that it was written only for amateurs. The English are appreciating more and more what Grove did in helping them to listen to good music understandingly. As one critic remarks: "Certainly, many a middle-aged amateur of to-day can trace his first real appreciation of the classics to Grove's stimulating and infectious enthusiasm." He was one of the first to write analytical programmes for use at concerts, at first on a slight scale, gradually more elaborately, but never pedantically.

In summing up, in the *Etude*, an article written by Mr. E. Markham Lee for the *Journal of the International Music Society* on the future of the cadence, Mr. Arthur Elson says: "According to his ideas, most of the present methods of closing a piece are becoming stale, flat, and unprofitable from over-use. He speculates on the adoption of new ones, and cites several instances, among them one by MacDowell, including the sixth note of the scale with the common chord." The theorists will find many other new things in MacDowell's music when they begin to study it. As for cadences, there are six European masters who especially abhorred the stereotyped closes and showed the way to endless variety: Schubert, Chopin, Franz, Wagner, Liszt, and Grieg.

BOOKS OF THE WEEK.

- Braudes, George. On Reading. Duffield & Co. 75 cents net.
 Brown, Charles Reynolds. The Social Message of the Modern Pulpit. Scribners. \$1.25 net.

The English Reviews, having had a chance at the advance sheets of William De Morgan's JOSEPH VANCE, have expressed themselves as follows:

Spectator: "A remarkable novel—a fine novel—by whatever standards we judge it. . . . We have never for a moment a doubt about the reality. Every character, down to the humblest, has the stamp of a genuine humanity. . . . Joseph seems to us a remarkable character study, done without sentiment or rhetoric. Mr. Morgan shows that it is possible to be shrewd without cynicism, and humorous without buffoonery. . . . The elder Vance . . . is . . . one of the most delightful people of our acquaintance in fiction. . . . No book has appeared for long in which lovers of the classic tradition in English fiction are likely to find such generous entertainment."

Review of Reviews: "In Mr. De Morgan's 'ill-written autobiography' the writing is in truth consummate art. Of how many novels containing over 500 closely printed pages can it be said that skipping is impossible? . . . The 'people' are there from the beginning, and it is these real, living human beings who fascinate."

Speaker: "A human document, and impresses one as a close study from life itself. The humour is too dry to have been invented, the satire too delicate. And the sadness of the book, too, is the sadness of life, the tragedy that arises from mistake. . . . A finely-written work, which deserves to stand high above the average output of fiction."

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 20, 1906.

The Week.

Secretary Root's completion of his South American circuit is worthy of more than its indifferent reception by our press and public. He has had something like a triumphal progress. His bearing has been at once dignified and tactful, and his public utterances have been weighty and at the same time conciliatory. The happiest impression has been made throughout his tour, and this country has been placed in a newly advantageous position to strengthen friendly and profitable relations with the countries to the south of us. But what sign is there that anything will really be done? What evidence can any one point to that the Americans of the North are prepared to shake off their old contemptuous attitude towards the Americans of the South? The truth is that years of the protective tariff have made us a home-keeping nation, with homely wits. We are not keen enough to see, or to care, that the Germans and English are far outstripping us in the South American trade, and for obvious reasons. If we give any attention to the matter at all, it is in order to emit a stupid growl at the "unfriendly" way in which Brazilians and Argentinos buy more of our rivals than they do of us; and then to talk again of falling back on bounties and hostile tariffs to do for us what only energy and skill can achieve. Mr. Root's voyage has put us in the way to change all that, if we would; but we fear it will be long before our protectionists can bring themselves to think of wool and copper and hides as aught except inviting objects for thumping tariff duties.

The agreement at the Rio conference Monday in favor of uniformity in customs legislation, consular regulations, and the publication of statistics among the American republics, is one of those resolutions which every one agrees to at sight, but which encounter all manner of obstacles in their execution. The movement in this country toward uniform methods of municipal accounting has even greater practical advantages to recommend it, yet for all its creditable progress the result aimed at is still far off. Part of this is due to sheer inertia. As regards the classification of goods, methods of manifesting, and so forth, a fresh start would not present great difficulties, once it is agreed which features of the diverse existing systems are worth preserving. But on the point of international statistics another con-

sideration comes in. As tables of trade and the like are reformed so as to be comparable with those of other countries, they cease to be comparable with those of previous years at home. As they become more useful in a horizontal plane, so to speak, they become less useful vertically. The disadvantages are outweighed greatly by the advantages, but natural conservatism defeats a good many desirable reforms.

Signs of party break-up are visible all around the political horizon. Here in New York conditions are chaotic beyond recollection. The Hearst movement is a striking witness to the relaxing hold of party and to the vague desire of multitudes that new methods and new leaders be given a trial. And evidence comes from State after State of similar discontent and unrest. In Massachusetts insurrection is astir in both parties. New Jersey is baffling all prediction as to what will occur in her politics. Even in the boss-ridden Republicanism of Ohio, there are mutterings of revolution. With the State machine fully in their control, Senators Foraker and Dick had yet to suffer the mortification of having 47 out of 88 counties vote against their domination. There may come good or there may come evil from this breaking-up of the fountains of the political deep. In so far as it signifies a growing independence, a disposition to go behind party names to political realities, a reaching after a more sincere and vital leadership, with a determination to destroy the corrupt alliance between selfish politicians and unscrupulous corporations, we certainly can but welcome it. It will teach citizens to think freely and vote independently. It will warn bosses that they are but mortal. It will help the people to regard party in its true light—merely a political means to a political end, and always to be cast aside when it forgets or imperils the end. People in rebellion against existing political conditions must not, however, suppose that any political conditions whatever can usher in the millennium. In a little book just published by the hard-headed French economist and publicist, M. Yves Guyot, is a sane discussion of the causes and perils of French Socialism. A part of his analysis is applicable to this country in such a time of political unrest as the present. He points out the impossibility of doing away with governmental and economic realities by any form of political words or party professions. Socialism as a political force is, he contends, really a revival of the belief in miracles, though these latter-day ones are to be wrought by the Govern-

ment. To preserve while improving should be the steady rule of the statesman. Without revolution or even rash experiment, it should be possible to take advantage of the new spirit abroad in the land in order to arouse a new and effective desire for public justice, for the equal enforcement of the law, for the striking down of all forms of favoritism, and for the unchaining in every way of the spirit of individual enterprise.

Capt. John J. Pershing, Fifteenth Cavalry, whom President Roosevelt has just advanced to the rank of brigadier-general, obtains his great promotion at the expense of 257 captains, 364 majors, 131 lieutenant-colonels, and 110 colonels, all of whom he overslaughes. The special excuse for this extraordinary advancement is Capt. Pershing's work while commander of a small force in the Lake Lanao country of Mindanao, in 1902. In its extent and results this achievement would have ranked during our civil war as one of a thousand raids into the enemy's country to which no special attention was paid. There is very considerable difference of opinion in army circles as to the military value of the exploit; some officers maintain that it accomplished little or nothing permanent, and that, so far from being an expedition into country unknown to Americans, officers with small escorts had several times traversed this district without causing any bloodshed whatever, or even being threatened. Obviously, the worth of Capt. Pershing's exploit, and his own personal conduct, ought to have been clearly established, at least to the satisfaction of the service, before being so munificently rewarded. With the theory that Capt. Pershing's promotion was due to his being a son-in-law of Senator Warren, the chairman of the Senate Military Affairs Committee, we have no sympathy. That is merely a coincidence, for which Capt. Pershing deserves—from one point of view—commiseration. But the fact remains that Capt. Pershing's brother officers are not at all enthusiastic over his advancement. The resulting injury to the service is manifold: (1) It intensifies the bitterness and dissatisfaction growing out of the advancements or appointments of Grant, Wood, Funston, A. L. Mills, and others; (2) it puts a premium on slaughter in the Philippines, as an easy way to high rank, and (3) it does the gravest injustice to the present colonels of cavalry, some of whom, like Augur, Kerr, and Morton, have well earned promotion. Col. Morton was a private in July, 1861, when Capt. Pershing was exactly ten months old. It is

true that Mr. Roosevelt had to make Capt. Pershing a brigadier, or give him no particular reward; but this merely emphasizes the need of a general law affecting all cases of really distinguished service.

"It is almost certain," acknowledges Chairman Sherman, "that in the next House the immense Republican majority will be cut down somewhat." In fact, no Republican authority thus far has expressed the slightest hope of retaining the present unexampled majority in the House. The combined Congressional pluralities in Maine were reduced from 26,154 in 1904 to something between 7,700 and 8,600 in 1906; that is, a loss of between 4,300 and 4,600 to a district. The Republican majority could withstand that scaling down in Maine. It is natural to ask how many other Republican districts are strong enough to do so. The answer is found in the list of Republican Congressmen elected in 1904 by pluralities of less than 4,300. There are fifty-three Republican Congressmen whom a Democratic success within their districts equal to that in Maine would defeat outright. The House now contains 249 Republicans to 137 Democrats. Subtract 53 from the former, add it to the latter, and the complexion of the body would be Republicans 196, Democrats 190. Maine September elections are not, however, like those of Vermont, regarded as prophetic. It will not do to draw too positive inferences. But certain facts stand out clearly. The Republicans do not expect a repetition of 1904, but rather a restoration of the conditions that prevailed when a strongly Republican Congress was elected in 1902.

The insurgents who opposed the reduction of the Philippine tariff because their own districts produced tobacco or sugar attained a great deal of notoriety last winter. But the smaller body of men who placed national honor above parochial considerations are more worthy to be remembered. Those who had the courage to vote against the immediate wish of their tobacco and beet-growing constituents did so with full knowledge of the effect it might have on their political fortunes. Connecticut and Wisconsin are the chief Northern tobacco-growing States; of the five representatives from the former, only one member, Mr. Hill, voted for relief to the Filipinos, and of the eleven from Wisconsin only two, Messrs. Cooper and Esch. It is against these two that the issue of this vote has first been raised. Both men were vehemently attacked for their "blow to home industry," but it is to the credit of their Republican constituencies that both were renominated at the recent primaries, Cooper by a majority of more than two to one, Esch

without any opposition at all. The fact that, in spite of angry talk, they were not punished for their conscientiousness in voting should be an encouragement to other members in both branches of Congress. It is the community which gives its representatives a free hand that comes in time to be represented by men of statesmanlike size.

The growing interest in the primary—the struggle in this city on Tuesday is a case in point—is seized upon by some as an objection to the whole system of the official and law-protected primary. It really gives us two elections, it is said, thus unnecessarily doubling their labor, their cost, and their turmoil. To this complaint it may fairly be rejoined that the pains of the method may be but the inevitable pains of free government. As Jules Lemaitre has said, there are ways of freedom (*mœurs de liberté*) which are not always easy or agreeable, but which are necessary if self-government is to be worked. Arbitrary rule would spare us all such trouble, but it would spare us all our democratic rights, too. Of course, the freedom which primary reform has aimed at, is freedom from boss or machine dictation. Really to invite and empower the rank and file of a party to make their own nominations, instead of meekly or angrily taking them cut and dried from a boss, requires work and time and vexation of spirit. And if it takes the equivalent of two elections to work out this great deliverance, it is not for the heirs of our fathers to repine. The official primary, even when of imperfect form, affords a new ground for appeal to the party voter to attend to his political duties. There is every reason, however, why that weapon should be made as effective as possible. The official primary is a great improvement, but it falls short of the direct primary. In New York, as in New Jersey, we still elect delegates in the primaries; in Wisconsin, in Georgia, in Texas, actual nominations are made in the primaries. This certainly makes for a clear understanding, and for thorough work while the job is in hand.

A number of literary and magazine folk of prominence in various good-government movements have combined to form a "People's Lobby," and appeal to the public for support, asking merely dollar subscriptions. What is proposed is a vigilance committee adapted to twentieth-century conditions and the longitude of Washington. All legislation will be subjected to expert scrutiny, flaws careless or intentional will be reported to the appropriate Congressional committees, the personal responsibility for delaying or defeating good legislation will be fixed, and he who bedevils a good measure will be held up to universal

scorn. Towards so much zeal for the republic it is very difficult for us to take a skeptical attitude. But we are constrained to doubt if the matter of securing good Federal laws is as simple as having even the most authoritative committee tell Congress what to do and what to leave undone—on pain of being reported to the people. Furthermore, the vigilantes most in evidence, though we sincerely believe them to be "independent of concentrated capital and of organized labor," have not established a reputation for discretion. We believe that many of them have done good, and we are in no sympathy with the present practice of dismissing them all with the epithet of muckraker; but we cannot see that they have made good their pretensions to be regarded as tribunes of the people. But were we to accept their magazine articles at their own estimate, we should still remember that the task of getting good Congressional Government is not that of contriving a brilliant censorship in the name of the people, but the far greater enterprise of rousing the average voter to a sense of his responsibilities.

Food adulteration is an amiable and harmless practice beside drug adulteration and substitution. The disclosures made through the investigations of Dr. Darlington, Health Commissioner of New York city, are certainly startling enough, though they were foreshadowed by earlier inquiries of a less exhaustive sort. Out of 10,000 samples of standard drugs bought in the retail market of this city, only about 28 per cent. "can be considered good"; 16 per cent. called for warnings to the manufacturer, while no less than 56 per cent. were bad enough to justify prosecution under the laws of this State. It is a rather interesting circumstance that Dr. Darlington expects to be able to remedy these conditions through the agency of existing laws, and before the National Pure Food act goes into effect at all. The function of that measure is to protect the scrupulous and careful States from being victimized by those which provide no safeguards against dishonest products. It will be vastly easier to keep such goods out of any local market after this new law takes effect, but it does not do away with the need for vigilance on the part of others than the Federal officials.

Although the formation of a British General Staff is announced as a new departure, a *de facto* General Staff has existed for some time past. Warmly recommended by the Esher committee on army reorganization, its adoption was forced by the glaring weaknesses shown in the Boer war, precisely as the American General Staff was the result of the

breakdown of the War Department bureaus in 1898. For England, it is, as Mr. Haldane remarks, "a very important step in the reconstitution of the British military system." Yet, like independent commentators on the American General Staff, he does not guarantee that the new body will of itself give permanent satisfaction. A General Staff is a valuable piece of machinery, but upon the men who work it, and their spirit, depends its value to the nation. Mr. Haldane warns the English army that, if its new staff officers prove to be merely pedantic theorists, they will fail to benefit the service. With us the danger has been that the General Staff might become an advocate of a large army. Fortunately, its activity in the direction of new legislation has been limited to drawing measures asked for by the Secretary of War. As a whole, its influence has been excellent, and its beneficial effect on the army has been visible in many ways. The British General Staff should be able to forward even greater reforms than ours, and, if it has wisdom and popular support, eventually make of the English army a competent machine from both the military and the business points of view.

The strength and influence of the Labor party in Parliament attracted especial attention to this year's Trade-Union Congress, which was held in Liverpool and adjourned on the 8th of September. With the present Liberal Government the congress seemed on the whole well pleased. It was not, however, satisfied with the Trade Disputes bill, introduced by the Government to nullify the effect of the Taff-Vale decision, which made trade-union funds liable. The congress demanded the complete immunity of the trade-union treasury. The bill to which the congress objects makes it possible to attach these funds in certain cases. For many of its provisions there is general support; yet it is essentially a dangerous measure, since, as so distinguished a jurist as Lord Lindley has just pointed out in a public letter, it concedes to the trade unions the right to stand above the law and to be accorded special privileges and immunities which are not given to other classes of the community. Not satisfied with attacking the special privileges of others, the labor unionists desire a few for themselves. Moreover, the bill would give them the right to coerce the non-union man into joining their organizations, although it is the duty of the state to safeguard every man who desires to work in or out of a union. So far as its attitude on this bill goes, the Trade-Union Congress will do much to strengthen the fears of those who behold in the Labor party in politics a menace to British political institutions and traditions.

The recent illness of the Sultan calls attention to the attitude of the Turkish court toward modern medical science. Abdul Hamid II. was so fortunate as to be brought up under the care of a Greek physician, Mawrogeni Pasha, who taught him the rules of personal hygiene from his childhood. It was he who advised the Sultan, after his accession, to abandon the old palace and build a new one on the heights. It was he who was responsible for the numerous modern hospitals built in the provinces as well as in the capital. But the time came when he fell into disfavor. An Albanian, Beiram Effendi, became the head of the medical staff, and his view of medical science was almost as scornful as that of a Christian Scientist. He knew nothing whatever of surgery, and opposed it fanatically. Bernhard Stern relates in his recent volume on the Sultan, that during the last war with Greece, Beiram would not allow the wounded to be operated on; his argument was that if God willed it they would recover any way, and, if not, amputation would be a crime. A special hospital was built for him, where, somehow, it nearly always seemed God's will that the patients should die. He rejected antiseptics and iodoform, and spoke disrespectfully of the microbe theory. The Sultan's personal attitude at present is by no means hostile to medical science. As we have just seen, he occasionally sends to Germany or Austria for experts. The "court pharmacy" is never patronized by him, his drugs and medicines being specially prepared in an office near his private apartments.

During the last fifty-five years the private wealth of Switzerland has grown from two billions to three billions four hundred millions, a remarkable increase for so small and naturally poor a country. But the most striking fact is that no less than two-fifths of the total have been acquired by the hotel proprietors—a striking testimony not only to the cash value of Switzerland's mountain scenery, but to the efficiency and economy of the Swiss *hôtelier*. As the London *Spectator* points out, the secret of this success is an open one: the hotel-keeper makes his business the study and the science of a lifetime. More than that, the natural beauties of his land have been exploited in a steady, systematic, and conservative manner. Elsewhere it is not so easy to draw tourists, save in Italy. There the tide of travel rises steadily, receding but slightly even in the summer. In France and Germany the attractions are not so obvious; hence in both countries efforts are steadily made to notify the outer world of the special sights or the unusual features which should draw the foreigner with his well-filled purse. So systematic and far-reaching have been the efforts in

France to organize *le tourisme* that an account of the principal agencies has recently been deemed worthy of a place in the *Revue de Paris*. They are the Alpine Club, the Touring Club of France, and the so-called "*Syndicats d'Initiative*," groups of professional and business men whose localities are certain to profit by the influx of tourists. From all this there is much to be learned by Americans. The "See America First" movement is widely advertised, and local improvement associations are increasing. The League of American Wheelmen, once so powerful, had on its programme not only road improvement, but the securing for its members of special advantages at the rural hotels. But at present, the railroads are practically the only agencies engaged in exploiting our natural wonders. In these the country is exceedingly rich, and their systematic development must come some day, despite our vast distances. Meanwhile, there is a crying need for a strengthening of the good-roads campaign, for a propaganda for good hotels and inns, and for more scenic-preservation societies.

Prof. Brander Matthews has a long letter in the London *Times* explaining to the heavy-witted Briton the plans of American spelling reformers. Like President Roosevelt, he minimizes the changes proposed in the famous list of 300 words, but he frankly admits that "a second list" will be issued "sooner or later." Professor Matthews perceives that the argument about the saving of the children's time and nerves hardly counts if it is only a question of spelling a few words in a shorter form; and that the principle of "simplification by omission" must be applied rigorously up and down the language. He adds that the American reformers are seeking the aid of English scholars, and announces the adherence of Dr. Murray and Dr. Bradley of the Oxford Dictionary. But another correspondent of the *Times* feels that there must be some mistake about this. He refers to the "Rules for Compositors and Readers at the University Press, Oxford," which, it is explicitly stated, had the sanction of Messrs. Murray and Bradley. One of the rules is:

"In words ending in 'ment,' always print the 'e' when it occurs in the preceding syllable, as—abridgement, acknowledgement, judgement, lodgement, and, in a note, Dr. Murray says: "I protest against the unscholarly habit of omitting it from abridgement . . . which is against all analogy, etymology, and orthoëpy." "I think the University Press ought to set a scholarly example, instead of following the ignorant to do ill, for the sake of saving four e's."

The correspondent remarks: "This is strong language, and it includes among the ignorant who do ill President Roosevelt and his advisers, for 'abridgment' is the first word in the American list."

THE SITUATION IN CUBA.

President Roosevelt's letter on Cuban affairs and the dispatch of Messrs. Taft and Bacon to the island have already had a quieting effect. At last some realization of the imminence of a catastrophe has dawned not only upon the rebels, but upon the Government as well, and has led President Palma to stop fighting. If some sort of agreement can be concluded before the arrival of the American envoys, none, we are sure, will be more pleased than Mr. Roosevelt and Mr. Taft. The latter would then be free to investigate the causes of the revolution and give such advice as might lead to a permanent peace. Whether that can be obtained now without President Palma's withdrawal from office would seem dubious.

It is the solemn truth which the President told the Cubans. Their civil strife, with its break-up of order and security, is really a war against Cuban independence. Such senseless fighting will, if continued, make American intervention certain. And if this country again has to set up a military rule in Cuba, it means the end of the Cuban republic. Perception of this fact is filling with grief those Cuban patriots who worked and suffered for forty years in the cause of independence, only to see their great hope dashed just as it apparently came to fruition. Nobody can doubt that the President speaks as a sincere friend and well-wisher of Cuba; and that it is a cause of genuine sorrow to him, as to Americans in general, to see the independent Government of Cuba fall in pitiful collapse.

Secretary Taft is an ideal envoy to Cuba. His valuable experience in the Philippines, his poise and sagacity and good humor, his entire freedom from race prejudice, fit him admirably for the conciliatory mission before him. Upon its success, all our desires must now hang. The situation is extraordinary. The Palma Government has shown amazing feebleness, and appears to have but small hold upon the affection or loyalty of the Cuban people. On the other hand, the insurgents are fighting for they scarcely know what. This is evidenced by their really comic eagerness to surrender to Commander Colwell of the Denver. Yet this very state of uncertainty and confusion suggests a way out. If Palma and his supporters can be persuaded by Mr. Taft to meet Zayas and Menocal and the aggrieved veteran generals to talk matters over and agree upon some fair measure for the restoration of peace, Cuba may remain independent. Short of some such plan, there seems to be no way of averting what the world will call the suicide of Cuba.

Annexation, the President must clearly see, would seriously hamper other cherished policies of his. Secretary Root

has steadily pointed to our relinquishment of Cuba as the great proof of American disinterestedness in our dealings with Spanish-American countries. "We want no more land; we absolutely do not dream of annexing territory." Obviously, anything like eagerness now to get our hands upon Cuba again would give too cynical an interpretation to these professions. And in the President's plans for interference in Santo Domingo, the Cuban precedent has been the sheet-anchor of his defenders. When it was argued that financial control of the Dominican Republic would soon mean political control, Cuba has always been pointed to as sufficient refutation. Mr. Roosevelt will not voluntarily be drawn into any course that might destroy that argument. Moreover, those who cry out so easily that the Cubans are not fit for self-government, and that we might as well, soon as late, take over the island, forget that, even if Cuba were an American possession, it would have to govern itself, at least locally. If the habit of submission to the majority and the craving for settled and orderly government cannot be established in Cuba the independent republic, the outlook for Cuba as an American Territory or State would be gloomy. Thus it is on all accounts to be hoped that some means may be found of permitting or helping the Cubans to run their own affairs.

JACQUERIE AND REVOLUTION.

The summer is nearly over, the long Russian winter is approaching, and the Russian peasants have not yet risen in revolution. When will they? In October, says Mackenzie Wallace, in an article in the *London Times*. For nearly two years, as insurrection and slaughter have followed each other in the cities of the Empire and left the monarchy intact, the friends of Russian liberty have attempted to make light of mere incidents, like the outbreaks at Moscow or Sveaborg. They bid us wait for the critical moment when Ivan awakes—Ivan who constitutes 85 per cent. of the Czar's subjects, and without whom revolution is impossible—as though the success of revolution is necessarily determined by majorities. But Ivan, if the sum total of his activity is to be justly appraised, has continued to sleep. Repeatedly he has stirred in his slumber, and after his own blundering fashion has struck out, burning a few estates and cutting down some square miles of forest. A recent traveller in Russia says of the peasant:

He burns crops which he needs to satisfy his hunger; devastates the land which he wishes to possess; and drinks the vodka which yields the tax which he has sworn not to pay. I have driven across long reaches of territory over which previously hordes of drunken peasants had passed,

pulling down houses and barns, burning forests and crops, and killing man and beast. They had no definite plan, no distinct object, no clear motive; and when I have asked them why they had done those things, they have scratched their heads, as peasants always do when they are perplexed, and replied: "How can I say?"

What is there to be hoped for from the Russian peasants? Venturing into the dangerous realm of historical comparison, we find in the story of peasant uprisings in the past a record of almost uniform failure, following upon an almost uniform sequence of events—an upflare of leaderless revolt marked by brutal excess, a brief and tumultuous career of triumph, while the erstwhile master is regaining breath from the surprise and mustering strength for the single blow that usually suffices, and then the crashing down of that blow upon an unorganized, pitiful mass, with the ensuing general massacre and battue of panic-stricken refugees. The process is true not only of Jack Cade and the peasants' war in Germany; it is working itself out now on a minor scale in Russia. The trouble with the methods of peasant warfare is that they are undramatic. Probably as many peasants have been whipped to death or shot down by the Cossacks during the last year and a half as fell on the barricades in Moscow last winter. But the affair at Moscow for a moment shook the throne of the autocracy, and the killing of the peasants has received a few scanty notices in the newspapers. The fighting at Sveaborg was momentous because it was a spark that might have set the Empire on fire; the knouting of peasants comes within the ordinary day's work of the Russian policeman. It is sad without being dramatic. The precise parallel obtains among us to whom the crushing to death of thousands on the railroads is but the matter of a paragraph quoted from an uninteresting Government publication at the end of the fiscal year. It requires a holocaust of a score of lives amid lurid horrors to rouse us to the necessity of change.

The Russian revolution, then, will seemingly have to win its victories in the cities, the nerve centres of the Empire, most probably in St. Petersburg itself. To put it crudely, if revolution is the taking of power from those who hold it by those who have it not, it would seem obvious that for the seizure to take place the two parties must come into close contact. Since monarchs are only human, a revolver close to the head will secure concessions that a more distant menace would fail to extort. Louis XVI. across the border, or even at Lyons or Compiègne, would not have yielded what Louis XVI. at the Tuileries was compelled to give up. And a quarter of a million of peasants pillaging in Saratoff and Samara are a negligible quantity as compared to a mob of

ten thousand men from the Putiloff iron works around the palace of Peterhof. There is no need to go to Berlin and Vienna in 1848-49, or to Paris repeatedly, for instances of what a city in arms may accomplish. The ancestor of Nicholas II., Michael Romanoff, owed his elevation to a national uprising under Minin and Pozharsky, which, by wresting Moscow from the Poles, shattered at one blow the foreign tyranny in Russia.

But though it would seem that the decisive battle between the people and the Government of Russia must be fought out in the cities, this does not at all mean that the peasants are a negligible factor in the present struggle. Said Nekrasoff: "Give the peasant a little more freedom to breathe, and he will show that Russia has men and a future." Revolutionary propaganda among the peasants pays because agrarian disorders, even if they are of secondary importance in themselves, are useful in drawing off an appreciable number of troops from the urban centres, and thus relieving the pressure at vital points. Rural propaganda also pays in that it infects with disloyalty those who in the course of time will carry the contamination with them into the ranks of the army. Thirdly (and this is due to the peculiar conditions of industry in Russia, where the peasant is so often an agriculturist in summer and a factory hand in winter), it is good tactics to preach the gospel of revolution in the open country uninterfered with by the police, and then to let the neophyte proceed to the cities to put revolutionary theory into practice. The peasant may bring about the fruition of Russian hopes, but he will be most likely to do it in the barracks or in the city streets.

THE IRISH DISTRESS.

No sooner had Parliament adjourned than the condition of Ireland once more began to figure largely in the English press. Early in August it became apparent that the potato crop in a number of counties was seriously menaced by the blight and by incessant rains. From Mayo on the west, Sligo, Roscommon, King's County, Queen's County, Kerry, Leitrim, and Tipperary in the south, was heard the same story of an apparently total failure of the crop, with starvation as the prospect. From all Connaught has come the official assertion that there will be no potatoes available after Christmas, and that the Government must be ready to provide work for thousands who will within a few months be destitute. In the East Kerry districts, grain crops and cereals of every kind have suffered; while from Carrick-on-Shannon and from Ulster come reports that the hay crops have been damaged by the flooding of hundreds of acres of low-lying lands.

To investigate for himself, the Chief

Secretary for Ireland, James Bryce, is now travelling through the country. His mission, however, is not merely to ascertain Ireland's temporary needs, but to study her permanent economical wants. At Bunrana on Lough Swilly, for instance, his attention was called to the lack of pier accommodations. Although the place is an important military and naval port, and the centre of the largest herring-fishing industry, on one day \$5,000 worth of herrings were thrown away for lack of piers. In such cases the appeal is always to London, just as at Portrush, where there is now a direct service to Glasgow, the local boards expect the British Government, through Mr. Bryce, to build a deep-water quay in order to develop the tourist traffic. Years of neglect and of maltreatment of Ireland are now bringing their punishment to England by forcing her to engage in all sorts of schemes, benevolent, paternalistic, even semi-socialistic, to rescue the remainder of the people from the fate of their immediate ancestors. But Mr. Bryce's movements have attracted no more attention than those of the party of eight Liberal members of Parliament, headed by Percy Alden, and a number of representatives of the Friends' Social Union, now investigating the long stretches of barren and waste lands on the west coast from Donegal to Galway. The object of these travellers is also to study economic conditions, and they have carefully avoided the greatly congested districts, since these are even now being studied by an able Royal Commission, of which Lord Dudley is chairman.

Out of all this investigating some good should surely come. Helpful as were the Wyndham Act of 1901 and the Irish Laborers' Act of the last session, much must be done before Ireland can really be regarded as prosperous. Almost the whole of Donegal, for instance, consists of "huge masses of granite, interspersed with peat bog, a wild, desolate region, where human life cannot be sustained from the land alone, even by unending labor and toil." Hence the Congested Districts Board has had to start up carpet factories and revive the lace industry and other home employments, such as the making of homespun tweeds. But as even in the factories a woman worker can earn only from \$1.25 to \$1.75 a week, the road to wealth is by no means easy. The fisheries are more promising, for Donegal County has 680 miles of coast and seas that fairly teem with fish. Thanks to Governmental guidance and aid, this trade is rapidly developing. In the twelve years from 1893 to 1905 the income of all the west coast fisheries has grown from \$5,000 to \$300,000 a year; of this the Donegal boats, supplied by the Congested Districts Board, earned \$90,000. The Board has lent or sold

seventy boats, with nets and gear, to crews of fishermen. The lack of adequate harbors and piers alone prevents the building up of a great industry, for the Donegal herrings are of the finest quality and are readily sold in New York, Russia, and Germany.

In Connemara, too, conditions are dark, although neither here nor in Donegal are they so bad as in the really congested districts. But Connemara, according to Mr. Alden, is also a "wilderness of granite and stone, the abomination of all desolations," where for miles and miles no family ever earns more than \$60 a year from every source. Mr. Alden found the inhabitants in despair, so he writes to the London *Tribune*, for their holdings are unprofitable, their fisheries a failure, and their potato crop totally lost. In order to get any cheer, he had to turn to the work of the Government in breaking up great estates. For instance, the Congested Districts Board has purchased Clare Island, 6,000 acres in extent, for \$25,000, and transformed the island from a "scene of lawlessness and discontent to one of peace and comparative prosperity." Where formerly periodical raids by the constabulary were necessary to obtain such rents as could be squeezed out of a reluctant and sullen people, the present collector reports that all of the Board's tenants pay regularly every penny asked of them.

Praiseworthy as all this relief work is, where does it eventually lead? Mr. Alden doubts whether Englishmen will be able to solve the Irish problem in a given time. The Dublin *Freeman's Journal*, which speaks for many high-minded Irishmen, rejoins to this:

Can they hope to solve it at all? Is it possible; is it in the least degree necessary? Let it be understood that the Irish people make no such demand on English time. They do not hope that England will ever be able to thoroughly understand Ireland, will ever be able to legislate satisfactorily for the country, or administer the laws. The Irish demand is not that England shall govern them in this fashion or in that; it is merely that they may be allowed to govern themselves. What to the English people is, and always will be, the Irish problem, to the Irish is no problem at all. They understand the question, and are prepared to deal with it. They do not ask a helping hand, but a free hand.

Similar views are freely expressed in such prominent Liberal newspapers as the London *Daily News* and *Tribune*. The former, in a recent leader, expressly asserted that Irish government alone can be successful in Ireland, which must "develop her civilization along her own ways." Hence Irishmen and the friends of Ireland are everywhere looking forward to the measure of Home Rule which Sir Henry Campbell-Bannerman is to propose at the next session of Parliament.

NAPOLEON THE LITTLE ONCE
MORE.

There has recently been published in the *Monatshefte* and *Temps* a correspondence between Napoleon III., then a prisoner of war at Cassel, and the Countess Mercy-Argenteau, who undertook to intercede for the unfortunate monarch with the Kaiser. These letters reveal a curious detachment in the fallen Emperor, and a by no means strange incapacity to perceive the promise of the Provisional Government. The first letter of importance, dated February 4, 1871, is practically a personal appeal for clemency. He urges the Kaiser to show that "chivalric spirit" for which he is famous. Now that France is completely conquered, her interests combine with those of Germany. The mushroom National Assembly is incapable of carrying out the conditions of a peace. Naturally, the hero of the *coup d'état* is in favor of that tried expedient, a *plébiscite*. He writes to the countess:

If I were in the place of the Emperor-King and the National Assembly should accept the peace terms, I would require the people to be consulted in order to establish a government strong enough to fulfil the stipulations. If, on the contrary, the Assembly should reject the peace, I would enter Paris at the head of my army; I would drive out the demagogues [the Communists] who have usurped the power, I would treat only with the legitimate government, and would offer it a peace less onerous than that offered the Assembly, and an alliance based on an equitable consideration of the interests of the two countries.

What these conditions should be the prisoner of Cassel does not venture to suggest, but he adds:

Nothing is lacking to the glory of the Emperor-King except to make a truly great peace, and I mean by these words a peace which, instead of leaving ruin, despair, and anarchy as its sign, should cause the greatness of his character and the profundity of his political views to be recognized.

This admonition to the Kaiser through the granddaughter of Mme. Tallien was not quite so fatuous as it seems. Bismarck was nearly at his wits' end to find a Government to treat with. Only three months earlier, before Metz surrendered, he had been willing to recognize "not merely a Republic, but, if you will, a Gambetta dynasty, only that dynasty must give us a secure and advantageous peace"; this assured, any régime would do, "whether Bleichröder's or Rothschild's." At that time the great Chancellor had received Napoleon's emissary, Gen. Boyer, favorably, and had expressed a desire to negotiate with the Empress as Regent. Even later than this letter, Bismarck used the name of Napoleon to smother Thiers's appeals to Europe. "If you speak to me of Europe," said the Chancellor, "I will speak to you of Napoleon and of the 100,000 bayonets which, at a wink from us,

would reseat him on his throne." "That must have made an impression on Thiers," Bismarck observed, "for the next time he felt inclined to talk of Europe he suddenly checked himself and said, 'I beg your pardon.'"

Whatever plausible illusions Napoleon may have cherished as to his residual importance, his letter made no impression on the Kaiser. The next communication to the countess contains nothing of note except a characteristic remark on a point of international etiquette: "The eagerness of the neutral Powers to recognize the kingship of M. Thiers is a proof of the little dignity that inspires foreign courts." The Tuileries, even in exile, still asserts a pretension to be considered an arbiter of elegancies. On February 25, 1871, the day before the peace protocol was signed at Versailles, Napoleon III. had evil presentiments. Things, he says, are taking a bad turn. The Orleanists must be reckoned with. The people cannot pardon him for having been "so ill-served and unfortunate."

News of the hateful bargain of Versailles shook the Imperial prisoner out of his egoism. In a letter of March 2, he discusses the matter in passionate terms, very like those which Jules Favre and Thiers used vainly in the negotiations with the implacable Bismarck. "It is no peace that the German Emperor has made; he is trying to kill us, and instead of reestablishing peace, the treaty sows hatred and mistrust for the future." In words that have the weight of prophecy, Napoleon III. continues: "Is it well calculated, even for Germany? I do not think so. The present state of civilization in Europe brings nations together in such bonds of common interests that the ruin of one reacts upon all the others." He returns to his dogma that peace should have been made with a solid and legitimate Government—and this time probably he does not mean himself exclusively. To have drawn a peace accepted by all France would have been high politics. "Hatred of Germany would disappear as by enchantment, peace would be assured for many a year, confidence be restored, commerce would resume its expansion, and the German Emperor would gain much greater glory than he will acquire from the possession of Metz and Strasbourg."

In the subsequent correspondence from Napoleon's English retirement there is little but apathy and skepticism as to the fate of the Republic. The Countess abounds in suggestions, and receives merely thanks. He no longer writes to her, as in previous letters, "as if she were his Foreign Minister." He reminds her that they have to do with "pitiless characters." It is futile to work directly in France. "Everything must come about in its time," and one must look for some form of spontaneous

Bonaparteism, though it seems "an audacious hope to concern one's self with the destinies of a people so frivolous as the French." Gradually the correspondence becomes terse and merely personal; a little before his death the Emperor writes: "I will not speak to you of politics, for it's a sad thing to see what is going on; but there is a kind of devotion that makes one forget both ingratitude and malice." His last word to her is, "The future still seems uncertain to me, clouds cover the horizon, and no clear sky is seen."

These letters add nothing new to political history, they do reveal a certain simplicity in the disillusioned Emperor, and present him in a more amiable light than is usually accorded him. Somewhat numbed by his calamities, his old self-infatuation becomes less offensive. If he can hardly imagine a France apart from himself, he at least shares her agony. Finally, he credits the victor with the sort of active benevolence that was so deeply mingled with his own self-seeking. He is perhaps less Napoleon the Little in these letters than he was in his overblown prosperity. In any case, he is hardly the ignoble ironist whom Victor Hugo had lacerated. There is room for curious reflection in the fact that it was Mme. Tallien's granddaughter who became the ardent partisan of Napoleon the Little in adversity. Her more famous ancestress was obstinately denied access to the court of Napoleon the Great. The case is almost an allegory of the compelling influence of the Napoleonic legend in France.

LITERATURE AND THE DOCTOR'S DEGREE.

It is related of Darwin that after a spell of hard work in his study he was wont to come out into the drawing room and rest on the sofa while listening to a novel read aloud. This anecdote may serve as a symbol not only of the scientific attitude toward literature, but of the place that literature is coming to occupy in life. The modern man reserves his serious energy for science or sociology or finance. What he looks for when he turns to pure literature is a soothing and mildly narcotic effect. Many people, of course, do not seek in books even the solace of their idle moments, but leave art and literature to women. "Poetry," as Lofty says, speaking for the men of business, "is a pretty thing enough for our wives and daughters, but not for us." In the coeducational institutions, especially the large universities of the Middle West, the men flock into the courses on science, the women affect the courses on literature. The man who took literature too seriously would be suspected of effeminacy. The really virile thing is to be an electrical engineer. One already foresees a time when the typical teacher of literature will be some young dilettante, who will interpret Keats and Shelley to a class of girls. As it is, the more vigorous and pushing teachers of language feel that they must assert their manhood by philo-

logical research. At bottom, they agree with the scientist—and the dilettante—in seeing in literature, the source not of a law of life, but of more or less agreeable personal impressions.

This curious interplay of philology and impressionism runs through the whole of our language teaching, but is most visible perhaps in the teaching of English. At one extreme of the average English department is the philological mediævalist, who is grounded in Gothic and Old Norse and Anglo-Saxon; at the other extreme is the dilettante, who gives courses in "daily themes," and, like the sophists of old, instructs ingenuous youth in the art of expressing itself before it has anything to express.

Perhaps a majority of the more important chairs of ancient and modern literature in this country is already held by men whose whole preparation and achievement have been scientific rather than literary. This situation is on the face of it absurd, in some respects even scandalous. Yet the philological syndicate can scarcely be blamed for pushing forward men of its own kind; and the problem is in itself so difficult that one should sympathize with the perplexities of college presidents. The young doctor of philosophy has at least submitted to the discipline of facts and given evidence of some capacity for hard work. The dilettante has usually given evidence of nothing except perhaps a gentle epicureanism. Temperamental indolence and an aversion to accuracy have been known to disguise themselves as a love of literature; so that the college president is most often justified in his preference.

Yet it is this acceptance of the Ph.D. as proof of fitness for a chair of literature that is doing more than any one thing to dehumanize literary study, and fix on our colleges a philological despotism. The degree as now administered puts a premium, not on the man who has read widely and thought maturely, but on the man who has shown proficiency in research. It thus encourages the student to devote the time he still needs for general reading and reflection to straining after a premature "originality." Any plan for rehabilitating the humanities would therefore seem to turn on finding a substitute for the existing doctorate. What is wanted is a training that shall be literary, and at the same time free from suspicion of softness or relaxation, a degree that shall stand for a discipline in ideas, and not merely for a discipline in facts. Our language instruction needs to emphasize more than it is now doing the relationship between literature and thought if it is to be saved from Alexandrianism. Alexandria had scholars who were marvels of æsthetic refinement, and others who were wonders of philological industry. Yet Alexandrian scholarship deserves its doubtful repute because of its inability to vitalize either its æstheticism or its philology, because of its failure, on the whole, to make any vigorous and virile application of ideas to life. The final test of the scholar must be his power to penetrate his facts and dominate his impressions, and fuse them with the fire of a central purpose (*ergo vivida vis animi pervicit*). What is disquieting about our teachers of language is not any

want of scientific method or æsthetic appreciativeness, but a certain incapacity for ideas. Some of our classical scholars have done distinguished work of a purely linguistic kind. A number of our scholars in the modern field have achieved eminence not only in linguistic work, but also in that investigation of literary history, which passes with many for literature itself. But we do not get from our teachers of the classics any equivalent of such writing as that of Professor Butcher in England or of M. Boissier in France—writing that should be almost the normal product of a humanistic scholarship; nor do our teachers of modern languages often attain to that union of finished form and mature generalization which is a common occurrence in the French doctor's thesis.

Our inferiority in this respect would seem due in some measure to the fact that with us a mature literary scholarship is not led up to and encouraged, as is the case in France and England, by an appropriate degree. Such distinctions as a First Class in an Oxford Honor School or the French *agrégation* would not in themselves be suited to our needs; but they at least illustrate how a degree that stands primarily for reading and assimilation may be made as severe and searching as a degree that stands primarily for research. If the general principle of such a degree were once accepted, its details could easily be adapted to our special requirements. Perhaps the desired end could best be accomplished by a comprehensive plan for graduate and undergraduate honors in literature. Graduate honors could be used to give the degree of A.M. the meaning it has hitherto lacked, and undergraduate honors to help restore to the degree of A. B. the meaning it is so rapidly losing. Graduate honors should not take more than two years and should hardly attempt to cover more than a single literature; but in that case they ought ordinarily to presuppose undergraduate honors which, like the new honors in literature at Harvard, correlate the ancient and modern fields. By being thus interrelated, the ancient languages will gain immensely in interest, and the modern languages in dignity. Aristotle and Plato should be used, as at Oxford and Cambridge, to give backbone to classical honors and make them a true discipline of ideas, but with greater attention to the modern foreground than is usually bestowed in England. A classical background, again, should, far more than a mediæval one, help the modern languages to develop standards and avoid a cheap contemporaneity. From the lists of books read in schools and colleges and from publishers' catalogues one might infer that what is now taking the place of the masterpieces of Greece and Rome is a hodgepodge of second-rate French and German novels. Even the best judges are impressionists in dealing with contemporaries; so that from the teacher's point of view one is tempted to lay down the rule that the only good authors are dead authors.

Who can doubt that a French teacher who was thus widely read in the ancient and modern classics would be of more use to the average college than the man who had demonstrated his "originality" by collect-

ing examples of the preposition in Old French from Godefroy's Dictionary? Or that the classical scholar who knew his Plato and Aristotle both in themselves and in their relation to the humane tradition of the world, would do more to advance his subject than the man who had devoted painful vigils to writing a thesis on the Uses of *dum, donec, and quoad*? The successful honor candidate would, like the French *agrégé* and unlike the American doctor, have been prepared directly for the work he would normally be expected to do; and then if he had a gift for research, he could, like the *agrégé*, cultivate this gift at leisure and at last publish something that might compare in maturity with the French doctoral dissertation.

For these and other reasons, a new degree would seem to be required as an alternative, if not as a substitute, for the present Ph.D.; a degree that would lay due stress on æsthetic appreciativeness and linguistic accuracy, but would insist above all on wide reading and the power to relate this reading so as to form the foundation for a disciplined judgment. There would then be some hope of our having humanists as well as philologists and dilettantes, and our literary instruction would be safeguarded from the dry rot of Alexandrianism.

FACSIMILES AND ORIGINALS.

Many facsimiles of rare books have been produced, and occasionally one of them is offered for sale as an original. Some two years ago a copy of Thomas J. Wise's type reprint, 1886, of the first edition of Robert Browning's "Pauline," 1833, was thus put on the market. The covers had been pulled off, and Mr. Wise's title and prefatory matter removed, as well as the last leaf at the end, which contains the imprint and date. The price was, if we remember rightly, \$600; cheap enough for an original, but too large a sum for the most inexpert collector to risk on the smallest chance of the book's not being genuine. The reprint was not done by photography, but the types are almost identical with those of the original, and the reprint is very accurate, even to the spacing of words and lines. The headlines and signature marks are in a type noticeably larger than in the original; and there is a slight difference in the position of the signature mark "B" on page 25. In the original this letter is below the last two letters of the word "those" in the line above; in the reprint the signature mark is nearer the outer margin, entirely to the right of the last letter of "those."

The first edition of Richard Hakluyt's great collection of Voyages was published in 1589, in one volume folio. In 1598 appeared the first volume of the revised and enlarged edition, the other two volumes of which appeared in 1599 and 1600. As first issued, the title-page of vol. i is dated 1598, and the volume ends with page 619. Most copies are, however, dated 1599, and contain 606 pages only. The 1598 title contains an additional sentence "and the famous victorie achieved at the citie of Cadiz, 1596, are described," which was omitted from the reprinted title. The omitted pages, 607 to 619, tell of the capture of

Cadiz by the expedition under the Earl of Essex. In 1599, when Essex had fallen into disfavor with Queen Elizabeth, this account of the Cadiz expedition, which was largely laudation of Essex, was ordered suppressed. Probably shortly after 1800 a reprint was made of this suppressed voyage, and this reprint is found in many copies, and is frequently offered and sold as the original suppressed leaves. The reprint, however, is not accurate, and is easily distinguished. The original ends on page 619, with a wood cut, page 620 being blank. The reprint goes over to page 620, and has no cut at the end. The fact that the reprint has seven paragraphs on page 607, while the original has eight, is another distinguishing point.

An anonymous play, "The Tragedie of Solimon and Perseda," 1599, the authorship of which has been attributed to Thomas Kyd and to Robert Greene, was reprinted by Smeeton about 1810. The reprint is very accurate, and the book, found as it is likely to be now in old binding, might deceive any one not familiar with the fact that such a reprint was issued. Indeed, a copy of the reprint brought \$180 in the third McKee sale, in 1901. It was returned by the purchaser, and when resold last season the identical volume brought only a dollar or two. The British Museum has four varieties of the original, distinguished by minute peculiarities.

Correspondence.

SYMPATHY FOR ANIMALS.

TO THE EDITOR OF THE NATION:

SIR: I cannot understand how people who have the luck of living in the twentieth century still confuse the Bible as it was written with the Bible as it is preached about. There is not a word of sympathy for animals, either in the Old or in the New Testament, and Pio Nono was perfectly right, from his point of view, when he withheld from becoming a member of a society for prevention of cruelty to animals. All the passages from the Bible quoted by your recent correspondents refer to *superstitious fears*, in particular to the *taboos* about evil days, mixtures and the like. If your oxen are not to work on the Sabbath, it is because that day is a *dangerous* one (just as the 13th in modern superstition); they might get wounded or ill. Don't yoke an ass with an ox, because certain mixtures are *dangerous*, for instance the mixture of different seeds in the same field (Leviticus, xix, 19). Allow your ox to eat the corn which he is threshing, because in doing so the beast *takes the danger off* from the new corn (cf. Leviticus xix, 23, about uncircumcised fruit).

The Greek philosophy of the sixth century, like Pythagoras, had no more sympathy for animals than the Jews, but they were *afraid* of them, fearing to injure a man whose soul might have transmigrated in the body of a dog. *Primus . . . fecit timor.*

Only prejudice, ignorance or *mala fides* can pretend to discover morality under the veil of superstition; as well say, you see the chicken in the egg. Morality, cleanliness, hygiene and many other good things

evolved from raw and stupid superstition, by the simple process of selection, by the falling off of the purely superstitious and the retaining or remodelling of what chanced to be in conformity with the higher interests or moral tendencies of mankind.

TEACHING LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: I venture to comment on your editorial of September 13, "Literary Teaching vs. Teaching Literature." I imagine most college teachers of English will heartily agree with you that literature is "a subject that possibly cannot, in the ordinary sense, be taught." "Teaching literature," "teaching Shakspeare"—do not the phrases themselves have a sound of absurdity? I met a man who declared he was "teaching Dante," and set him down as a charlatan. Facts and principles, English grammar and English composition, can be taught directly; the appreciation and enjoyment of literature can be induced only by indirection.

However it may be at Oxford, there is doubtless room for missionary work, not only in our schools, but in our American colleges. And fortunately our colleges have their evangelists. One well-known professor has for years spread the gospel mainly by reading aloud to large classes, the reading constituting an interpretation and an inspiration. But it is doubtful if the teaching of English, in the sense of inducing appreciation, has in strictness any place in collegiate instruction. A college may well teach the history of the English drama without trying to arouse dramatic appreciation by producing Shakspeare's plays or giving credit for attendance at the theatre; just as it may teach political economy, the science of wealth, without having anything to do with the actual appreciation and enjoyment of money. The appreciation and enjoyment of literature are matters extra-academic and belonging to the home; the teacher of English (except as he is a missionary) will presuppose them; he has theoretically no more to do with them than the teacher of political economy has to do with goods in the concrete.

What, then, is the business of the teacher of English literature? In the first place there is the history of literature. College students study political history and the history of philosophy. Why not also the history of literature? Who will say that the literary history—for instance of the period of Queen Anne—is less valuable, or less interesting, or has less "disciplinary basis," than the political history of the same time? Again, there is the theory or (in the broad sense) science of literature, viz., criticism. Who will say that while all other matters, above and under the earth, are made the subject of scientific study, literature should be neglected? Literature for the colleges is one of these two things—literary history or literary criticism. With these two fields properly open to it, why should the collegiate teaching of English have "a supererogatory look"?

And from these studies, as well as from the study of foreign languages—perhaps for many students better than from the study

of foreign languages—literary appreciation may come as a by-product. It will come inevitably in proportion to the culture and the enthusiasm of the teacher. Let the teacher go ahead with his proper subjects and the problem of inducing appreciation will, as far as may be, take care of itself. Thus already, I believe, do many college teachers of English by indirection find direction out.

F. C. PRESCOTT.

Ithaca, N. Y., September 15.

WHY CLERKS WILL NOT EXPOSE EMPLOYERS

TO THE EDITOR OF THE NATION:

SIR: The resolution of the Institute of Bank Clerks, noted on page 214 of your issue of September 13, is eminently proper as an academic maxim, and as Bacon says, "for reformation's sake fit"; but every member must have voted for it with his moral tongue in his cheek. I mean no cheap cynicism or pessimism, but a serious and regretful acceptance of obvious fact, in saying that the laws of business evolution tend steadily to make it impossible for subordinates to interfere effectively with their superiors' management, for good or evil, without drawing heavy monetary punishment on themselves, while effecting no provable good to the business.

As to the latter clause, the exposure must be made either before the mismanagement or corruption has become ruinous, or after it. If the former, the chief, who *ex hypothesi* has a large business repute and connection, and whose word will be believed by the whole mass of the business world against the unrepented clerk, will simply deny that there was any danger. At most, he may have made some mistakes in judgment, perhaps broken some technical rules for the sake of profiting his company, but without wrongful intent, but he will thereafter conform to the regulations, etc., etc. The business world will hold the "exposure" to be at best great cry and little wool, and most likely inspired by malice, disappointment, intrigue, or folly; and the clerk may as well resign himself to a new career outside that trade. The very ones benefited by the clean-up will dislike him for disturbing business; the most honest heads or directors will think a business rebel not a desirable subordinate. For one reason or another, there is no new place within the branch which the clerk has learned, the only one he is trained for, and in perhaps middle age the only one he can well acquire. This is the reward of honest courage; and it is no fancy sketch, as any one conversant with business must know, and would be much oftener reminded of did not the mass of subordinates appreciate it before action.

On the other hand, if the exposé waits till the impending ruin is certain, and he cannot be accused of discovering mares' nests, the case is far worse. The only good he accomplishes is to prevent a few more innocents being deluded before the crash comes; and he will gain no credit even for that. A chorus of denunciation and contempt will arise—many and many a time has arisen: "If you knew the danger, why didn't you make it known earlier? Why did you leave so many honest people to

be drawn in and ruined? It is perfectly evident that what ails you is not conscience, but funk. You waited as long as there was anything for you to get out of it, and only peeped when you saw that your position was as good as gone, and you could earn a little cheap credit for exposing what was bound to expose itself very shortly." Equally he is hated and dropped.

I know the very small handful of exceptions to this, where clerks or department heads of unusual strength and opportunity have managed to obtain newspaper or official support. I also know others where that support has ranged itself unanimously on the side of the ill-conducted head; one where the State's appointed guardian went straight to the accused head and told him every word of the clerk's confidential information, and took the magnate's word that it was all false, without examining the documents or consulting parties in adverse interest. In a word, the reason why few subordinates will ever check their official heads, even out of loyalty to the interests the employer is betraying, is because in its own possible interest the business clan-family will always ban and punish such a course. CREDE EXPERTO.

Hartford, Conn., September 15.

Notes.

From the large and interesting list of books announced by the Macmillan Company for this autumn we select the following: "The Earth's Bounty," by Kate V. Saint Maur; "Salmon Fishing," by W. Earl Hodgson; "Baseball and Football," by John Ward and Ralph D. Paine; "Skating, Ice-Yachting, and Skate-Sailing," by Archibald Rogers and Daniel C. Beard; "Highways and Byways of the Mississippi Valley," by Clifton Johnson; "Tarry at Home Travels," by Edward Everett Hale; "Persia Past and Present," by A. V. Williams Jackson; "The Fair Hills of Ireland," by Stephen Gwynn; "A Wanderer in London," by E. V. Lucas; "Charleston," by Mrs. St. Julien Ravenel; "History of Modern Painting," revised edition, by Richard Muther; "Reminiscences of Henry Irving," by Bram Stoker; "Life, Letters, and Art of Lord Leighton," by Mrs. Russell Barrington; "Eugénie, Empress of the French," by Clara Tschudi; "Mrs. Gaskell," by Clement Shorter; "Charles Kingsley," by G. K. Chesterton, and "Shakespeare," by Walter Raleigh, in the English Men of Letters Series; "A History of the United States," vols. vi. and vii., by James Ford Rhodes; "A History of the United States," vol. ii., by Edward Channing; "A History of Rome in the Middle Ages," vol. i., by F. Marion Crawford and Giuseppe Tomassetti; "A History of Modern England," vol. v., by Herbert Paul; "A History of the Inquisition of Spain," vol. ii., by Henry Charles Lea; "Letters of William Pitt, Lord Chatham," "The Cambridge Modern History," vol. iv., "The Thirty Years' War"; "An Introduction to the English Historians," by Charles A. Beard; "The German Empire," by Burt Estes Howard; "Poems," by Alfred Noyes; "Poems and Plays," complete, by W. B. Yeats; "Jeanne d'Arc" and "Sapho and Phaon," by Percy Mackaye; "The Toast

of the Town" and "Her Own Way," by Clyde Fitch; "A Sailor's Garland," collected by John Masefield; "English Literature, from the Norman Conquest to Chaucer," by William Henry Schofield; "The Development of Shakespeare as a Dramatist," by George P. Baker; "The International Law and Diplomacy of the Russo-Japanese War," by A. S. Hershey; "The Nature of Capital and Income," by Irving Fisher; "Readings in Descriptive and Historical Sociology," by Franklin H. Giddings; "Text-Book of Economics," by John Bates Clark; "Newer Ideals of Peace," by Jane Addams; "Life in the Homeric Age," by Thomas Day Seymour; "The Art of the Greeks," by H. B. Walters; "Life in Ancient Athens," by T. G. Tucker; "An Introduction to Philosophy," by George Stuart Fullerton; "The Modern Pulpit," by Lewis O. Brastow; "The Christian Doctrine of Atonement," by R. J. Campbell; "The Seeming Unreality of the Spiritual Life," by Henry Churchill King; "Concepts of Philosophy," by Alexander Thomas Ormond.

James Pott & Co. announce the following illustrated books as ready for publication: "The Pageant of London," by Richard Davey; "Algiers," by M. Elizabeth Crouse; "The Cathedrals of England and Wales," and "The Cathedrals and Churches of the Rhine and North Germany," by T. Francis Bumpus; "India," by Pierre Loti; "Some Literary Eccentrics," by John Fyvie; "By the Waters of Carthage," by Norma Lorimer; "Fire and Sword in the Caucasus," by Luigi Villari, and "Cheer Up," by Charles Battell Loomis.

Funk & Wagnalls will soon have the following books ready: "The Incubator Baby," by Ellis Parker Butler; "Under Pontius Pilate," by William Schuyler; "In London Town," by F. Berkeley Smith, and "Misère," by Mabel Wagnalls.

To their Thin Paper Classics Thomas Y. Crowell & Co. are adding Boswell's "Johnson," Carlyle's "French Revolution," and "Don Quixote." Complete editions of Burns, Keats, Scott, and Shelley are also to be included.

Little, Brown & Co. will publish next month "The Dragon Painter," a story of Japan by Mary McNeil Fenollosa, who is also announced as "Sidney McCall," the author of "Truth Dexter" and "The Breath of the Gods."

Next week Doubleday, Page & Co. will bring out "Inventors at Work," by George Iles. An elaborate work in the press of the same firm is "Fighting the Polar Ice," which gives the story of Anthony Fiala's Arctic expedition.

Prof. James H. Hyslop is adding to his other works on "the scientific investigation of the supernatural" a third volume to be called "Borderland of Psychical Research." It will be published this autumn by Herbert B. Turner & Co.

H. Ripley Cromarsh, who is none other than the sister of A. Conan Doyle, has written a detective story to be published by Small, Maynard & Co., under the title of "The Secret of the Moor Cottage."

Duffield & Co. have made George Brandes's essay "On Reading" into a neatly printed little volume.

Mitchell Kennerley is publishing a re-

print of Alexander Smith's "Dreamthorp," with memoir and portrait. He is also preparing "Anactoria and other Lyrical Poems," chosen from Swinburne's works.

Three volumes of "The Cambridge History of English Literature" are promised for publication next year. They will cover these periods: "From the Origins to Chaucer," "From Chaucer to the Renaissance," and "Elizabethan Poetry and Prose."

The Hertfordshire County Council is engaged in calendaring the documents in its possession illustrating the history (social, ecclesiastical and political), the topography, and the genealogy of the county. The calendar is now issued in two parts with preface and full index of the "Session Rolls, 1561 to 1850." This work (price 15s. the volume) has been compiled and edited by W. J. Hardy, Fellow of the Society of Antiquaries, and can be obtained from any of the London booksellers.

"A Child's Recollections of Tennyson" (E. P. Dutton & Co.), by Edith Nicholl Ellison, turns out to be more concerned with Tennyson's children, Hallam and Lionel, than with the poet himself. Mrs. Ellison and her sister were playmates of the boys at Farringford, and saw much of them in later years, especially at Marlborough, where the girls' father was master of the school to which the boys were sent. Tennyson himself was a frequent and honored guest at the master's house. Certain rooms were reserved for his use, and his special coffee cup and saucer were kept under a glass case so that no one else might drink out of them. He would read his poems to the older class, but to the writer of these reminiscences, at least, the lecture was far from edifying. "A great deal of praise," she says, "has been bestowed upon these readings, but I have to speak of them as we young ones found them, and I am sorry to say they seemed to us rather uncomfortable performances. We were accustomed to the musical cadences of our father's voice, whose reading, not only of poetry, but of the Bible's grand prose, was unique, and when the poet read I really must confess that we thought he was shy, as we heard little but mutterings and grumblings into his straggly beard."

"Picturesque Brittany," by Mrs. Arthur Bell, illustrated by Arthur G. Bell, is a favorable specimen of its type, the book of travel illustrated with water-color drawings reproduced in color. The text is agreeably written, and the pictures, which are the real *raison d'être* of the volume, are sober, truthful, and sufficiently able, and are without any of those extravagances of color that have grown, of late, somewhat too familiar. It is published by Dent in London and by Dutton in New York.

A new volume in the American State Series (Century Co.) is entitled "Local Government in Counties, Towns, and Villages," and comes fairly up to the title. The author, John A. Fairlie, deals with such matters as county officers, police, and justices; the town in New England, in the South and in the West; public education, charities, public health, and local finance, in a manner suited to the large mass of readers who approach such a subject neither as lawyers nor as philosophers. In other words, he gives a careful and businesslike presentation for the general

reader or the young person who wants to get the subject up for a college course. But he does not give us, nor does he pretend to give, on the one hand, a manual that would assist the practising lawyer, or, on the other, any of those informed and deeply reasoned summings up of the tendencies of an age and people that attach permanent value to a book. When on such pregnant topics as the tendency to centralization, to State supervision, etc., the author obviously feels out of his depth, and hastens on to safer, that is, to more statistical, ground.

Two recent additions to the literature of cotton are the result of observations in North Carolina, the State which, above all the others, presents the most striking changes wrought by bringing the mill to the scene of production. Holland Thompson's "From the Cotton Field to the Cotton Mill" (Macmillan) is a frank picture of the mill towns and their people. In that scarcely perceptible immigration, in which nearly 200,000 persons were transferred from the farm to the towns and villages, many new problems naturally were involved: old prejudices were weakened, ideals of success were transformed, and the negro was directly affected. With the ugly problem of child labor, the author deals at some length, taking issue with the accounts of "investigators" as overdrawn and unreasonable. Certain sweeping indictments against the atmosphere of the mills and the morality of the operatives Mr. Thompson finds altogether unfounded. A carefully prepared appendix gives an interesting comparison of the cost of living in the representative mill towns of Massachusetts and North Carolina, in which there appears to be a decided difference in favor of the Southern communities. "Cotton," by Charles W. Burkett (Doubleday, Page & Co.), is primarily a text book of cotton culture, though it deals with the marketing and manufacture of the staple. Much valuable information is conveyed in an interesting way, and if it be true, as is often claimed, that the methods of American cotton growing are the loosest and least practical in all agriculture, this book will doubtless fill an important place in the "Farm Library" of which it is a part.

Two volumes have now been published of the new edition of C. P. Lucas's "Historical Geography of the British Colonies" (Oxford: The Clarendon Press). The first of these has been edited and brought up to date by R. E. Stubbs, B.A., and the second by C. Atchley. A colonial geography, which is the joint work of these three men, must at once command attention and win confidence; for no men could be better placed for the work. C. P. Lucas has been under-secretary of state in the Colonial Office at Whitehall, in which R. E. Stubbs also holds a position, while C. Atchley is librarian to the Colonial Office, and has consequently unusual facilities in regard to all literature bearing on England's Colonial Empire. Mr. Lucas's Colonial Geography has already had some fifteen years of usefulness; and if it was to remain the authority on British Imperial possessions a thorough revision was necessary. So far as regards the two volumes that have now appeared, the work of revision has been satisfactorily accomplished, and the historical sketches

of the colonies included have been brought down to 1905. None of the great self-governing colonies is included in either of these volumes; nor is the greatest of the British Crown colonies—India. The first volume begins with Gibraltar, and travels through the Mediterranean by way of Malta and Cyprus to the Asiatic Islands of the Far East. Except for the three European possessions and Somaliland in Africa, the book deals exclusively with the islands in the Indian Ocean and the minor Asiatic possessions. The second volume deals with the West Indies, the Bermudas in the North Atlantic, and the Falkland Islands and South Georgia, at the extreme end of South America. Both volumes are well indexed, and at the end of each section is given a full bibliography of the books bearing on each island or colony. When the remaining volumes appear in their revised condition, the "Historical Geography of the British Colonies" will form, at any rate for a few years to come, the standard encyclopedia of the British Empire.

The senior bishop of the Protestant Episcopal Church, the Rev. Dr. D. S. Tuttle of the diocese of Missouri, in a candid and often naïve way has disclosed those attributes of his personality and conceptions of the functions of his office which have made him effective as bishop since 1866, in extending the bounds of his church and in helping commonwealths to ethical ideals in Utah, Montana and Idaho. Never in the popular mind a hero, as was Bishop Whipple by his service for the Red Men, and practically indifferent, as this book ("Reminiscences of a Missionary Bishop," Thomas Whittaker) shows, to all problems of polity, ritual, or theology within the Episcopal fold—Anglican or Roman—Bishop Tuttle consecrated twenty years of his life to patient, unheralded, pioneer service among Mormons, miners, stage drivers, business men and the heterogeneous population of early Western communities. There his physical prowess as an athlete and his ability to discriminate between sin and the sinner made him astonishingly skilful in dealing with situations and with elements of population which would have driven the ordinary parson back East. This partial autobiography is a record of episcopal activity and human intercourse, such as only a Western American bishop could have written. Mingled with its rambling record of thrilling physical adventure, ecclesiastical financiering, and human rescue-work, there are homilies on aspects of the pastoral and episcopal life which will have their lesson for the younger clergy. As he has seen much of Mormonism. Bishop Tuttle's chapter on that religion and system of plural marriage has distinct value. He is less severe as to the past and more hopeful as to the future than many non-Mormon ecclesiastics have been.

Research in English manuscript collections has enabled Champlin Burrage, a fellow of Newton Theological Seminary, to find several hitherto unknown or lost writings of Robert Browne, on whom British and American Congregationalists rightly look as the first Englishman to define and suffer for the principles of the Independent or Congregational church polity. The pamphlet ("The True Story of Robert Browne," Henry Frowde), giving the young Baptist scholar's interpretation of Browne's

reversion to the Church of England; and correcting some major and minor errors into which earlier writers—notably Dexter—on Browne were led, for lack of documents and because of partisanship, has the merit of modesty in tone and of brevity and clearness in method. There is sufficient quotation from new MSS. to reveal Browne's argument against both Presbyterians and Anglicans as well as his bluntness and intensity in controversy. That Browne was either mentally unbalanced or full of duplicity when he returned to the Episcopal fold, Mr. Burrage doubts, though there is adequate recognition of the pathos of his last days and the difficulty which confronts the believer in Congregationalism, who would make him out altogether a hero. The principles Browne laid down for his followers have not lost worth during the subsequent development of church polity, as the growing rights of laymen and congregations even under Episcopacy prove.

In the third volume of his "Biographic Clinics" (P. Blackiston's Son & Co.) Dr. George M. Gould has brought together several more of his essays bearing on the influence of even slight errors of refraction upon the general health. Among them are studies of the visual defects of Symonds and Taine. The conclusions in the case of Symonds will hardly seem convincing to those who are familiar with the details of his life. There are also essays on the relation of posture in writing to vision, which are most interesting reading. The author's attitude toward his critics, his resentment of the very general doubt of the conclusions of his earlier volumes on these subjects, and a certain harshness in presenting his material will much delay the conversion of those professional brethren, and there are very many of them, who find his theories rather too finely drawn to be acceptable.

Lord Amherst is selling, through Bernard Quaritch, the rarer books in his collection. Among other treasures there are seventeen Caxtons and De Wordes, including what is believed to be the only genuine and perfect copy in existence of the Lefevre, the first book printed in the English language. Those volumes marked P in the list are perfect:

Lefevre, "Recuyell of the Historyes of Troye," 1474? P.
 Cessolis, "Game of Chess," 1475? P.
 Christine de Pisan, "Morale Proverbes," 1478.
 Boecius, "De Consolatione Philosophiae," 1478-9? P.
 "Mirrour of the World," 1481. P.
 "Tulle of Old Age," 1481. P.
 "Godfrey of Boloyne," 1481. P.
 Higden, "Polycricon," 1482.
 Voraigue, "Golden Legend," 1st edition, 1484.
 Voraigue, "Golden Legend," 2nd edition, 1487?
 Christian de Pisan, "Fayites of Armes," 1489. P.
 Virgil, "Eneydos," 1490. P.
 "Four Sermons," 2nd edition, 1491.
 "Chastysing of Goddes Chylidren," 1491. P.
 "Treatyse of Love," 1493. P.
 Voraigue, "Golden Legend," 3rd edition, 1493.

Through the death of Otto Mühlbrecht, the head of the well-known house of Puttkammer & Mühlbrecht in Berlin, the German book trade has lost one of its most conspicuous members. Born in Braunschweig, he entered a book store in that city in 1853; in 1858 he started out on his *Wanderjahre* and spent some years in Göttingen, Kiel, and Elberfeld, until in 1862 he obtained a place in an importing house in Amsterdam. Later he returned

to Germany, worked a couple of years with T. O. Weigel, in Leipzig, and in 1868 he and Albert Puttkammer founded the "Buchhandlung für Staats und Rechtswissenschaft," which bears their name. Mühlbrecht had early tried his hand on bibliographical work, and in 1866 published a bio-bibliographical sketch of Beethoven. As bibliographer he should be well known both in and outside the trade, through his *Uebersicht der gesammten Staats- und Rechtswissenschaftlichen Litteratur*, which he has edited and published in annual volumes since 1867, and through the "Wegweiser durch die neuere Litteratur der Staats- und Rechtswissenschaften," first published in 1885, and followed by a second volume in 1901. Mühlbrecht was a diligent contributor to the *Börsenblatt für den deutschen Buchhandel* as well as to a number of literary journals. In 1898 he published a short autobiographical sketch.

An interesting and instructive year-book, "Biographisches Jahrbuch und Deutscher Nekrolog," is edited by Dr. Anton Bettelheim of Vienna. The ninth volume, just published by Reimer in Berlin, contains biographies of distinguished Germans, who died in 1904. One of the fullest and most important of these contributions is the life of the historian, Theodor Mommsen, by L. M. Hartmann, an attractive and thoroughly authentic work, based on hitherto inaccessible material furnished by the family. Worthy of mention also are accounts of the life and achievements of the scientist, Friedrich Ratzel, by Viktor Hantzsch, of Herbert Bismarck and General Waldersee, by Hugo Jacobi, and especially of the Munich painter, Lenbach, by Hyazinth Holland. Unfortunately, the necrology for 1904 was not completed in time for publication in this volume, but will be printed together with that of 1905 in volume x., which will be issued during the present year.

Anatole France's new book, "Vers les Temps Meilleurs" (The Good Time Coming), is a collection of various papers already published. It marks his final conversion on many points, due to the *Affaire Dreyfus*, in which he took so passionate an interest. He is quite won over to Socialism in its most collectivist sense; and his eulogy of Zola's "J'accuse" is as extreme on one side as his criticism of twenty years ago was severe, on the other, in declaring that better Zola had not been born than be a purveyor of naturalist filth. Much of the charm of style remains, but the vengeful sharpness of the controversy will not hold those who were hitherto drawn by the author's mere literature, very perfect and very Renanian in its Olympian indifference. Another Academician who has become more reasoning with age is Paul Bourget. His studies in Sociology and Literature are also reprints of these later years, which have worked in their author just the contrary conversion of that of Anatole France. The sociology is that of Le Play, with a vigorous political tang from Bonald and Joseph de Maistre. For Paul Bourget, past fifty, is firm monarchist in behalf of the much discussed French *bourgeois*, just as Anatole France, past sixty, is collectivist in hatred and derision of him. The literature is good and heavy.

To the numerous authentic contributions

to the history of the fall of Napoleon the Third's empire, started up by the recent visit of Empress Eugénie to Emperor Francis Joseph, should by all means be added "La Défense Nationale," by Henri Genevois. The author is a friend of Ranc and Gambetta; and it is undoubtedly their views which he presents in a matter where they have been accused of sacrificing the interests of France to those of their own republic. His general conclusion is that "our defeat did not have its origin in irremediable organic decay, but it was the result of external circumstances which were contingent and reparable."

The death at Tangiers of M. Salmon, head of the French Scientific Mission in Morocco, draws attention to the prodigious amount of work accomplished by him within three years. He was barely twenty-eight years old, and was one of the students of Arabic at the Cairo Institute. The mission under his direction, has already published seven volumes of translations and memoirs, mostly due to M. Salmon's own work. He had just made an investigating trip to Fez, where he managed to secure some eighty "lithographed" Arabic works—practically all that date from that city. Most of them were unknown until now. He also discovered an encyclopedia of Moroccan Law in twenty volumes, comprising the jurisprudence of the *Cadis*, municipal customaries, and corporation regulations. When it is remembered that the civilization of Morocco has waned but slowly from that of the Moors in Spain, the possible importance of all this literature of Islam may easily be surmised. The Scientific Mission will take charge of the complete publication.

Any addition is welcome to the small store of books in English dealing with Muhammadan law. It is doubly welcome when it deals with the work of so significant, and yet so little known a jurist as Ibn Abi Zaid, the Malikite, and when it prints a careful Arabic text with translation and commentary. In giving a text in his "First Steps in Muslim Jurisprudence" (Luzac & Co.: London), A. D. Russell, who is chief magistrate of the Colony of the Gambia, has probably had no predecessor among English scholars until Sir William Jones is reached, who published in copper-plate a treatise on inheritance in the late eighteenth century in India. His book will certainly be very useful, for Muslim, like Roman law, can really be learned only in its original tongue. It is curious, however, to notice that in the Colony of the Gambia and extreme West Africa generally, the sections dealing with slavery are no longer of any importance, and are not given here. It is different farther east in Nigeria. There, to the personal knowledge of the present reviewer, the student and the administrator must still take account of the law of manumission. Mr. Russell has done his legal work very carefully, but his introduction on the early history and sources of Muslim law is hardly adequate. He should notice, too, that a *bid'a*, "innovation," is not necessarily heretical; a theologian may even speak of a praiseworthy *bid'a*. Some mention might also have been in place of the use made of this same text by Vincent, in his "Études sur la loi musulmane."

The blind and deaf special report of the

Census Bureau, prepared under the direction of Dr. Alexander Graham Bell, is a remarkable production. Not only does it give the customary statistics, but it adds much well-considered information in regard to the facts collected. It also has this peculiar merit, which adds greatly to its value and accuracy, that the material has been collected mainly by direct correspondence with the individuals. In sixty-four tables are given among other things the number in each State, the age at which they became blind or deaf, the cause, disease or inheritance, the school attendance, in the deaf the ability to speak, and the present occupations. It is interesting to note that a large number of the blind are musicians or music teachers, while agricultural pursuits are the principal employment of the deaf. Apparently deafness is decreasing in the country, while the number of deaf and dumb per million of the population has fallen since 1890 from 648 to 321. Infant schools for the deaf, receiving pupils as young as three or even two years of age, have been established recently for the purpose of teaching the children to talk.

A remarkable career was closed by the death of the Rev. George Matheson on August 28, at the age of sixty-four. The son of a Glasgow merchant, he became blind when a youth, but nevertheless pursued his studies and graduated from Glasgow University with honors in classics, logic, and philosophy, and with a prize for an essay on Socratic dialogue. Then he entered the ministry and soon was recognized as the greatest preacher in the Scottish Church since Dr. Caird. He declined a call to succeed the celebrated Dr. Cumming in London, and settled over an Edinburgh church, whose pastorate he resigned in 1899. He was distinguished as a hymn writer and contributor to leading English and American periodicals. His published works number at least twenty-two, of which the first, "Aid to the Study of German Theology," appeared in 1874, and the last, "The Representative Men of the New Testament," in 1905. His "Spiritual Development of St. Paul," which has reached several editions, has been translated into the Chinese.

The celebration by the ninety-three-year-old Prof. Eduard Zeller of the seventieth anniversary of his promotion to the doctors' degree, simultaneously with the retirement of the eighty-two-year-old Prof. Kuno Fischer from Heidelberg University, and the completion of his seventieth year by Prof. Johannes Ranke, once more suggests the probability that brain work is conducive to longevity. The youngest of the three, Professor Ranke, is best known to the general public by his book, "Der Mensch," of which Virchow said that Germany ought to pride herself on having produced it. He established his fame first as physiologist, then as anthropologist, and it was due to him that anthropology was represented by a special chair at the University of Munich, and placed on a level with other branches of science. Kuno Fischer has been for over three decades the most popular professor at Heidelberg. His knowledge, imagination, and eloquence enabled him to make a lecture on a dry metaphysical problem so interesting that the students would applaud as at a play or a political address. As for Zeller, all the

honors that can come to a scholar have been bestowed on him. He has been made honorary doctor of all four faculties in succession by the Universities of Heidelberg, Tübingen, Edinburgh, and Marburg. Among the friends of his youth were Ludwig Uhland, Fredrich Vischer, and David Friedrich Strauss. He began his career as a theologian, and stands at the head of historians of Greek philosophy, as Kuno Fischer does of historians of German philosophy.

The school editions of Cæsar's Commentaries had, perhaps still have, hypothetical designs of the engineering works at the siege of Alesia; and there is a model in wood and plaster at the French National Museum of Saint-Germain. The site had been identified etymologically with the modern Alise, against the will of a few crabbed scholars. Important excavations have been begun at the place, on Mount Auxois, under the direction of Major Espérandieu of the Académie des Inscriptions et Belles-Lettres, following out a plan of State Engineer Fornerot. Considerable discoveries have already been made, the most surprising of which is the number of public monuments built there by the Romans, after the conquest. This is quite the contrary of their forcing the conquered Gauls to evacuate the *oppida* of Bibracte and Gergovia. It is thought that Alesia, from prehistoric times, must have been a religious centre with a market, so that the Romans chose to multiply in it buildings sacred and profane for the better control of the natives of the whole country. What seems to have been a Forum is a square, fifty yards to a side, with apses on three of the sides, dating apparently from the time of Augustus. A bas-relief of a Dioscurus was found in the ruins. The wholesale destruction of Alesia seems due to the troubles preceding the advent of Vespasian.

A DISPERSER OF MEDIÆVAL GLAMOUR.

From St. Francis to Dante. A Translation of all that is of Primary Interest in the Chronicle of the Franciscan Salimbene (1221-1288); together with Notes and Illustrations from Other Mediæval Sources. By G. G. Coulton, M.A. London: David Nutt.

Mr. Coulton has produced an important book. To put Fra Salimbene's Chronicle in intelligible form before English readers, is well; because it belongs with the "Fioretti" of St. Francis and Joinville's "Life of St. Louis" among the most intimate human documents of the thirteenth century. But Mr. Coulton has done more than this; he has made Salimbene the touchstone by which to test the manners, morals, and ideals of that time. His work serves as a most wholesome corrective to the prevalent unhistorical glorification of the age of St. Francis. We have heard much of the "Ages of Faith," of the "spirit that built cathedrals." The early Romanticists painted the martial and feudal pageantry of the mediæval world. Then as the modern scientific spirit began to act as a solvent for old religions and superstitions, the religious conservatives turned back with pathetic anxiety to find in the Middle Age conditions amid which they themselves might feel at home. England had its crop

of Tractarians and Pre-Raphaelites, and its revival of ritualism and brotherhoods. Even Ruskin gave great aid, though indirectly, to the movement. The Roman Church under Pius IX. could account for the unbridgeable chasm which had opened between its dogmas and the proved knowledge of the modern world only by condemning—in the Syllabus of 1864—modern knowledge and progress. Twenty years later Leo XIII. urged Christendom, if it would be saved, to return to the simplicity and faith of the thirteenth century. Latterly, there has been a renewed interest in St. Francis—an interest which M. Sabatier did not create, but to which he gave form and volume—with the result that there are many good persons, shocked or depressed or exasperated by life to-day, who yearn for the conditions amid which St. Francis flourished. Historians have long known, of course, that this glorification of the "Ages of Faith" is wholly unwarranted. Mr. Coulton's demonstration, clear and entertaining, may come as a novelty and may convince some readers who never search the truth in formal histories.

He has chosen an excellent method. He selects from Salimbene's chronicle all the important passages which refer to Salimbene's own career. Thus we follow him from his infancy—he was the son of a noble of Parma, born in 1221. We learn something about his childhood and education, and about his conversion in 1238, the year after the Great Alleluia. Thenceforward for fifty years we keep pace with him on his journeys; we share his likes and dislikes; we listen to his stories and jokes; we see the sort of life he led in many parts of Italy and France: in a word, we become intimate with a thoroughly individualized personality.

Mr. Coulton next proceeds to use Salimbene as an historical witness, quoting his account of the political events of that half-century, and his opinions or descriptions of famous contemporaries. Through Salimbene's eyes we look on Frederick II., "the Wonder of the World," on Gregory IX. and other Popes, on great prelates and noted princes. And we get an initiate's view of life in the cloister and outside; of the rapid degeneration which set in almost before the death of St. Francis in the order he founded; of the worldliness of many of the religious; of the obscenity darkening into bestiality that was almost a commonplace in monastic life. Brother Salimbene is the best of witnesses, because he writes not to maintain any thesis, but simply to record facts that interest him, quite unconscious that posterity would see anything strange in these facts. No fair-minded reader can doubt that here is an actual piece of mediæval civilization; not a mere slice or segment, but a large, representative specimen. Salimbene is as careful to report that at Ravenna a duck could be bought for fourpence and twelve eggs for a penny, as to chronicle wars and sieges, the decrees of pontiffs and the fate of kings.

Finally, Mr. Coulton appeals to him for testimony as to the beliefs and practices of churchmen, high and low, and as to the relations of the clergy and the people. Superstitions and miracles abound. So do innumerable sects; for Mr. Coulton reminds his readers that in the thirteenth century

the Catholic Church had not reached that uniformity which it has maintained at all costs since the Reformation. The organizing of the Dominicans as the persecuting order shortly before Salimbene's birth was to be a great aid to the hierarchy in its struggle for orthodoxy. The cynic who declared that in the United States there are seventy religious denominations and no religion, would have no difficulty in discovering among thirteenth-century fanatics the counterparts of the Eddyists, Dowrites, and Holy Ghosters of to-day.

The upshot of the evidence can give little comfort to those backward-gazing persons who sigh for the "Ages of Faith." They forget that for one St. Francis there was a host of dirty, ignorant, worldly religious; that the genuinely devout, always in a minority, were as sodden as the rest in satanology; that tyrants, of whom Ezzelino da Romano set the example, made carnage and torture everyday experiences; that slavery, serfdom, and concubinage were established institutions; that learning still busied itself with mechanical conceptions of man and the universe; that justice was rarer than oases in the Sahara; that the position of wife was still precarious. If it be asked why, in spite of these incontrovertible defects, a glamour has risen over the thirteenth century, we find much truth in the following paragraph from Mr. Coulton:

Much of the generous modern overestimate of mediæval society is due to the admiration for mediæval art. The men who built and adorned our [English] churches (it is argued), must have been better men than we. Yet this indirect argument from art to morals is utterly fallacious. Raphael painted his Madonnas in the midst of a society rotten to the core; and the peculiarly modern art of landscape may teach us the same lesson. Six hundred years hence, the enthusiastic student of Turner will be tempted to imagine that Englishmen of the nineteenth century loved their country scenery better than any race in any age. Yet never has man done more to ruin the landscape; never has he crowded more blindly from the fresh fields into the smoky town.

The true artistic greatness of the Middle Ages begins with the eleventh century. The greatest works of those days were carried out not by celibate monks or clerics, but only for monks and clerics. The real artists were the most Bohemian of craftsmen—wandering masons, who loved wine, women, and song, but whose too riotous fancies were chastened by the spirit of asceticism among the clerical patrons that directed the general lines of the work. . . . Art was not the product of mediæval religion, but of worldliness under some restraint of religion. Many details of church carving are too licentious to be photographed or modelled, and some at least of our most beautiful English cathedrals were built in part from the fines collected from unchaste priests, in part from more questionable sources still.

This passage may stand as a fair example of Mr. Coulton's quality. He has read widely in the sources of his period, and is able at every turn to illustrate Salimbene's statements. Wherever it is desirable, as in the case of Joachim de Flora's theory of development, he does not restrict himself to a paragraph of explanation. As a result, his book, within the lines he has laid down, may be said to do for the thirteenth century what Burckhardt did for the Renaissance. It should be read by everyone who desires an accurate report on life as it was really lived in that interesting age. It may also be commended to the

Dante scholar, as presenting the very elements out of which the "Divine Comedy" sprang; only when we realize that it was such a world as this by which Dante found himself encompassed can we understand much of his poem or measure his genius. Finally, it should not be overlooked by the student of civilization, whose business it is to appraise human progress at different epochs.

MATHIESON'S HISTORY OF SCOTLAND.

Scotland and the Union. A History of Scotland from 1695 to 1747. By William Law Mathieson. New York: The Macmillan Co. \$3.25.

Mr. Mathieson's "Politics and Religion in Scotland" was a book of such vigor, originality, and learning that all who welcomed its appearance four years ago will be glad to read the continuation. "Scotland and the Union" carries forward the thread of narrative from the period of the Revolution to the year after Culloden, and has for its central motive a theme of hardly less importance than the breach with Rome, which Mr. Mathieson discussed in his former work. It seems to be pretty generally agreed that the Scotch became a nation in the age of Knox. Mr. Mathieson's present task is to consider the state of national feeling at a time when Whig and Jacobite, Unionist and Patriot were striving to give the destinies of Scotland their final direction. There is less room for religious controversy than before, but the ecclesiastical element does not wholly disappear. Indeed the very quality which gave Mr. Mathieson's first work its distinctive excellence is once more apparent in his account of Scottish life during the era of the Union.

We refer here to the note of moderation—and of moderation exercised under rather trying circumstances. For centuries the Scotch made so serious a matter of religious partisanship that it was almost impossible for their historians to approach the Reformation and the Covenant without a vitiating warp of mind. Owing to their excess of admiration for Knox, Melville, and Henderson, the men whom these leaders of the Presbyterian cause opposed were habitually disparaged on the ground of lukewarmness, moral cowardice, or Anglomania. In writing a history of the Scottish Reformation Mr. Mathieson sought to trace the progress of a saner, less intemperate mood than that of Knox, and to define the ideal of Christian charity as it emerged at intervals amid the disputes of Calvinist and Episcopalian. For the first time, in a book of adequate scope, he examined the aims of the Scottish bishops and showed that they were not mere placehunters, but in many cases the representatives of a policy more humane and tolerant than that of their Presbyterian contemporaries. This was to adopt a novel point of view, and to incur in some quarters a charge of special pleading. But Mr. Mathieson did not come forward as a champion of any ecclesiastical type.

Relatively speaking, the ecclesiastical interest slackens at the period of the Revolution. Prior to the Restoration it holds an unchallenged priority. Under Charles II. and James VII. the misguided attempts of the Government to force the national

conscience prolonged a strife which otherwise would have rapidly subsided in Scotland. "After a hundred and thirty years of strife," says Mr. Mathieson, "the great majority of the nation were disposed to regard the question as settled, and to devote themselves to more profitable pursuits."

When the Union was under debate a pamphleteer who opposed it took the ground that if the two countries became one, religious toleration would be sure to follow. However narrowminded the writer's views, his forecast was quite correct, since immediately the Episcopallians set up a demand for the same status in Scotland as that enjoyed in England by the Presbyterians. The Toleration bill of 1712, as passed by the House of Commons, with the overwhelming majority of 152 to 17, was a relief measure conceived in a generous spirit and quite acceptable to the Scottish Episcopallians. It gave them liberty of worship, with the right to use the liturgy, and promised them the protection of the State. The heresy trial, so familiar to our own age, had a part in the liberalizing of Scottish theology long before the days of Robertson Smith. For the thirty years between 1717 and 1747, the University of Glasgow was a storm centre of great activity in the theological world. Professor Simson, who held the Chair of Divinity from 1708, was the most prominent leader of liberal thought among the Scottish clergy until his suspension by vote of Assembly in 1729. On the theological side this book, like its predecessor, makes all episodes converge towards one motive—the contest between intolerance and the spirit of free inquiry.

In turning to the politics of the Union settlement, one must keep chiefly in view the state of national sentiment as it affected the diplomacy of the northern kingdom. A first glance at the situation might suggest the belief that Scotland was dragged into the Union by her great peers, whose interests in England ranged them on the side of the Court. As Mr. Mathieson points out: "Of 46 peers—to 21 against—who voted for the first article, at least 29 were privy councillors, pensioners, officers or officials, and six more, in addition to nine of the placemen, or 15 in all, had been enrolled or promoted in the peerage since the Revolution." There may also have been a little direct bribery, but the amount spent in cash to secure votes for the Union could not have been large.

All things considered, it is clear enough that the Lords as a body were strongly in favor of the Union. But Mr. Mathieson does not credit them with having had sufficient influence to carry through the measure unaided. A change in the constitution was proposed, and constitutional changes cannot well be put through by a bare majority. On the one side stood the great Whig peers who were committed by interest to the Union; on the other side were ranged the Country Party under such leaders as Hamilton, Athol, and Fletcher, with the pronounced Jacobites supporting them. In this juncture the casting vote belonged to the so-called *Squadron Volante*, which took form through a schism in the Country Party. The name is misleading, for the members of the Squadron, so far from constituting a small minority engaged in a guerilla war of politics, were at the decisive moment a major-

ity of the Country Party who acted under a strong and sober conviction.

Mr. Mathieson shows marked skill in blending a portrayal of character with the discussion of purely political issues. His chapter entitled "The Union from Within" is quite the best study we have seen of the statesmen whose talents light up the sessions of the Scottish Parliaments during its last days. Having had a somewhat inglorious career until the eve of its disappearance from history, this body did not vanish without leaving on record a series of vigorous and eloquent debates, in which the honors were evenly divided among a large number of speakers. "The crisis of the Union," says Mr. Mathieson, "could produce no Knox, and, fruitful as it might have been in political genius, it produced no Maitland and no Montrose; but when we consider the personality of those who pass and re-pass most prominently before us in that closing scene—the graceful adroitness of Queensberry and Seafeld, the massive intellect of Stair, the magnanimity of Roxburgh, the charm and impetuosity of Argyll, the intensity of Fletcher, the fiery invective of Hamilton and Belhaven—we cannot but conclude that at no previous crisis had great ability been so plentiful, and the level of public talent so high." One may be permitted to add that the standard of political honesty was quite as high at the time of the Union as it had been in the days of the Reformation.

Mr. Mathieson credits the Church with having discouraged the anti-Unionist extremists with no less enlightenment than was shown by the leaders of the Squadron. This is not to say that it disclosed any great enthusiasm for the Union. Some of the clergy objected that the Covenant exacted a promise from its subscribers to labor for the reformation of the English Church. How could such a promise be fulfilled if Scotland went into partnership with a country in which Episcopacy was established by law? But if the Church was unfriendly to several of the changes which the Union involved, it did not preach a crusade. "The majority in parliament," says Mr. Mathieson, "would certainly have been paralyzed if the clergy had consented to encourage a popular revolt . . . and, when we consider how little the Union was in harmony with their ecclesiastical traditions, and how strong was the current of popular feeling which threatened at times to sweep them off their feet, it is no small compliment to their own prudence, and to the vigilance and capacity of their leaders, that they adhered on the whole to the path of neutrality—unsympathetic and even menacing neutrality as it was."

The two Jacobite risings come within the range of Mr. Mathieson's survey, and he gives an adequate account of both. But Jacobite literature is a thing by itself and we do not infer that Mr. Mathieson aspires to do more in the present work than indicate the general relations of the '15 and the '45 to the Union. The last chapter closes with a well deserved panegyric of Duncan Forbes, but for our own part we prefer to take leave of this excellent book by quoting a sentence which occurs at a much earlier stage of the narrative:

Happy it was for the future of Great

Britain that Scottish nationality went down, suppressed indeed in outward form, but defiant and unbroken to the last; for this spirit, persisting as it did, not only ensured to Scotland its just recognition in the terms of union, but in after years, when bitter memories had passed away, asserting its vitality in literature and arms, and promoting a solid partnership founded on mutual esteem, was to mingle with English traditions and to become the common heritage of the British race.

RECENT FICTION.

The House of Cobwebs and Other Stories.

By George Gissing. With an introductory essay on the author by Thomas Secombe. New York: E. P. Dutton & Co.

The fifteen brief sketches that make up this posthumous work by George Gissing have a very uniform quality which readers unused to the finer literary discriminations will perhaps find monotonous. In fact the effect of the book is cumulative, and one must have read far before he realizes how remarkable a survey it is of the narrow world in which Gissing lived most of his life—the grey limbo of shabby gentility, with its meticulous scruples maintained in the face of penury, its obscure tragedies and comedies, its furtive generousities, its lonely intransigencies. And Gissing has invested this chronicle of those who fail with a curious dignity. His heroes may have failed, but at least they have not consciously surrendered. Rebuffs are their daily bread, which they eat with patient stoicism. They one and all retain the respect due to those who, perforce, live alone or in alien companionship, yet indulge no bitterness toward the prosperous world. Indeed, this group of reduced gentlemen, impoverished bibliophiles, penniless authors, and the like stands in tacit, but damning contrast with the children of worldly success who occasionally intervene—the money lenders, the prosperous friends who lightly promise but as quickly forget, the whole lucky rabble that has no time to indulge delicate feelings.

Nobody has traced the hidden lives that rim and permeate London with quite the tact and knowledge of Gissing. He has written better books than this perhaps, but here is the quintessence of his art. It would be interesting to trace the double strand that runs through these stories and all his works—the eager humanitarian curiosity that he learned from Dickens, and the austere restraint of phrase and feeling imposed by his life-long classical studies. One may note a somewhat analogous case in that other Dickens disciple, Alphonse Daudet. But these considerations lie aside from a brief notice, and it is enough to say that the observation in these sketches is originally fine, and then highly selective; the English of great purity and incisiveness; and that a certain thinness of tone and lack of humor are necessary results of gruelling personal experience with the matter in hand. It is a book for those who love impeccable workmanship. In a period where slapdash and overemphasis are in favor, it may not win the general ear, but it will, we are confident, find the kind of audience that conveys a volume to posterity.

Space fails to do more than mention Mr.

Secombe's sympathetic study of Gissing which raises issues of life and letters beyond the scope of a mere book review.

The Master-Man. New York: John Lane Co.

"The Master-Man" would be what the ladies used to call "a sweet, pretty, little story" if it had rightly fulfilled its being. The central figure is a Southern country "doctor of the old school," with the celebrated virtues of his kind. He is an old bachelor, who has had an early disappointment in love. The void in his home, if not in his heart, is filled by a niece who both adores him and makes him comfortable. To her come wooers. Thus far all is familiar and intelligible; it is Dr. Thorne over again. The course of true love will not, of course, run perfectly smooth, but it will not run awry. In this our expectations are answered. The less desired suitor is not slow in withdrawing from the field, and the favored one (who is the son of the doctor's old love, and the doctor's own understudy) is displayed in those fair romantic proportions to which the hero of an idyl is natural heir. It seems that we have only to watch the happy pair, as they pace hand in hand under the benignant eye of the Master-Man along the primrose way. Judge, therefore, our confusion and dismay when we find our gentle idyl attempting to transform itself into a problem story of a sort, with a tragic ending! Lynch-law is the burning question. The facts of the case are stated plainly enough. A young girl, a protégée of the doctor and his niece, is criminally assaulted by a negro. The doctor, after months of search, finds his man and has him jailed. A lynching mob assembles, and the Master-Man, almost single-handed, defends the prisoner till the arrival of the police. Wounded and exhausted, he hastens to the bedside of the dying girl. Meanwhile a heavy storm arises; and when, at dawn, the doctor tries to make his way home through the great drifts, his strength fails him, and his life ends.

Now, the unfortunate thing about all this, to us, is the casualness of it. The lynching business seems to be introduced as mere local color; or, perhaps, rather as a fulcrum by which the man's mastery may get its full hold upon us. Surely, rape is not an incident to be made ornamental use of. It has been and may be the theme of sombre tragedy; but a most difficult and dreadful theme it must always be—*res nefas* unless upon the mightiest tongues. Is it not a sign of the lawlessness of our fiction that such a jarring of motives should nowadays be so common? In what stable forms of art are such things conceivable? In the Forest of Arden one does not come upon a casually mutilated Lavinia; and nobody has thought of making of Lucrece a Roman holiday.

The Leader. By Mary Dillon. New York: Doubleday, Page & Co.

The American political novel continues to be of thin texture: is it because American refinement is still somewhat gingerly in its approaches to the public arena? The Leader is a popular orator of inconvenient principles. In his contact with the

bosses he plays, as would be expected, a losing game, but remains (a fact plainly due rather to his silver tongue than to his principles, though these also count) an idol of the people. His name is brought forward for nomination at a St. Louis convention as "The Lion of the Party," "The man who alone in American politics stood for a great principle," "The faithful friend of the masses," "The idolized leader of the people." He makes the best speeches and gets the most applause; but he is not nominated, though a final chance offers itself through the repudiation by his successful adversary of a plank in the platform. The veil of fiction cast over these incidents is of the thinnest; the writer's art gives them no fresh meaning. For the rest, we are not cheated of our "heart interest." The course of true love runs smoothly enough for all practical purposes. And there is always hope that our Voice of the People may make itself more profitably heard during the next campaign.

The Fighting Chance. By Robert W. Chambers. D. Appleton & Co.

Since this book gives a pretty detailed description of American high life, it will have a certain value for shop-girls and dry-goods clerks solicitous to know what to wear, what to say, and what to do in unwonted social emergencies. It is hard to see why any other class of readers should take it at all seriously. The story displays a cheap dandyism of phrase, a cheap exuberance of amorous incident of a harmless enough kind, a cheap social satire, not to mention the cheap expedient of hinting at real personages in New York society and finance. Yet, with all its palpable defects upon it, this novel was framed for popularity; it is just the sort of mess of love-making, phrase-making, abundant gush, and facile cynicism of which the public palate apparently cannot have too much. But it is emphatically not for the literary epicure.

Christus nicht Jesus. By F. W. van Oestéren. Berlin: Egon Fleischel & Co.

Fogazarro's "Il Santo" bids fair to have a rival in Germany. Although the Jesuit problem has of late been superseded by other more vital ones in fiction and drama, recent events in France have brought it to the foreground. The election of a German for the important office of Jesuit-general, too, may divert some of the attention which the book of the Italian receives.

Friedrich Werner van Oestéren came to sudden prominence six years ago, with the publication of his "Merlin," which some critics ranked with the best epic poems written since the passing of the classic period. It elucidates the character of Merlin by flashes of a philosophical insight which reflect the spirit of our time. This same philosophy dominated his historical epic "Domitian," which was published soon after. A volume of animal fables followed, "Wir," in which the author satirizes his own time; and then a symbolical poem, "Schatten im Walde." This closed his poetical production for the present, and with "Die Wallfahrt," a story of a pilgrimage in Galicia, he made his début, three years ago, as a novelist. It is not difficult to trace the train of

thought which led from that picture of superstition and license to the finely spun web of intrigue which forms the plot of the new book. There a vulgar rural clergy deluded the lower classes by appeals to their senses; here the sharpest and best-trained minds of the Order of Jesus approach the higher classes with all the cunning and diplomacy at their command. The *Tendenz* is much more apparent in the later book; but its artistic value does not suffer. For the author's gift of characterization has created a number of figures interesting from a psychological point of view, regardless of their significance.

The story is told with directness, but without repulsive details. It revolves about the illegitimate son of a liberal prince, influential at the court of the reigning monarch. This son of an actress, who was married to an officer of the army, is taken by his foster-father to a famous Jesuit school patronized by the aristocracy. To gain the mother's favor, who is still the friend of the prince, and, through her, indirectly to influence him and counteract his hostility towards the order, is the plan cherished by the fathers. The tool chosen for that purpose is Brother Victor, a high-minded young idealist, who has occasion to become the boy's friend and protector when his schoolmates begin to taunt him with his descent. Although the young priest appeals to the imagination of the woman, who has become a widow, her friendship for her former lover is too deep to admit of relations which the fathers hope to see established between the priest and the mother of his pupil. Victor becomes conscious of the mission which he was unknowingly to perform, renounces his vows, and frustrates the well-laid scheme.

This plot is supplemented by others of minor importance, and one, the love of Maja Karmetter for the legitimate son of the prince, his treatment of her, and her death, is not without grave significance. But the strength of the book lies in the picture the author presents of the inner workings of the order, especially of its educational institutions. For his vision is undeniably objective; he sees the disciples of Ignatius Loyola as products of centuries of training. He does not sit in judgment, but shows us the working of the machinery, without adding his comment. The characters are admirably drawn. The pedagogue prelates, especially the rector of the school, with his inscrutable diplomatic smile; the far less diplomatic Huellmann, the stern fanatic, pressing upon the others measures of an almost rash severity; and Father Hofelder, never denying his rustic origin by a certain simple spontaneity and inherent sincerity, yet quite subservient to the holy mission—all these are strongly outlined types. Hofelder is a figure almost impossible outside of German fiction; he is of the type Grützner liked to paint.

American Public Problems. The Election of Senators. By George H. Haynes. New York: Henry Holt & Co. \$1.50 net.

This book is an arsenal of arguments on both sides of the question, Shall the election of senators by direct vote of the people in the several States be substituted for

the present method of election by the State legislatures? The author believes the subject to be very important, because the Senate has power, for the time at least. It is the dominant body in Congress, the body now mainly relied on both to put into effective and rational form the crude and erratic legislation of the lower House, and also to act as a check on the attacks of Socialism, on the one side, and the encroachments of the executive on the other. Moreover, thirty-one States—two-thirds are required by the Constitution—have made formal application to Congress for the submission of an amendment authorizing the changes. "The present volume," he adds in his preface, "aims to make clear the considerations which led the framers of the Constitution to place the election of State senators in the hands of the State legislatures; the form and spirit of elections thus made, and the causes which have led to the recent and pressing demand for popular control over the choice of senators. It attempts also to forecast in some degree the probable effectiveness of such popular control, whether exercised under a loose construction of the present law, or in accordance with a Constitutional amendment making possible the election of senators by direct popular vote."

What is meant by "a loose construction of the present law" is, we take it, explained by many instances given of States which even now attempt to ascertain in advance the popular desire as to the senatorship, and to bring this to bear upon the legislature (p. 140). There is nothing, so far as we know, to prevent a State legislature from making a habit of selecting as senator the candidate who shall have received in advance a majority vote of the people of the State; in this way the function of the legislature in electing senators would become gradually atrophied (p. 138), as has happened to the same function in the case of the electoral college. The author produces a good deal of evidence to show that this process is now going on; the end of it would be that the legislature in every State would merely record the popular choice previously declared; a roundabout way of securing popular selection.

The book is so complete and so fair that, but for one circumstance, we should not feel called upon to do more than to refer the reader to it as a lucid and exhaustive compendium of all that can be urged on either side of the question discussed. This circumstance is that it is, in a measure, inconclusive. The argument assumes, of course, that the Senate, as it exists, is in need of improvement. Chapter iv. discusses and analyzes "the personnel" of the Senate, with the result that in the opinion of "close observers" one senator out of every three owes his election to his personal wealth, to his being satisfactory to the "system," or to his "expertness in political manipulation." This part of the book is more labored than is necessary. It is enough to take the author's list of the seventeen best men in the Senate (p. 93) and compare it with a list of the seventeen best men in the Senate fifty years ago, to see what a falling off there has been in character, learning, independence, and ability. The only real question is how far this falling off can be remedied by changing the method of election. We understand the author's

conclusion to be that the change would produce some improvement; whether a great deal or very little is not clear. This obscurity, however, we are inclined to think is inherent in the nature of the subject, and of the argument. There are so many causes at work which influence the selection of the members of a body like the Senate, besides that of the mere method of election, that to determine in advance how far a change in that would improve its character is an impossibility. The tendency of the change might be towards improvement, yet this tendency might be counteracted by others, so as to leave matters very much as they are now. The array of arguments pro and con, marshalled by the author, has slightly the effect of leaving us in a quandary as to whether we may not after all be wrong in thinking there is any substantial preponderance.

The true preponderance may possibly be brought out by a statement of the argument in a form slightly different from the author's. The complete enumeration of every conceivable argument is sometimes a pitfall, because arguments of little or no consequence tend to obscure the important ones.

In the present case, the controlling circumstances are the following: First, there is a direct connection between the decline in the character of the Senate and the method of nomination. The legislatures elect now those whose names are chosen for them by a boss or committee; this boss or committee, as we know by experience in New York, controls the legislature, and selects the senator from considerations of party subserviency (we leave out cases like those of Mr. Lodge, and others, who select themselves), which exclude, so far as possible, independence and character as qualifications. Now, in this process, the fact that the legislature is a small body, the members of which are themselves dependent for their seats on the pleasure of the boss or committee, gives the latter an enormous advantage. Make the election popular, and the nomination, instead of being in the hands of the boss or committee, goes back to a convention, such as now nominates the governor. While it is true that the boss or committee always has a "slate" for this convention, which would (under the new system) include the names of candidates for the senatorship; it is by no means true that the boss always controls the convention as he does the legislature. On the contrary, instances are continually occurring of distinguished and capable men being selected as nominees for governor, who would not stand a ghost of a chance for consideration by the boss for the senatorship. Mr. Hughes and Mr. Jerome are both conceivable as governors of New York, and their chances are to-day being canvassed; while neither one of them is likely in any event to be made senator. Thereason for the difference is obvious. The general convention of a party chosen from a whole State cannot be owned and controlled as a legislative majority can. It is consequently a body in which nominations are more likely to be influenced by these very considerations of general repute, which it is the object of any good system of nomination to make effective. In the fact, there-

fore, that popular election would change the system of nominations, would destroy the present pocket legislative nomination, and substitute a system more open to the influence of popular opinion, lies, we think, the answer to the question propounded by the author. It remains true that no system of nomination or election will produce good senators, unless the public desires them earnestly, and detests had senators sincerely. The change in question will merely give those in any State who desire a good senator an opportunity better than they now have, for urging his claims.

The Development of Freedom of the Press in Massachusetts. By Clyde Augustus Duniway, Associate Professor of History in Leland Stanford Junior University. New York: Longmans, Green & Co.

Dr. Duniway's volume was originally a thesis for the degree of doctor of philosophy in political science at Harvard. In its final form, it is a work of permanent value; for in the intervening nine years (1897-1906), Dr. Duniway has continued his research and greatly extended his monograph. His first idea was to write a history of the right of freedom of discussion in the United States; to do for America, that is, what Henry Jephson did so well for England in 1892, when he published "The Platform." As a preliminary step to a work which would have been larger in its scope than Mr. Jephson's history—for Mr. Jephson is concerned exclusively with the development of the public meeting in England—Dr. Duniway began an investigation into the restrictions upon the freedom of the press in the British-American colonies; and when the magnitude of even this one phase of the right of free discussion was realized, he determined to narrow his investigation to Massachusetts.

British American colonies might or might not have included Canada—and had Dr. Duniway pushed his investigations into the older provinces he would have discovered that New Brunswick and Nova Scotia from their earliest settlement benefited much from the progress towards a free press which had been made in Massachusetts up to the time of the Revolution. In New Brunswick, the Legislature assumed that it had powers to punish offending newspaper publishers, much as the General Court of Massachusetts in 1722 punished James Franklin of the *New England Courant*, when it ordered the high sheriff of the County of Suffolk to detain Franklin in the stone prison during the pleasure of the court. The New Brunswick Assembly at Fredericton, about 1830, committed the publisher of the *Merimachi Gleaner* to jail. In 1844 it similarly committed Hill and Doak, the publishers of the *Loyalist*; but in this case there was an appeal to the courts, as there was in the case of Daniel Fowle, who, in 1755, was committed to jail by the General Court of Massachusetts for printing a satirical account of the debates of the House on an unpopular excise bill. In Fowle's case a judicial decision harried the action and assessed the costs against the plaintiff. In the Hill and Doak case in New Brunswick, however, to the dismay of the Legislature, the attempt to bar the action on the same plea that was successfully advanced in Massa-

chusetts in 1756, failed. The printers of the *Loyalist* recovered damages from the Speaker and the sergeant-at-arms; and it was discovered that the Canadian Legislatures had never possessed the power which they had used in committing printers for contempt. They did not possess this power "because," in the words of a judgment of the Judicial Committee of the Privy Council in London in 1843—a judgment which governed the New Brunswick case—"the ordinary tribunals of the colony were sufficient to investigate and punish past misconduct."

This may seem a digression on the part of the reviewer; but it is not an impertinent digression, for a glance at the history of the free press in Canada shows that Dr. Duniway has good ground for his claim that in confining himself to Massachusetts it was possible to treat "every aspect of the subject with sufficient fulness to give a true picture of historic development." Another reason for regarding Dr. Duniway's work as of more than local value is to be found in the copious footnotes which record parallel developments in other of the thirteen colonies. In a word, it is much more than the history of the development of a free press in Massachusetts. Either in the text or in the footnotes there is to be found the history of a free press in the United States; and as most of the early newspapers in the Provinces of Nova Scotia and New Brunswick were begun by United Empire Loyalists who had emigrated from Boston, and who were familiar with the status of the press in Massachusetts in the years immediately preceding the Revolution, Dr. Duniway's work will have to be taken into account by the historian of the constitutional development of the press in the Dominion of Canada.

Still another value attaches to Dr. Duniway's monograph. It was necessary for his purpose that he should make clear the changing position of the press in England from the settlement of Massachusetts to the Revolution in 1776; and he has done this so thoroughly that it is scarcely conceivable that any American student of the development of a free press in England will have occasion to consult any other authority. Dr. Duniway carries his study of English conditions beyond the Revolution. He brings it down as far as the Act of 1792—Fox's Act to remove doubts respecting the functions of juries in cases of libel. There was much legislation concerning the press by the British Parliament after the act which resulted from the exertions of Fox and Erskine; but most of it had to do with registration, imprints, excise duties on paper and advertisements, and with stamps on newspapers. Fiscal burdens the English newspapers had to carry for sixty or seventy years after the enactment of 1792. Save for these, however, the English newspaper press was free by 1792; so that Dr. Duniway comes within measurable distance of being the historian of the free press in England as well as in Massachusetts. In fact, he comes nearer than any other writer to being the historian of the free press in the Anglo-Saxon world; for Fox Bourne bestows only a couple of pages on American journalism before the Revolution in his "English Newspapers." Andrews does little more; while Hunt and Grant ignore overseas British newspapers altogether. More than this, it can be asserted for Dr. Duni-

way's monograph that it embodies the first scholarly work that has been put into this phase of the history of the press as an Anglo-Saxon institution; and it is perhaps noteworthy that unlike all preceding histories of the newspaper press its author is not of the newspaper craft.

The Frog Book. North American Toads and Frogs, with a Study of the Habits and Life Histories of those of the Northeastern States. Mary C. Dickerson. 16 colored plates, 96 half-tone plates, and 35 line drawings in the text; the illustrations based largely upon over 300 photographs by the author. "The Nature Library." New York: Doubleday, Page & Co. \$4 net.

Any remnants of popular prejudice against frogs, toads, and tree-toads are likely to be dispelled by this attractive and instructive volume. The fifty-eight living North American species are described and (with one exception) finely illustrated, often in colors, from the author's photographs. The regrettable exception is *Ascaphus*, the sole North American representative of the discoglossoid toads, a single example of which was found in 1897 in the State of Washington. Naturally and appropriately, greater space is devoted to the forms that are more familiar, more interesting, or economically more important, e. g., the bull-frog, leopard-frog, garden toad and common tree-toad, *hyla versicolor*. The thoroughness of treatment is evidenced by the fact that to the last named, picturesquely styled "this entertaining little acrobat of the frog world," are given six pages of text, two line cuts, two half-tone plates exhibiting nine attitudes, and two colored plates (one of them the frontispiece) showing ten color-phases of this versicolored creature. Among the uncolored plates special praise is due those which represent the stages of development and the parts employed in the "Keys"; Figs. 8 and 9 clearly show the two kinds of vocal pouches.

Notwithstanding some examples of the prevailing nature-study gush or cant, the style is generally simple and direct. Among particularly graphic phrases or descriptions are the following: "The frog's moist skin is like a great gill stretched over the whole body"; "if a sparrow comes for its daily bath beside what seems to be a moss-covered stone, its brown tail feathers are seen a moment later protruding from the frog's mouth, while the frog is sitting sedately in just the same spot." Most persons are aware, directly or indirectly, of the eminent edibility of frogs' legs, yet probably few realize that "frog-hunting yields \$50,000 annually to the hunters, but threatens practical extinction to certain native species," or that so many thousand young frogs are sacrificed for fish-bait that some regions are overrun with grasshoppers, and vegetation suffers materially. The economic value of the "heavy-gaited toad" is well set forth in the following paragraph:

It is found that 88 per cent. of a toad's food consists of insects and other small creatures that are considered pests in the garden, grain-field, or pasture. It is estimated that in three months a toad will eat 9,936 injurious insects, and that of this number 1,988 (16 per cent. of all its food)

are cutworms. Counting the cutworms only, the estimated value of a single toad is \$19.88 per year, if the injury done by a single cutworm be put at the low figure of one cent per year.

Yet unmixed commendation cannot be accorded either the author or the publishers. The fifty-page Introduction deals, for the most part, clearly, concisely, and correctly with such general topics as structure, development, distribution, and phylogeny; but its technicality might well discourage the lay reader at the very outset, and certain portions would have been better relegated to the end of the volume. On the other hand, under particular species are discussed at considerable length topics of equally general application, voice, segmentation, metamorphosis, moulting, and respiration, that would come properly within the Introduction, wherever placed. Cilia are not "minute hairs" (p. 180) in any proper sense. Only the linguist or the professional naturalist could be expected to interpret "metachrosis (p. 150)"; nor should it be necessary to consult the Index for information that "Batrachia" and "Salientia" are synonyms of *Amphibia* and *Anura*.

More than one-half of the line cuts might have been omitted without detriment to the proper subject of the work. The list of color plates does not name the forms represented, and the page is ostentatious. Several of the full-page half-tone plates display merely forest and stream; the frogs and toads are no more in evidence than was the prophet in the picture of Jonah and the Whale. The list of half-tones is verbose. The Index comprises less than three pages of too small print, and is inadequate for a volume of such size intended for the laity. The following specific omissions have been noted incidentally: *Anura* (pp. 245, 248); behavior (27); metachrosis (150); pollywog (68) purring (173); squirting water (172); fatal effects of salt and lime (36); and "spring-frog" as a synonym of *rana pipiens* (171). The Bibliography covers nine pages, and includes the titles (mostly sufficient) of 165 publications by 113 writers. A later edition of "Wiedersheim" should have been cited. Typographic errors are surprisingly few. In Stejneger the *j* is commonly replaced by *i*; in the Index and on pp. 13 and 12, respectively, Dipnoan has a superfluous *i* before the *a*, and the *y* is omitted from *Crossopterygii*.

The Becquerel Rays and the Properties of Radium. By the Hon. R. J. Strutt, F.R.S. Second edition. New York: Longmans, Green & Co. \$2.40 net.

The fact that the books on radio-activity by Strutt and by Rutherford have both gone into second editions in two years shows that the subject is of great general interest, and that our knowledge of it is changing rapidly. Radio-activity and the speculations aroused by it have ceased to be a nine days' wonder, and an earnest desire has arisen among physicists to fit this new material into the scientific mansion which is building so laboriously.

While the new theory of ions, electrons, or corpuscles, as they are somewhat indiscriminately called, does not professedly contravene the atomic theory, yet the

additions are so revolutionary as to amount really to a new conception of the structure of matter. The metaphysical idea underlying the supposed divisibility of the atom is little dwelt on by the expounders of the new belief. Yet the very fact that, as our knowledge increases, we find it more and more difficult to retain simplicity of structure and are compelled to divide and subdivide the ultimate particles of matter in order to explain newly discovered properties, raises the question whether, after all, we are on the right track. Who can say that in a few years Thomson's corpuscle will not be further divided, and so on until a *divisio ad absurdum* is reached? That this new theory is already beyond the limits of physical science is even more apparent when the properties of the electron are considered. Some of the corpuscular school even now maintain that the electron is an immaterial substance, composed wholly of negative electricity. It is difficult enough to hold to a conception of the essentials of matter, but a substance, electricity, possessing inertia and no matter, is at present at least incomprehensible. Our ideas of inertia and matter are firmly anchored to a space representation, and no necessity for such a space relationship has been found for electricity. In the development of this theory there has been a too ready submission to the glamour of the corpuscle and a lack of variety and conclusiveness in the proofs. But after all is said, the theory of electrons has two powerful supports: it appeals to the imagination, and it has been the means of coordinating a mass of discordant phenomena, and of giving a working hypothesis for their explanation. And that is a great service.

Mr. Strutt in the new edition of his book has given an adequate and clear outline of the facts and theories of radio-activity, and has made his treatment quite elementary. Necessarily, a subject changing so rapidly will require in a short while a revised account, but Mr. Strutt has grown up in the subject, and is quite competent for the task. We note a few typographical errors which should have been corrected, and at least one misstatement. When he says that "Radium gives off enough heat to *boil* its own weight of water in an hour," he should have said "to bring to the boiling temperature."

Brief Literary Criticisms. By Richard Holt Hutton. New York: The Macmillan Co. \$1.50.

This is the second volume of selections from the essays contributed to the *Spectator* by the late R. H. Hutton, a genial and suggestive critic of Ainger's type, but with more power and less humor. No man in England was more just or better balanced, and when a great writer died, such as George Eliot, Carlyle, Longfellow, or Browning, one could count on finding in the *Spectator* an accurate and well-written estimate of the man's genius and his work. Several of these papers have been reprinted here.

A useful but not a great critic was Hutton, one who served his generation well, and can still be read with profit, though some of the subjects that he discusses, such

as the comparison of Browning and Tennyson, the question whether Clough was a true poet, the "poetic place" of Matthew Arnold, have lost their freshness for the present, until, in fact, other generations call for a reevaluation of the late Victorian writers. Most critics have a weakness for some obscure poet to whose merits they try to convert an unwilling world. Hutton's protégé is William Caldwell Roscoe, whose *Malgodin*, in the poem "Violenzia," is, he tells us, a tempter more sardonic and resourceful than Mephistopheles. Writing on "Decadence in Poetry," he brings together interesting evidence from the seventeenth and eighteenth centuries to show that morbid taint is to be looked for, not in the age itself or in any particular society, but in the individual decadent, who has not "the judgment or the breadth of sympathy to find out the healthier instincts of his age." Hutton had a profound admiration for Matthew Arnold, whom he called "the greatest elegiac poet in the English language." Arnold's descriptive poetry he considered peculiarly refreshing and restful to the soul—more so even than Gray's, and his self-questioning strains were, he thought, bound to become more and more popular as they are recognized to be the voice of this self-questioning age.

Miss Roscoe has prefixed to this selection an excellent reproduction of Hutton's photograph of Hutton.

The Poetry and Philosophy of George Meredith. By George Macaulay Trevelyan. New York: Charles Scribner's Sons. \$1.50 net.

Mr. Trevelyan's title is, perhaps, a trifle misleading. What he deals with is the "style" and the "content" of Meredith's poetry. Under the former head, to which he devotes the first two chapters, he remarks upon the following points, which he takes to be characteristic in this respect of his author: "The richness of his imagination; his use of metaphor as an appeal directed more to the mind than to the eyes and ears; the rapid succession of his metaphors; his compression; . . . the sleepless activity of his intellect; and, lastly, the haunting quality of his phrases." The discussion of these matters is not particularly rich or suggestive—it is rather what the rhetoricians would call "expansion"—with the exception of an excellent comparison of the Meredithian metaphor with the Elizabethan. The main interest of this part of the volume consists in copious quotations from "Modern Love" and "Love in the Valley"; for, however he contrives it, these poems, and particularly the former, do seem to gain something from the manner in which he sets them out. Perhaps his judicious abridgment has something to do with it. At the same time, in the case of Meredith, as of Browning, it is a great advantage to be told what a piece is about, before you read it.

From these same characteristics just referred to, Mr. Trevelyan derives the poet's chief failings too, his ruggedness and his obscurity. "My principal contentions have been that these faults are mostly due to the style, but occasionally to the subject matter." They are "the necessary price paid for those literary mer-

its which distinguish his work." Happy the critic nowadays who can make shortcomings appear as the defects of his author's qualities! His mission is accomplished. If a writer is crude or rough, it is due to his strength; if he is formless and chaotic, to his breadth of vision; obscure, to his profundity. "The army of human thought," says Mr. Trevelyan, "is advancing in two bands: one marches along the high road under the bright hard light of science; but the other is straggling into the dimmer shades of intricate psychology, into 'haunted woods,' the birthplace of new aspirations, prophecies, and religions, which can find no expression in dogmatic statements, but only in the inspired language of beauty, suggesting the undefined, and making the unseen felt. Mr. Meredith has long been a leader in this direction."

As for the exposition of Mr. Meredith's philosophy, it seems in some way much more tenuous and impalpable than what precedes—partly, no doubt, on account of the difficulty of reducing a poetry of adumbration to "dogmatic statements." "Mr. Meredith," his critic repeats, "is the inspired prophet of sanity." Perhaps so; but was ever sanity led so mad a dance? At all events, as Mr. Meredith is represented—whether rightly or not, it would take too long to decide—what is most conspicuous to the spectator is the grapple between the poet and the humanitarian. It may be that Mr. Trevelyan lays too much stress upon his author's socialism, what may be defined as his disposition to substitute the sense of society for his personal conscience. But in such a case the poet's only hope is in resistance; for either he or the humanitarian must go to the wall:

George Meredith is the most modern, although he is the oldest, of our living poets. Whenever he is not in touch with the common ideas of our age, it is more often because he is still in front, than because he has been left behind. In his spirit we find a synthesis of many crude elements of latter-day thought.

At least, such a text, if adequately expounded, would go far toward explaining the poet's unmistakable confusion and inconsequence.

Highways and Byways in Oxford and the Cotswolds. By Herbert A. Evans. With Illustrations by Frederick L. Griggs. New York: The Macmillan Co. \$2.

There is no district in England better suited to the aims of the Highways and Byways Series than the Cotswolds of the shires of Oxford, Gloucester, and Worcester. They are almost unspoiled by the railway, and have remained pastoral; are, in fact, more pastoral now than in the sixteenth and seventeenth centuries, when their cloth-mills were celebrated. The yellow or gray stone of which the Cotswold houses are built exactly suits that hilly country, and no counties in England are richer in Jacobean mullioned manor-houses, granges, priories, and abbeys. Too many of these have been converted into farmhouses or allowed to fall to ruin, but here and there they have come, of late years, into the hands of intelligent owners who, like William Morris and Kelmscott, have known how to restore and to pre-

serve all their charm. The Cotswold churches are often like small cathedrals, built in the days when the wool merchants, who made their fortunes there and built many of the great houses, counted it a pious duty to spend on the church what they had earned from the soil. Nearly all of these churches have been "restored" by overzealous parsons in the nineteenth century, and Mr. Evans has to lament, on almost every page, some act of vandalism which has filled the windows with vulgar "cathedral" glass of modern workmanship, or scraped the old mellow plaster from the walls. It was after seeing, in 1876, the alterations under the name of restoration going on in the beautiful Norman church of Burford, that William Morris founded the "Society for the Protection of Ancient Buildings," better known as the "Anti-Scrape Society." Cotswold wheat and barley, like Cotswold wool, are famous, and H. Rider Haggard has admitted that the farmers in the Gloucestershire Cotswolds are better off than elsewhere in England, so that the Agricultural College of Cirencester, the Cotswold capital, with its four hundred acres for scientific farming, is happily placed. The wool merchants in the palmy days of the industry, before foreign growths had driven them almost out of the field, used to send the wool on long strings of pack-horses by the ancient trackways across the Berkshire, Hampshire, and Surrey downs—those deep and narrow tracks now half-grown over that to the casual visitor to the downs are so mysterious—to the Medway ports and thence to Calais, where the English staplers had their warehouses. Lately a Gloucestershire sheep farmer has invented a method of softening the native wool, and a cloth can now be produced from it as fine as from a Yorkshire loom, so that Cotswold cloth may again rank with the best.

Mr. Evans pursued the ways of the Cotswolds on a bicycle, with Oxford, which he describes in the first chapter, for starting point. The roads are good, but hilly, and are not likely to encourage motoring. Perhaps the chapter most interesting to American readers is that which covers the charming villages of the Worcestershire Cotswolds, Broadway (which in spite of its distance from the railway has become a favorite American resort in summer, since Mr. Abbey and Madame Navarro established themselves there); Willersey, its near neighbor; Weston, and Aston Subedge, and the rest, whose cottagers now depend mainly on fashionable summer visitors. In these books the illustrations play an equal part with the descriptive writing, and much of the antiquarian information supplied by Mr. Evans would be thrown away on the reader without the admirable sketches by Mr. Griggs. The volume is fully up to the rest of this charming series.

Music and Drama.

English Diction for Singers and Speakers.
By Louis Arthur Russell. Oliver Ditson Co.

Rousseau maintained that the French language was unsuited for music; but Gluck's way of using it made him change his mind. The English language is still

awaiting its Gluck, and pending his arrival singers continue to look down on it as quite unfit for their purpose. They will be surprised to hear the opinions of Mr. Russell on this point. The English language, he maintains, is proper enough. It is the vocalists who are at fault; they have not learned their lesson. As he recollects the great German, Italian, and French singers in attempts at English song and oratorio, made in this country and in England, he can only say that the effect of their vocalizing in English has been, almost without exception, ridiculous, even though these artists have had a good conversational English vocabulary, and a fair idea of English grammar. "From such exhibitions as these has come the theory that English is unsingable." But English is not unsingable. Artists like Charles Santley, Sims Reeves, Nellie Melba, Lillian Nordica, Lillian Blauvelt, are able to sing not only in several of what are considered the "music languages," using a pure diction; they can use the English language also musically. Why? Because they have taken pains to learn it. The French, German, and Italian artists have not done so; they are poor linguists; the various vowel sounds are not clear to them. Undoubtedly, the English language is more difficult to master, but it is worth the trouble, being better adapted to the requirements of expression, especially in the finer and more sensitive lines, than the other languages. "The singer who has mastered English may well laugh at him who can sing only in a simpler language, like Italian."

This doctrine will not please the proud Continental singers from abroad, but there is much truth in it. Successful vocalists are, and have to be, hard workers; yet the majority are indolent, and disinclined to learn more than is necessary. Heretofore their maltreatment of the English language—and the songs and oratorios written in it—has been commonly condoned on the ground that the language itself was more to blame than they; but they will have to turn over a new leaf and go to work again, if Mr. Russell establishes his point, which we think he does. He makes it clear that the difficulty of English is not due to the sounds in themselves, but to the *many sounds*, the closely allied vowel-colors, the finer shades, with which our language abounds. But all these can be taught without much difficulty, and Mr. Russell's attempt to teach them ought to attract the attention of singers and speakers. His book contains sections on pronunciation, vowels, diphthongs and diphthongal vowels, and consonants, while the last chapter is concerned with practical work. A few sentences may be added to illustrate the author's lucid way of driving home truths:

We put all possible voice in all consonants, *singing* them, as nearly as possible, taking all noise out of them that we can, yet never forgetting that they are consonants. We put as much vowel-character in them as we can, yet heeding the articulations.—When we have found the *place* of all the vowels and the consonants, their individual character and color; when the ear is well tuned in phonetics, and the mouth in quick responsiveness, we will find great delight in language, we will find our speech improving with our singing, and, if we properly continue in the work, we will sing well in spite of

voice limitations, for a good enunciation and smooth, precise articulation are the largest of the true singer's accomplishments.

Georges Jacobi, composer of the opera "The Black Crook," which had a run of more than 300 nights, and of "La Mariée depuis midi," written for Mme. Judic, and sung by her all over Europe, and of innumerable ballets, died last Thursday, at the age of sixty-six. He was born in Berlin on February 13, 1840, and at the age of six began the study of the violin under Edward and Leopold Ganz. In 1849 he went to Brussels as a pupil of De Bériot. He also studied at the Paris Conservatoire, where he gained a first prize for violin playing. He was in the orchestra of the Opéra Comique, the Grand Opéra, and the Bouffes Opéra. For more than twenty-five years he was conductor at the Alhambra in London. As a teacher he won a high reputation, and in 1896 he was made a professor at the Royal College of Music in London. He was twice elected president of the Association of Conductors in England, was an officer of the French Academy, and a Knight Commander of the Spanish Order of Isabel.

Otto Neitzel, the eminent Cologne critic, who is to give a series of lecture recitals in this country the coming season, is the author of the best book on France's greatest composer, Saint-Saëns, whom we shall also hear. It is published by the Harmonie Company in Berlin. Adolf Jullien's "Musiciens d'aujourd'hui" contains good articles on some of the works of Saint-Saëns, and Georges Servières has a charming study of the same composer in his "La musique française moderne." Saint-Saëns's own books are admirable specimens of musical criticism; especially his "Portraits et Souvenirs," which contains sympathetic articles on Berlioz, Gounod, Liszt, Massé, Rubinstein, Bizet, Wagnerism, "Don Giovanni," "The Musical Movement," and "Lyric Drama and Music Drama." In our own language the best essay on Saint-Saëns is that of Arthur Hervey in his "Masters of French Music" (pp. 107-172), published by the Scribners.

Nothing succeeds like sensationalism. Richard Strauss's "Salome" is to be produced this season even in Italy—at the Scala in Milan, under the direction of Toscanini. The manager of the Scala, Giulio Gatti-Casazza, heard the work at Cologne and promptly secured the performing rights.

The first critically revised edition of Beethoven's letters complete is announced by the publishers of *Die Musik*, Schuster & Loeffler, in Berlin. It will be issued in about 25 *Lieferungen* of 50 to 60 pages each.

There was probably more desire for advertisement than anxiety about British dramatic art at the bottom of the conduct of the London manager who tried to exclude three or four of the ablest dramatic critics from his first-night performances, on the ground that they took themselves too seriously, and failed to appreciate English acting at its real value. The notion that the worth of the modern actor is underestimated by the contemporary press is absurd. This fact was brought home to the manager in question by some

pointed comment, and he, thereupon, shifted his ground, falling back upon the old plea that it is practically impossible for a critic of a first-night performance to write a competent review for the next morning's paper, and that it is unfair, anyhow, to judge a piece by its first public performance. Undoubtedly, reviews could often be made more complete if the author had more time for reflection, but, on the other hand, a trained writer, having once formed his opinion, does not require a very long time to put it upon paper, with intelligibility at least, if not with elegance. If the critic's opinion is worthless, it will not be any the more precious when uttered in polished literary phrase. Regarding the artistic quality of a first public performance, as compared with that of a later representation, all depends upon circumstances. If the piece is produced prematurely, without adequate supervision or rehearsal, the interpretation of it certainly is likely to improve for some time to come. But a producing manager who is both able and conscientious would not raise his curtain for a public exhibition until he was satisfied that the performance was as perfect as rehearsal could make it. Assured of that fact, he would invite all the critics at the earliest possible moment, knowing that their presence would act like a tonic upon his actors. This is one of the commonplaces of theatrical experience. Moreover, the general public expects to get its report of a new play the morning after. Herein, of course, is the main reason why some managers reserve any seats at all for the critics. In no other way can they get so much of the cheap publicity which is the very breath of their commercial and "artistic" existence. That much of the so-called criticism which is printed is grossly incapable and unjust, as the London manager asserts, may be true, but the greater part of it is of that adulatory sort, of which no manager ever yet complained and of which the unsophisticated public is the chief victim.

Richard Mansfield will soon begin rehearsals for the production of Ibsen's "Peer Gyn" upon a scenic scale of great magnitude. There are fifty-one speaking persons in the cast, eleven scenes, a choir, two ballets, and a large number of supernumeraries. The music of Grieg will be one of the attractions of the performance.

E. S. Willard, one of the leaders of the English-speaking stage, will open his American season in Montreal on October 1 with Michael Morton's "Col. Newcome," the adaptation from Thackeray's masterpiece, which Beerbohm Tree presented with considerable success in London. Mr. Willard, in many of his impersonations, has demonstrated his ability to depict with exquisite veracity certain attributes—such as natural tenderness, fine simplicity, unconscious dignity, and a sweet old formal courtesy—which are essential to any recognizable portrait of Thackeray's hero. Therefore, whatever the quality of the play may be, his enactment of the Colonel cannot fail to excite the liveliest interest and sympathy.

The London critics are not particularly enthusiastic over the production of "The Winter's Tale" at His Majesty's Theatre in London, although it is plain that, as usual under Beerbohm Tree's management, every-

thing possible has been done for the play by the stage manager. Some of the scenes are described as very beautiful. It is plain that the performance was not brilliant enough to disguise the infirmities of the play. Miss Terry, never a good first-night actress, was more than commonly uncertain of her words as Hermione, though she did not fail to exercise her invariable charm and make her power felt.

Art.

This season's excavations by the French School of Athens at Delos have already resulted in discoveries of artistic importance. Six large archaic lions in marble, ornamenting an esplanade by the Sacred Lake, are a unique find in Greece. Several well-preserved houses have been brought to light in the quarter of the Theatre, and in one of them an inscription in perfect condition gives a precise date. There is a statue of the Muse Polyhymnia, with elaborately executed drapery, superior to the well-known Polyhymnia in the Berlin Museum, and like it probably a replica of the famous work of Philiskos of Rhodes. Quite as interesting is the superb head, larger than life, of Dionysios (Dionysos?) found in a newly excavated temple. This is announced as the finest figure found at Delos for fifteen years, and one of the finest known in Greece. A "treasure" of forty coins (tetradrachma, drachma, and subdivisions), found hidden beneath the base of a monument, is of interest to numismatists.

Alfred Stevens, once a painter of renown, old and paralytic for several years, has surprised the world by dying after it had forgotten that he was alive. The marine paintings, of which he was so proud, excellent and ancestral of recent art as they are, may not be remembered; but his fine ladies will be looked for as long as the Second French Empire interests mankind. The satin gowns, the crinoline, the cashmere shawls from India, drape his figures, whose postures and visible emotions live in his canvas as they do in the pages of Octave Feuillet. Between them and the present-day Parisiennes of Helleu there is a great gulf fixed; and it does not make those of us feel younger who had glimpses of that vanished society led by Empress Eugénie, still living. Was ever an epoch more abruptly ended, and now more remote, than the days of Marie Antoinette and Josephine? When the Second Empire Renaissance arrives, as it is sure to do with all its inartistic sumptuousness, then inspiration and copy will be sought from Alfred Stevens. By birth he was a Belgian, but a son of one of the great Napoleon's officers; and in 1870, when all his ideals were crumbling, he turned sharpshooter against the German destroyers of his Paris.

A large portion of the Asiatic collection of Lord Curzon of Kedleston, made by him in the course of his travels through the East during the last twenty years, and especially during the seven years from 1898 to 1905, when he was viceroy and governor-general of India, is now on view at the Bethnal Green Museum. The collection illustrates chiefly the art of India, Burma, Nepal, and Tibet, but specimens are also

included of the art productions of Turkey, Persia, Afghanistan, Siam, and China. It thus embraces in a single survey the majority of the countries on the mainland of Asia and presents a comprehensive picture of some at least of the principal artistic manufactures of the East. A number of exhibits in bronze, lacquer, cloisonné and porcelain were secured at the relief of Pekin in 1900.

The examples of the faience of Moustiers gathered together at the Colonial Exposition of Marseilles make a unique collection. According to Garnier, in his "Histoire de la Céramique," Moustiers, after Rouen and Nevers, was the most important centre for the manufacture of French faience. The period of the town's finest artistic output extends from the end of the seventeenth century to within a few years of the French Revolution, and the collection at Marseilles contains many excellent specimens by the greatest artists in this ware, the two Clérissys, Joseph Olerys, De Fouqué and Pol and Hyacinthe Roux.

A collection of works by the French sculptor, Puget, most of which had been either unknown or considered lost, has been offered to the museum of Marseilles by Emile Ricard, brother of the portrait painter, Gustave Ricard. This large collection includes sculptures, paintings, engravings, and sketches. The gift is timely, as a statue to Puget is about to be erected in Marseilles.

The house of Rubens in Antwerp is to be reconstructed just as it was three centuries ago. A museum will be installed in it, which will contain everything connected with the life of the great master that can be collected.

The special spring number of the *International Studio* is devoted to the Royal Institute of Painters in Water Colors, long known as "The New Society." The text includes a "History of the Institute," some account of its members, and a chronological list of the latter; while the illustrations consist of forty reproductions in color of the works of living and dead members. These one would judge to be faithful, and perhaps as many of them as could be expected are of really interesting and meritorious works of art. "Southwold from the Beach," by Tom Collier; "On the Downs, near Harting," by J. Aumonier; and "The Hayfield," by Claude Hayes, may be es-

pecially mentioned as vigorous and effective landscapes, while "April," by the late G. H. Boughton, is quite the best of the figure-pieces. It is noticeable that none of these bears the kind of aggressively poetical title which is as frequent here as in most collections of British art.

"The Ambones (pulpits) of Ravello and Salerno" is perhaps the most interesting article in the September *Burlington Magazine*. The author, J. Travenor-Perry, arrives at the conclusion that these gorgeous structures are "in all probability the production of Lombard artists, educated in the Greco-Roman school of Monte Cassino, and influenced largely in their designs by Saracenic workmen." This controverts a prevailing theory that the early classical revival in Italian sculpture derives from southern Italy. Sir Richard Holmes continues his series on English miniature painters with an article on that sterling artist of the Commonwealth and Restoration, Samuel Cooper. Prof. C. J. Holmes concludes his valuable survey of Rembrandt's etchings, dwelling this time upon such important pieces as "The Three Crosses," "Abraham's Sacrifice," and "Christ before the People." The American section is chiefly occupied by R. T. H. Halsey's account of the exhibition of Colonial American silver at Boston. It should open the eyes of Americans to the merit of a native art hitherto unduly neglected.

CABOT'S EVERYDAY ETHICS

By ELLA LYMAN CABOT. 439 pp., 12mo, \$1.25 net.

A live and interesting discussion of problems which present themselves to boys and girls of high-school age. It is based upon the author's long experience in teaching. It is supplemented with a key containing questions, suggestions for illustration, and a bibliography all separated from the body of the text.

A New Edition, with Introduction and Notes by Sir Frederick Pollock, of

MAINE'S ANCIENT LAW

xxiii+462 pp., 8vo, \$1.75 net, by mail \$1.92. The object of this edition of Maine's classic work is to reproduce it accompanied by such help to right understanding and profitable use as a younger generation may reasonably require. Since the book was first published many new facts have been discovered, and knowledge of others has been freed from error and misconception. This material, embraced in the new notes, confirms and supplements Maine's work in many points.

HENRY HOLT AND COMPANY 29 W. 23rd St. NEW YORK

Some English Authorities

having had a chance at advance sheets of

JOSEPH VANCE

(By WILLIAM DE MORGAN. \$1.50.)

have expressed themselves as follows:

SPECTATOR: "A fine novel, by whatever standards we judge it. . . . No book has appeared for long in which lovers of the classic tradition in English fiction are likely to find such generous entertainment."

ATHENÆUM: "The reader—if he has any appreciation of work that is humorous, thoughtful, pathetic, and thoroughly entertaining—will not regret the length of the story."

SPEAKER: "A finely-written work, which deserves to stand high above the average output of fiction."

ACADEMY: "The book is never tedious, and we were continually delighted by the apt wit."

WESTMINSTER GAZETTE: "A godsend to holiday-makers."

THE HEART THAT KNOWS

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 27, 1906.

The Week.

When Secretary Taft, the good-natured, the patient, throws up his hands and calls the behavior of the Palma Government "utterly disgusting," Americans will not go far wrong in echoing the phrase. If ever there was a case of political suicide, it is that of President Palma. And the worst of it is that, in his own self-destruction, he is dragging the Cuban republic to death along with him. And all for a strained punctilio that outdoes the most fantastic *pundonor* ever proudly but fatally insisted upon by a Spaniard, whether in fact or fiction. It is with a magnificent flourish that Palma declares he will surrender to the Americans, if need be, but that he will never consent to abdicate in order that a peaceful adjustment may be made by the Cuban people, and a government set up able to command their respect and obedience. One would think he was the heroic ruler of an adoring country. But what are the facts? Palma himself has admitted that his government had reached the extreme of inanition. He did so when he invited American sailors to land in his own capital. The insurgents were only twelve miles away, in ever increasing numbers, and it is evident that, but for the truce declared on President Roosevelt's initiative, they would have captured Havana before this, and chased Palma away. In view of Palma's attitude there is no evading the dispatch of an American military force adequate for the protection of life and property. This country has undertaken to guarantee that in Cuba, and if Cubans themselves have let the work fall to the earth, we must take it up. The one comfort in the "disgusting" situation is that the Administration has moved most reluctantly; has shown no desire except to aid the Cubans to restore their own shattered Government; and that the intervention, which we must now regard as an accomplished fact, was compelled, not by American greed, but by Cuban blindness and incapacity.

No one need be surprised at the recent outbreak in Atlanta. For six months politicians in all Georgia have been vying with each other in denouncing the negro. They have been conducting their primary campaign as if trying to free the State from a negro "reconstruction" government. During the same period, an apostle of lynching, John Temple Graves, has been making almost daily appeals for a mob murder.

For the killing of every negro accused of assault on a white woman his rival in base journalism, the *Atlanta News*, has offered \$1,000 reward. With all this has come a series of atrocious assaults by negroes on white women. That gave the excuse for an outburst as savage as any slaughter of Jews in Russia. When a murderous mob can take possession of one of the richest and largest cities of the South, it means the loosening of the fundamental bonds of civilization, the breakdown of government in city and State. Why talk of pacifying Cuba? Nothing that has happened there in the remotest degree approaches the Atlanta horror in its danger to the United States. Unfortunately, the world will condemn Atlanta without considering that it has honorable white residents who feel keenly the humiliation and dishonor. Three hundred of them met Sunday to consider how to stop the lawlessness and redeem the city. The business men know that all this retards the city's growth and injures its prosperity. Quite aside from the sickening horror they must feel at the outrages of the mob, they realize that lynching is a cure for nothing. There is but one remedy: the rigid enforcement of law and order.

Winston Churchill's New Hampshire canvass is one of the most remarkable events in the history of American politics. A young man with but the slightest political experience, he went into a boss-ridden and railroad-owned State, announced his candidacy for Governor, and conducted a campaign which at first amused but rapidly terrified the Republican managers; he compelled them to put his ideas into their platform, and failed to get the nomination by only a few votes. This is an extraordinary achievement. It shows the power of bold and honest leadership. Mr. Churchill may well say to the regular Republicans whom he came so near defeating: "You are in office, but I am in power." During the next year, he will be in a position to compel the party to keep the pledges which it made under duress. He will be a sort of "People's Lobby" of his own, to let New Hampshire know whether the pass-system is abolished, the railroad lobby shorn of its power, taxation reformed, and the direct primary granted. Failing to secure these reforms, Mr. Churchill will be able to press his candidacy again and irresistibly. Even as it is, the flashing of his Carvel sword has put the enemy to flight, infused a new spirit into New Hampshire politics, and cheered on those who are fighting the same battle elsewhere. The brilliant exploit of this amateur in politics gives the lie to those

who assert that in the political world all is flat, stale, weary, and unprofitable.

"The advances in forest work have been so great in particular lines and so general throughout the country," writes Quincy R. Craft in the new Year-Book of the Department of Agriculture, "that forestry has obviously passed out of the stage of preparation and propaganda into that of actual work." It is, indeed, a remarkable record of accomplishment which has been made in the first year since the national forest reserves were transferred to the control of the Department of Agriculture. The maintenance of these reserves being the chief feature of our forest policy, their surprisingly rapid growth of late should rightly be set down as the most important single development. The total acreage of land reserved, actually increased by more than one-half in a single year. From 63,045,797 acres on January 1, 1905, the reserve area rose to 97,773,617 acres on December 31. This is a larger area than that of any State in the Union except Texas and California. But even this is not all, for the several States have begun to cooperate in the work of creating reserves. Fourteen now maintain officials specifically and solely charged with their forest interests; six employ trained foresters. In those for which figures are given in the bulletin already quoted, some 2,549,500 acres are already set aside for forest purposes. Large as they are, the existing reserves, so greatly increased through President Roosevelt's interest in forest questions, are inadequate for the needs of the future. "Reforestation," said the president of the American Forestry Association last year, "is the coming work of the American forester. We are now planting thousands of acres of trees every year, but it isn't enough." Along lines of educational and experimental work valuable results have already been obtained. Uses have been discovered for new woods formerly considered of small value, like loblolly pine, red-gum, and lodgepole pine. By the employment of preservatives lumber from inexpensive and quick-growing trees is being adapted to needs for which slow-growing hard woods were demanded a few years ago. Thus there is scarcely an element of the forest problem affecting which substantial and encouraging results are not already secured.

The launching of three great ships in England last week calls attention afresh to that country's supremacy in shipbuilding. Not only in originality and in thoroughness of construction, but in speed, the English lead the world. But

Americans cannot go over to England and buy ships unless they are prepared to sail them under foreign flags; there is not even a high duty, payment of which would enable an American to register his ship under his own flag. The sole exception to this rule is the millionaire yacht-owner, who can buy the latest product of the English shipyards and get an American registry for it without question, while the man who needs a perhaps less expensive craft for trade purposes is barred out in the hope that, rather than have no ship at all, he will pay the American builder 30 or 40 per cent. more. The result is in most cases that the American shipping man turns his attention to other matters, or sails his craft under the English or Norwegian flag. The Atlantic Transport Line was long and still is a case in point, for its English steamers are largely owned by American capitalists. In the case of the new *Mauretania*, the British Government has aided the Cunard Company by a large subsidy in order to have the use of the steamer in war-time. In the main, however, England's great merchant fleet has been created without Government aid, and the same is also true of the German merchant marine. Yet the proud, independent American will again be told next winter that we cannot have a fleet unless Uncle Sam subsidizes the ship-owners. Even the report of the subsidy committee, however, admitted that if we could "standardize" the building of ocean steamers, as we have that of lake craft, we could compete with the English.

The report that the elaborate Japanese "tea ceremonies" are being introduced at American country-places comes almost simultaneously with the announcement that tea culture in this country has passed its experimental stage. In the current number of the *Review of Reviews*, Dr. Rodney H. True summarizes the history and present status of tea-culture in America as developed by private enterprise in coöperation with the Department of Agriculture. What has been demonstrated is that from the soil of the Southern States can be produced an excellent grade of tea with "a characteristic quality in the flavor." On the commercial side, the problem is more doubtful. Tea-picking has to be done by hand, and it is here that the question of labor becomes important. "It has been demonstrated that the South Carolina trained negro boy or girl can more than equal the performance of the average picker in the Orient. . . . His wages may be higher than those of the Oriental laborer, who receives perhaps only ten cents a day, but his ability to accomplish results, when properly supervised, is correspondingly high." Last year, out of

some 60,000 tons of tea consumed in this country, less than six were American grown. The infant industry has not yet reached the stage of lobbying for a protective tariff; but it seems to be in a state of exceptional promise.

The first burning issue to arise under the Pure Food law, as is fitting, does not relate to food at all, but to drink. It is, in a word, whether whiskey made by mixing together plain alcohol, water, flavoring and coloring matter, "beading oil," and a decoction which makes it taste ten years old or more, is to be labelled "imitation" or "blended." The contention of the attorney who represents the manufacturers of this class of product before the Federal Commissioners was foreshadowed months ago. No sooner did it appear likely that the Hepburn bill would pass than this office began to receive arguments in pamphlet form from makers of whiskey "blended" or "imitated," as the case may be. The arguments were in effect that most commercial whiskey is made in the way described; that even old-style pot-still whiskey is artificially flavored and colored by being set away in charred oak barrels, and that, on grounds of honesty and common sense alike, any beverage which looks like whiskey, tastes like whiskey, has the same chemical and physiological properties as whiskey is whiskey, whether it takes ten years or ten minutes to produce it. It seems to be accepted by all that the label is somehow to differentiate the concocted product from the old kind. But whether the polite "blend" or the contemptuous "imitation" is to be the distinguishing term remains to be decided. If, as some prophets assert, the food of future generations is to be made by synthetic chemistry, this may be the beginning of a series of really epoch-making rulings.

The popular vote which has forbidden the sale of absinthe in the Swiss canton of Vaud is in the line of well-conducted temperance reform. It is believed that the other cantons will follow this example. Absinthe, it need hardly be recalled, ministers both to the ordinary alcoholic craving and to a drug habit peculiarly disastrous to the brain. Thousands of people, to be sure, drink it in great moderation, at the traditional "green hour" only; for the unfortunates who drink it freely, insanity of some sort is in store. The Swiss are showing themselves canny folk when they manufacture the stuff for those who don't know better than to use it, but forbid their own mountain people to touch it. This legislation, as we have said, is of the modern sort, recognizing the different degrees of harmfulness in the various liquors. It makes our whole-hearted Yankee way of proscribing as "rum"

everything from a light wine to absinthe itself, look amazingly crude.

Without formally approving the assassination of Gen. Minn, Prince Kropotkin spreads the slain man's record in the *London Times*. His suppression of the Moscow rioting appears as of so brutal a sort that his removal seems less an act of vengeance than of human instinct. The orders given to his regiment ended with these "general indications: not to have prisoners, and to act pitilessly"—directions which were followed to the letter. When the soldiers reached Golutvino station they arrested all the bystanders, twenty-two in number. At dusk these innocent prisoners were marched off to a remote part of the station, shot from behind as they chatted unsuspectingly, their bodies loaded into a car, and buried in a common grave next morning. At Pérovo station, Gen. Minn's regiment, without a word of warning, shot into a crowd of hungry peasants who had begun to loot the grain cars. Over fifty were killed. Among the individual prisoners at other points, many were "marched to the left" according to a secret list and bayoneted summarily. This was done without the court-martial required in Russia, even when military law suspends the code. Of these victims several had orders of release in regular form. The pitiful instance is recorded of a mother who after some anxious days "received the student uniform of her son pierced by fourteen bullet holes and one bayonet thrust—and his order of release." Repression is rough business at best, but such a story, told tranquilly and supported by indubitable evidence, at least explains the mental attitude of the terrorists, and interprets the dispatch of Tuesday which says that many high Russian officials are breaking down under the strain of the duties they have to perform and the nemesis they hourly expect.

The French bishops have submitted to the authority of the Pope and voted against compliance with the Separation law. For this action they offer the technically correct explanation that the Concordat—a contract between France and the Vatican—was abrogated without consultation with the Pope. Thus the head of the Church has been wounded in his dignity and is not bound to recognize any reorganization of the Gallican Church made without his consent. While in full sympathy with this view, we feel also that the terms of the Separation act are more vexatious than oppressive, and that the part of good sense would be to conform to it. It need hardly be recalled that this was the opinion of the French bishops in May. They have taken the other attitude in obedi-

ence to the Papal authority, not out of personal conviction. It appears, then, that early in December the French Catholics will gradually be dispossessed of their churches. Nothing like an actual persecution of the cult is possible, for under the ordinary law the faithful may meet for purposes of worship on simply notifying the local authorities of each meeting. It does not make matters any more comfortable for the Government that the Free Masons are publicly planning to make the churches over into "temples." In fact, the obduracy of the Church, being totally unprovided for, will be a source of considerable embarrassment, and it is possible that some slight modification of the Separation act may yet save the *amour propre* of the Vatican. Going to Canossa is, after all, not so dire a pilgrimage, Vicomte de Mun recently pointed out, when it only means chatting with a Papal legate, say, at Fontainebleau.

A comparison of the final weights of the Harvard and Cambridge crews discloses a fact which may have much significance. When the crews began practice, the American oarsmen were considerably heavier than their opponents, as much as six or seven pounds per man; and their superiority in this respect was thought by many to give them a decided advantage, other things being equal. On the morning of the contest, however, this disparity in weight had almost entirely disappeared. During the last days of training, both crews grew slightly heavier, but the Englishmen gained most, for when the starting gun was fired their collective weight was only six pounds less than that of their antagonists. Plainly, then, the Americans were trained more "finely" than their rivals, and the question at once suggests itself whether a fatal mistake may not have been made in this particular. There were critics, including Vivian Nickals and other prominent English oarsmen, who asserted, with much repetition, that the Cambridge crew had not been exercised sufficiently, that they had never been "rowed out" in practice, and that they would not last the course. The event put an end to all such complaints, but does not preclude the suspicion that the American professional coach, Wray, may have fallen into the error which the English amateur, Muttelbury, skilfully avoided. If the Harvard men were a trifle stale, it would not be necessary to seek any other reason for their defeat. English oarsmen have always thought that Americans were likely to be over-zealous in their training.

The miniature scale of the recently erected Dürer monument at Nuremberg provokes a French journalist to reflec-

tion on the abuse of monumental sculpture. The statues, he feels, become embarrassing both from their number and their inhuman isolation. They stand blankly, cut off our view, and, as it were, look down upon us. With small statuary in public places the case is different; it meets us on our own level, and we establish a certain intimacy with it. Our critic likes to recall, for example, the small Dürer in bronze as a kind of patron and playfellow of the children who frequent the fountain at its base. The practice of nations who have had great sculpture, the Greeks, the Italians of the Renaissance, the masters of Gothic France, bear out this criticism. At the high periods of sculpture there has always been a good deal of what may be called a sub-monumental kind. The habit of cluttering the streets with heroic sculpture savors of Rome and the decadence of the antique. In any case, much of our public statuary sins in scale, and much of it would actually be more effective if of smaller dimensions. Let any art-lover ask himself how often and how intently he looks at the sculptures on the front of St. Bartholomew's Church in this city, and how often at any one of the gesticulating gentlemen in bronze before which the cars whisk him daily. The query may suggest that, while neither bigness nor littleness is in itself an admirable quality, our city, like the rest, has in evidence far too much nugatory bigness.

The late Hermann Zumpe, who came near being Anton Seidl's successor at our Metropolitan Opera House, once wrote from Madrid, where he repeatedly conducted series of concerts and operatic performances, that he believed the best way to wean the men of Spain from the love of bull-fights was to make musical enthusiasts of them. Thus he would tempt them to spend their time and money in concert-halls and opera houses instead of in the Plaza de Toros. The enthusiasm he aroused with his Wagnerian performances naturally suggested to his mind this solution of a serious national problem. Doubtless, he was too sanguine; yet his plan prompts the general question, Is not such a source of keen and lasting pleasure worth cultivating by all men as well as by women? Men of letters, like Dr. Johnson or Mr. Burroughs, may speak of music condescendingly as a "purely sensuous" art; but its devotees know that it is infinitely more—that it involves the feelings and the intellect as much as any other art does, or any phase of mental activity. Think of Remenyi being forbidden by the Austrian Government to play Magyar patriotic airs in the villages of Hungary in 1848; think of the heads of the Catholic Church attributing the success of the Lutheran movement chief-

ly to the innovation of allowing the congregation to take part in the singing of hymns; think of the indispensable rôle music plays at all social functions, at all sad or cheerful gatherings, from funerals to weddings, and it will be conceded that the habit most men have of looking on this art as a mere accomplishment, like dancing, is extremely foolish. Every professional or business man who has tried it long enough will concede that, next to sleep, nothing is so potent as music to lift the weary mind out of its ruts and bring it rest. A musical air may be as balmy as sea or mountain air, bracing the nerves for renewed efforts. Other arts rest the mind also, yet perhaps not so completely, for they are concerned with the world as we constantly see it, whereas music is a world of its own.

A correspondent of the *London Times* calls attention to the many neglected trout streams in Great Britain, meaning the smaller tributaries of well-known fishing rivers. These brooks are overlooked by the angler chiefly because the fish are small, a condition which can be easily remedied by building occasional small dams. In the ponds thus made the fish may lie in hot weather, and every such expanse of water is a catch-all for and actual producer of food for the trout. Such a policy, with proper stocking, would vastly increase the amount of fishing water available for the modest angler. These observations apply with considerable force on this side the Atlantic—not so much in the way of improving the smaller streams, which the American small boy—more enterprising than his British contemporary—annually fishes to death, but rather by way of suggesting the introduction of trout into waters now given over to coarser fish. Rather few waters are adapted to that fastidious aristocrat, our speckled trout, but the brown trout will thrive in almost any Northern stream not hopelessly polluted. He will even maintain himself against the perch and pike kind, but not for long against the omnivorous black bass. There are many streams which now afford only a negligible kind of mixed fishing that would provide tolerable trout fishing. Gradually, the riparian owners will realize, first, that they are neglecting a valuable utility; next, that, since the day of our splendid wilderness trout is passing, it is time to consider the claims of the trout of civilization, the river trout of Europe. It is not given to all of us to fish the lakes and streams of Canada, but a little thrift would provide plenty of fly-fishing within a hundred miles of New York. And with the brown trout will presumably come also such engaging sophistications as the dry-fly, which go far to compensate for a light basket at nightfall.

VOTING FOR PARTY.

"I advise young men to vote for parties, and not men," said Secretary Shaw at St. Louis the other day, "for parties stand for principles, and men do not always do so." This is a doctrine which we expect to hear preached by some one at pretty regular intervals, and certainly no one, at the present time, expounds it with quite so straight a face as Mr. Shaw. It has a stranger sound now, however, than of old, and affects the hearer like an echo of "The King can do no wrong," or "The sun do move."

The notion that the man simply revolves around the party may fairly be called the Ptolemaic hypothesis of politics, obstinately adhered to by its devotees in the face of a myriad of facts which go to overthrow it. The Secretary utters his solemn advice to the young men at a time when party regularity for its own sake is less esteemed than ever before in our history. Mr. Shaw himself sits at the Cabinet table once a week with a President for whose election millions of voters disregarded party loyalty altogether; and a fellow-secretary, Mr. Taft, was one of the chief factors in overthrowing Boss Cox of his own party in Cincinnati, and, incidentally, in electing a Democratic Governor of Ohio.

All over the country, the party break-ups of last year are in a fair way to be repeated. Never, it is safe to say, have there been so many independent candidacies for office in States and cities; never so many elections uncontested, or so many endorsements of independents by the party organizations. So manifest is the weakening of party discipline, with the old style of party loyalty, that some sage observers have predicted the actual dissolution of both the existing parties.

It is not necessary to accept that conclusion in order to point out that Mr. Shaw's advice is an anachronism. The typical figures in politics to-day are the group of reformers whose names are so often linked as almost to make the every-day citizen tired of hearing them called "the Just." But these men—Folk, Jerome, Weaver, La Follette, Colby, Churchill, et al.—without exception owe their present position to the flat disregard by both themselves and their constituents of the advice of partisans of the Shaw school.

While the preference for the man above the party has thus given the country its present leaders, what has the theory of thick-and-thin adherence the party to show for itself? Mainly, unfit men in office and a set of election laws calculated to fetter the voter who wants good men. The early nineties were the years of the ballot-reform movement. The best citizenship took up

this fundamental reform and forced the passage of ballot reform laws in most of the States. The greater number of these conformed to the principles of the Australian ballot. They placed all candidates for a given office on an equality. But the believers in "voting for the party" would not allow this condition to exist very long. The straight-ticket circle was invented, which made it easy to vote without looking at the names of candidates at all. The pictorial emblem was brought in to reduce mental effort still further. In John Fiske's "Civil Government," to illustrate, was pictured in 1892 the newly adopted Kansas ballot, without emblem or party circle, only a shade inferior to the Massachusetts style. But within a few years the politicians had added the emblem and party circle, coupled with rules to make independent voting very difficult. What happened in Kansas happened in about a third of the States which, at the instance of partisans of the Shaw school, deliberately abandoned good ballots for bad. Rhode Island in 1905 was the last to make the change. The early ballot reformers apparently did not see clearly enough the vital difference between forms externally similar and did not resist the distortion as they should have done. The ballot designed virtually to coerce the voter into becoming a strict partisan is thus the chief memorial of the school of political thinking to which Mr. Shaw clings.

It is in spite of this obstacle that political independence has made its wonderful advances in recent years. The American electorate has from the first shown great readiness to shift from one side to the other between elections. If "independence" be measured on this basis, there was as much or more displayed between the elections of Buchanan and Lincoln as between those of Garfield and Cleveland, or Cleveland and McKinley. But the habit of discriminating between candidates for different offices at the same election has been of slow growth. The general tendency to hold municipal elections in off-years or odd months was due largely to the extreme difficulty of making voters settle these contests without reference to State and national issues. State questions came up times without number on which the minority party had the popular side. Yet after a fight thus complicated, the vote for Governor and vote for Presidential electors were apt to correspond pretty closely. The choice of electors of one party and a Governor of the other, as in the case of Russell of Massachusetts, was more than a seven-years' wonder.

The breaking of the slavish habit of voting has been one of the finest achievements of the twentieth century. It has been computed that in the election of 1896 only .38 of 1 per cent. of the voters went to one party for a Governor

and to the other for a President, 1.22 per cent. in 1900, but 7.57 per cent. in 1904. This means, roughly, that the discriminating vote rose from 50,000 in 1896 and 150,000 in 1900 to more than 1,000,000 at the last national election. It is not an encouraging time that Mr. Shaw chooses for his appeal to young men to make of themselves hide-bound partisans.

THE LIFE-INSURANCE NOMINATIONS.

With the filing of the independent nominations for trustees of the Mutual and New York Life Insurance Companies, the experiment in control by the policyholders has fairly begun. There has been an impression, since misunderstanding or disagreement in the policyholders' committee became public, that the plan of opposition nominations was somehow coming to grief. This is a mistaken inference. Bishop C. C. McCabe and Cardinal Gibbons withdrew from the committee for purely personal reasons. Cardinal Gibbons did, to be sure, make it plain that he was unwilling to be placed in an attitude of hostility towards certain of the administration nominees whom he happened to know and respect. This objection was not at all unnatural, especially in a dignity of the Church; but it has only the slightest bearing on the policyholders' cause.

No one denies that, on the administration tickets of both companies, men of the highest character and efficiency are named. This was, indeed, to be expected when the existing boards made special efforts to fill vacancies with precisely such men as should appeal to the confidence of policyholders. Among even the old trustees renominated on the administration ticket, there are names which warrant Cardinal Gibbons's dislike of personal warfare. Messrs. Orr, Fowler, and Claffin on the New York Life's official ticket, and Messrs. Clarke, Dickey, and Vanderbilt on the Mutual's, are examples of candidates who on personal grounds are unobjectionable.

But the real question now at issue goes far beyond such considerations. The policyholders' vote of December 18 will serve two purposes. It will, first, test the usefulness of the elaborate machinery, constructed by the Armstrong committee to ensure a bona-fide vote by the real owners of insurance companies. Second, it will show the true feeling of the policyholders towards managements under which abuses and scandals were possible. Doubtless, the present managements of both companies are chastened and reformed. The practices of the McCall and McCurdy days have been definitely abandoned. Under the *ad interim* presidency of Mr. Orr, no

one would dream of the sleight-of-hand tricks with the New York Life's funds to which Mr. Perkins owned up; and while Mr. Peabody has made a feeble and tactless president for the Mutual, with Wall Street affiliations which are highly undesirable for one in his office, still there is no more of the "syndicating" on joint account with trustees, or malversation of funds in the political department.

All this is true; yet it is impossible, even for friends of the existing managements, to deny that the "administration" tickets will be taken as representing the former official control under which abuses had their rankest growth. The question remains whether the gentlemen who sat in the directorates with notorious offenders, and who must have been aware of what was the common talk of Wall Street, can now be freed from all responsibility, because of the reforms which they have made under duress. This is not the way of everyday business. We know of two trustees of these companies, both of them well-known men of affairs, who stated frankly to their own fellow-directors, in official meetings, that the entire board owed it to themselves and to the public to resign.

The plan of independent nominations can succeed only if the policyholders choose satisfactory candidates, and then shake off apathy and support them heartily. The first of these two steps has been well taken. Man for man, the policyholders' tickets filed for the New York Life and the Mutual are fully a match, in efficiency and personal standing, for the administration nominees. What most impresses the reader of these lists is the success of the nominators in securing men whose names and connections guarantee effective service; yet whose affiliations arouse none of those misgivings, always surrounding the old boards, as to what favors this director or that would demand for his private business. When one recalls the skepticism, commonly voiced a few months ago, as to whether competent candidates would ever be selected by opposition committees, this is a real achievement.

The final choice is now in the hands of the policyholders. They may sustain the administration, elect the opposition nominees, or select, if they prefer, such names as suit them from each ticket. Whatever the outcome, a contest and a genuine canvass will be the most wholesome of all the innovations resulting from the insurance troubles. The one result which would warrant discouragement would be a return of the policyholders to the indifference and apathy which made possible the repeated plundering of mutual life insurance companies.

THE DISAPPEARING EASTERN RUG.

Just as true Oriental rugs are disappearing from the market, numerous books and articles celebrate their requiem. Blessings, as usual, brighten as they take their flight. These authorities generally agree that there are more good antique rugs in America than in the entire Orient. Probably this is true, but a little inspection of the auction places where "priceless antiques" are glibly knocked down to imaginary bidders or of the great stores where Eastern rugs are sold without hugger-mugger, would show pretty clearly that the old ones are no longer in the market. They are on floors, unrecognized and unprized, and our boot heels are gradually grinding out the last vestiges of a beautiful art. Museums will tell of its richness to the future, but even they will fail to represent its infinite variety.

The art is perishing, like an immemorial oak, from the centre. A generation ago one might still pick up the marvellously fine weaves of Persia—old Sehna and Kirman. These splendid fabrics gave way to the cruder weavings, until they were replaced by the technically admirable but lifeless copies of today. Next, the true Turkish rugs disappeared. To-day one may occasionally buy an old Bergama or a sturdy Anatolian made by the back-country nomads; but these are absolutely the last of a great stock. Trans-Caucasia, Western Turkistan, Afghanistan, and Beluchistan long seemed inexhaustible sources of supply. But the Russian advance, or its influence, has everywhere introduced aniline dyes and hasty commercial methods of manufacture. For a matter of ten years it has paid to test every Caucasian rug with a wet finger; perhaps five years ago inferior examples began to displace the velvety weavings of Bokhara, and within a year or two even the Beluchistan rugs, the last resort of the poor but discerning amateur, have begun to go the way of the rest. About the only regions that produce rugs in any quantity up to the old standard are Mesopotamia—the Mosul rugs of excellent materials and workmanship, but without distinction in design; Kurdistan, and the Trans-Caspian wastes, where Turcoman nomads still make the so-called Yomut Bokharas. These forlorn survivors cannot last many years, and then the West will be measurably cast upon its own resources for superior floor coverings.

In some quarters the hope is expressed that the modern factory products of Asia Minor, Persia, and India may be brought up to the old standard, and it is true that fine carpets, substantial in weave, of true colors and more than passable design, come from these countries. It will probably be long before the West makes carpets of equal utilitarian or artistic merit. But these are

something quite other than Oriental rugs in the true sense. Even when of high technical merit, like the modern Kirman-shah or Tabriz weaves, they are made upon set copies, being lifeless tracings of traditional designs. The imperious demand of the West has at last exhausted the apparently unfailing inventiveness of the East, and the modern commercial rugs, however practicable, are no more Oriental than Vernis-Martin is fine Japanese lacquer. Moreover, these carpet rugs, even where the law, as in Persia, requires vegetable dyes, are for the most part artificially "aged" or bleached. This may be done without harm to the wool, but never without detriment to the rug. Probably some thousands of these doctored carpets are sold each year to people who at least hope that they are buying a valuable heirloom. Since genuine antiques of carpet size are hardly to be had, and when bought are worth at least their weight in silver, the people who buy ancient carpets from seventy-five dollars up deserve rather little sympathy.

Meantime the trade grows apace, and the West does double injury to the East, robbing it first of its fabrics and next of the taste that made them possible. The only hope of a rehabilitation of rug-weaving in Asia would be a marked cessation of the American and European demand. This cannot fairly be expected so long as even the commercialized products of the Orient are better and cheaper than any we produce here. But the gradual degeneration of the output of Asiatic looms affords an opportunity for the Western carpet manufacturer. It is an opportune time for him to appeal to the class that still buys Eastern rugs. A few years ago the competition was frankly hopeless; to-day that is no longer the case. Even on machine looms one need not despair of vying with the average small rugs of the modern East. Merely from the artistic point of view such a rivalry might teach the weavers of Trans-Caucasia and Turkistan that it was worth while to recover their former superiority.

For the collector, the disappearance of the antique rugs from the market affords opportunities. The old ones being so few, the average dealer regards them as a source not of profit, but of prestige. When found they may be bought at a trifling advance upon the usual price per foot—always excluding the high rarities of Persia and Asia Minor. But to find these few survivors of the gorgeous clan—there's the rub. Each "find" is acquired at the cost of many disappointments and hours of fruitless breathing of the Levantine dust, while the eye is offended by the glaring dyes of the German laboratories or the specious sheen bestowed by the rug "doctor." Only very patient and stalwart persons can be encouraged to engage in

the quest. These hardly need the hint to look first at the pile of long hall "runners." Not being generally available for the modern house, good antiques may still be had in this size at most reasonable prices. And—we whisper it, for the counsel savors of sacrilege—these long fellows can readily be cut down to working dimensions by the simple expedient of taking out their middles. But this should only be done with examples, not "too bright and good for human nature's daily food."

CONGRESS OF AMERICANISTS.

The fifteenth international congress of Americanists was held at Quebec September 10 to 16. Americanists are scholars whose field is the study of the American continent and the native American races. The geography, history, and ruins of America, the life and customs, languages and traditions, arts and industries of the aborigines were the subjects of addresses and discussions by students from all parts of the world. France, Germany, England, Mexico, the United States, and Canada were represented.

One of the most interesting addresses was delivered the first evening by Leopold Batres, the Mexican archaeologist, who has been excavating the ruins of an ancient civilization. Eighteen years ago there lay, some twenty-five miles from the City of Mexico, a group of mounds and two great hills covered with vegetation. To-day the mounds have given place to ruined houses and temples; and where the hills were, now stand two pyramids, one of which is larger than Cheops in Egypt. A whole city has emerged from its burial of countless centuries. This city is called Teotihuacan, an arbitrary name, meaning "the place of God." A great avenue runs through the city and connects the two pyramids. On each side were buildings with courts, vestibules, and peristyles, adorned with frescoes and sculpture. Teotihuacan must have come to its death by violence, for the buildings are in ruins, the pillars and statues broken, and everything scarred by fire. The giant pyramids are thought to be temples. For this work of excavation the Mexican Government has appropriated \$1,500,000—a sharp contrast to the indifference of the United States towards its inheritance of antiquity.

Dr. Franz Boas of Columbia University argued for more extended archaeological and ethnological research in Canada, particularly in the field of Indian languages. The study of the native tongues, he holds, furnishes the key to knowledge of the distribution of population and diffusion of culture. Unless work is carried on speedily, the time for it will have passed.

The Indian of the future was considered in three papers which outlined a plea for the resuscitation and development of all that is of value in the Indian as an Indian. Mrs. Osgood Mason of New York spoke of the Indian's creative faculty and his skill in phases of art activity. She urged that in educating the Indian this native genius be fostered, instead of arbitrarily crushed; and that the development of his art industries would make of the Indian a useful factor in civilization. Mrs.

Mason affirmed that as decorators and designers, as workers in metal, wood, and glass, our aborigines could occupy the place now held by foreign immigrants.

Mrs. Mason's address was followed by two examples of the effort to encourage native talent—that of Miss Angel De Cora in the field of Indian art, and of Miss Natalie Curtis in Indian music. Miss De Cora is of the Winnebago tribe and is possibly the first of her race to address the Americanists. Although cultivated in the white man's ways, she exemplifies the gifts of her race. She is a skilled artist, and has worked in illustration and designing, in wood carving and in plaster, and has also painted pictures. Last year the present commissioner of Indian affairs, Francis E. Leupp, asked her to become art instructor at the Carlisle Indian School. She accepted the appointment with the purpose of developing native art in all its branches, and of applying it to various industries. This step marks a new departure in the education of the Indian, and Miss De Cora may fairly be regarded as a pioneer. She showed a number of designs made by the Indian boys and girls.

Miss Curtis then gave some examples of songs of the Indians, collected by her from all parts of the United States. She maintained that in the poetry and music of the aborigines, no less than in the pictorial art, lay a great gift to the civilized world. The whole unwritten literature of a race is embodied in the music and ritual of the Indian.

Professor Seler of the University of Berlin and Dr. Gordon of the University of Pennsylvania discussed phases of the art of ancient America.

Correspondence.

ARCHÆOLOGICAL BILLS PASSED BY CONGRESS.

TO THE EDITOR OF THE NATION:

SIR: Three bills of no slight importance for the promotion of archaeological studies were passed at the last session of Congress: an act incorporating the Archaeological Institute of America, approved May 26; an act for the preservation of American Antiquities, approved June 8; and an act creating the Mesa Verde National Park, in Colorado, approved June 29.

The Archaeological Institute of America was founded in the year 1879, by Prof. Charles Eliot Norton and others in Boston. Its purpose is to promote archaeological research, by aiding in the maintenance of schools for archaeological study in Athens, Rome, and Palestine; by maintaining fellowships in American archaeology and in mediæval and Renaissance studies; by sending out expeditions for special investigations; by publishing the results of exploration and research; by holding general meetings, and by offering free public lectures. The activities of the Institute have thus far been extended to five fields of archaeological interest—Greek, Roman, Oriental, American, and the Italian Renaissance. The school in Athens was established in 1881, that in Rome in 1895; the school in Jerusalem was founded in 1900. The number of affiliated societies of the Institute is now twenty-one, comprising a

membership of nearly 2,000 persons. Eight of the societies are in the Atlantic States, eight in the Central States, and five in the Western States. The extension of the Institute's work, and the need of making permanent provision for its financial support, rendered incorporation important, while in view of the scope of its undertakings and the geographical distribution of its membership, incorporation as a national rather than as a State institution was desirable. The Institute hereafter will have an office in Washington, but the organization which has been found to be well adapted to its work is retained. Its government continues to be vested in a council consisting of ex-officio members and additional councillors chosen by the affiliated societies. It is authorized to hold property "to an amount not to exceed \$1,000,000." The beginnings of an endowment have been made by the funding of life memberships, and it is hoped that there will soon be large additions.

The approval of the act for the preservation of American antiquities marks the culmination of a long series of efforts to bring the policy of the United States in this respect into line with that of other enlightened nations. Before 1905 several bills for the protection of prehistoric remains were introduced, but were rejected as inequitable or defective on the legal side, or as presumably opening the way for the withdrawal from entry of an undue portion of the public lands desirable for settlement. Meanwhile, the ruthless destruction of ancient landmarks and archaeological remains on Government land by relic-hunters, commercial excavators, and ranchers, particularly in the Southwest, went on practically unchecked; isolated instances of protection, as that of the Casa Grande in Arizona, only served to accentuate the irretrievable loss to science occasioned by the unrestrained harrying of less favored sites.

At the meeting of the council of the Institute in May, 1904, a large and representative committee was formed to take into consideration the whole subject of national legislation for the preservation of antiquities. This committee, of which the president of the Institute, Prof. Thomas Day Seymour of Yale University, was chairman, met in St. Louis in the following September. Under its auspices representatives of the Institute and of the American Anthropological Association held conferences in Washington in January, 1905, and agreed upon a measure. That particular bill did not pass, but the present law, which had in advance the approval not only of the committees of the Institute and of the Anthropological Association, but also of the heads of the Government departments concerned, is simpler and in several respects more satisfactory. The provisions of the act are sufficiently liberal without being exposed to the danger of loose construction. The first section prescribes a penalty for the collection or destruction of antiquities upon the public lands "without the permission of the secretary of the department of the Government having jurisdiction over the lands on which said antiquities are situated." The second section is far-reaching in its application. The President of the United States is authorized to declare by public proclamation historic

landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Government of the United States to be national monuments, and he "may reserve as a part thereof suitable parcels of land."

It will be noticed that the reservation of parcels of public land from entry is not limited to areas containing prehistoric remains; "historic structures" are included, as are also objects "of scientific interest," such as a natural bridge or a petrified forest. And the way is made easy to transfer to national ownership and keeping such structures and objects of interest now in private ownership as it shall seem worth while for the Government to accept and protect. The Bureau of American Ethnology is understood to be already preparing data to be submitted to the Interior Department for guidance in withdrawing from entry as soon as practicable the sites on the public lands which contain the most important archaeological remains.

The remaining section of the act deals with the difficult question of granting permission to conduct archaeological excavations upon lands owned by the Government. Some members of Congress and Government officials at first favored the limiting of such excavation to the Government's own initiative, but the view of the archaeologists prevailed. These, including W. H. Holmes, chief of the Bureau of American Ethnology, which is more directly concerned with the matter than any other bureau, were unanimous in advocating a more generous policy, which should serve the public interest by granting the right to excavate, under suitable restrictions, to properly accredited scientific institutions, thus making possible the formation of collections of antiquities for "reputable museums, universities, colleges or other recognized scientific or educational institutions," all gatherings of antiquities to be made "for permanent preservation in public museums." Commercial excavation on public lands of the United States will soon be, if it is not already, a thing of the past.

The Mesa Verde National Park, set aside for the preservation of its cliff dwellings, comprises a strip of land along the Mancos River, in southwestern Colorado. It is fourteen and a half miles long, and contains 65.5 square miles. The most important cliff dwellings of the region are not in the park itself, but on lands belonging to the Indians, near the edge of the southern Ute Indian Reservation, which adjoins it on the south. As the Indians cannot be dispossessed of their land, the protection of these monuments is assured by a provision of the act which places under the custodianship of the secretary of the interior all prehistoric ruins that are situated "on Indian lands" within five miles of the boundaries of the park, these to be "administered by the same service that is established for the custodianship of the park." The creation of the Mesa Verde Park is in direct response to praiseworthy efforts of public-spirited women of Colorado. The act creating the park contains no provision for the care of it or for the granting of concessions to hotel-keepers and others whose services are necessary for the accommodation of tourists; but this

defect can easily be remedied by supplementary legislation.

FRANCIS W. KELSEY.

Ann Arbor, Mich., September 15.

THE "HONOR SYSTEM" IN COLLEGE. TO THE EDITOR OF THE NATION:

SIR: In your interesting review of Professor Paulsen's "German Universities and University Study," in the *Nation* of September 6, you say: "[He] cites the well-known fact that there is no rowdiness in a classroom (would that we Americans could say as much!)."

The words in parenthesis, so far as they are true, should be humiliating to "us Americans." To a very large degree "we Americans" can say as much. Throughout the South, I think, it can be said.

I have been for more than forty years a professor (for more than fifty years a teacher) in several colleges and universities of the South, and, with a single exception, I have never seen "rowdiness in a classroom." That exception was in an institution under military discipline, and rather proves than refutes what I am about to say. Absolute good order and perfect respectfulness in the classroom—and not only in the classroom, but everywhere in intercourse with professors—is, I believe, the unvarying usage of students in all Southern colleges. In support of this statement, I think I can unhesitatingly appeal to the testimony of my colleagues throughout the South.

A few years ago a distinguished gentleman from Boston—whose name would be known to all readers of the *Nation*—visited me here. I was just conducting the final (written) examination of a large class. He expressed a desire to visit the library:

I said: "I will go with you."

"But," said he, "how can you leave your class in examination?"

"With perfect safety," I answered; "the class itself is my police—more perfect than any I could establish. The least attempt at dishonesty would be detected and punished."

So I went with him for an hour, and then returned to my classroom. During our walk he said: "I see you have a large class; how do you keep order in the classroom?"

I said: "You might as well ask how I keep order in my own parlor. These young men would as soon be guilty of misconduct there as in my classroom. The thought of 'keeping order' never occurs to me. *Order keeps itself!*"

My good friend, whose personal experience had been so different, was astonished, and asked: "How can this be?" I answered, with some detail, what I will here say only in brief: It is simply one of the results of the honor system, which is traditional in Southern colleges.

This "honor system"—so often misunderstood—is the very foundation of Southern college life. It applies not only to honesty in examination, but everywhere, to all intercourse between students and professors. It means simply: A student is a gentleman; a professor is a gentleman; the intercourse between them should be, always and everywhere, as between gentlemen. With this traditional sentiment, recognized by all students and by all professors, mutual de-

ceit or distrust becomes impossible. The student body becomes the watchful guardian of student honor, and this "code" elevates and refines all intercourse between students and professors.

With such convictions, based on an experience of college teaching since 1853, it is with positive grief that I read the arguments of such men as Dean Briggs of Harvard, and of President Andrews of Nebraska, expressing distrust of the "honor system" in colleges. They do not trust it because they have not tried it *with faith*. Without faith it need not be tried at all. But it is better to trust and be deceived, even again and again, than to impair that confidence which is the only true and safe basis of college life, as of business life.

EDWARD S. JOYNES.

University of South Carolina, September, 1906.

Notes.

The John Lane Company is issuing from the Bodley Head a new batch of verse, including several volumes of reprints. In the list are a complete collection of the poems of William Watson, edited by J. A. Spender; "The Book of Indian Love," a posthumous collection by Laurence Hope; the collected poems of Ernest Dowson, with a memoir by Arthur Symonds; "Peace and Other Poems," by Arthur C. Benson; "Love's Journey," by Ethel Clifford; "Musa Verticordia," by Francis Coultts; selected poems of John Davidson; Alice Meynell's later poems; poems of John Henry Newman, edited by Frederic Chapman; "Underneath the Bough," an anthology by Theodora Thompson; and "The Cloud Kingdom," a book of bird song, by J. Henry Wallis.

The American Unitarian Association announces for early publication "Four American Leaders," by President Charles W. Eliot. The book consists of essays on Franklin, Washington, Channing, and Emerson. The Association will also publish "Life's Enthusiasms," by President David Starr Jordan; "Father Taylor"—founder of the Seamen's Bethel in Boston—by Robert Collyer; "Cap'n Chadwick: Marblehead Skipper and Shoemaker," by the Rev. John White Chadwick; and "The Message of Man," a "collection of ethical scriptures," edited by Stanton Coit.

The Frederick A. Stokes Company announces for autumn publication "Decorative Styles and Periods," by Helen Churchill Candee; "Chats on Old Prints," by Arthur Hayden; "Betterment, Individual, Social, and Industrial," by E. Wake Cook; "The Making of a Housewife," by Isabel Gordon Curtis; "Tibet, the Mysterious," by Sir Thomas Holdick; and "The Collector's Manual," a guide for collectors of antiques, by N. Hudson Moore.

Doubleday, Page & Co. publish this week "Crumbs and His Time," by Dolores Bacon; "Set in Authority," by Mrs. Everard Cotes; "The Arab Horse," by Spencer Borden; "Farm Animals," by E. V. Wilcox; "Confessions to a Heathen Idol," by Marian Lee; "The Cynic's Word Book," by Ambrose Bierce, and a reprint of "They," by Rudyard Kipling.

Small, Maynard & Co. will bring out shortly "The Nibelungenlied," translated by John Storer Cobb. The firm will also

issue "Latter-Day Love Sonnets," an anthology by Laurens Maynard; and "Intimations of Immortality," a volume of selections by Helen P. Patten, divided into such sections as "The Testimony of the Ancients," "From the Bibles of Humanity," "The Speculations of Philosophy," "The Voice of the Church," "The Deductions of Science," "The Vision of the Poet."

The Fleming H. Revell Company announces for October, "On the Trail of the Immigrant," by Edward A. Steiner; "The Missionaries and Their Critics," by Dr. J. L. Barton; and "Listening to God," a volume of sermons by the Rev. Hugh Black, who comes from Edinburgh to the professorship of practical theology in Union Seminary, New York.

"From Things to God," a volume of sermons by the Right Rev. David H. Greer, D.D., bishop coadjutor of New York, preached while rector of St. Bartholomew's Church, New York, will be reissued by Thomas Whittaker, in a new and popular form in "Whittaker's Sermon Library."

An autobiography of Field-Marshal Sir Evelyn Wood, "From Midshipman to Field-Marshal," will soon be published by Methuen & Co. Sir Evelyn Wood served with the Naval Brigade in the Crimea; he won his Victoria Cross in India; he fought in Ashanti, Zululand, and the Cape; he occupied a prominent place in the Boer war of 1881 and in the Gordon Relief Expedition of 1884-85. Finally, he commanded at Aldershot, and afterwards became quartermaster-general and adjutant-general.

A book by Commander J. W. Gambier, R.N., entitled "Links in my Life on Land and Sea" is just published by Unwin. Capt. Gambier was correspondent of the London *Times* in the Russo-Turkish war.

"The Life of Sir Henry Vane, the Younger, with a History of the Events of His Time"; his sojourn in New England and governorship of Massachusetts, his return to England, and his life under the Protectorate and Restoration, his trial and execution, by Dr. William W. Ireland of Edinburgh, will be published immediately by E. P. Dutton & Co.

E. P. Dutton & Co. will have ready in a few days a novel by C. J. Cutcliffe Hyne, "The Trials of Commander McTurk."

The *National Geographic Magazine* for September opens with an account, by R. H. Chapman of the Geological Survey, of his experiences in the Nevada deserts and Death Valley, while engaged in making a reconnaissance of an unmapped region, which is, however, being rapidly developed by miners and railroads. In a discussion of the leading questions of Oriental politics, the Hon. E. Hioki, Japanese chargé d'affaires, dwells upon the Anglo-Japanese alliance as a guarantee for peace and pleads for an industrial and commercial alliance between the United States and Japan. He believes that, with the opportunities in Korea and Manchuria, Japanese immigration to the United States will considerably decrease in the future. Among the other contents is the substance of Senator Warren's speech on the animal wealth of the United States, and Sir Wilfrid Laurier's address on the forests of Canada, in which he advocates the creation of preserves and the adoption of the German system of forest

patrol and reforestation. An abstract is given of Prof. K. Mitsukuri's account of the cultivation of marine and fresh water animals in Japan. The illustrations are numerous and very interesting, and there is a map of the Death Valley region.

An interesting description of Seistan is given in the *Geographical Journal* for September by Col. Sir H. McMahon, the head of the commission appointed to arbitrate the boundary and water disputes between Persia and Afghanistan. From its fertile soil and abundance of water it is a second Egypt; and though now sparsely settled, nowhere else in the world, he affirms, are there so many ruins, from shapeless mounds to high imposing structures of great size. The singular problem of the relation of the Helmand and the other rivers to the Seistan basin, which has sunk some 400 feet in geologic times, he solves by the supposition that this lowering of level is caused by the weight of the enormous amount of silt annually deposited by the floods. The region is remarkable also from the wind which, beginning at the end of May, blows unceasingly, with a violence sometimes reaching seventy miles an hour, till the end of September. It carries with it great masses of sand, which buries towns; the wind also uncovers ancient ruins. He refers to the work of Ellsworth Huntington, the American explorer and Carnegie research assistant, as does H. W. Cadoux in his graphic account of recent changes in the course of the lower Euphrates. Prof. J. W. Gregory, in an article on the economic geography and development of Australia, dwells especially on the labor question and legislation, and gives a favorable impression of the present conditions. Some notes on two expeditions in southern Peru are contributed by C. R. Enock; and A. P. Low summarizes the geographical work of the Geological Survey of Canada, of which he is the head, for the years 1900-1905. This work includes extensive explorations in the Yukon valley.

In *Petermann's Mitteilungen*, No. 5, Dr. M. Eckert describes a series of maps of the world designed by him on the basis of the Mercator projection, but intended to present a more correct conception of the relations of the different parts of the earth's surface to each other than this gives. A characterization of the climate and the distribution of vegetable life in the Peruvian Andes is the result of four years of hot-animal studies in that region by Dr. A. Weberhauer. There is also an interesting summary of Governor-General Gallieni's report, showing what the French have accomplished during their ten years' occupation of Madagascar. The larger part of it is devoted to an account of a journey in German East Africa by J. Vander Burgt, a white father. In No. 7, Dr. K. Sapper gives a detailed description of his researches in the Canary Islands. There is also a long and appreciative notice of the works of Alexander Agassiz and J. S. Gardiner on the Maldiv and Laccadive Archipelagoes.

The third volume of the Rev. Dr. James S. Dennis's "Christian Missions and Social Progress" (New York: Fleming H. Revell Co.) brings to a close one of the most painstaking endeavors that have ever been made to record the influence of foreign missionaries in non-Christian lands. This

entire volume is concerned with the contribution of missions to social progress, and every phase of the subject is accorded full and careful treatment, with abundant illustrations from missionary activities under all churches, and in all countries. Aside from the influence of missions in promoting general and industrial education, which are possibly the more important branches of the subject, the work of missionaries in such matters as the furtherance of wholesome literature, the cultivation of patriotism, the elevation of the standards of Government service, the promotion of advanced commercial methods, is described with abundance of specific and authentic fact. The chapter on the contributions of missionaries to intellectual and scientific progress is of peculiar interest and value. The work is liberally furnished with illustrations, especially of schools, hospitals, and the like, which convey a striking impression of the extent of missionary activity and the firmness of missionary hold upon many countries. Some idea of the industry of the author, and the extent of the work, may be had from the fact that the index occupies 100 closely printed pages. The work is valuable for reference.

In the July issue of the "Oxford English Dictionary" (H. Frowde)—Ph-Piper—the intrusive digraph Ph neatly begins the top of the first column, and, following the ignominious treatment already accorded to Ch and awaiting Th, is hedged off by a dash at the close. A stray chick or two—Fantast, Fantasy, Fanatic—gathered into the true fold, stares at its twin beyond the fence. Stiff-neckedly our unphonetic fathers, after Ph had been reduced to F in Old French and Early and Early Middle English, reverted to the Latin as in many other instances, and as Americans have done in the case of honor (honour), etc. The *corpus* of Ph has been enormously swelled since 1839 by the creation of words growing out of the invention of photography; and it is characteristic of this wonderful dictionary that it traces the introduction of the words Photograph, Photographic, and Photography to Sir John Herschel on May 14 of that year, in a paper read before the Royal Society. A Frenchman, M. Neander, brought in the useful Phraseology in 1558; an English showman in 1802 alike drew upon the Greek for his fine invention of Phantasmagoria, which quickly passed into literature and has an assured immortality. Philanthrope (1734) and Philanthropist (1730) were late comers considering that Erasmus had insinuated the Greek word in his "Colloquies" two hundred years before; but the lexicographer Bailey, first quoted here for Philanthropist, in translating at the same epoch the "Amicitia" of the "Colloquies," followed the gloss "Lover of Men" rather than take in the neologism. Erasmus had used the appellation for the dolphin, and the naturalist Pennant is here quoted (1769) for the reputation of that fish as "Boy-loving and Philanthropist." Phenomenal, in the sense of "exceptional, extraordinary," we seem to owe to Rossetti in 1850. To pronounce Physiognomy without the *g*, we are told, is now old-fashioned. There are some pithy proverbs under Physician—"A foole or a physition" reverts to 1606. Phaeton reminds us that no better name could be ap-

pied to our lawless, zig-zag, colliding, destructive automobile.

In the main letter we have been struck with the geographical and topographical excellences also of our self-styled Historical Dictionary. Pike is shown to be a Northern English name for a pointed or peaked summit, and its Norse origin is inferred from the names in Pike having their centre in Cumberland, Westmorland, and Lancashire-above-the-sands; in other words, being "localized in the district of England characterized by Norse topographical names." But there was a much later non-local Pike, the earlier form of Peak (which, had it prevailed, might have given us Pike's Pike in Colorado), first associated with the Pike of Teneriffe (1555), Adam's Pike, etc. Dr. Murray, as often happens, casts a foreign light on Continental etymology when he shows in the above connection that *pic* was locally used in the Pyrenees and is found in Provençal in the 14th century, whereas the French Academy admitted the word only in 1740 in the case of Pic de Ténériffe, Pic du Midi, etc. So, under Picturesque, Pope in 1712 cites the French usage, though French dictionaries are twenty years behind with *pittoresquement*. Again, Pill (pool), local name for a tidal creek on both sides of the Bristol Channel, on the lower Severn and in Cornwall, lacks a Middle English example connecting Old English *pyll* with sixteenth-century *pille*; yet identity is inferred from the fact that "all the examples of *pull* and *pyll* in the charters in Kemble's *Cod. Dipl.* refer to the Severn estuary or valley." To what other dictionary may we look for such detective work as this in the interest of etymology? We had, as usual, marked much more for comment, but must close with referring curious readers to the article Pie, for a history of that delicacy's contents (Pieman, by the way [1820], we owe to Simple Simon); and to Pig, the metal, where it is shown that Sow antedates Pig, and the terms probably refer to size only, not to the main and minor channels of the comblike pig-bed. Dr. Murray owes much to Mr. Albert Matthews of Boston for the elucidation of Piazza and Pilgrim Fathers.

One of the rarest of American printed books for which bibliophiles are searching is a curious work by Thomas Maule, a Quaker: "Truth held forth and maintained According to the Testimony of the Holy Prophets, Christ and his Apostles, recorded in the Holy Scriptures." The imprint reads only "Printed in the year 1695," but it is known to have been printed in New York by William Bradford. It is a quarto volume of 276 pages and is the thickest book published by Bradford prior to 1700. The paper is of two different qualities, part of it, at least, being from the Rittenhouse mill, the first paper-mill established in America. The ink was poor, as in most, if not all, books from Bradford's press, and the impression is very uneven. Maule was born in England in 1645, but he lived many years in Salem, Mass., and died there in 1724. In this book he defended the native Indians, and declared that they had been unjustly treated by the first settlers. In regard to witchcraft, also, Maule spoke out freely about his Salem neighbors and roused the ire of the Massachusetts authorities. In December, 1695, he was arrested on a warrant which stated that the

book contained "many notorious and wicked Lyes, and Slanders, not only upon private Persons, but also upon Governments," etc. The sheriff was ordered to search Maule's house and seize all copies of the book. Maule declared that they "sacrificed sixteen pounds' worth of his Books, a burned Offering to their Anger and Revenge." Probably several hundred copies of the book were printed, but whether more than the thirty-one copies found by the sheriff at his first search were burned cannot now be discovered. It is hardly possible that thirty-one copies would have been considered "sixteen pounds' worth." Although the book has been long known and diligently sought after, only two copies can be traced in this country, and both of these are imperfect. One, lacking the title-page, is in the library of the Essex Institute in Salem, Mass.; the other, lacking all the preliminary leaves, but having the text complete, is owned by a private collector in New York city. As the title is given in full in Joseph Smith's "Catalogue of Friends' Books," there must be a perfect copy in some Quaker library in England; at least there was in 1860. When Maule was out of prison again (he was acquitted), he issued a second book, with the punning title "New England Persecutors [misspelled Pesecutors] Mauld with their own Weapons." This was undoubtedly printed by Bradford, in New York in 1697, though the title is without imprint or date. Five copies of this book can now be traced in America. The Essex Institute and the Lenox Library each has a perfect copy, the Lenox copy being from the Brinley library. The Massachusetts Historical Society has a copy lacking the title, and two others, both perfect, are in private collections in New York city. This second attack still further exasperated the New England divines and provoked a reply from Cotton Mather. Maule took up his cudgel again in a third book, "An Abstract of a Letter to Cotton Mather of Boston in New England by T. M." This is a pamphlet of nineteen pages only, without name of printer or place of printing, but printed, without much doubt, by Reynier Jansen, in Philadelphia, in 1701. The copy described by Hildeburn, presumably belonging to the Pennsylvania Historical Society, and a second copy (lacking three leaves) in a private collection in New York seem to be the only ones traceable in this country.

"Juvenile trials for robbing orchards, telling fibs, and other heinous offences. . . Boston, 1797," is the title of a book recently added to the Boston Public Library. It is described in the September Bulletin as "a very pleasing and ingenious little work, in which a court of justice is supposed to be instituted in a school, composed of the scholars themselves, for the purpose of trying offences committed at school." The editor is Master Tommy Littleton, Secretary to the Court. To many it will be a surprise to find that so early in our history children received this practical training in self-government.

Two quite extensive fragments of Greek comedies have been found by the French papyrus investigator, Pierre Jouguet, and published in the Bulletin (vol. xxx.) of the French classical school in Athens. These fragments were originally discovered in papyrus coffins, which were unearthed in

Gurob, in Fayyum, and the writing shows that they belong to a very early age, the one to the third and the other to the second pre-Christian century. The former is divided into seven parts, and treats the rediscovery of a lost daughter by her parents. Of the second fragment two prologues have been preserved, both in iambic metre. The first tells the story of how a young man purchased a young girl for a wife; and the second is a specimen of metrical art, the author having woven into the composition the entire alphabet in anagram form. Both specimens belong to the New Comedy Period.

Dr. Sigurd Ibsen, State Minister of Norway, and son of the deceased poet, publishes a request to all persons having letters and other documents from his father to send these to him for the purpose of having copies made. The originals will be returned to the owners.

A number of hitherto unpublished letters of Henrik Ibsen, written to a young woman friend, will, in the near future, be published by the house of Bard, Marquardt & Co. of Berlin. They will appear in a "study," written by the Danish *littérateur*, George Brandes.

Some of our educators might well examine a book by one of their French colleagues, Professor Crouzet, entitled *Maîtres et parents* (Colin). His theme is co-operation between the school and the home; and, among other suggestive ideas, the sharp distinction he draws between the instruction which the former, and the education which the latter, should provide is one that is well worth pondering.

The merits of Urbain Mengin's translation of "Grandezza e Decadenza," by Guglielmo Ferrero have been recognized by the French Academy, which has awarded it a prize.

The Cologne *Volkszeitung* reports the organization of a Thomas à Kempis Society in Zwolle, consisting of Catholics and Protestants. The purpose is collecting the different editions of the "Imitatio," together with all documents, pictures, and other objects pertaining to the author. These are to be deposited in a Thomas à Kempis Museum in Zwolle.

The first association for collecting, sifting, and studying the great mass of data gathered from all nations in the department of comparative mythology has been organized in Berlin; the plan is to make an international organization. For the present it will publish a journal at irregular intervals. Membership fee is ten marks yearly. Particulars may be secured from Oberlehrer Dr. Ressman, in Charlottenburg, 2.

The Cultus Ministerium of Prussia is considering the question whether it would be wise definitely to pension university professors at a certain age. Such a rule is already in force in Austria, and, it is asserted, with good results, while Russia's policy in retiring men after twenty-five years' service in its German university in Dorpat has caused much heartburning. The Prussian authorities addressed a circular of inquiry to the various faculties, but a practically unanimous negative answer was given in return. The most noteworthy exception is Professor Paulsen of Berlin,

who, in an article in the *Nationalzeitung*, declares that the demands, especially the physical, are now so great on many university professors, that it would be wise to permit a professor to retire when he has attained the age of sixty-five, and at the age of seventy or seventy-two to make this retirement compulsory, the veteran to continue as professor emeritus, and to be permitted to offer courses of lectures outside of the regular curriculum.

"HANS BREITMANN."

Charles Godfrey Leland: A Biography. By Elizabeth Robins Pennell. 2 vols., illustrated. Boston: Houghton, Mifflin & Co.

This readable biography, permeated with the strong personality of its subject, has the shortcomings that Leland's versatility made practically unavoidable. It is the story of the man, rather than an authoritative record of his activities in so many and so widely diverging fields of investigation; for Mrs. Pennell has not always been able to follow to the very end Leland's studies in Gypsy lore or tinkers' talk, in witchcraft, psychology, Indian legends, or the mysteries of sex. This limitation she frankly admits in her introduction; then disarms criticism, which nowhere could be very severe, with the charms of her picture. All who knew Charles Godfrey Leland knew that the man was stronger than his work. It is this man that Mrs. Pennell draws for us. From her pages radiates a personality that refreshes and rejoices, a vitality that heartens and invigorates the reader.

Not but that the biographer, proud of her brilliant uncle, does her best to give some account of what he achieved. And here she serves him truly, for the very fate is threatening to overtake him that he most dreaded in life—the fate of going down to posterity as the creator of Hans Breitmann, and nothing more. As he wrote to Miss Mary A. Owen in 1894: "I don't dislike my 'Breitmann Ballads'—indeed, I love many of them—but I am sometimes highly pained when I find that people know nothing else about me, have never heard of my 'Practical Education,' or what I have done in Industrial Art, Language, Tradition, etc." There is enough about all this in Mrs. Pennell's pages to correct this ignorance, enough, at least, to give the general reader an idea of the scope of Leland's achievements, with the emphasis laid rightly upon his services to practical education.

The biography is mainly the work of Leland's own pen. It consists almost entirely of transcripts from his memoranda, notes, and other papers, and of letters written to his family and to celebrities, American and English, with some of their replies. Mrs. Pennell furnishes the necessary links, transitions, and explanations, drawing upon her knowledge of the man and his ways, acquired during the period of her intimate companionship with him. Where there is a lacuna in her material, her personal recollection, and the memory of others, she frankly confesses the blank; one of considerable length is due to the loss of a diary.

Leland was a prince of letter writers. It is in the selection of the correspondence given here, and in the use made of his

notes, most of them as elaborate and as cleverly written as the letters, that the real merit of Mrs. Pennell's work lies. The passages she has chosen are palpably representative of the man as he was at the different stages of his career. She depicts successively the rousing spirits, the intellectual alertness of his student years in Germany and France, the repressing influence of the period of "storm and stress," when he was in bondage to daily journalism in Philadelphia and New York, the resilience of his spirits when an inheritance enabled him to devote himself to his many pleasant tasks, the energy with which he carried them to completion, his frank joy at recognition of the value of his work, his equally frank disappointment when it was withheld, and, finally, the gradual cooling of the fires of many enthusiasms into the softer glow of an interest retained during a long old age. Throughout he remains constant in his curiosity regarding witchcraft old and new, the witchcraft of the African jungle, the Etruscan sybils, or the peasantry of Europe—he who was surrounded at his birth with mediæval Christian magic by his eighteenth-century Dutch nurse, and whose last vivid pleasure in life, so Mrs. Pennell assures us, was the very curious, not to say miraculous, return to him on his death bed, of the Black Stone of Voodoo that had been as mysteriously stolen. Most of this he is made to tell in his own words, vividly, picturesquely; and, despite a few gaps, the picture is all but complete. It certainly does not lack perspective.

Withal there is a strange contradiction in Leland's career. A physical giant, endowed with an adventurous spirit, he should have become a soldier of fortune, whereas he contented himself with that one mad exploit on the barricades of Paris in 1848. His service in the Union armies was caused, of course, by a higher motive. He should have been a wanderer with the Romanies, whereas he was content to visit them soberly of an afternoon for a talk and a smoke, then to return to his well-ordered Philadelphia or London home, or his Italian or Hungarian hotel, in time for dinner. He loved Europe and its many interests, yet from his first visit to the last one, from which he never returned, his letters give evidence of a strong homesickness that was always with him, even if it was only expressed on his repatriation in whimsical boasts to Walter Besant of the dainty and delicious things one breakfasts and lunches and dines on in these United States. In some ways, it was fortunate for Leland that his versatility never allowed him to pursue the same path for long; it was perhaps unfortunate in others. Singleness of purpose might have brought him more lasting fame, but it would have taken much of the glamor that life held for him almost to the very last. Most of his serious work—his Gypsy lore, his Indian studies, his psychological investigations—is destined to survive but in footnotes to the work of later students. Breitmann is safe of his place in the annals of American humor; but nowhere can the name of Charles Godfrey Leland be more appropriately preserved than on the front of an industrial art school; and one believes that "the Rye" would like that form of posthumous fame best of all.

Appropriately enough, it is Leland's educational work that is best represented in the current lists of American publishers; most of his other books have long been out of print with us, whatever may be the case in England. And this leads us to a final word regarding the bibliography appended to these two volumes. It leaves much to be desired. Mrs. Pennell, who apparently assumes full responsibility for this bibliography, explains in a brief note preceding it that she "has not attempted a list of the magazine articles by Charles Godfrey Leland"; that "it would be no easier to make a record of his pamphlets and leaflets on politics and art," of which he himself, it appears bad not a complete collection; and that this bibliography is confined to those of Leland's writings which he himself deemed worthy of "the more permanent book form." But even within the narrow limits thus defined it but a fragmentary piece of work, of no service to the collector of scarce books or first editions, because, incredible as it may appear, its record of the first, latest, or, indeed, of any American editions of the books of this American author is very incomplete. For instance, the American publisher of "Kuloskap" is mentioned, but the fact is ignored that the same firm also issues here "The Alternate Sex," brought out in the same year. There is no mention whatever of the American editions of the "Manual of Wood Carving," the "Leather Work," or the "Elementary Metal Work." No notice whatever is taken of the American editions of the "Abraham Lincoln," which was kept alive in this country in various forms from the time of its first appearance in 1879, in an English series of "lives" edited by Walter Besant, until as late as 1902. There is no record whatever of the American edition of the "Memoirs," of which but a few copies remain, with practically no prospect of a new edition; while, to crown it all, no would-be purchaser of the "Breitmann Ballads" in this country can learn from this bibliography who is the present American publisher of the book.

The illustrations consist of two frontispiece portraits of "the Rye," and facsimile reproductions of letters written to him by Lowell, Holmes, Tennyson, Browning, Bulwer-Lytton, and many others.

RECENT FICTION.

The Guarded Flame. By W. B. Maxwell. New York: D. Appleton & Co.

This is a story which can hardly be taken lightly. It is composed with a deliberate and painstaking intensity. Nothing is hurried or slighted; the case is put with a kind of dogged energy, the evidence adduced and summed up, and the verdict given in due course. If the record is "not pleasant," neither is it morbid. The action chronicled is of such tragic significance as to trouble no healthy and courageous mind, nor is its manner of presentation lacking in a stern benignity of tone which sets it off from an action merely pathetic or deplorable. The motive, being tragic, is not new; but it is given a modern turn. The situation is, briefly, this: An old man is betrayed by his young wife and a man, also young, whom he has greatly trusted. The old man, discovering their

guilt, is stricken down by paralysis; and a girl, his favorite niece, to whom the young man is engaged, making the same discovery a little later, poisons herself. The young man goes away, and the wife is left to nurse her husband back to reason and the memory of her fault. By force of will, he recovers and resumes his work making no sign, and, as before, employing his wife as assistant, and seeking her companionship. At the end of ten years, he discovers that he has always remembered her guilt as the cause of his seizure. Now the peculiar thing about the interpretation of these facts is that they are looked upon as concerning an intellectual rather than a moral lapse. We observe the consequence of error not in the human heart or conscience, but in the human mind. The lusts of the flesh, our author shows us, often lead to defective judgment, or to a disastrous abeyance of judgment. Conversely, to be great in mind is to be comparatively safe from what are commonly called moral errors. Familiar doctrine, of course, but not as forming the working creed of a novelist.

Mr. Maxwell puts his case as strongly as possible by taking for his central figure an intellectual prince, one Richard Burgoyne, the last survivor of the great Victorian scientists. He is still, at seventy, in the prime of his powers. Ten years earlier he has married a girl of twenty, the daughter of an old friend, whose death had left her alone in the world. She becomes his amanuensis and chief helper. With them lives the favorite niece. Enter Unreason in the person of a male secretary, young, clever, untested by human experience. Then for some time our only concern is with the progress of Burgoyne's work. The author is unsparing in detail, and is sometimes dull in the interest of verisimilitude. Suddenly, we are startled by an outburst of raw human passion. Of that passion there are three victims; Burgoyne is not one of them. Stricken as he is by the horror of his discovery, he yet makes shift to struggle back to life, to wrest still another decade of achievement from apparent defeat, and to forgive and cherish the woman who has wronged him.

One consideration seems to escape both Burgoyne and his creator. Is it good or bad thought which leads elderly philosophers to deprive young women of the right to love with the love of youth? Why did not Richard Burgoyne adopt his friend's daughter? Whose loose thinking is directly responsible for the catastrophe?

The Incomplete Amorist. By E. Nesbit. New York: Doubleday, Page & Co.

The *Incomplete Amorist* is a sort of feminine Sentimental Tommy. No man would have the heart or the face to demand a general consideration of so paltry a hero as Eustace Vernon; but a male flirt and pure popinjay may, this story shows, command the fond attention of even clever women. There is nothing in this Eustace to attract a man, yet his maker is half in love with him. He has the charm of the totally irresponsible and selfish male—and no other. Even that charm he has only in a minor sense, for he is a flabby male—by no means a Manisty. Naturally, the tale of his adventures is slight enough, fit to pass the time for

a moment, and to be heard of no more. It is adorned with incidental attractions of some consequence. Our flabby gentleman is supposed to be in a casual way a great painter, and the heroine having a leaning to that kind of greatness, we are not surprised to find ourselves presently in Paris, in the Latin Quarter, being Bohemian according to the familiar code. There is the atelier scene, the café scene, with its bearded and demi-mondaine joys, and so on; we have an unfortunate sense that it is all fetched in by the ears as a popular variety of "business." We have in due season another woman, titled and jasmine-scented, who adores, and in the end captures a reluctant Eustace. We have another man, an honest one, who performs the miracle of disentangling the rather foolish heroine from the snares of an eager Eustace. Better still, we have the strapping, worldly-wise, cigarette-smoking, and gentlemanly aunt of the heroine; a person such as we have never met, but who, we are given to understand, exists. Best of all, here is talk of English country-women which reminds us of Mrs. Poyser and her gossips. This is, we understand; a first novel by an experienced writer. To judge by the experiment her true vein would promise to lie not in the picturesque region of Bohemian romance, but on the quiet levels of rustic comedy.

Italian Romance Writers. By Joseph Spencer Kennard. New York: Brentano's. \$2 net.

Dr. Kennard has already published this, or a work of similar scope, in Italian, and by it has given much pleasure to a people always sensitive to the judgment of foreigners. The author, who is an American and a doctor of the Sorbonne, who has lectured under the august cupola and published books in French and Italian, as well as English, can say nothing about Italian writers that is not worthy of attention. In adding our testimony of admiration of this really good book, we almost feel as if we were carrying coals to Newcastle.

Of the novelists of to-day, the author gives evidence of having read nearly all who are worth reading, excepting the very latest. His silence with regard to Ugo Ojetti, Luigi Pirandello, Alberto Cantoni, and some others, is owing, we infer, to the fact that they have come to the fore since the materials for this work were gathered. He may be acquainted with such writers as Edoardo Calandra, Arturo Graf, the Marchese Crispolti, and have thought that the small volume of their performance precluded them from the honors of a review; we prefer to think him ignorant rather than guilty of such an error of judgment. Within the compass of some 450 pages he has treated of fourteen writers, and, what is more, has managed to give a fairly adequate idea of their performance. Donna Laura Gropallo, in the same number of pages, confined herself to only five, and one of these, Gerolamo Rovetta, is unaccountably absent from the list of Dr. Kennard. Indeed, we must make it a reproach to him that a list which includes "Neera," should omit not only Rovetta, but Luigi Capuana. It would not have been difficult to make room for them. Nearly 120 pages of this book are taken up with accounts of the

fiction of Alessandro Manzoni, Massimo d'Azeglio, Francesco Guerrazzi, Tommaso Grossi, and Ippolito Nievo. Granting that there is always something to be said about Manzoni, and that it was even desirable that somebody should introduce Nievo to the English-speaking public, we could well have spared the pages consecrated to novels that have pretty well lost the little flavor they ever had.

Dr. Kennard, however, could hardly have gratified us in this respect without changing the essential conception of his book. And it is just here that such little quarrel as we would raise against him finds its excuse. We should have prized unreservedly an account even fuller and more complete of the achievement of the Italians of to-day in the field of fiction. Such as Dr. Kennard has given us is of a nature to make us wish for more. But he has chosen to give us instead in an Introduction a history of the Italian novel, mingled with something of its rationale; and it is to exemplify this that the romantic followers of Manzoni are brought in, and that the survey of modern fiction remains incomplete. We might, indeed, have accepted Guerrazzi and Grossi to the exclusion of Rovetta and Capuana, if the history which has introduced them afforded compensating delights. But, frankly speaking, this historical introduction appears to us the least successful part of the book. We are brought rapidly down through the ages, until, coming to more modern times, our author finds that, though the Italians had no lack of *novelle*, the novel properly speaking was an invention of the French and English, from whom the Italians were slow to borrow it. He assigns as a reason for this, "political divisions and unsettled conditions," though—granting the case be as stated—if these conditions did not hinder the development of poetry and painting, it is hard to see why they should have prevented the growth of the novel, had Italian intellect been directed that way. Chiabrera and Tassoni, to say nothing of Galileo and Paolo Sarpi, were all contemporaries of d'Urfé, the father of the French *roman*. And then when the Italians did get the real novel, they failed—they still fail—to reproduce some of its English characteristics. This at first blush seems only natural, and suggests that they may have preferred to stick to their own.

Moreover, our author is not always quite accurate in his history. On pages 24 and 54, it is stated that the example of Parini, dissipating the affectations of Secentismo, etc., opened the way for Goldoni and made it possible for him to write realistic comedies. As by far the greater number of Goldoni's comedies were given to the world long before Parini began to work on "Il Giorno," we are puzzled what to make of this bit of causation. Again, speaking of the *Biblioteca Italiana*, the journal founded by the Austrians to keep Italian writers out of mischief: "Ugo Foscolo saw the danger, and declined the directorship; Silvio Pellico, Pietro Giordani, Vincenzo Monti, Confalonieri, and several others who had at first promised to contribute critical and literary essays, perceiving the snare, withdrew from the *Biblioteca* and founded another periodical, *Il Conciliatore*, with a romantic national programme. A twelve-month later the *Conciliatore* was suppress-

ed; two years later the whole staff was sentenced to death or *carcere duro*." Now Giordani and Monti were both prominent among the contributors to the *Biblioteca*, though they had nothing to do with the *Conciliatore*. We need scarcely add that neither of them was sentenced either to death or to close confinement. Nor is the statement true as to all those who were on the staff of the *Conciliatore*. The Austrians knew that the aims of the journal were literary as well as political, and some of the contributors, Berchet, for example, and Porro, by whose money it was supported, were advised to withdraw from Italy before any proceedings were begun. Those who were condemned to the horrors of the Spielberg had more laid to their charge than mere participation in the affairs of the *Conciliatore*. The intimate connection between that offence and the punishment, implied in the paragraph quoted, did not exist.

And yet, notwithstanding our objections as to both scope and execution of the Introduction, we may be grateful for it as it is, accepting it, of course, *sous bénéfice d'inventaire*. It contains, in its latter part, a readable and unusually abundant account of Italian contemporary fiction.

But, with all the respect that is due to his chapters on Manzoni and Nievo, the chief interest of the book lies in those describing the works of writers of to-day. He generally seeks to convey an idea of his author by giving a sympathetic summary of some of his principal works, and there is perhaps no easier or surer way of enlightening us as to the subjects the novelist affects, with his manner of treating them, his view of life, and even—if actual quotations are made—of such qualities in his writing as can survive in translations. Dr. Kennard adds comment of his own on occasion, and sometimes this is of value, but as a rule he is at his best when he makes his author represent himself. His translations always read as if they were the originals, and with one exception, so far as we have taken the pains to verify them, are faithful.

The book is, on the whole, written with clearness and directness, though slovenly constructions are to be found now and then and sentences that will not parse. Little inaccuracies of various kinds arrest the eye of the attentive reader. Of Dr. Roberto's novels, "Illusione" is not a sequel of "I Vicerè," but was published three years before and appears to have suggested the greater work. And most surprising of all, we are told on p. 23 that after Boccaccio, "the tales of Sacchetti and Pecorone were a return to less worthy standards." Now we know that Sacchetti, for better or for worse, struck out a line for himself; but why should Dr. Kennard fall foul of poor Pecorone, whose name, we venture to assert, can be found in no Italian history of literature? There was a humble imitator of Boccaccio, by name Giovanni Fiorentino, who called his collection of tales "Il Pecorone," but as Giovanni was an imitator, and therefore stuck to the standards of Boccaccio as well as he knew how, one hesitates to suggest that there may have been here a confusion between author and work.

There is an elaborate, though not perfect, index. But after all, and notwithstanding repeated evidences of haste or carelessness in the execution, we maintain that the work

is a good and useful introduction to the study of modern Italian fiction.

The Wilderness Campaign, May-June, 1864.

Papers of the Military Historical Society of Massachusetts. Vol. IV. Boston.

The purpose of the Military Historical Society of Massachusetts is the preservation of accurate statements of military operations for historians who are to come. Sixteen communications referring to the operations of the Army of the Potomac between the Rappahannock and the James in May and June, 1864, read before the Society at various dates from January, 1879, to April, 1899, have been published as Volume IV. of its papers. With the exception of two by the eminent student, the late John C. Ropes, these are by participants, two ex-Confederates, all competent observers; and the whole is thus first-hand testimony. Its primary value is to the historian as good material, but it has an importance, which is scarcely secondary, to the generation born too late for the memories of the civil war. The object of every paper is to show what was done in some particular operation, as well as its apparent motive, and in these demonstrations fatigue and exposure, wounds and death, are mere incidents. These are casually but often vividly referred to in recounting success or failure.

Following Capt. Porter's excellent tactical description of the fight (a "battle" only in its casualties) at Cold Harbor, is one on the same theme by Mr. Ropes. That acute critic believed that when Grant broke camp on the North Anna May 27, because Lee could not reasonably be assailed and must be turned, he might have seized either the Mechanicsville road or New Bridge on the Chickahominy, compelling Lee to attack or to retire within the lines of Richmond. It was just at that point that Grant lost the initiative, and Mr. Ropes makes an excellent point by quoting from his dispatch to Halleck that "a battle with them cannot be had outside of their intrenchments," and then showing that the Union general lost an entire day in searching for their intrenchments instead of rapidly moving into a controlling position. Thus, after delay and casual, but always serious, fighting the armies again faced each other, Lee intrenched as usual. In Mr. Ropes's view, and we believe he is correct, there was the grave error of not impressing upon the Union generals and, as far as possible, upon their subordinates, that the attack of the third of June would bring on a great battle, and of not arranging for it with judgment.

The final papers are by Mr. Ropes and Col. Thomas L. Livermore, the latter a very able discussion of the former, upon the Virginia campaign of 1864 up to the first contact at Petersburg. This is not the place for an analysis of either. Mr. Ropes commends the strategy of the campaign, but condemns it tactically. He maintains that it was only the overwhelming resources of the Government which allowed the "burning, persistent desire to fight, to attack in season and out of season, against intrenchments, natural obstacles, and what not" (p. 405), to be carried out. Col. Livermore points out that "procrastination was the only salvation for the Confederacy. Un-

ceasing action was forced upon Grant" (p. 409). He *had* to fight. Col. Livermore regards the Wilderness, rather than Gettysburg, as the turning point of the military fortunes of the Confederacy. For in the Wilderness was demonstrated the inability of its soldiery to come out of their works and beat back the Federal advance.

This volume is well indexed and has six trustworthy maps. Somewhat more careful proofreading would have corrected the statement that Lee was "sending aid to Hunter" (p. 73), would have reconciled the names of the roads northeast of Richmond on the Cold Harbor map with those of the text (p. 394), and would have made Johnston (p. 457) Johnson. But these are venial slips.

The Balkan Trail. By Frederick Moore.

With sixty-two illustrations and a map. New York, pp. xi. and 296: The Macmillan Co. \$3.50.

Wherever the Turks rule over a Christian people, there you will find unrest, outrage, massacre, and again unrest, resulting finally in rebellion and revolution. Such is the completed story of Greece, Roumania, Servia, Bulgaria, and Crete, and the incomplete story of Macedonia. Macedonia is prevalently Christian, and its people are becoming more and more restless under Turkish misrule. But while prevalently Christian, Macedonia, unlike Greece, Bulgaria, and the other states which have achieved independence in the last century, is not homogeneous. It is divided among several races and religions—Bulgarians, Greeks, Wallachians, Servians, and Albanians. These, with the exception of the last named, are of the same race and religion as the people of the independent border states, which latter conduct propaganda in the country, each for its own race and religion, and against the race and religion of each other. All by their disunion play into the hands of the Turks, with whom they intrigue, and whom they sometimes directly support against one another. The feeling of each against the other is bitter; and especially bitter is the feeling between Bulgarians and Greeks, who are the really serious rivals. Mr. Moore says (p. 155): "The rivalry between the racial parties—they cannot be defined as races—works death and disaster among the Macedonian peasants. Bulgarian and Greek bands commit upon communities of hostile politics atrocities less only in extent than the atrocities of the Turks."

Even under a wise and just government the problem of ruling Macedonia would be a difficult one. Under the Turks the result is disorder, anarchy, and outrage. When the conditions of misrule finally became so flagrant that they could not be altogether overlooked, the Powers demanded from the Turkish Government reforms, and assigned to Austria and Russia, as the great Powers most intimately concerned and having the greatest facility for action, the task of overseeing and directing those reforms. The viciousness of this arrangement is not too strongly stated by Mr. Moore, when he says (p. 188): "The Austro-Russian accord on Macedonian affairs resembles a thieves' alliance—without that

saving grace, however, the proverbial honor that exists among thieves."

At last the Bulgarian *committajis*, despairing of this sort of reform and believing that Europe could be aroused to effective action only by an explosion, undertook the so-called "revolution." This was proclaimed August 2, 1903, but during the whole of that year the country was in a state of confusion. No foreigner was allowed to go away from the track of the railroad; correspondents were watched and kept under surveillance to prevent them from reporting the actual conditions and occurrences; the whole country was full of troops, alarms, and outrages. Mr. Moore was one of the correspondents sent to the scene of disturbance, representing first an American paper, and then the London *Times*. This book is the result of his observations and experiences at that time, ripened by further study and correspondence. First, he introduces us to the Bulgarians at Sophia, the capital, and then takes us along the Turkish border. He shows that universal sympathy with the "revolution" existed in Bulgaria; that no strenuous efforts were made to prevent revolutionary bands from recruiting in Bulgaria; and that, in fact, it was practically impossible to do so on account of the intense sympathy of the population with the movement of their kinsmen across the border.

Mr. Moore undertakes, as essential to an understanding of the Balkan problem, to give impressions of the various populations, in such chapters as "Constantinople and the Turks," "Salonica and the Jews," the latter including the curious sect of Moslem Jews, called *Dunmeh*. It was in Salonica, by the way, the port of Macedonia, that the Bulgarian *committajis* resorted to a very desperate and, in the eyes of the world at large, peculiarly atrocious method of awakening Europe to the need of relief in Macedonia, and the responsibility of the great Christian Powers for the conditions there prevailing, namely, a series of dynamite explosions directed against foreigners and foreign property. The revolutionists blew up the Imperial Ottoman Bank, attempted to blow up the French steamer *Guadalquivir* of the Messageries Maritimes Company, and threw dynamite bombs into various hotels and cafés in the foreign quarter. But this method of awakening Europe did not have the desired effect. So far from attracting attention to the outrageous conditions which induced men to commit such desperate acts, it led to a general denunciation of the Bulgarian *committajis* as conscienceless desperadoes. Moreover, the Turks took advantage of these dynamite explosions to manufacture Bulgarian outrages for their own advantage, both to secure the sympathy of European Governments, and also to levy blackmail on innocent Bulgarians.

The place selected by the revolutionary *committajis* for the rising against the Turks was the central portion of Macedonia, of which Monastir is the principal town. The total force available on the part of the *committajis* was about 10,000 men, armed with all sorts of weapons, which they had been gathering for several years at great sacrifice of life and at an excessive price in

money. Besides the armed men, about 40,000 villagers, men, women, and children, went into the mountains unarmed. The leaders of the revolution did not expect to defeat the Turks. They hoped to provoke the Sultan to such an excess of outrage and massacre upon the Christian population at large as would compel the outside Christian world to intervene, as it did in the early part of the last century for Greece, and fifty years later for Bulgaria. "They were willing to pay the lives of many thousands of their brother Macedonians for the accomplishment of their desire—the country's autonomy" (p. 251). The sufferings of those who joined the revolution were terrible, and the condition of those who stayed at home was in many cases almost as miserable, exposed to attack from the revolutionists and the Turks alike. One Sunday Mr. Moore and an English correspondent came to a Macedonian village where the peasants, all dressed in their brightest clothes, were dancing their national dance, the *horó*. They asked for a guide to take them over the mountains to the village of Garbintzi, where the Turks had massacred the population because of its supposed sympathy with the revolution. The villagers refused to give a guide, saying that any man from that village who took them over the mountains would be killed by the *committajis*, because they, the villagers, had refused to arm and join the revolution; and that, on the other hand, if the Turks discovered that any of their number had guided foreigners to a place where outrages had been committed, their village would be treated in the same way. So they earnestly begged the foreigners to leave them at once, that suspicion might not fall upon them from either side.

Naturally, Mr. Moore has more to say about the Bulgarian than about the rival Greek propaganda. He does, however, devote some space to the Greeks and the methods pursued by them, particularly the travesty of religion which is connected with their propaganda. We hear something also of the Wallachian, Servian, and Albanian movements.

While Mr. Moore dwells as lightly as possible on the details of Turkish outrages—the sale of boys, the abuse of women, etc.—some of them he of necessity records in connection with the massacres at various places.

With its picture of greed and intrigue, of cruelty and violence, the book would be dreary were it not for Mr. Moore's pleasant style. He is alive to the humorous in everything, especially in his own sometimes dangerous experiences. At Monastir we hear of an Italian official of the Ottoman Bank, who, having taught himself English, but never having heard it spoken, addressed them at supper in their own language, which they were quite unable to identify as any known tongue. Then he took his pencil and wrote that he was speaking English; to which an Englishman wrote back: "Always pronounce English as it is not spelt; spell it as it is not pronounced." Now and then, however, the tone is somewhat too flippant and the style becomes "journalistic."

Mr. Moore had some experiences which may remind us, as they reminded him, that in spite of our abhorrence of Turkish misrule in Macedonia, we must be careful

about throwing stones, because we, too, live in a glass house. When he was sipping coffee with a Turkish officer at Barakova, on the Bulgarian frontier, the latter complained that the foreign papers described the Turks as uncivilized, and accused the Sultan and his soldiers of doing barbarous deeds. "Tell me," continued the Turk, "are sections of America still barbarous? I read of blacks being burned at the stake."

In his concluding chapter Mr. Moore points out that, although three years have passed since the revolution, the same conditions still prevail, the same atrocities, the same mockery of reform, under the Austro-Russian agreement, with the notorious Hilmi Pasha as governor, at liberty to do what he pleases. There is still also the same disunion and discord among the Christian subject peoples, and the same propaganda by the border States. There is a chronic condition of guerrilla warfare, now by the Christians against the Turks, and now by Christians against Christians. One wonders as one reads why the whole land has not long since become a desert.

Mr. Moore has succeeded in giving a very good idea of the various peoples of the Turkish part of the peninsula, of the various agencies at work among them and the general conditions of the country. He carried with him a camera, which he used effectively. The illustrations, from his photographs, are excellent, and really illustrate the text.

Le Siam et les Siamois. Ct. E. Lunet de Lajonquière. Paris: Armand Colin.

This is an entertaining account of a journey in Siam, the main object of which was the examination of ruins of ancient cities. Though these are described at some length, archaeological details form but a small part of the book, which is simply the narrative of the daily experiences of a two months' trip by houseboat, canoe, elephant, and pony, with vivid word-pictures of the scenery, the life, customs, and industries of the natives. Its value is enhanced by the fact that the author had been in Siam twenty years before, and was familiar with its history and literature; he had been connected with the French colonial service in Indo-China, where he had made a similar examination of the ruins of Cambodia. Bits of history and quaint legends of the places visited are accordingly interspersed with the story of the incidents of the journey.

In the first chapter he gives a general description of the country, the various races inhabiting it, the methods of government, the prevailing religious beliefs, and the influences by which it is attaining a measure of civilization. Foremost among these is the King himself, now in the thirty-eighth year of his reign. He has shown his appreciation of the value of education by sending the Crown Prince to an English university and by having in his palace English women to teach the princes and princesses. Nevertheless, his loyalty to the ancestral customs is staunch, for the heir to the throne was at the time of the author's visit at Bangkok in a bonzerie for the religious novitiate, binding on all Siamese young men. In a brief reference to the relations with the Western

nations, a cordial tribute is paid to the diplomatic skill and extreme amiability with which the King's "general adviser" in foreign matters, Professor Strobel of Harvard University, is helping Siam to win a place among the nations of the world.

The number and size of the ruins found in the dense, trackless forests of Siam speak eloquently of a historic past in whose records, known to but a few, strange legends form a conspicuous part. The author gives on the whole a pleasant impression of the natives with whom he came in contact. As an illustration of their conscientiousness, he tells of one of his men whose elephant ran wild into the forest, and whose tracks he followed for three days with neither food nor sleep. "At last, by force of patience and, one can add, of energy, he succeeded in overtaking and mastering him." A curious mingling of East and West is shown by the fact that he found the walls at Moulmein covered with the show-bills of an American circus, and in the interior a canoe with two Japanese photographers taking pictures for postal cards.

The Social Message of the Modern Pulpit. By Charles Reynolds Brown. New York: Charles Scribner's Sons. \$1.25 net.

This volume contains the Lyman Beecher Lectures on Preaching, delivered at Yale during the year 1905-6. The author is one of the best known clergymen of the Pacific Coast, where he has a considerable reputation for breadth of view and progressive leadership. The burden of his lectures is that it is the chief duty of the clergy, at least in the present situation, to inculcate true principles of social action and become leaders in the work of social reconstruction. He declares that the centre of interest has passed from questions of doctrine and belief and rests now in matters of social reform, and that the supreme need of the modern church is to secure ministers willing and able to cope with the problems of this kind. From a few positive statements of this sort, one might conclude that Dr. Brown's idea is that clergymen should all turn sociologists and leave off preaching faith and judgment to come, but such a conclusion would do him grave injustice. He says that the imperative need is not so much for instruction in the facts which make up social problems, as for spiritual impulses to lead men to act on what they know already. Again he declares that a clergyman's mouth is not to be stopped because he can not present a solution for the evils he defames, that in fact, it is not his business to present solutions, but to declare the eternal principles of justice. Further, when Dr. Brown illustrates at some length how he would convey the social message of the modern pulpit, in a series of very excellent expositions of the Book of Exodus, he is not so much a social reformer as a prophet of the Lord, dealing out eternal realities and recording the judgments of the Almighty. One must conclude that the author's real conception of the work of preaching is not so pre-eminently social as he himself defines it.

The besetting sin of clerical effusions on sociological questions is carelessness as to facts. Many a gospeller has shrieked

high and striven for the accents of Amos with a muck-raker's article for his single source of information. Dr. Brown is not of this class, and yet his appeal is rarely to facts of personal observation or to what might be called the original documents of sociological controversy, but is commonly to writers whose entire fairness and inerrancy have yet to be proved. One might wish that he had included a caution as to the danger of falsifying in matters in which one is not thoroughly at home, and that he had himself realized this peril sufficiently to question the authenticity of the tale of Lincoln's resolution to deal a hard blow to slavery when he saw a slave auction on his flat-boat trip to New Orleans.

Social Aspects of Christian Morality. By the Rev. W. S. Bruce, D.D. New York: E. P. Dutton & Co. \$3.50 net.

A German professor of dogmatic theology expects to lecture on ethics as well as on Christian doctrine, and in some cases the *Ethik* is the abler course and the most useful portion of the student's theological instruction. From these courses have resulted volumes of *theologische Ethik* of recognized value among all students of moral science. In Great Britain and America, however, there has been woful neglect on the part of systematic theologians of the ethical side of Christian doctrine, and Protestant divinity students have had no compensation for their lack of the Roman Catholic candidate's preparation for the confessional. The incongruity of painstaking attention to doctrines of soteriology in which few are interested, while ethical questions of vital importance and equal philosophic dignity are almost ignored, cannot long continue.

Dr. Bruce's volume may be taken as an indication that morals are coming to their own among the theologians. He was Croall lecturer at Edinburgh in 1903-04, and discussed the ethical bearing of prominent social and political questions somewhat in the fashion of Dörner and Martensen. Although the "superiority of Christian ethics" is asserted vigorously, one misses the searching analysis of Christian motive and incentive found in writers like Herrmann and Rothe. In fact, Dr. Bruce cannot be said to have made any real contribution to the discussion of his theme. He has collated facts and opinions with some assiduity, and he manifests a wholesome instinct, but neither on the subject of marriage and the home, nor on the moral province of the State, does he exhibit any new light or any special wisdom.

Tacitus and Other Roman Studies. By Gaston Boissier. Translated by W. G. Hutchison. New York: G. P. Putnam's Sons. \$1.75 net.

We are not surprised to note thus early an English translation of M. Boissier's recent volume on Tacitus. For that work is a type of scholarly investigation at its best. Few footnotes catch the reader's eye; he sees few references to the latest "literature." But he is sure, after pondering not many pages, that the author is abreast of modern researches. Documents and *Vorarbeiten* are necessary during the process of

construction, but the perpetual citation of them, as M. Boissier remarks, is "a kind of erudition run mad." The first impulse of an artist like our author is to gather all his material within the frame of the text, to shun the footnote. If the footnote grows too great, he lets it grow greater still, into a separate essay. Such, we fancy, is the origin of the entertaining sketches at the end of the book, on the schools of declamation at Rome, on the Roman journal, on the poet Martial—all closely related in theme to the main idea of the work.

M. Boissier's method of presentation illustrates admirably his views on the function of the historian. The book abounds in shrewd reflections on the nature of historical writing; the author declares for the ancient conception of history as a literary art, cherishing no aversions to science, but recognizing that in any description, judgment and composition must play a part:

Into this task there necessarily enters an element of personal creation, and those who claim to withhold the historian from introducing aught of himself, would constrain him to produce nothing better than a work resembling the convent chronicles as compiled in the Middle Ages, or our examination manuals. . . . When we wish instruction of the past, we presumably prefer it to be presented to us as it was, that is to say, alive. Very anxiety for truth, which we set above all else, demands it. A table of contents, comprising the principal events stated and dated, with a reference to the learned dissertations in which they have been elucidated, would not do our business.

But the literary method as employed by Tacitus, and by M. Boissier himself, does not exclude our modern interest in the facts that underlie the interpretation. This M. Boissier shows at every turn: his eye is ever on causes, inferences, developments. Starting with the early career of Tacitus as advocate, he takes as his first problem, "How Tacitus Became a Historian." Following his clues step by step, with a careful Cartesian restraint, he brings us inevitably to the goal; we see how Tacitus, like the other great moralist of his day, felt that

difficile est . . . non scribere.

In a review of M. Boissier's original work we gave briefly our own judgment of Tacitus, and will not now take up this matter in detail. In a word, M. Boissier finds in Tacitus not a Republican at odds with his times, not a falsifier of tradition, not, according to Nissen's "law," a slavish adherent to one main source for his information, but, despite a fundamental tendency to pessimism and the epigram, a careful scrutinizer of facts, a critic of Roman and of foreign traits, whose chief passion is impartiality, and whose essential verdicts are sustained by those of his contemporaries.

The translation is correct in the main, and reads fairly smoothly. Its general quality should not be inferred from various infelicities in the passage here quoted, or from those in the preface. We wish that the book might be read and pondered by lovers of Tacitus, writers of history, and any other scholars who are planning learned works.

An Englishwoman in the Philippines. By Mrs. Campbell Dauncey. With Illustrations and a Map. New York: E. P. Dutton & Co. \$3.50 net.

This volume is made up of selected domestic correspondence by the wife of a sugar factor in Iloilo, published because it contains "a plain account of those scenes and conversations" that refer "to the political situations which form the topic of most [such discourse] in that uneasy land." That is, we have here a presentation of the British commercial mind (for much of the comment evidently is the sentiment of foreign traders, not original research), along with a record of personal experience. Mrs. Dauncey had not visited the United States; nor had she seen the British Asiatic possessions, otherwise than as touching at Colombo, Singapore, and Hongkong on the outward voyage. Such a work, it is hardly necessary to say, contains not only much misinterpretation of facts, but much actual misinformation.

The serious criticism, which appears incessantly and sometimes with unintentional grotesqueness, is three-fold:

(1.) That the Americans fail to publish themselves a superior or ruling race, but proclaim a theoretical equality, which is denied in practice. On this point it is enough to note in passing that legal and social parity seem hopelessly confused in the writer's mind.

(2.) That the taxes and duties are exorbitant and ill-spent, consequent upon which the cost of living is unreasonably high. Here we may admit that there can be no doubt that the Philippine tariff is very ill and unjustly arranged, from which and from American profusion household expenses are beyond all reason. Censure is deserved, but it is not well administered.

(3.) That to lay stress upon education as essential or even desirable for the natives, to say nothing of providing it at public expense, is ridiculous, and the entire scheme "seems a very strange way to treat Malays." Whenever education is referred to, it is so obviously misrepresented that the slurs answer themselves. One need not believe that literacy and merit are twins, honestly to respect the remarkable work of the Filipino schools. It does not appear that Mrs. Dauncey's opinion is based upon any knowledge of what is taught, or any inspection of methods.

Much unfriendly comment might be quoted were it worth while. Speaking generally, the criticism seems unsound as well as partial; but it may be considered, as one would take the gossip of the countryside to show the drift of unlearned but popular feeling, if not serious expert judgment. It leaves the impression that the American administration is an inefficient intrusion, unacceptable to natives and foreigners alike, which must radically change its character to have hope of success. Our own opinion is that Secretary Taft, in so far as he can get competent subordinates to carry out his policy, is doing fairly well—the tariff excepted—in the desperate task of managing Asiatics veneered with Latin civilization. We have, however, indiscreetly assumed a position antipodal to our

institutions, and it will be a happy day for the republic when it can relinquish with honor its anomalous and undesirable authority.

With every page a challenge, one may be glad to read the volume, regretting, for the lively and confident author's sake, that a competent editor had not revised some of its phrases. There are two dozen illustrations, mostly good, a fair map, and an index wholly bad.

The Economic Development of a Norfolk Manor, 1086-1565. By Frances Gardiner Davenport. Cambridge: The University Press.

In the certainty and precision of statement that come from an unusual knowledge of the minute detail of her subject lies the value of Miss Davenport's study of Forncett. Her book is, in the main, a close, exhaustive analysis of the known records of her manor (which is a fair type probably of many other manors) within a restricted period, supplemented by a number of excellent tables and documents. The analysis is so complete and accurate that it compensates largely for the disappointment, probably inevitable, of finding in the appendix only selected documents. The account rolls of 1272 and 1376 especially are of so much interest that one wishes for others edited in the same competent manner. In the analysis of the material the desire and necessity for completeness has led to the inclusion of some details that seem at first sight wearisome and merely statistical; yet the dull records of bailiffs, even the price given for nails for horse shoes, become valuable if taken as illustrative of the method by which a great lay lord exploited his estates, and serve also to supplement our knowledge of the economy of great groups of church manors.

Close study of the records has led, moreover, to some suggestions and conclusions of wider application. From a sixteenth century survey and an excellent knowledge of the topography of her manor, Miss Davenport has constructed an admirable map of Forncett which proves once more the value of the study of the map for economic history. It leads her to the suggestion that in the earliest times there may have been a connection between the distribution of dwellings and the status of the population; that the dwellings of the unfree were grouped close to the manor, whereas many free men "dwelt apart and scattered." Again, a full discussion of the history of each of the bond families of Forncett, for which we were prepared elsewhere, shows that the bond population was not immobile and stationary in the later period of serfdom, as some recent writers have believed, but that rather the number of withdrawals from the manor, either of fleeing or chevage-paying tenants, was considerable. After 1350 Forncett tenants are found in at least sixty-four different places. In the concluding chapter, by the test of the number of dwellings vacant, Miss Davenport proves that there was a great decrease in the population of Forncett after 1348. Such a test, if applied in a sufficient number of cases by a student with as admirable and intimate a knowledge as Miss Davenport's of the bond and free tenants of different localities, should determine the extent of the "decay of

towns," and the relative population in the rural districts before and after the Black Death. It should also furnish statistics useful for the further question of the actual depopulation of England by the pestilence.

The Liberty of the Press in the American Colonies before the Revolutionary War. With Particular Reference to Conditions in the Royal Colony of New York. By Livingston Rowe Schuyler. New York: Thomas Whittaker. \$1.

As Mr. Schuyler is a native of New York city it is not surprising that in his "Liberty of the Press in the American Colonies" he should have given most attention to the history of the freedom of the press in the State of New York. There were only two colonies in which there was anything that could be described as a long-maintained movement to free the press from the restrictions imposed upon it when colonial settlement began. One was Massachusetts and the other was New York.

In each of these two colonies the history of the movement is interesting, but for different reasons. In Massachusetts the Church was largely concerned with the continuation of the restrictive code which may be said to have been brought from England at the time of the settlement of Massachusetts Bay. Much of the history of the free press in New England centres about the attitude of the dominant church towards the press; first towards the books which emanated from it; and later, after James Franklin, in 1721, had begun the *New England Courant*, towards the newspaper press. In New York in colonial days there is no trace of any hostility on the part of the clergy towards a free press; and practically all historical interest centres around the Bayard case during the Administration of Lord Bellamont (1697-1701); the Zenger case in 1734; and the long and bitter contention between Lord Clinton and the Assembly in 1745-48 as to the right of the House to determine what should be printed in the Votes and Proceedings. This quarrel ended in favor of the House. The Zenger case also, as is well known, ended in a victory for the popular cause.

In no other British colony on the North American continent, including British North America of to-day, have there ever been more important issues with regard to the press either in the courts or in the Legislatures, than those which were fought out in the colony of New York. The only other libel case coming before British North American courts which can be compared with the Zenger case was that in which Joseph Howe, the Nova Scotia publicist and statesman, was concerned in 1835, when he was editor of the *Nova Scotian*, and condemned the municipal administration of Halifax in its columns. No lawyer would defend Howe. In his own defence he made a speech which to-day ranks among the great orations of Canada; but the results of the triumphant acquittal of Howe were not so far-reaching as those which attended the acquittal of Zenger; for undoubtedly the point then made by Andrew Hamilton, Zenger's counsel, that after libel cases in England were no longer adjudicated upon by the Star Chamber, it was the right of juries to determine whether the publication complained of was libellous as well as

the fact of publication, had influence in England. This argument advanced by Hamilton affected the movement which began after Woodfall's case was heard before Lord Mansfield in 1770, for a reform in the libel laws—the reform which came in 1792.

The history of the freedom of the press in New York consequently has a singular constitutional importance. Regarding this, Mr. Schuyler has given much care to working out the several struggles for freedom of the press and their significance. Not quite the same care has been bestowed on the introductory chapter dealing with the position of the press in England when the American colonies were settled; and there is not much to commend, certainly not as regards completeness and clearness of statement, in the chapters covering the history of the movement in Massachusetts, Pennsylvania, and Virginia. Authorities in print have mainly been consulted; dates are lacking in places where they ought to appear, and where they could have been given with a little further research; and the index is inadequate.

Drama.

The revival of "A Midsummer Night's Dream" in the fine new Astor Theatre in this city is the most notable of recent dramatic events here. On this representation much care, time, and money had been expended. As a spectacle it more than fulfilled all moderate expectation, but in almost every other respect it was unsatisfactory, at all events to lovers of Shakspeare. It revealed, in a very striking way, the enormous difficulties to be surmounted before there can be, in the present condition of the stage, any adequate interpretation of a play requiring a sympathetic and cultivated intelligence on the part of the producer and a capacity for romantic sentiment and poetic utterance on the part of the actors. The fact is, that during the last twenty-five years the race of real stage managers—the men capable of comprehending the spirit of a play and teaching the actors how to give full expression to it—has been rapidly dying out, and now is nearly extinct. The stage manager of today is master only of the mechanism of the scene, the groupings, the lighting, the costumes, and the sensational effects. He is concerned with the externals only, not with the soul of the play; and actors, except when the living author is present, have no expert to guide or instruct them. Thus, it came to pass that the enactment of "A Midsummer Night's Dream," apart from the beautiful framework in which it was set, was more often an effacement than a realization of the poet's ideal. The performers strove to embody the fanciful creations of a luxuriant imagination by means of the crudest methods of modern, everyday speech and gesture, without refinement, grace, or dignity. They were vigorous and fluent in speech and gesture, but utterly inelegant and unpoetic in both. Their enunciation and pronunciation were equally slovenly. The rhythm of the lines was constantly ignored and the true significance lost. Word endings were clipped and the proper vowel sounds disregarded. In the prose passages, of course, the elocutionary faults were less

perceptible, but scarcely any comprehension of the humor of the clowns was displayed. The comic effect of their proceedings, of course, ought to arise from the simplicity of their ignorance and their egregious self-confidence. To substitute for this stolid foolishness the elaborately silly artifices of burlesque or the harlequinade is to betray the most complete misconception. The purely decorative part of the representation was rich, ingenious, and tasteful, and the fairy machinery exceedingly well devised. If one-half of the intelligence and capacity exhibited in the panorama had been exerted in behalf of the acting, there would have been a memorable production. But Shaksperian actors must be made before there can be any satisfactory interpretation of such plays as "A Midsummer Night's Dream" or "The Tempest."

Music.

Music and Musicians. By Edward Algernon Baughan. John Lane Co. .

The London critics have not been given so much to reprinting their periodical articles as their American colleagues, but they have made a beginning, and among those whose utterances deserve such a compliment Mr. Baughan is prominent. He has ideas of his own, and his lucid style enables him to convey them to the general reader even when they relate, as they must now and then, to matters technical. Of the twenty-nine articles in his "Music and Musicians" the most suggestive, perhaps, is that entitled "The Gentleman in Music," which throws interesting sidelights on the status of the tonal art in England. For the purposes of his article the author defines a gentleman as "a man who comes of good family—not necessarily rich or noble, but gentle—and has had the ordinary English gentleman's education (a good public school and, afterwards, one of the universities)." Such gentlemen have long abounded in the army, the Church, and the learned professions, but it is only recently that English parents have ceased to speak of musicians as "fiddler persons," and have begun to look on with equanimity while their sons become professors or composers of music, or players or singers.

Has this change been for the good of music in England? Socially, no doubt, it has. "No one expects an English musician, at least, to be long-haired, dirty, ignorant, and a sloven in his habits." But musically it has not, according to Mr. Baughan. "The gentleman by birth and training is," he maintains, "the last man who should be a musician." Why? Because music is primarily a matter of feeling, while such a gentleman's whole education has had the aim and effect of suppressing emotion, or at least the manifestation of it; and the ideals of uniformity and stoicism inculcated in him become a second nature in time. The gentleman musician admires Bach, but strips him of his humanity, exaggerating his austerity, as he does that of Brahms. He makes a fetish of the love of uniformity that has been implicated in him. "The great fault of British music and British performers has been a certain coldness and want of emotion; and those very defects are precisely

the merits for which our universities strive."

The gentleman in music, if playfully inclined, might easily retort to this accusation: "You are a gentleman yourself." For, unquestionably, the general tone of Mr. Baughan's volume is one of decided animosity toward the display of emotion by composers or performers. On page 98 he declares that "our modern music-making suffers much from exaggerated emotionalism." And once more (p. 161): "Much could be said against the influence on the mind of the more morbidly sentimental Chopin compositions, of the pessimistic whines of the first and last movements of the 'Pathetic' symphony, and, to take another aspect, the excessive and theatrical emotion of much of Wagner's music." To cap the climax, he has a whole chapter, "Is Opera Doomed?" in which he tells us that opera (the most emotional form of music) is bound to disappear, being absorbed in the oratorio. Mr. Baughan's bark, however, is worse than his bite. He is consolingly inconsistent (he defends his inconsistency in the preface), telling us, in another essay, that there is a peculiar reason for the existence of opera as an art-form of drama, which reason he proceeds to give in convincing terms (p. 176); and on the next page he adds:

That it is not impossible to invent drama which will throughout yearn for musical expression, has been almost proved by Wagner in his "Tristan und Isolde," and, to a great extent, in his "Parsifal." In the love-tragedy you will hardly find a single speech which does not demand music.

Another rather odd inconsistency may be found with reference to Richard Strauss. On p. 273 we read that "he has strong thematic invention, so individual that many will no doubt deny it—for new melody is one of the most difficult things in music to grasp at first"; while on the last page but one of the book we find this sentence: "Strauss's want of great thematic invention has already been mentioned!"

Such inconsistencies (due to the fact that these essays cover a period of twelve years) will not prevent any one from enjoying Mr. Baughan's book, in these journalistic days of shifting opinions. The Wagnerians need not feel alarmed at his confession that he is "a convert from Wagnerism"; they will find him still very much of a Wagnerite, even if he does opine that the "Meister's" operas are as "unreal as the old Italian operas at which we laugh so consumedly nowadays," and that Wagner's reforms have had a more vital influence on Italian and French than on German opera. He admits that it is useless to criticize Wagner any more, because he is gradually gaining the same position as Shakspeare, who "stands serenely where he did in spite of Bernard Shaw."

The forty-ninth annual music festival at Worcester, Mass., will take place October 1 to 5 this year, a week later than usual. The programme is: Wednesday evening, October 3, Handel's oratorio, "Israel in Egypt," with six soloists; Thursday afternoon, October 4, first symphony concert, with soloists; Thursday evening, Verdi's Manzoni "Requiem," with four soloists, to be preceded by Brahms's "Song of Destiny," for chorus and orchestra; Friday afternoon,

October 5, second symphony concert, with pianist and soloist; Friday evening, artists' night. The usual public rehearsals will be given, beginning Monday evening, October 1. The management has provided a chorus of 400 trained voices; sixty Boston Symphony players, and sixteen soloists, as follows: Mlle. Elizabeth Parkina, soprano; Mme. Louise Homer, mezzo-soprano-contralto; Miss Louise Ormsby, Mrs. Margaret C. Rabold, and Mrs. Viola Waterhouse, sopranos; Mme. Isabelle Bouton, Miss Grace Munson, and Mrs. Grace Preston Naylor, contraltos; Daniel Beddoe and Paul Dufault, tenors; Emilio De Gogorza, Frederic Martin, and Tom Daniel, basses; Timothée Adamowski, and Miss Bessie Bell Collier, solo violinists. The piano soloist is Mme. Olga Samaroff. Arthur Snow will play the organ and Arthur J. Bassett will be piano accompanist.

Julius Stockhausen, one of the best-known German singing teachers, died on Sunday night at Frankfort. He had a fine baritone voice, and after studying with Bussine and Manuel Garcia, sang in opera in many cities on the Continent. On the death of Roff he was made director of the Frankfort Conservatory, but retired in 1898 to give private lessons.

Dr. Karl Muck, the new conductor of the Boston Symphony Orchestra, sailed for this country on Tuesday. On his arrival he will go direct to Boston to begin rehearsals for the first concerts on October 12 and 13. The programme for the opening of the season will be Beethoven's C minor symphony and Wagner's "Siegfried Idyl," "A Faust Overture," and the prelude to "The Meistersinger."

Art.

IN HONOR OF REMBRANDT.

AMSTERDAM, August 31.

The Dutch, in celebrating the Rembrandt tercentenary, have evidently felt the uselessness of attempting to compete with their own great Rembrandt exhibition of 1898. If the ceremonies of the actual anniversary, already described in the *Nation*, were not thought sufficient for so distinguished an occasion, if some sort of exhibition to prolong the period of commemoration seemed indispensable, this exhibition in no case, either in Amsterdam or Leyden, has been arranged on such splendidly broad and representative lines as the memorable show of eight years ago.

In Amsterdam, indeed, the special exhibition for this summer of 1906 is not of Rembrandt at all, but of modern Dutch artists. The avowed object is that the work now being done there may be compared with that of Rembrandt's day. If, to pursue this comparative study with the seriousness the modern Dutch artists expect, you should go first to the Rijks Museum to refresh your memory and impression of Dutch art in the seventeenth century, you will there find an important change in the hanging of the pictures, and this also is to be regarded as a special tribute to Rembrandt—not wholly a successful tribute. As every one now knows, almost all the paintings by Rembrandt—the exception is that marvellous old woman who sits, prim and stern, not far from the very similar

portrait by Hals—have been removed from the long familiar places and given two rooms apart. The change is not altogether an improvement. The room where the "Night Watch" now hangs is small, out of all proportion; a side light is artificially regulated so as to emphasize just those passages that call for no emphasis. Besides, the crowding in of the other Rembrandts on the opposite walls adds neither to the effectiveness of the "Night Watch" nor to their own. The "Syndics," in an adjoining room, is somewhat better hung than it was before, but that is not saying too much. Save for this change, the Rijks is as one remembers it—a collection that, though many things in it might be omitted with advantage, is rich in the masterpieces of Dutch art.

It is from these you must turn to the exhibition at the *Art et Amicitia*, in the delightful rooms overlooking the Rokin. The windows there, in midsummer wide open to the canal and the opposite houses and the cloud-swept skies, seem to invite you to note how well the Dutch painters of the nineteenth century have used their eyes to see what is actually before them. The Dutch painter, for that matter, has ever been a realist, if realism implies the preoccupation with motives and themes and subjects that one need wander no further than one's own door to stumble upon. Pieter de Hooch, Vermeer, Terburg, as you get to know them at the Rijks, or any other gallery where they hang, were ever busy with their own Holland, though more inclined than the modern Dutchman to study it indoors. Hobbema and Ruysdael, too, though they could borrow at times the special kinds of picturesqueness that did not exist at home, loved no less their own endless waters and low-lying land under heavy skies, their own long, straight, tree-lined roads and little villages nestling about church and spire in the distance. The Holland you look out upon from the windows of the railroad carriage is the Holland of Rembrandt's etchings—there are the same farmhouses enclosed in their squares of trees, the same lines of windmills turning on the horizon. The Dutchmen you watch tossing off their beer in the café are the same Dutchmen who swagger in that wonderful series at Haarlem; and, indeed, only this summer, as I sat in the restaurant of the Kraznapolsky at Amsterdam, I saw at a near table, calmly drinking her glass of milk, an old, old lady in close, white cap, with withered rose-flushed cheeks, who might have stepped from the group of old women in surely the most marvellous of the many marvellous pictures Hals painted. And so, too, in their own fashion, the modern Dutch artists have been absorbed with the beauty at their own doors—all, except Tadema, and he, though included out of courtesy, comes in every way as a foreigner into the company of Jacob Maris and Mauve, Bosboom and Israels, who have disdained archæology in their love for their own skies and pastures, for their own peasants and fishermen, cottages, and boats.

Even as I write these names, however, I feel, as I did in the gallery, the incompleteness of an exhibition of modern Dutch art that could leave out Matthys Maris and Bauer, Breitner, Toroop, and the younger men who, it is just possible, their

elders may think are knocking too hard at the door. There are, however, some very good things exhibited. I have never seen a Bosboom that I thought suggested better the qualities he seeks to give in his church interiors, than his Synagogue, with its simple, white-washed walls and spaces of green panel or shutter, and its great brass lamp. I know of nothing of Mauve's that has interested me more than two or three little studies of still-life—a brass milk can, some pottery, a bit of old painted wood—probably very early, guiltless of any attempt at picture-making, but with something of the beauty by which a little Chardin or a Vollon will overshadow acres of tedious, perfunctory historical and heroic "pieces." There are also pictures by Israels belonging to the period before his Dutch fishermen and fisherwomen, and his Dutch landscapes, had become enveloped in the sentiment which his admirers of later years have demanded of him; by Jacob Maris there are not only sombre towns under the dramatic skies he eventually overweighted with drama, as Israels has overweighted his domestic incidents with sentiment; but also the little figures—the girl at a piano, the boy with a violin, and the others—which prove him no insignificant rival of his brother Matthys. When all is said, however, the series of pictures and drawings represents only one small group, and has not the contemporary importance many of its promoters appear to have claimed for it.

Another exhibition at Amsterdam, arranged by a firm of dealers in the Doelen Straat, Frederick Müller & Co., is also, they announce, in honor of the Tercentenary of Rembrandt. It can boast only two or three paintings by, or attributed to, Rembrandt, and these seem all the less important because the Rijks Museum is within such easy distance. In addition, it includes proofs of a few of the etchings, and a little series of drawings, among them two sketches of Burgomaster Six that have the further personal interest of having been lent by the Burgomaster's descendant, Professor Six of to-day. The principal part of the collection, however, is made up of the paintings of other Dutch artists, some of them admirable examples, that send one back to the Rijks with renewed zest.

At Leyden, Rembrandt himself is more prominent at the two shows, or, rather, the two sections of one show, held at the Lakenhal and the University. But here, too, it was apparently impossible to depend solely upon Rembrandt, and at the more noteworthy of the two sections, in the Lakenhal, he appears in company with the other masters of Leyden of the seventeenth century. It is extraordinary how many of the Dutch painters came from Leyden. Here are Jan Steen and Van Goyen and Gerard Dow and Van Ostade and Van Mieris and, greatest of all—always excepting Rembrandt—Pieter de Hooch. There are only some seventy pictures all told, and twenty-five of these are attributed to Rembrandt. I can hardly say that, in any case, the artists are represented by their masterpieces. You can see them to better advantage not only in Amsterdam, but in London and most of the large national galleries. Jan Steen, to be honest, is a painter of whom it is easy to

wearv, and this is no less true of Van Goyen, whose pictures, usually of interest as records, are less often so as paintings, though there is here a fresh little rendering of the dunes and cottages of Holland, full of color and atmosphere that is really delightful. One of the De Hoochs, an interior lent by M. Adolf Schloss of Paris, is charming, the inevitable open door giving a characteristic glimpse of a canal and the houses of Amsterdam, though even in this De Hooch is not at his finest. It is, however, suggestive to see these men grouped about the master who was so infinitely greater than one can quite understand why the public of his own day, no more intelligent than the public of any other day, failed to appreciate him. Of that greatness the twenty-five pictures do not give an adequate idea.

There are, however, portraits: of himself, his mother, father, brother, sister, Saskia—the ever familiar themes—of Petronella Buys, Catrina Hoogstraet, Jan Six; there are pictures of the subjects, religious, historical, mythological, characteristic of him. But if I record truthfully the impression they have left with me, I must say they struck me—as a collection, that is—as more apt to appeal to the critic armed with foot-rule and photographs, than to the artist who loves a fine Rembrandt for the qualities he finds in it and who would love it just as much, given those qualities, were it signed by any other name. Some of the portraits I should hand over to the copyist, or to Rembrandt's pupils, on no more "expert" evidence than their unworthiness of the master. In saying so, however, I am far from wanting to dispose of the entire series. The little "Jan Six lisant debout à la fenêtre," lent by M. Léon Bonnat, is a beautiful little study, the figure full of character and animation, the color delightful, the composition and pose recalling the famous etching and well suggested in one of the drawings at the Amsterdam dealers' show in the Doelen Straat. Some of the other portraits, more particularly the very small ones, are of the utmost interest. But perhaps nothing appealed to me so powerfully as the little "Christ sur la Croix," another fine thing from M. Bonnat's collection—the cross with its tragic figure, so magically modelled, set against an ominously grey, storm-laden sky, below which stretches the vague, shadowy, sombre land, oppressed, you might almost fancy, with the horror and terror of the unspeakable crime being enacted upon it. The painting of the flesh, of the heavy clouds, of the mysterious distances—all had that quality of tragedy that Rembrandt, beyond other masters, knew how to wrest from what may have seemed to his contemporaries the most ordinary palette. The little "Andromeda"—this from Dr. Bredius of The Hague—has something of the same impressiveness, the tortured body beautiful, not according to any banale Salon ideal of beauty, but in the splendid play of light on its white enamelled surfaces. These are the things that held my attention at the time, that remain in my memory far more vividly than the larger and, in arrangement at least, more elaborate paintings.

The collection of drawings is, in every way, more important and more representative. M. Bonnat, Walter Gay, Dr. Bredius, Dr. Hofstede de Groot, among others, have

lent from their treasures. Here are the suggestions for many of the famous and well known pictures and etchings, and the landscapes where, with a few lines or simple washes, Rembrandt could render for you the loveliness of endless stretches of flat meadow land, of rows of windmills, of simple farmhouses in their enclosure of trees. Here are the portraits; the studies of animals, the notes of movement, action, a pose; here are the beggars who, in their picturesqueness, never ceased to inspire him; here are the odd studies and sketches—in a word, here are the memoranda of the artist who knows how to use his sketch book, who, as he goes, jots down all that he sees of interest to him, or, as they come, all his ideas for the work he has on hand. The wall space is limited, but the drawings have been exceedingly well and intelligently hung, with a real sense of things, a right feeling for subject and appropriateness. A certain number have overflowed into the university.

The four or five rooms which are available at the University are devoted to a collection of reproductions of Rembrandt—reproductions of paintings and drawings and prints. It is clear that no pains have been spared in getting it together, and, what is more important, in making the most of it once it was got together. I was astonished not so much at its completeness even, as at the excellent and suggestive manner in which, though chronological order is fairly well observed, subjects are grouped together. For instance, one room is filled with reproductions of his portraits of himself, his family, his two wives—Saskia and Hendrickje—his son, Titus. It is not so much the arrangement of this special series that commends itself to me, as the care with which the reproductions of drawings and etchings and paintings of the same subject are grouped. You are thus given a wonderful impression of Rembrandt's methods of study, of his absorption in his subject whatever it might be, of his tireless industry, of his knowledge, his power, his love of work. Photographs never can yield just the quality, the elusive something by which the master reveals and asserts himself. But in this collective display of reproductions of the same subject, as he expressed it in various mediums, you can learn much of the scope of his work and the diligence by which he attained the full measure of his accomplishment. And so I have come away from Leyden feeling that, to a certain degree, the exhibition of photographs after Rembrandt may prove more useful in the end than the major exhibition—useful as a chronicle, I should add. When it comes to a question of art, one little painting like the Jan Six or the Christ on the Cross is of infinitely greater value than all the photographs and reproductions in the world. N. N.

The death is announced of Étienne Le-roux, the sculptor, who was born at Écouché (Orne) on August 3, 1836. His works adorn many cities and towns in France. He studied under Jouffroy, and was an exhibitor at the Salon from 1863 to the present year. One of his earliest and most famous works, the "Marchande de Violettes," a bronze statue, is at the Luxembourg; his statue of Jeanne d'Arc is at

Compiègne; the monument of Sadi Carnot at Chabannais. His busts include those of Renan, Théodore Auhanel, the Duc d'Audifret-Pasquier, and Dumas the younger. He obtained medals at the Salons of 1866, 1867, and 1870, as well as at the Universal Exhibitions of 1878 and 1889.

The annual international art exhibition now open at Florence is remarkably good. It contains over 400 works. The feature of the exhibition is a collection of canvases by the late Niccolò Cannici. Many skilled artists are represented, notably Roll, Cagniard, Maurice Eliot, Fleury, Werts, Dhurmer, Rolshoven, Pael, Abel Faioire, and Lamy France. Among national artists represented are Gioli, Costelli, Martinelli, Ghiglia, Vianello, Constantini, and Costetti.

An exhibition of representative German paintings is planned for this fall by Charles M. Kurtz, director of the Buffalo Fine Arts Museum. By arrangement with the Pennsylvania Academy of Fine Arts, the Chicago Art Institute, the St. Louis Museum of Fine Arts, and the John Herron Art Institute of Indianapolis, the pictures are to be shown in those galleries also.

The seventeenth annual exhibition of the New York Water Color Club will be held in the galleries of the American Fine Arts Society, No. 215 West Fifty-seventh Street, opening to the public November 10 and closing December 2.

After an interval of three years, the second part of Giulio Urbini's "Disegno Storico dell'Arte Italiana" has been published by Paravia (Turin). The qualities which marked the author's treatment of the rise of Italian art, its romanesque and gothic periods, and the influence of the school of Giotto, which made up the first volume, are equally characteristic of his review of the fifteenth and sixteenth centuries which the new volume embraces. A thorough knowledge of his subject, together with great accuracy and clearness of statement, render this author a safe guide for the general reader, and a lively, graceful style makes his pages pleasant reading for lovers of Italian. He successfully avoids the temptation to make this manual of Italian art a study of isolated schools, gives architecture the place to which it is entitled and presents a well-defined conception of its harmonious development. The illustrations are numerous, excellent, and well chosen, and the price is moderate. The "Disegno" will be completed with the publication of a third part.

Science.

Handbook of Flower-Pollination. By Dr. Paul Knuth. Translated by J. R. Ainsworth Davis, M.A. Clarendon Press.

The good work of placing the more important German botanical treatises within the reach of English and Americans who do not find pleasure in reading German, goes steadily on. Some of these treatises have been reviewed in these columns, generally with words of commendation for the thoroughness with which the translation has been done. In most cases, too, the English translation has received the attention not

only of the translator, but of competent commentators, as well, who have greatly improved the original. Dr. Paul Knuth's work, the latest in this series, is one of the best.

At first sight, the first volume (the only one yet translated) is distinctly disappointing, because it appears to consist only of an introduction and a voluminous bibliography, with nothing sandwiched between. But this impression is removed immediately by the discovery that what is called "Introduction," comprising about half the volume, is in fact a comprehensive essay of the most fascinating character. The perusal of this long essay naturally leads the reader to inquire, Where can other works on this topic be found? The bibliography answers the question. Hence, although the construction of the first volume differs from that of other first volumes, it embodies a perfectly natural arrangement of matter. The two succeeding volumes are to be devoted to special topics presented geographically.

The present work has an interesting history. Shortly after Charles Darwin had called attention to certain relations which exist between flowers and insects, an enthusiastic German naturalist undertook observations in the Alps, hearing on the general subject. For such observations, this naturalist, Dr. Hermann Müller, was peculiarly fitted. He had devoted himself to geology in the broadest possible fashion, making tributary to that synthetic science every fact which fell in his way. Being a student of nature, and not a mere specialist, he gave much of his time to botany and entomology. Thus equipped, he passed very easily from the pursuit of these allied topics to the study of the new department which was suddenly formed between them, namely, the investigation of the relations between insects and flowers. He was fortunate in securing from the outset the hearty coöperation of kindred spirits. His brother, Fritz, a renowned observer, contributed from his varied life in South America extremely valuable data, while associates in Europe and North America all lent a hand. In 1873 his first great treatise appeared in German, and this immediately stimulated further observation everywhere. Other works followed from the same author and the bibliography soon became voluminous. Early in the development of this new department of natural history, careful search was made for observations which might have anticipated those in progress; and the discovery was soon announced that some of the recent observations were only repetitions of forgotten studies made long before. This discovery gave unbounded delight to Darwin and to this earnest follower of his, Hermann Müller. Only magnanimous souls can thus welcome the news that their thoughts have been wrought out before. Even sticklers for priority, sensitively jealous of their scientific reputation, bring to such masters their single contributions, feeling that they will receive due credit for all their work. The field became speedily filled with hundreds of observers, of all sorts and conditions, each anxious to read aright the riddles of the flowers and insects in his locality.

Müller's work and some of its translations have long been out of print, and al-

though innumerable treatises upon the same subject have appeared, no single one of them has seemed to take its place. To supply this want, Dr. Paul Knuth, professor in the Oberrealschule, in Kiel, undertook negotiations with Müller's representatives and with possible publishers, finally embarking on the formidable enterprise of constructing an entirely new work, based on Müller's lines. To this work, he gave all his energy. It was the privilege of your reviewer to meet Dr. Knuth during the closing days of his voyage, as he was returning home with his scientific spoils. Although he was then far from well, Knuth devoted all of his available time to the task of revising his notes gathered in many lands. When he sought a little relief from his work, he was fond of telling his fellow-passengers something of his travels and of his plans. Many of these plans were frustrated by his untimely death, but many more of them have been carried out by friendly hands, and the magnificent German edition of his work is Knuth's lasting monument.

The English translation begun by Dr. Gregg Wilson has been committed to Prof. Ainsworth Davis. But it is more than a mere translation: it embodies additions to the original, and also many substantial improvements therein; real advantages which we owe to many contributors. The compendious treatise entitled "Introduction" in this first volume, is, beyond question, the best presentation of the matter of flower-pollination by insects yet given in an English dress.

Most of our readers are familiar with the general fact that seeds are produced by the action of pollen upon the ovules of flowers. They further know that it would seem to be a measure of economy in the vegetable world to have every ovule fertilized by the pollen of its own flower: in this way there would certainly be less risk of loss of pollen in transfer, and, as a matter of fact, a great many flowers are fertilized by this process, known as "close-fertilization." But a vast majority are provided with some sort of device, by which such close-fertilization is prevented and cross-fertilization is secured. In the latter case, the ovules are fertilized by the pollen from some flower not its own, but of the same species. In many of these instances, the pollen is transferred by the wind (the lightness of the pollen renders this mode of transfer very easy). But the most interesting cases are those in which the transfer is more safely effected by the agency of insects of some sort. The insects are paid for their work, sometimes in sweet nectar, and sometimes in a part of the pollen, a kind of rebate, so to speak. To induce the insects to act as transfer agents, there are innumerable attractions of odor, color, and the like, associated with structural mechanisms, flower-forms, etc., by which these attractions are rendered very efficient. Of course such a subject must needs possess a somewhat formidable terminology, but aside from this, the whole matter is attractive down to the smallest detail.

It ought to be said that some skeptics have expressed doubts as to the extent of insect intervention. Some of these skeptics have been apparently afraid of the results which would follow if the case of insect-intervention were proved: a notable case is

a recent work in which Darwin's study of the primrose is most unjustly handled. Some other skeptics have dwelt chiefly upon the instances of close-fertilization, and have asked whether these instances do not invalidate the general statement that cross-fertilization in plants is essential to the perpetuity of a species. Therefore, referring our readers to the book itself for the very interesting details, we may note the conclusions reached as to the whole subject, and thus observe where the skeptics are placed:

(1.) Other things being equal, a flower is visited by insects in proportion to its conspicuousness. (2.) In a number of cases, odor has more to do with the attraction of insects than the size and color of the corolla. (3.) Bees, the most intelligent of flower-guests, are influenced in the choice of flowers, even more by food-value than by external appearance. (4.) Different odors attract different groups of insects. (5.) Attraction from considerable distances is certainly effected, for the most part, by the odor of the flowers which fills the air as with invisible clouds and indicates the direction of flight. When the insects approach nearer, the colors undertake the task of further attracting them; and when they finally settle, the lines and points of color, long ago pointed out by Sprengel, serve to point out the shortest way to the nectar. These are the conclusions in this first volume, after all the evidence in court has been carefully weighed. It would appear to be a decision without the possibility of appeal.

Every one who watches the flowers in his neighborhood for the coming of their insect-guests, can perhaps obtain and contribute confirmatory evidence in regard to this matter, but the main question has been practically adjudicated. The subsequent volumes of this excellent translation of a most important work will present the specific data relative to all flowers hitherto investigated, arranged on a geographical basis, which is, after all, perhaps, the best

The British Association for the Advancement of Science, when it held its annual meeting in August at York, returned after seventy-five years to its birthplace. It was in York in 1831 that the association came into existence. It was an outgrowth of the Yorkshire Philosophical Society, which had been founded in order to examine and preserve the fossil bones and other cave deposits of the once famous Kirkdale Cavern. The founders of this earlier society saw the need for an association on national lines and with a far wider scope; and the result was the British Association, which now counts in its membership almost every scientist of distinction in the British empire, and which holds its meetings on the banks of the Zambesi or the St. Lawrence, as well as on those of the Isis, the Cam, or the Ouse. To commemorate its return to the city of its birth, "The Historical and Scientific Survey of York and District" (York: John Sampson) was prepared under the auspices of the local committee. It is edited by Dr. George A. Auden, and surely guide or handbook never attempted a wider field. Archæology, history, topography, bibliography, biography, botany, zoology, and meteorology of York are all covered by various writers. The section of the book most likely to interest Ameri-

can readers includes the chapter by G. Benson on the Minster and Churches of York, and that by Dr. J. Solloway on the Monastic Establishments in York. Much interesting matter given in these chapters is not to be found in the ordinary guides or handbooks to York. The chief merit of the volume, however, is not so much in its contents, which are too miscellaneous in character and too cursory in treatment to be of lasting value, as in its commemoration of York as the home of the movement which created the British Association.

Henry Holt & Co. has planned an "American Nature Series," which will include "Fishes," by President David Starr Jordan of Leland Stanford University; "Insects," by Prof. Vernon L. Kellogg, Stanford; "Trees," by N. L. Britton, director of the New York Botanical Garden; "Wild Mammals of North America," by C. Hart Merriam, chief of the United States Biological Survey; and "The Bird: Its Form and Function," by C. W. Beebe, curator of birds in the New York Zoological Park.

HENRY HOLT & CO. NEW YORK

Have Just Published:

A new novel by BURTON E. STEVENSON, whose "MARATHON MYSTERY" was reprinted in England and Germany.

Affairs of State

Being an account of certain surprising adventures which befell an American family in land of wind mills.

Illustrated by F. VAUX WILSON. \$1.50

A second large printing was called for on the very day of publication. This is the story of two American girls and their father at a little Dutch watering place, who unintentionally become involved in a diplomatic intrigue which threatens the peace of Europe. It moves on to a breathless climax.

A striking romance by a noteworthy California author.

Casa Grande

A California Pastoral. By CHARLES D. STUART. \$1.50.

A tale of the early fifties, dealing with the trying experiences of a young Southerner while making good his title to an unconfirmed Mexican grant in the picturesque Sonoma Valley. The heroine's evolution from a mannish cow-girl to a lovable and feminine woman is sketched with a spice of outdoor life in the sunshiny State, and there is the stress and suspense typical of the times.

RECENTLY PUBLISHED

Joseph Vance

An "Ill-Written Biography." By WM. DE MORGAN. \$1.50.

Boston Advertiser: "A deep, broad, tone, shrewdness without cynicism, pathos without parade, the sound philosophy of an able and healthy mind. It commands undivided attention from cover to cover."

New York Globe: "Written with such apparent closeness to life and to truth that the illusion is well nigh perfect. The elder Vance is a creation in character drawing quite worthy to be compared with the elder Weller, and perhaps the story as nearly measures up to the best standards of English fiction—the standards of Dickens and Thackeray—as any story recently published. American readers should be grateful to the publishers of 'The Divine Fire' for giving them another novel of such conspicuous merit."

FINITE AND INFINITE

An Original and Powerful Defense of
CHRISTIAN THEISM

By THOMAS CURRAN RYAN

*The Best Book for Clergymen and
Religious Thinkers*

Gettysburg and Lincoln

The Battle, the Cemetery, and
the National Park

By HENRY S. BURRAGE, D.D.,

Brevet-Major, Maine Vols.

8vo, with 27 Illustrations and 3 Battle
Plans. \$1.50 net.

Gettysburg will always be famous as one of the great battlefields of the world and as the place where was fought the decisive battle of the Civil War. Major Burrage, himself a war veteran, brings together in this volume, which is fully illustrated, and equipped with tactical maps, the records of the battle, the park, the cemetery, and the Lincoln address.

Send for New Illustrated Catalogue.

THE FALL ANNOUNCEMENT NUMBER OF

The Nation

WILL BE ISSUED ON OCTOBER 11TH

A copy of this issue will be sent to every bookseller of known importance in the United States and Canada.

Advertising copy should be received on or before October 9th.

The Nation.

NEW YORK, THURSDAY, OCTOBER 4, 1906.

The Week.

In setting up a Provisional Government in Cuba, Secretary Taft, acting under the instructions of President Roosevelt, has taken a momentous step with all possible consideration for Cuban sentiments and susceptibilities. The Cuban flag is still to fly over public buildings; the government is to be conducted, so far as possible, by Cuban officials; Cuban judges will continue to administer justice. It rests with the Cubans to show whether they have sufficient political aptitude and enough patriotism to set up that other independent Government of which Secretary Taft's proclamation holds out the distinct hope. Upon Americans, also, grave problems and heavy responsibilities press in this affair. It will require the utmost delicacy of handling to prevent a collision between our troops and the insurgent forces. Moreover, if we are obliged to maintain a military government of Cuba for some years, what fiscal treatment are we to give that island? The London *Spectator* suggests offhand that Gen. Wood be put in charge for ten years, with "free access to the American market" meanwhile guaranteed the Cubans. But the *Spectator* does not know our embattled protectionists—has not learned to dread the sugar-beet on the Congressional warpath, or the Connecticut "filler" tobacco turned into a political oriflamme.

The movement of troops to Cuba is of especial interest as the first test of the General Staff under conditions approximating those of war-time. Already it is evident that there is not to be the confusion of 1898. Transports have been hired without loss of time, and their names were announced the minute the President ordered troops to Cuba. At the same time there was given out a full roster of the first expedition—something that was never done in 1898, when nobody knew what troops were going with Shafter until the last moment. The General Staff is fortunate in that it has trained officers who are already at the points of embarkation prepared to see that the troops are put on their vessels without the slightest friction or delay. This in itself is an incalculable advantage, as appears at once if one but considers the indescribable chaos of the Tampa docks in June, 1898. Furthermore, subject to the modifications of Secretary Taft and Gen. Funston, there is already a complete plan for the distribution of the troops in Cuba, which

Gen. Bell has discussed with the entire General Staff—again in marked contrast with 1898, when no general dreamed of calling a lot of capable officers together to get their suggestions as to his plans. Altogether, the army is in for manœuvres of the very best practical utility. It is to be hoped, however, that they will remain manœuvres, and end without the firing of a shot or the dispatch of further troops.

No more sudden political transformation has ever taken place in this State than that which has come over the Republican party. But three weeks ago it was still in the hands of the old bosses, whose maladministration had so long disgusted intelligent citizens. Platt and Depew, it is true, were already in oblivion, but Odell, the State Chairman, allied with Quigg, the lobbyist, was busily intriguing to retain control of the machine. Presto, change! Mr. Parsons, favorably known because of his record as alderman, as Representative in Congress, and as president of the County Committee, suddenly appeared as the slayer not of one, but of many bosses. His success at the primaries drove Quigg out of political life for the time being, and put an end to Odell's carefully laid plans for retrieving his power as State boss. For the first time, almost, within the memory of man, the Republican organization in this city is in charge of an honest and fearless leader. At the Saratoga convention Mr. Parsons, unskilled in bartering, incredibly lacking in the respect due to bosses, dominated the other delegates by refusing to accept any other candidate than the best. Thus the convention, led but not bossed, expressed the wishes not only of the vast majority of Republicans, but of thousands of Democrats who were turning with disgust from Buffalo. For this result much praise is, of course, due President Roosevelt, who backed Mr. Parsons strongly and steadily. If Republicans everywhere are glorying in the disaster which has overtaken the Aldridges, Kilburns, and Hendrickses, as well as the Odells and Quiggs, they must not fail to realize that the ground thus suddenly won must be sternly held. Behind the leaders must stand a rank and file eager to complete the rout of the evil elements in their own organization, as well as those into whose hands the Democracy has been betrayed.

The term "revolution" was generally applied to the political upheavals of last year. The powers that had long ruled our States and cities, sometimes nominally Republican, sometimes nominally Democratic, but always actually working

for selfish interests, were beaten all along the line. Not only did the creatures of the bosses go out of office, but good laws, held back for years past, were hurried through Congress and the State legislatures. Yet this year, to the confutation of the prophets, has thus far been a year of apparent setbacks for reform. La Follette of Wisconsin, the idol of his party two years ago, has been "rebuked" in the person of his candidate for the succession. Weaver of Philadelphia has broken with the City Party. Colby in New Jersey has not only failed to gain strength for the "New Idea," but has actually lost ground carried a year ago. Jerome, after his amazing sweep of this city in 1905, was utterly unable to rally Democrats throughout the State. While there have been some fine achievements, like the decisive defeat of Addicks and the victory of Mayor Jones in Minneapolis, the ret balance is thus far on the other side. Do the defeats mean that Wisconsin, New Jersey, and Philadelphia were not ready for sustained effort along the lines begun so promisingly? It is worth noting that in every instance a leader otherwise beloved and honored was attempting to control matters outside his province. La Follette gratuitously endeavored to decide which of two old and trusted lieutenants should be his successor as Governor; Mayor Weaver, the hero and the hope of Philadelphia last May, failed pitifully at the first trial, and more pitifully at the second, to have one of his own directors nominated for District Attorney over a man who had effectively attacked the Mayor's Administration in his unregenerate days. The Colby movement, as is now conceded, would have done vastly better if it had not bound itself up with the Senatorial candidacy of Mr. Record, and taken part unnecessarily in minor local campaigns. The leaders under the new order must evidently accept the position of human beings with whom their fellows sometimes agree and sometimes differ. With that as a premise, there is nothing in this year's events to destroy hope for the future.

Fresh from its triumphs in the political arena, that most influential of vegetables, the sugar beet, again complacently offers itself for our admiration. Its introducer in this instance is the versatile Mr. Coburn, secretary of the Kansas State Board of Agriculture. Kansas in 1901 began paying a bounty of a dollar a ton, later reduced, on sugar beets. Thus, since no grower is likely to let this premium go, there is the basis for an accurate return on the Kansas crop. The first year of the bounty

saw a yield of 1,747 tons, and, in spite of a decline in 1903, the total had risen in 1905 to 8,605 tons. Whether that gain has been duplicated for the country generally does not appear. The statistics of factory building, however, certainly do not point to an industry living in hourly dread of the "death blow" about which its Congressional friends talk so much. There were four beet-sugar factories in the United States in 1880. In 1890 there were so few as to figure merely among "all other industries." In 1900 there were 30. But Mr. Coburn's table shows 52 factories in 1905, 16 in Michigan and 12 in Colorado, with 12 in course of construction in the present year. An industry that increases sixteen times in twenty-five years easily inspires enthusiasm, but there will be still more if it can keep alive without feeding on special favors.

Edward Everett Hale calls for laws forbidding labor of any kind for children under sixteen years of age. To something like that we shall probably come. Meanwhile, here in New York Monday marked the going into effect of some laws with which we have special reason to be pleased. It is no longer legal to employ children under sixteen years of age in any factory before 6 A. M. or after 7 P. M. After the latter hour no child may be employed in this city in any business or telegraph office, hotel or apartment, or in the distribution of merchandise—this last provision obviously applies to the delivery of parcels in the period of Christmas shopping. Women and children under sixteen are also forbidden to work in any quarry or mine within the State. For this progress the anti-child labor organizations are entitled to hearty thanks. But there remains much to be done, not only within the limits of New York, but elsewhere throughout the Union. The workers have been much disappointed with the results they have achieved in the last few years. Dr. Hale's platform is plain and, if perhaps too sweeping, is none the less one which all who wish to see the United States lead in matters of social betterment can in general approve.

Another instance of haggling between the customs officers and a collector over a fine picture illustrates the awkwardness of applying the present tariff on art. The power of the appraisers, he it noted, is arbitrary; no certificate of purchase price avails; a theoretical market price in America must be established. In the case of ordinary merchandise, this may easily be done, but with many sorts of paintings it is very difficult to fix a value; in fact, a market price is the wildest approximation. Hence it comes about that, when a really fine picture comes into the Custom House, the

owner is mulcted as much as the officials dare. In fact, on both sides it is likely to be a simple game of "trying it on." We make it difficult to bring in the really fine paintings that are desirable possessions, and, by a strange illogicality, practically nothing is paid on the dealers' trash that is imported by the hundreds a year. Here, curiously, the principle of market price does not apply, and it would give an awful but yet educative shock to many a collector who has paid for his latest accession in five figures, to learn that it was appraised in the customs at two figures. The every-day working of the tariff on art, in short, affords the strongest argument to those who would abolish it altogether.

Inferior races seem marvellously slow in recognizing their own inferiority. A recent dispatch tells of the capture, by Dutch troops, of a native capital in the East India island of Bali, under these gratifying circumstances:

The followers of the [native] princes, numbering in all 400 men, were killed in attempting a desperate sortie. The Dutch losses were four Europeans killed and ten wounded.

This outcome shows clearly that the status of the natives of Badong, as compared with that of the Hollander, is only as 1 to 100. This record, of course, is not quite so creditable as the clean hag of 600 Moros that Gen. Wood placed to his credit some time ago, or the almost equally meritorious drive made lately by the British in Natal, where 575 Zulus were slain without the loss of a single white man. Germany, too, though young in colonial experience, has turned out a piece of work marked by the characteristic national thoroughness. In the course of a year's fighting in Southwest Africa, the Herero nation, we are told, was reduced from about 80,000 souls to 2,000, mostly women and children. That savage races, after being taught such wholesome lessons of obedience, should venture again and again to challenge the rights of their European masters, would indicate that primitive man is not only the slave of his medicine man, but that his memory is very short.

The more enlightened races of the East have adopted of late a weapon which may be regarded as an unmistakable produce of the *Zeitgeist*, so universal has become its use under the different names, passive resistance, boycott, or general strike. The Chinese boycott on American goods is yet fresh in all minds. Still more recently, in Persia, the general strike would appear to have proved tremendously successful as a political force. The entire high priesthood, as a protest against the existing régime, left the capital and betook themselves to the sacred city of Kum. Possibly

the Shah might have learned to dispense with the priests and the expounders of the law, but these were followed by no less than 16,000 inhabitants of Teheran, including nearly all the merchants of the city and most of the students, who established a vast model camp. The most admirable order is said to have prevailed, and in their tent city the Persians revealed on a sudden a capacity for self-government they had never given signs of among the palaces of the capital. In the face of so vast a secession, the Shah yielded, granted a national assembly, and everybody came back to Teheran. At present, Bengal seethes with discontent, aroused primarily by the partition of the province under Lord Curzon. The feeling voices itself with greatest effect in a widespread movement against the purchase of British goods, the place of which is to be taken by products of native manufacture. After the European model, school children are incited towards insubordination, university students find it impossible to attend lectures while their country is subjected to oppression, and social ostracism is brought to bear on the timid and the lukewarm in the national cause. And so the peaceful Chinaman and the dweller by the Ganges have come to realize that in their many millions there is a peculiar strength—not that of armies and cannon, indeed, but the strength arising from the economic demand created by millions of stomachs to be filled and bodies to be clothed. One does not willingly turn Gatling-guns against one's customers.

Repression in Russia, it appears, applies only to Jews and reformers. The author of an abominable pamphlet advocating the "pogrom" as a patriotic duty, has been let off with a fine of \$50. His inflammatory work came from the presses of the Department of the Interior. An official of this department who provided and distributed anti-semitic matter has been restored to active duty after a brief period of suspension. Meanwhile, the Czar has made a handsome contribution to the League of the Russian People, the organization that sustains the Black Hundred in its counter reign of terror. In a way, the inhumanity of the procedure is less striking than its fatuity. If this sort of repression were steadily followed all along the line, it would at least constitute a consistent policy—such, for example, as Alexander II. actively carried into effect in the years preceding his assassination. Evidently, for the present Czar, the last counsel seems the best, and there is no comprehensive grasp of the situation. The emergency is really one in which ideas only will serve; instead of these impulses are in control.

The recent visit to Denmark of the

Iceland Parliament, on the invitation of the King and the Danish Parliament, is taken as a sign that the Danes intend hereafter to pay needed attention to their colonial affairs. Mismanagement has been the rule hitherto, not only in Iceland, but in the Danish West Indies. But private organizations have lately formed to bring about better communications between the motherland and the colonies, to increase the popular interest in the latter, and to better their economic condition. This movement dates from the recent abortive attempt to sell St. Thomas to the United States, and to it must largely be attributed the renewed interest of the Government in its over-sea provinces. The Icelanders have recently been given a broader constitution and their own minister in the home government. But this has not satisfied them, and the natives who have just visited Copenhagen have boldly urged that the union between Denmark and Iceland be only a "personal" one; that is, the King of Denmark should be King of Iceland, but in every other respect Iceland should be governed by her own citizens. In other words, Iceland asks what Ireland has so long demanded. The King of Denmark, it is understood, is not at all pleased with this result of the Icelanders' visit, but he is afraid to deny the appeal for home rule lest Iceland imitate Norway and set up for herself.

The status of wireless telegraphy under the law of nations has been defined by the Institute of International Law sitting at Ghent. It denies the Japanese contention that senders of wireless messages from belligerent territory may be treated as spies, but holds that the business is contraband, and that operators, etc., may be taken as prisoners of war. In any case where a neutral vessel or balloon has furnished information useful to an adversary, the wireless apparatus may be seized and sequestered. In general, the furtive use of apparatus for partisan purposes constitutes spying, and may summarily be punished as such. These regulations are of rather an indefinite sort, and seem likely to raise in given cases pretty complex problems of evidence. It is a gain, however, to have weighty repudiation of the sweeping Japanese assertion that to carry or use wireless telegraphy on neutral waters in the vicinity of hostilities practically amounted to piracy. It should be recalled that the eminent jurist, the Rt. Hon. Sir Edward Fry, has discussed this whole matter before the British Academy, laying down the principle that even in time of war a wireless apparatus may be set up and used wherever any neutral enterprise may of right be. This would exclude telegraph ships merely from blockade limits and the actual fields of hostili-

ties and manœuvres, while a terrestrial instrument might be set up anywhere on neutral soil. Of course, the recommendations are merely advisory, not obligatory, but they at least indicate a common-sense view of a new emergency, and a reaction against the theory that the necessities of war may limit or even proscribe the use of this important new invention.

As the date for the meeting of Parliament draws near, reports of the complete break-down of Mr. Chamberlain's health are more frequent. If verified, they would imply political changes of the highest importance. Mr. Chamberlain has unquestionably been ill all summer. He has had attacks of gout before, but this one has been unusually long and severe, while his wonderful recuperative power seems at last to have been impaired at seventy years. It is thought certain that he cannot be in his seat in the Commons this session; there are even rumors that he may resign. The close attention given to these reports testifies to the extraordinary rôle which Mr. Chamberlain plays on the English political stage. The movement against free trade, for example, is almost concentrated in his personality. Were he to withdraw from public life, Mr. Balfour and the old Tories would doubtless undergo another fiscal conversion, and the issue would quietly be dropped.

The increased representation of women in the English Trade-Union Congress has been much commented upon in the London press as being in striking contrast to the apathy and disappointment hitherto noted in the movement to organize women workers. "A women's union," says the *London Tribune*, "springs up under the stimulus of an immediate and concrete grievance, and then, after a brief hour of promise and enthusiasm, it melts away as suddenly as it came into being." This was the fate of a large number of women's reform unions during the great dock strike. Another case is that of the women pen-workers in Birmingham, who once had 600 members and now have only five left. But in certain places these growths are of a more lasting nature; for instance, the union of jute and flax-workers at Dundee, which has steadily grown until it now has 4,000 members. Of course, it is much harder to organize women than men, since many of them go into work of one kind or another merely as a temporary employment until they marry. Moreover, the greater part of women workers are cheap, inexperienced, and unspecialized labor, and with them the problems of organization are hardest of all. Since the majority of women wage-earners are not self-supporting, but live at home with their parents or their husbands, they can afford to work for

very much lower wages than men. In this connection, an investigation of the English Woman's Industrial Council has rather discredited the theory that it is the married women workers who lower the rate of wages. The belief of the Council is that the unmarried worker, living with her parents, is responsible for the low wages paid, as well as for the feeble unions.

The first of five Carnegie libraries to be founded in Islington, England, was opened with a somewhat novel declaration of policy. This library is, like the branches of our New York public library, chiefly a circulating station, but also provided with reading-room facilities. The shelves are to be open, and visitors will have the privilege of selecting their book personally, after first testing it a bit, if they choose. To reduce the casual attendance, the newspaper files are limited to two—the *Times* and one local journal. The intention is, in short, to make things as convenient as possible for a reader of books, and to offer the fewest attractions to those who merely want protection against the weather. Such a programme is in the line of progressive librarianship. In particular, the opening of the shelves is worthy of note as a considerable departure from British conservatism. Such liberality can hardly be practised in public libraries possessing many rare and valuable books; but the tendency is toward a greater confidence in the honesty and intelligence of the average reader.

The anti-noise crusaders of this country will be glad to learn that Sir James Crichton-Brown, the famous neurologist, is pleading their cause in England. He calls attention to the fact that not quantity, but quality, of sleep is important, and that sounds heard, even if not perceived, produce a definite harm. Sleep is murdered, so far as restful quality is concerned, by the blowing of whistles, the rumble of vehicles, and the like, even though the victim may not be conscious of the injury. Another English expert has recommended stringent laws against street cries, the use of horns, chimes, and signals, and proposed the requirement of rubber tires for certain vehicles and the cessation of heavy traffic between the hours of 11 P. M. and 5 A. M. Resuming the discussion, Sir James brought a special indictment against the early morning cock, the herald of dawn. But this offender is not greatly to the fore in cities, and presumably cannot be legislated either into silence or late rising. Since the law has not yet formally recognized a right either to sleep or to silence, such debates may seem theoretical. They point out, however, the course that society must take in self-defence as the strain and dangers of city life are multiplied.

THE ISSUE IN NEW YORK.

When it is stated that the voters of New York have now to choose between Charles E. Hughes and William R. Hearst for Governor, the one issue of a campaign of national interest is summed up. To talk in this State of parties is as idle as the blowing of the October breeze. The labored platforms of both conventions are already in the waste-basket, utterly forgotten. Mr. Hughes himself put the case with lucidity and precision, in his admirable telegram of acceptance, when he said that the political contest now upon us is one "to defend the honor of the State and to represent the common sense of the people and the cause of decent government." That is literally true; and simply to enforce and apply that sentiment is the one duty of the next six weeks. All that newspaper or orator can do is to point the people to Hughes and Hearst, bid them look on this picture and then on that, and ask: "Have you eyes?"

We start out with good hope because Hearst's nomination has instantly provoked, along with nausea, revolt. Hundreds of honorable Democrats openly repudiate him; thousands are saying quietly that they would no more think of voting for him than they would of forging a note. Not a reputable Democratic newspaper in this Democratic city will support him. It is not necessary to talk about organizing a Democratic bolt. The thing is automatic. Hearst has an enormous power of repulsion; and decent Democrats fly from him as people flee from pestilence. It did not need the indignant words of betrayed Democrats at Buffalo to make it plain that Hearst gets the Democratic nomination only with the party torn asunder and the worse part alone his.

Moreover, though Hearst now appears more powerful than ever before, he also appears more contemptible. The trickery, bribery, and complete surrender of his professed opinions, which have marked his course during the past few weeks, have shown him so unscrupulous as to disgust even former dupes. His crawling back into the arms of Murphy and Grady and the Sullivans not only discloses his instinctive feeling for his true associates, but his readiness to swallow his bravest words if he can gain anything thereby. His repeated attacks upon Murphy, as the greatest criminal of the age, whom he called by name a thief and the hireling of corporations, will be reproduced everywhere during this campaign, and the question will be put, as it was in the convention, "What was the price?" By what infamous bargain was Hearst led abruptly to cease his arraignment of Murphy and take his nomination solely from the hands of a man whom he had again and again declared it would be his great aim to send to

Sing Sing? Tammany has always had a bad name throughout the State, and this year the stigma of treachery and brutality is fastened upon it as never before. Into that inheritance of hatred and scorn Hearst cannot escape entering. He will go through the State carried on the back of Murphy, infamy joined to freebooting.

Most happy is the chance by which we have a man like Hughes standing against this unholy alliance. As chaos settled down upon the Buffalo convention, order and law asserted themselves at Saratoga. To oppose the candidate of upheaval, the instincts of the people sought a candidate who would embody the principle of the steady ongoing of honest government. They found him in Mr. Hughes. He is of the type to which the good sense of Americans has hitherto turned from the flighty, the vicious, the demagogue, the boss. His rise has been the work of his own hand and brain. His young manhood was given up to labor. A quiet, studious, and hard-working lawyer, he was first brought prominently into general notice as counsel in two investigations—of the gas and insurance companies—wherein his extraordinary grasp and tenacity and fearlessness were displayed to great public advantage. Especially in his insurance report, with his recommendations of needed legislation, all the essential features of which were actually enacted, did he exhibit high ability and really constructive statesmanship. This State has thus a great opportunity to put a first-class man in charge of its affairs. Mr. Hughes, with his talent for business, can take hold of the extravagantly managed government of New York, let in the light, introduce economies, strengthen efficiency, and purify administration.

Though at first glance it would seem impossible to doubt the choice of the people when it is so clear a case of Hyperion to a satyr, there should be no illusion about the contest that is upon us. Hearst has fully discounted the revolt of intelligent men. He cares not that self-respecting newspapers are against him. They present arguments and appeal to the steady and thrifty and property-owning classes, while his campaign is to be one of loud assertion, of catering to the worst elements of the population, of promising everything; and he will fling his millions into the scale with the desperation of one who knows that his whole future is put to the touch. Anticipating the defection of Democrats by the thousand, Hearst will try to make it good by winning over, by fair means or foul, the venal and the freakish and the discontented Republican vote. For the first time in our history, we have an unprincipled man, with inherited millions at his command, setting out to organize the ignorant and the vicious, to upset weak heads with

inflammatory cries, to stir up class hatreds, to ply the discontented with predictions of impossible benefits, to trust solely to the baser sort being in a majority.

Any man is blind who cannot see that this Hearst campaign, as planned, has formidable elements in it. He cannot be beaten except by hard and unintermittent work. But the issue is crystal clear; Hughes is the very man to pit against Hearst; and we trust that the sober sense of the people will give such a voice in the election that Hearst will at last learn that they are neither fools nor knaves.

"CORPORATION LAWYERS."

In an address before the Bar Association of New Hampshire on Monday Edward M. Shepard uttered some serious and timely truths about corporation lawyers. A corporation lawyer himself, he began by frankly admitting the loss of political prestige which has befallen his class. As he points out, it is an enormous change from the day when the highest legal practice was the natural road to high office. To-day, it is regarded almost as a bar to it. Mr. Roosevelt has expressed a doubt whether a corporation lawyer could ever be elected President. Yet Lincoln was a skilled corporation lawyer. He gave up, to become President, a good practice as a railroad attorney. He was prominent in the McCormick Reaper cases. Imagine the howl to-day if any party dared nominate to the Presidency the counsel to the Harvester Trust! If existing prejudices had been applied in former years, neither Webster nor Seward, neither Lincoln nor Tilden, neither Cleveland nor Harrison, could have shown large in the political firmament. They were all corporation lawyers.

Why the great difference? Mr. Shepard frankly tells his brethren some of the causes. The legal profession, with the others, has not been able to withstand the rush for wealth. Eminent lawyers now get in one year fees greater than Webster or Mason or Wright earned in a decade. They are vastly richer to-day; but Mr. Shepard inflicts only the faithful wound of a friend when he asks if they are as high-minded as the leaders of the bar used to be, as delicately conscientious, as acutely sensible of their being retained by all the people as truly as by their immediate clients? These are searching questions, and they go to the root of the present-day distrust of the men who bear away the great prizes of the legal profession.

The change is one which Mr. Bryce noted, on his last visit to this country, as having taken place among us since his first. It is the shrinking of the class of lawyer-publicists. The distinguished men at the bar used more frequently and directly to lend their great

talents to the public service. They were towers of strength in times of political crisis. Consider, for example, the sheer political weight of the late James C. Carter. As a publicist, it might have been said of him, as Mr. Choate said of him as a lawyer, that when he retired he left room for a thousand men. That type seems to be passing. What lawyer in this city can be mentioned to-day who could stand as Mr. Carter did in the Maynard campaign, and, with every sign of respect and confidence and even affection showered upon him, bid an aroused electorate care for the safety of the commonwealth at the polls? The reason is that too many able minds have given up to corporations what was meant for the service of their fellows.

And it is a corporation quite other than the kind that Lincoln served which leaves its political taint upon the lawyers whose brains it sucks while it fills their pockets. It is the law-defying corporation which needs skilled legal advice to keep its managers out of jail; it is the speculative corporation, with its lying prospectuses and gulled investors, which requires lawyers to see that justice is *not* done upon its promoters; it is, finally, the public-service corporations, acquiring franchises by bribery and defending and exploiting them by systematic political corruption—these are the corporations which have dragged down the political repute of the able lawyers they employ.

It is, of course, trite to say that corporation business has so heaped up that if a lawyer refuses to work for a corporation he will be in danger of having no work at all to do. It is also true that almost all the leading lawyers of the day have been, at one time or another, retained by a corporation. The ability of a mature lawyer who had not been would naturally be doubted. In so far, then, the general outcry against "corporation lawyers" is senseless. Nothing is more certain than that a man may be a master of corporation law without either selling his mind for money or mortgaging his soul. Indeed, he may make the noblest public use of the knowledge and skill which he has gained in the private service of corporations. This is precisely what Charles E. Hughes—to take one notable instance—has already done, and what, if elected Governor, he may be expected to do on a wider scale and to the greater advantage of the State. That complete and admirable grasp of corporation accounts, and perfect insight into corporation methods, which enabled him to tear away the disguise from the insurance looters, would put him in a position to do unsurpassed service to New York. If he makes it clear, in the course of his campaign, that his ambitions are resolutely fixed upon that kind of public benefit, the taunt of "corpora-

tion lawyer" will fall away from him harmless.

STEAMBOAT DAYS RETURNING.

Kansas City celebrated last week with bands and bunting and a great outpouring of citizens the arrival of the first steamboat that had made the trip to that city from St. Louis in more than ten years. The *Lora* with the barge *Louise* and the *Thomas H. Benton* with the barge *America* had left St. Louis on the morning of September 15, with a light cargo. How long it would take to make the trip no one knew. The navigability of the undredged and unlighted river was doubtful. As a matter of fact, the *Lora* reached Kansas City in nine days. All along the route there was the utmost solicitude over her progress. The Kansas City papers published bulletins from every little river-town she passed. Business was suspended everywhere when the *Lora* went by; and when she finally reached her destination, the men on board said their welcome was like that accorded to returned explorers.

The demonstration that a boat can still pass between Missouri's two chief cities has, indeed, been hailed with more jubilation than the recent discovery of the Northwest Passage. "The cruise of the steamer *Lora*," says the *Kansas City Star*, "has put Kansas City on the map as a 'water city.' This trial trip, insignificant in itself, yet marks an epoch in the development of this industrial centre of the Southwest." If this be so, it is an epoch brought about by an organized movement. The *Lora's* trip was not due to casual enterprise on the part of a steamboat owner. The merchants and shippers of Kansas City were fairly drummed into supporting the new line by a few enthusiasts led by Lawrence M. Jones, and the same promoter is out now to ask support in running the boats into the winter months.

The promised revival of steamboat traffic on Western rivers is exactly of a piece with the recent activity in canal building and improvement in the East. Kansas City promotes an experimental steamboat line for the same reason that New York voted for a deepened Erie Canal—in order to secure railway freight rates based upon water competition. The tremendous river and canal traffic of the early days was allowed to decline on the theory that the railway alone would supply the needs of commerce. The first steamboat, as the oldest resident was disturbed on his sickbed to recall, came to Kansas City seventy years ago, but the halcyon days of the Missouri were from 1849 till the outbreak of the civil war. There were then over fifty packets in regular service from St. Louis to Sioux City, and as many more tramp steamers from the Ohio, and various other tributaries of

the Mississippi, made occasional trips up the Missouri. Much of the early Western immigration went by this route and the boats on their return trips carried valuable cargoes of furs and buffalo robes from Montana.

What happened on the Missouri has evidently happened on the Western rivers generally, though the picturesque of old steamboat days has not entirely vanished from our American life. Mr. Howells, if memory serves, wrote in a vein of delightful enthusiasm of a steamboat journey down the Ohio, taken within the last two or three years. He found most of the charm, with few or none of the discomforts which Dickens discovered on a similar trip some forty years earlier.

But the period of liberal expenditure by the national Government and the States as well for River and Harbor improvement, has also been a period of absolute and relative decline in river shipping. Twenty-five years ago, there were owned on the Western rivers vessels having an aggregate tonnage of 394,048. Last year the corresponding figure was 174,319, considerably less than half. The decline was steady, between these dates, except for a slight rally in the early nineties. The record of vessels built shows that the type has apparently changed also. In 1903 the average tonnage of vessels built on the Mississippi and its tributaries was only 74, while only two of over 1,000 tons were built and officially numbered.

The experimental trip from St. Louis to Kansas City has been followed promptly by the announcement of the establishment of a new packet line on the same river from St. Joseph to Omaha, the first trip being set for October 15. Hay, grain, and cordwood from the country immediately along the river are expected to furnish the bulk of the freight. With the two new lines in operation, long-haul traffic will be moving all the way except for the short stretch between Kansas City and St. Joseph. With that gap bridged, and the still visionary route open from St. Louis to Lake Michigan by way of the Illinois and Desplaines Rivers and the Drainage Canal, even Omaha would have water transportation to the Great Lakes. Grain could conceivably be brought from Omaha to this port, in a shallow-draught steamer to Chicago, a lake freighter to Buffalo, and a canal-boat to New York. Presumably it never will be, but this matter of river improvement and utilization lends itself to the exercise of the imagination. Kansas City, at any rate, has the good wishes of neighboring cities, and will doubtless receive strong moral support when, as is inevitable, the *Lora's* achievement is made the excuse for asking Government money to improve the Missouri.

A SOCIALIST COLLEGE.

The Rand School of Social Science has opened in this city with an attendance of ninety. Situated on East Nineteenth Street, where the East Side joins the old residential region below Gramercy Park, it is a natural rendezvous for the professional socialists of the proletariat and the amateur socialists of the well-to-do classes. The modest property of the school backs upon a dwelling owned by Prof. Brander Matthews, so the whole region is hallowed by reform of one sort or another. Certain Columbia professors who serve on the faculty may readily lunch or sup at the nearby, Columbia Club, while the Players and National Arts clubs afford similar facilities to socialists of the parlor stamp. Within a stone's-throw is Scheffel Hall, offering for all hands a temperate conviviality. The lines of the new school have surely fallen in pleasant places.

Since the similarity of the name of this institution to that of the famous *Ecole Libre des Sciences Sociales*, at Paris, might mislead, we hasten to say that the teaching of this new college will be mainly, though not exclusively, socialistic. The secretary, and apparent actual executive, is W. J. Ghent, who has with much ingenuity and ability promulgated in America Vanderfelde's doctrine of parasitism. As a writer, Mr. Ghent is serious, well documented, and, for an avowed special pleader, both candid and not devoid of humor. He may be counted on to keep the school wide of the direr abysses of vague humanitarianism and also of the uninhabitable heights of perfectionist doctrinarism. If held to a sensible middle way, the school may be a valuable educative force far beyond the limits of titular socialism.

While utterly opposed to the teaching of Socialism, whether in its dilettante or militant phases, we can but sincerely wish the new enterprise long life and all success. It will do good if it merely disabuses good people of crude imaginings about the socialist movement. A look at Mr. Ghent, Prof. F. H. Giddings, or D. S. Muzzey will convince the most timorous conservative that Socialism does not connote dynamite bombs beneath the tails of the bourgeois frock coat which even the emancipated affect. Then, actual contact between the socialists of the once brownstone districts and those of the unnumbered streets cannot but do good. Those charming amateurs who are socialists because their hearts are too warm or their nerves over-taut will learn something when they study the programme of the real socialists and observe the tactics of class warfare near at hand. The experience should send the majority back to their clubs and sewing circles—the school knows no discrimination between the sexes—or forward to their logical

destination, genuine Internationalism. In short, the lectures and, even more, the daily associations of the school, should make powerfully against the prevailing cheap sentimentalism.

From the point of view of teacher and student, a socialist college should be nearly ideal, unless, indeed, the various forms of perfectionism breed new kinds of academic odiums and incompatibilities. But we have no heart to prognosticate head-breaking between, say, the "reds" and "yellows." In fact, the most violent partisanship is usually found among reactionaries—witness those Roman Catholic gymnasians who for days heckled M. Izoulet at the Collège de France, the new professor being reputed to be a Socialist and known to be a Dreyfusard. We anticipate no trouble of this sort for the Rand School; in fact, its socialists should, as we have said, be fairly ideal students. We can imagine none who more urgently need education, and none who are more earnestly bent on getting it. There will unquestionably be an educational zeal among them that might put the indifference of many an ancient foundation to shame.

And we are willing to believe that the zeal will be tempered with discretion. There is something sobering about the riere routine of teaching. To come indoors and reason together means a resort to rational method, and, in a certain measure, an offset to that intemperate vituperation of the rich which is the staple of curbstone propaganda. Confident that the axioms of Socialism are fallacious, and its programme accordingly without substantial promise, we are equally willing to admit that it is a doctrine which may be supported by strong argument, and as such deserves respect. Its diagnosis of social ills is based, we believe, on a misinterpretation, yet on actual observations of social facts; its forecast of a collectivist state is founded, if erroneously, on study of the economic drift towards concentration of both capital and political power. If it appeals too much to class animosity, it aims at least to control the wild beast it evokes for tactical purposes. Fundamentally, its plea is a rational one, which, if honored on insufficient light, may also be repudiated on better thinking or information. It is because of its essentially rational character that we believe that Socialism will provide its own antidote, while doing much to furnish that mainstay of a free state—a proletariat intellectually quickened.

The teachings of such a college should weigh powerfully against the really pernicious agitation of the more dangerous demagogues. The unreasoning discontent and hatred of wealth inculcated by benevolent but irresponsible orators; the combination of spineless sentimentalism and social animosity produced by

the demagogic press—these are the contagion that really threatens the republic. Compared with this, the modest establishment in Nineteenth Street, with its ambitious purpose of upsetting all existing political and commercial institutions, appears a very bulwark of our institutions. An error that springs from a false step in reasoning may be cured by reason, but who shall undertake to confute the wilder fallacies of the heart?

A CHANCE FOR THE BIRDS.

The Hamburg authorities have decided to appoint a special "Vogelwart," whose duty it will be to study and utilize the best schemes for preserving bird life. This important step, which, it is hoped, will be taken as a precedent by other governing bodies, is prompted by the International Association of Women for the Protection of Birds. The German branch, which has nearly doubled its membership within a year, has just issued its "Jahrbuch" for 1905, a volume of 120 pages, containing some startling figures as to the wholesale slaughter of birds in various countries. Italy, Dalmatia, Belgium, the United States, Morocco, Egypt, and Turkey lead in this war of extermination. In Italy alone, perhaps 200,000,000 useful or ornamental birds are killed annually; the number of nests destroyed exceeds, according to the secretary of the Florence branch of the association, 12,000,000, which means the loss of another 50,000,000 birds. In Madrid, it is estimated, some 300,000 larks, robins, finches, and other birds are served daily as food. In four-fifths of the area of the United States birds with beautiful feathers have been nearly exterminated.

Though our country figures in the list as one of the chief culprits, there is reason to believe that the tide has turned, and that the birds here have once more a chance to live and multiply. While there are, of course, no statistics, observers have noted during the past spring and summer that there are more songsters in our meadows and trees than a few years ago. For this result, thanks are due largely to the work of the Audubon Society. The first duty of its members is to discountenance the use by women of all feathers except those of the ostrich and of domestic fowls. The society's report for 1905 indicates a gain of 250 per cent. in its receipts over those of the preceding year; of this money excellent use is made. Much has been done in the way of influencing legislatures to pass laws for the protection of songsters and game birds. There are already six reservations, where birds are guarded during the breeding season. The Louisiana branch has taken a lease of twenty-two islands, each of which is the breeding place of large colonies of birds, such as Laughing Gulls, Foster's Common, Royal

and Cabot's Terns, and Black Skimmers. The number of wardens has been steadily increased. A stream of educational leaflets is issuing from the headquarters, at No. 141 Broadway. Clubs are being formed in schools, and in awakening an interest among children lies the greatest hope of the permanency of the Audubon movement.

Through the work of the society, farmers are impressed anew with the importance of birds as enemies of the destructive insects and worms, whose ravages are annually increasing. Foresters are appealed to in view of the damage done, and the much greater damage threatened, by caterpillars. "No Shooting" signs have been distributed in large numbers to landholders, by which means protection has been provided on many large farms and on estates near towns and cities. Perhaps the greatest triumph has been the agreement of the wholesale milliners of New York and Chicago not to sell native or imported song birds for a period of three years. How this plan works, is illustrated in the report from Oregon. Grebe hunting was abruptly stopped in that State on receipt of word from the Milliners' Association that no more of the skins would be bought. The Pacific islands, with their birds of brilliant plumage, are included in the work of the Audubon Society. Of special interest in the current report is a remark made in the section devoted to Maine by Warden Harlow of the Mount Kineo region. "While sportsmen are generally inclined," he says, "to respect bird life, there are quite a number of instances where thoughtlessness leads them to shoot at our song-birds merely as targets." This has done much to decimate the birds; but there is undoubtedly a reaction.

One influence has been exerted by the numerous articles and books recently written to show that shooting animals with the camera is infinitely more fascinating than the use of the rifle. This enterprise calls into play all the best manly qualities of endurance, sets one's wits against the cunning of wild animals, and gives all the excitement and pleasure of pursuit without that "half-defined feeling of repentance and sorrow" which comes to hunters when their quarry lies dead before them. An excellent illustration of this method of hunting with the camera is provided by an article, to which we referred at the time of publication, "Photographing Wild Game with Flashlight and Camera," by the Hon. George Shiras, in the July number of the *National Geographic Magazine*.

There are certain animals which remain as legitimate prey of those who prefer the rifle to the camera: woodchucks, for instance, and the wily crows, which destroy birds' eggs and are, often more than is generally known, devastating visitors in the chicken yards. Squirrels,

too, must not be allowed to become too numerous; they eat eggs and young birds that have escaped the deadly cold storms of early summer. The worst enemy of birds, apart from man, is the domestic cat. One, at a low estimate, will devour every year fifty birds in the nesting season on a single farm. A cat tax would doubtless do much to help the multiplication of birds. Pending its enactment, those who love to see and hear birds near their houses would do well to follow the suggestion made in a recent book, that the house cat be prevented from roaming about during the time when young birds essay their first flight, by confining her within a large enclosure of wire netting.

GENUINE PHONETIC SPELLING.

George Bernard Shaw, in a letter to the *London Times*, buffets the simple spellers to the top of his Irish bent. To the changes proposed, he objects that they are not simplified spelling, but "shortened spelling," which leaves a child or a foreigner quite as much in the dark as before. The whole business, he continues, is trifling, not touching the real issue, which is to spell as we pronounce. Granted the desirability of a phonetic alphabet, it is evident that the gradual reforms proposed by Mr. Carnegie's committee are ludicrously inadequate. To the present list of 300 "reformed" words, thrice that number might be added, and we should still be little nearer a spelling transparent to the foreigner or child. These half measures Mr. Shaw, as a cheerful iconoclast, heartily despises; for him, genuine phonetic spelling.

This is the sincere milk of the word. Mr. Shaw is merely giving wings and a voice of brass to the cause that such quiet scholars as Ellis, Alexander M. Bell, Henry Sweet, Vietor, Paul Passy, and others have been advocating for a generation. These specialists have set themselves the task of ascertaining all the sounds of human speech and of establishing fixed and unmistakable symbols therefor. Phonetics has become a science, an indispensable adjunct to philology, a recognized means of recording dialects, for example, and an approved device for teaching the pronunciation of modern language. Many, not all, of the phoneticians believe the science transcends these erudite uses and wish to make phonetic spelling universal. Under such a dispensation, we should all write precisely as we speak, noting our individual peculiarities of pronunciation. To this end perfect alphabets have been devised; and if we cannot tell whither Professor Brander Matthews's colleagues will lead us, we can tell to a dot what Mr. Shaw means to do to the language.

Turn we, then, to Henry Sweet's "Primer of Phonetics," the best author-

ity on the subject, and learn what the innocent simplifiers, did they but know it, have in store for us. Mr. Sweet, be it noted, has two alphabets—one a transitional scheme, calculated for those who are devoted to the old spelling; the other for those who would be genuinely and progressively phonetic. He illustrates from the following Ollendorffian predication:

People used to think the earth was a kind of flat cake, with the sea all round it; but we know now that it is really round, like a ball—not quite round, but a little flattened, like an orange.

For the benefit of weak-kneed reformers, this may be spelled phonetically in the following makeshift fashion, the texts running line for line:

pijpl tjwz -tə :pijnk -ði 'æp -wəz -ə :kaɪnd -ɒv
'flæt 'keɪk', -wɪð -ðə 'sɪj -ɔl raʊnd -ɪt ; -bət -wɪj 'nəʊ
'nəʊ -ðət -ɪts 'ri:əl raʊnd', 'laɪk -ə 'bɔ:l -nɒt 'kwɑɪt
'raʊnd', -bət -ə 'ɪlɪl 'flætnd', 'laɪk -ən 'ɒrɪŋz'.

As a golden middle way, Dr. Sweet feels that this does well enough; Mr. Shaw, as a foe of compromise, is bound to repudiate any such orthographical *modus vivendi*. He desires that the "President and Board take the bull by the horns . . . and enlarge the alphabet until our consonants and vowels . . . are separately defined," stipulating also that the new letters "be designed by an artist with a fully developed sense of beauty in writing and printing." But Mr. Shaw seems to be unaware that the very thing exists in the "visible speech" invented by the late Professor Bell. It is theoretically perfect, each symbol being an exact signal to the organs of articulation. It is comely also, bearing a remote resemblance to Coptic calligraphy. Here, then, is our geographical thesis again, in the spelling to which all convinced phoneticians and simplifiers do or should aspire. Here is the real simplicity for which "G. B. S." agonizes:

ə:ntəs nɪs -ɔl 'vɪs -vɪ- 'tʃ -sɪz -l :ə:ntəs
'lɪ -sɪz 'vɪz -ɔl 'vɪs -vɪ- 'tʃ -sɪz -l :ə:ntəs
'lɪ -sɪz 'vɪz -ɔl 'vɪs -vɪ- 'tʃ -sɪz -l :ə:ntəs
'lɪ -sɪz 'vɪz -ɔl 'vɪs -vɪ- 'tʃ -sɪz -l :ə:ntəs
'lɪ -sɪz 'vɪz -ɔl 'vɪs -vɪ- 'tʃ -sɪz -l :ə:ntəs

In all seriousness, the proposals of the Simplified Spelling Board either mean a systematic advance in this direction, or they mean a purposeless and futile meddling with a language that is doing very well. It is fair to say that of the thirty-odd members all but half a dozen are quite guiltless of phonetics. The miscellaneous dignitaries on the Board have, indeed, only a casual knowledge of the history of the English language. In fact, the curious and disheartening thing is that a literary body should seem so dull to the necessary and eternal distinction between the spoken and written language—between colloquial and literary English.

It is an indication of both the narrowness of our modern philological training, and the bluntness of the average literary susceptibility, that it should be nec-

essary to labor such a point. But the myopic zeal of the phoneticians and the cheapening of the literary language by over-production have brought about real confusion. Ever since human speech has been written at all, "to talk like a book" has been a reproach; to write absolutely as one talks has been reserved, we believe, for our own day, and the author of the "Billy Baxter Letters" has possibly founded a school. In English, however, the colloquial language still includes little more than a thousand words, the literary some twenty thousand, and we properly refuse to tolerate from the pulpit or lecture platform the locutions we readily admit in the street. And the criterion of the book language is not the ear, but the eye. Spelling, if learned at all, is picked up incidentally from much reading. How much nonsense is talked about saving the time of the child can be perceived only when it is recalled that those who command only the colloquial language rarely learn to spell at all—even in the most phonetic tongues. In other words, the evil of inconsistent and illogical spelling is largely imaginary. Those who read much and well will spell well enough unless, indeed, they belong to the large class of congenital cacographers.

Of course, there are those who say that there ought to be no such distinction between spoken and written English—let us call it heard and seen English—and that heard English as the living reality ought to go straight into the books, each author mouthing as he will and duly recording his individual pronunciation. With such an expression of benevolent anarchy we have no wish to argue. Suffice it to say that the simple spellers are so far behind this teaching as to have justly acquired "G. B. S.'s" scorn, whereas the aggressive phoneticians are in such an unqualifiedly superior attitude to the mere facts of language that this literary socialist seems almost their predestined champion.

THE PRESENT POSITION OF LATIN AND GREEK.

This article is an argument neither for nor against classical studies. It has no concern with their intrinsic merits or defects as instruments of discipline and culture, and none with their value, in comparison with other studies. It is, rather, an attempt to present certain facts concerning their present position in our secondary schools and colleges, together with comments thereon from the point of view of the practical administration of those institutions.

Since the pessimists as to the future of Latin and Greek are numerous, and since they are able to cite rather disturbing evidence for their opinions, it is worth while to recall this evidence at the outset. First of all, there is the present status of the A.B. degree. Time was when the course leading to this degree involved a consid-

erable amount of prescribed Latin and Greek. This is the case no longer. It is now possible to obtain the A.B. at most colleges of the first rank, and many lesser ones, without an hour's study of either language. Many colleges still require a small amount of Latin—one or two-fifteenths of the total work for the degree—but even in these the prescription of undergraduate Greek is rare. This abandonment of required classical study has been accompanied by the enlargement of the circle of liberal studies. Most of these studies—English, German, French, Spanish, political economy, history, government, the natural sciences, and others—are not new. The important point is that, under present conditions, the student may follow any one of them for several successive years, instead of the half-year or year formerly allotted to them. Thus, for the first time in our history, they have attained a dignity formerly held by the classics alone.

The enlargement of the group of liberal studies and the increased dignity of the newer members have been emphasized recently by the growing tendency of colleges to abandon the degrees of Ph.B., B.L., B.Litt., and even of S.B., and to grant the single degree of A.B. for all undergraduate work. To many observers the introduction of real competitors for the time and attention of students, together with freedom of choice among them, seems to be a further step in pushing classical studies to the wall.

Again, the new policy regarding entrance requirements seems to be adverse to the classics. This also is marked by the general abandonment of required Latin or Greek, and by the demand for real attainments in other subjects. In 1870 Cornell demanded from all entering the A.B. course the whole of Cæsar, the entire "Æneid," six orations of Cicero, three books of the "Anabasis," one book of Homer, and Latin and Greek composition and grammar. The remaining requirements were arithmetic, elementary—very elementary—algebra, plane geometry, and a contemptible smattering of ancient history, geography, and English grammar. Substantially the same requirements were made by Harvard, Yale, Princeton, Michigan, and Columbia. Cornell and Michigan now require neither Greek nor Latin; Princeton is the only institution which requires Greek. So late as 1897 nearly three-fourths—more than three hundred—of the colleges in the country specified Greek as an entrance requirement. Undoubtedly, in many cases, this was merely a catalogue requirement, in emulation of larger colleges, but few of these institutions now make it even on paper. Two to four years of preparatory Latin are still very generally required, but it is possible to take the A.B. in institutions of the highest rank with no knowledge whatever even of preparatory Latin. The modern theory in its extreme form is that four years' really solid study of any group of secondary subjects of reasonable variety is a sufficient preparation for college. Stanford University, for instance, publishes a list of about thirty-eight subjects, of which the student must choose from six to ten, including English. Harvard, much more conservative, requires English, algebra, geometry, one ancient and one modern language, history, a natural science, and

advanced work representing a year's study in each of at least two of the foregoing branches. English is no longer the tag-end of the examination; it stands on precisely the same footing as Latin. Only occasionally is less than a year's solid study of any other subject accepted, while German and French must be pursued for two years each. It is safe to say that in 1870 students who could pass in Latin, Greek, and mathematics were never seriously troubled by examiners about the other subjects, and that a few days of study were sufficient to get them up. The importance of this development of modern subjects, with the freedom to choose them for entrance, must be emphasized. It is perfectly fair to say that much later than 1870 the classics were supreme, partly because here again they had no real competitors. This advantageous position they no longer hold.

Turning from college studies and entrance examinations to the secondary schools, the situation appears to be no better. Either the outline of a solid classical programme is lost through the adoption of a system partly or wholly elective, or if it exists, it is flanked by schools or programmes devoted chiefly to modern studies. This state of affairs is not new; on the contrary, it is nearly a century old. But only within twenty-five years have the modern subjects been standardized, their methods and resources developed, and their teachers trained, to a point even approaching equality with teachers of the classics. The latter held the advantages of centuries of scholarly work in these directions, as well as those of position, social prestige, and repute. These advantages they are now rapidly losing.

It is clear that in practice, as well as in theory, we have come to a radically new administration of liberal studies, and that Latin and Greek no longer necessarily hold a dominant place—or even any place at all—therein. On the foregoing presentation the pessimist appears to be justified in his views. The classics seem to be dethroned, and even discredited. With this view the writer disagrees. Not one of the facts cited above touches the heart of the situation; the important facts remain to be considered. For clearness Latin and Greek will be treated separately.

In number of students alone, Greek appears to be declining slowly, in the face of a general increase in the secondary school and college population. In the high schools, in 1898, students of Greek numbered 25,000; in 1904—the latest data at hand—there were 18,447. For several years previous to 1898 the number had been practically stationary. The first statistics of college students were collected in 1900-01, in which year the number of students of Greek was 16,218. In 1904, it was 14,729. The total college population of these years was 103,000 and 118,000 respectively (round numbers). Whether this is a permanent decline remains to be seen. The abandonment of prescribed Greek for college entrance has probably not greatly influenced the decline. Greek is still protected, and well protected, at most colleges by being given more credit for a given amount of study than any other subject. This is a real protection. At Harvard, where it is optional, most candidates for admission nevertheless offer elementary Greek, and 43 per cent. of them choose ad-

vanced Greek out of a list of ten elective subjects. At Yale, the alternatives are so exacting that Greek is in effect proscribed. A real cause for the diminution in numbers is probably the prosperity of Latin in secondary schools. A word of explanation will make this clear. Most schools cannot maintain separate teachers of Greek; the work is done by teachers of Latin. Greek classes are commonly small—often of half a dozen students or less; Latin classes are large, and growing larger. From an administrative point of view, the teacher's time and strength should be devoted to the subjects much demanded, hence the tendency to extinction of the small classes. This tendency holds good of all little-chosen subjects, and it probably accounts in part for the relative disappearance of Greek.

But there is much for encouragement in the situation. Greek teachers are probably better trained than ever before, and their efforts are turned in more profitable directions. There is a growing tendency to study the language as literature rather than as an exercise in grammar. How little has this been done in practice, and how often has it been recommended since the days of Quintilian! We are on the right road, though even the next generation may not reach the goal. College entrance examinations are tests of power to read Greek at sight, rather than tests of memory and knowledge of grammatical rules. College courses in Greek have never been more numerous, nor have Greek studies ever been carried so far. Denouncers of the elective system must not forget that that system means liberty to extend the study of the classics as well as liberty for other studies, and that no feasible proscribed system could possibly give them the freedom in that respect which they now enjoy.

Latin flourishes in the secondary schools almost beyond belief. In 1894 there were roughly 480,000 secondary students in the United States, of whom 43.59 per cent. were studying Latin; in 1904 the numbers were 822,000 and 49.96 per cent. respectively. The observer is at once struck by the enormous increase in the secondary population and the still greater increase in the number of Latin students. Further study of the facts only emphasizes these points. Tracing the figures backward from 1894, one finds a steadily diminishing number of secondary students, and a generally lower percentage of them giving attention to Latin. This subject is now more generally pursued than any other except algebra and English. While it shows both absolute and relative increase in numbers, many other subjects—notably the natural sciences—show relative decline. Indeed, it is clear that something must be done soon if physics, chemistry, and biology are to make a respectable showing twenty-five years hence. Latin teachers too are better and better trained. They are slowly getting away from the ideals of the Hinterschlag Gymnasium, so eloquently described in "Sartor Resartus," to the study of Latin as literature. College entrance examinations, like those of Greek, are real tests of power, rather than of linguistic cram; and similarly, under the freedom of the elective system, the college courses in Latin have been vastly extended. In 1870 the classical department at Harvard had the sup-

posed advantage of proscribed Latin and Greek, which it lacks in 1906. Yet now, with less than double the number of students which it had in 1870, its staff of professors has been multiplied by three, and it offers more than five times the number of courses offered thirty-six years ago. This case is, of course, exceptional; but in a less degree the advancement of the subject has been going on at many other institutions. The number of Latin students in college remained fairly constant from 1901 to 1904, the figures being, for the two years, 27,219, and 26,056 respectively. Much of the decline is probably due to the fact that fewer freshmen are conditioned in the subject on entrance, and do not, therefore, appear in the elementary classes.

The abolition of required Latin for entrance at Cornell has had little effect on the number of students offering it. Only an insignificant minority offer other subjects in its stead. Indeed, President Schurman declares that should there be danger of a wholesale desertion of Latin it would be restored to the status of prescription. Unless all signs fail, the number of students offering Latin for entrance, even to those institutions which do not require it, is constantly increasing. The fears that the elective system would encourage a wholesale rush for easy subjects are by no means justified. As a psychological fact, students of all ages will, and do, freely choose and stand by subjects known to be difficult, when the same subjects proscribed would win from them only a tardy attention.

In the face of these facts there may be some who still long for a return to the "traditional A.B. curriculum." This "traditional A.B." exists only in the imaginations of persons ignorant of the history of education, but let that pass. What would be the effect of a return to a proscribed curriculum involving much Latin and Greek, and to entrance requirements similarly narrow? Should we not vastly improve the present situation of the classics? The writer answers, No. He believes that such a move would result in the practical extinction both of the classics and of the A.B. degree. This has, in fact, been nearly the experience of several institutions which have made the attempt, not to restore, but merely to maintain, long established requirements. The following table shows this most forcibly:

MICHIGAN.		
	1891.	1900.
A.B. degrees conferred	55	68
Other first degrees (Litt.B., Ph.B., S.B.)	94	231
CORNELL.		
A.B. degrees conferred	23	53
Others, as above	164	237
WISCONSIN.		
A.B. degrees conferred	11	21
Others, as above	80	196
CALIFORNIA.		
A.B. degrees conferred	11	38
Others, as above	43	183

In these cases it is clear that the number of students for the A.B. degree has remained small, preventing expansion of courses, and the more advanced study of the classics, while they have been overshadowed by the growth in numbers seeking other degrees. Less conspicuously, but not less effectively, the new degrees have gained upon the A.B. even in institutions

where the latter has been particularly strong. Far-sighted administrators of college affairs have seen for years that the effective preservation of the A.B., and all that goes with it, can be secured only by broadening the terms on which it may be obtained, and on which students may matriculate for it. Michigan, Cornell, Wisconsin, and other universities have already moved in this direction with gratifying results. The adoption of the policies mentioned at the beginning of this paper was merely formal recognition of a need already urgent. As President Eliot has repeatedly pointed out, changes of this kind are commonly brought about by changes in our national life and thought quite beyond the control of college or university. In the long run, these institutions, as well as the secondary school, must adapt themselves to new conditions if they would survive. It is not merely ridiculous, but impossible, to uphold a scheme of education which no longer commands the respect of the public. And though we may never again see the classics dominating liberal studies as of old, we need not fear for their future. "The argument as to the merit of Greek," said President Eliot, "simply proves to me that the study of it by competent persons will never cease. . . . Can any of us believe that the classical departments of our universities are going to become weak and feeble, and that little money is to be spent on them? Not if we believe in the supreme excellence of the Greek period, and its fruits."

EXCAVATIONS AT SPARTA.

TO THE EDITOR OF THE NATION:

SIR: The British Archaeological School at Athens has undertaken some important excavations this year upon the site of ancient Sparta. Sparta has long been regarded as a promising place for excavations, but has so far been neglected, because an extensive olive grove covers the ancient city, and the expense necessary to remove this has been regarded as an effective barrier to complete exploration of the site. In 1892 Dr. Waldstein, at that time director of the American School, uncovered the theatre, and did some digging at the so-called "Tomb of Leonidas" and in a few other places, but since then little or nothing was done until last spring. The British archaeologists were attracted to the site by the fact that for some time small lead figures, said to have been found in the vicinity, were offered for sale by children at Sparta. A member of the British School—I believe Mr. Wace—induced one child to show him where they were found, and was guided to a place in the river bed about half a mile below the bridge where the stream passed close to considerable remains of Roman concrete. After a preliminary examination of this site, Mr. Bosanquet, the director of the school, decided to begin at this spot the excavations which have turned out so promising.

It was evident at once that a rather important Roman building had stood there, but not enough of it remained to determine

what it was. The excavators conjectured that it might be the circular building seen by Leake, but sought for in vain by later travellers. As they dug down they came across a number of inscribed slabs of the second century A. D., recording the dedication of *strigils* to Artemis Orthia. This made it clear that they had found one of the landmarks of Sparta, the temple of Artemis Orthia, where the Spartan youths were flogged. Below the dedication on each slab was a cutting into which the *strigil* was fitted, and one slab was found with the rusty *strigil* still in place. Further down a great mass of concrete, a metre and a half thick, was uncovered. When the excavators at length broke through this they found below it foundation walls and quantities of potsherds of the Corinthian style, mixed with which were a number of bronzes and ivories, and some very interesting terra-cotta masks; and lower still were great quantities of geometric sherds also accompanied by bronzes, among which were a number of *fibulae* ornamented with four spirals. In both layers enormous quantities of the small lead figures were found. The concrete was so thick and so difficult to remove that the excavators could do little more than sink pits through it at different points, but they found everywhere deposits of the same character and the same richness. For the thick layer of concrete, like the crust of a pie, had fortunately preserved the interior absolutely intact.

The most interesting objects found were the terra-cotta masks. These are life size, and in some cases look almost like death masks. Forty whole ones and parts of about sixty others had been taken out up to the time when the excavations closed. Next in importance are the small lead figures. A few of these had found their way to the National Museum at Athens and to the Ashmolean Museum, Oxford, before the excavations began. They are as a rule about an inch and a half high and cut out of sheet lead. There are about fifty different types of soldiers, some mounted, some on foot, female figures, and great quantities of small wreaths. The excavators estimate that they have already found about 7,000 wreaths and 3,000 or more figures. When one considers that the site has only been tapped, so to speak, the number of objects which will eventually come to light is truly amazing.

Not enough has been uncovered yet to permit a study of the walls, but the west end of one building was found which the excavators thought to be the end of one of the temples, though not the earliest.

Mr. Bosanquet and his assistants were not content to devote all their time to the temple, but have explored the whole area of the ancient city very carefully. Pits sunk along the river bank between the temple and the bridge show the same deposits of pottery, and prove that one of the earliest Spartan villages was located here. And here I might say that the vase fragments show local peculiarities, a fact which seems to prove that they were made on the spot. Other excavations have been undertaken at the theatre, where one end of the stage has apparently been found. Several large sculptured blocks, with garlands extending from one *boucranon* to another, were uncovered here; also a number of inscriptions, including one with the

rare name of the Emperor Florian and another giving rules for the games called the Leonidea. It is expected that other inscriptions referring to these games will be brought to light, as several bases for *stelae* have already been found.

Furthermore, the town wall which enclosed Sparta in later times has been followed for practically its entire length. Beginning at the Artemiseum it ran up stream nearly to the bridge, and then across to the Magoula, and down by that stream. This shows that the ancient city was of much greater extent than has hitherto been supposed. The wall was of unbaked brick, covered with tiles, and had the usual stone foundation. Several tiles inscribed *δημοσίου τείχους* were found; and in one place the remains of a building, probably the temple of Eilyeithuia, as a tile was found bearing the local name of that goddess in the genitive. Trial pits have been dug in a number of other places, and some tombs opened, but nothing more of especial importance discovered.

The site is so large and has shown itself interesting in so many places that it will probably be several years before the excavators will feel that they have exhausted it. The British School is certainly to be congratulated upon its good fortune, and all archaeologists will look forward with anticipation to the renewal of the excavations under the new director, Mr. Dawkins, next spring.

LEARNING LATIN.

TO THE EDITOR OF THE NATION:

SIR: I wish to express my thorough agreement with Professor Lodge in your issue of August 30, in the matter of acquiring a Latin vocabulary. The fact that this is a difficult matter only makes it the more important that the teacher should, in every possible way, aid the student. That the chief aim in the study of Latin is acquaintance with the literature, in no way obviates the necessity of learning to read the language and of learning this quickly and thoroughly. If Latin is ever to have the place in higher education that of right belongs to it, the student must acquire in the high-school course far more reading ability than at present. He must come to college with such power that he can in reality take up the study of the Roman literature. The modification of our present methods which more than any other will tend to bring about this desirable result is just this giving attention to the acquisition of a larger vocabulary.

But there is another improvement in most Latin teaching only second in importance to that proposed by Professor Lodge. It has been observed that the freshman's knowledge of the grammar has very little connection with his ability to read Latin. A freshman usually knows his declensions; he may be able to tell with some prompting the principal uses of the cases; but in my own experience, I have never yet found a freshman who could tell what were his grounds for deciding that a certain dative or ablative or accusative had a certain use or meaning. Indeed, the method commonly employed seems to be to guess at the

meaning of the form, and then to see if it makes sense. Now, an inflectional form having more than one possible meaning presents a problem to be solved, and it would seem necessary that the student should have a detailed knowledge of the methods by which the solution is to be reached. He must, in fact, have more; he must have the skill that comes only from the frequent conscious application of these methods.

If we examine the text-books, we may not be surprised at this lack of information on the part of the freshman. The grammar and the beginner's book may give him the uses of the cases and of other forms; the notes to his edition of Cæsar, Cicero, or Vergil, may occasionally tell him that the use of a certain case is this or that; but neither in grammar, beginner's book, nor notes, does the student find direct specific instructions for distinguishing one use of the ablative from another, or of one use of a conjunction from another. Whatever skill he gets in this direction, he gets with no thanks to his text-books. And unless his teacher helps him greatly, whatever he gets is haphazard and nearly worthless.

Latin is a difficult language for two reasons. The vocabulary is difficult of acquisition, and every sentence, almost every word, presents a problem, the solution of which requires the application of certain grammatical knowledge, the body of which is after all not so large as we commonly think. That students may learn to read the language, it is necessary that direct systematic instruction be given, looking to the acquisition of a vocabulary. It is also necessary that the same kind of instruction and guidance be given in the acquiring of skill in the application of grammatical knowledge.

EDITING CONSULAR REPORTS.

TO THE EDITOR OF THE NATION:

SIR: Do you realize the manner in which the Daily Consular Reports are now being "edited" in the interest of Trust-made tariff and ship subsidies?

Here is one of those innocent little editorials in the Consular Reports:

The large subsidy paid to the Cunard Line, and the loan of money at low rates of interest to build new ships, was proof enough of the British fear of the German lines, which are favored by aid from their Government.

Here is another:

One noticeable feature of consular reports is the frequent mention of arrangements made by foreign Governments to extend their foreign trade by increased transportation facilities, and the repeated complaint of the lack of such facilities for American exporters. In many parts of the world American products are practically excluded because of the frequent transfers necessary in shipping, the consequent long delay in filling orders, and the high cost of transportation. By increased shipping facilities Canada has greatly added to her trade, as have Germany and other progressive countries. The expressions of regret on the part of consuls and other representatives of the United States abroad because of a lack of direct transportation are creditable to them.

I read the consular reports daily and I have failed to find any such frequency of complaints. On the other hand several

consuls have taken occasion to commend the transportation facilities.

Read this from the "editorial" department of the Reports:

Mr. Heingartner, deputy consul at Trieste, says that he cannot understand why American goods of the same kind cannot be sold in Austria as well as those of British make. That is a little puzzling. But lower wages enable the British to produce many articles cheaper than can be done in the United States, and better steamship communication gives them another advantage.

Now, as matter of fact the consul said that the goods would be sold all right if an American manufacturer would establish a store or agency of his own in Trieste, and said nothing about the lack of transportation facilities affecting our trade there. In fact, he said that a large stock of poor suspenders was offered at a high price; what was wanted was good suspenders at fair price. A line of steamers runs between New York and Trieste, with at least two sailings per month, and sometimes as many as four; what more is needed?

Here is another editorial intended to quiet the clamor against Trusts:

A new Trust composed "of the whole of the hinge makers of Great Britain," as reported by the London *Times*, has recently been formed "to put an end to underselling." Trusts are increasing at present more rapidly in the United Kingdom than in the United States, despite the lack of a protective tariff in the former country.

It is about time that the "editor" of the Reports let them speak for themselves, and injected a little less of his partisan bias into them.

VOLTAIRE'S FAITH.

TO THE EDITOR OF THE NATION:

SIR: Silas Orrin Howes, in your issue of August 16, asks for the source of Voltaire's statement, "I die adoring God, etc." He will find it in the "Œuvres complètes de Voltaire," Paris, 1828, édition Delangle Frères, Vol. I., page 437.

JEAN CHARLEMAGNE BRACQ.

Vassar College, Poughkeepsie, N. Y., September 22.

Notes.

The Clarendon Press of Oxford (New York: Henry Frowde) issues a long list of books in preparation. Among those which will be published before Christmas are the following: "Louis XI. et Charles le Téméraire," by Michelet, edited by E. Renault; "Les Journées de Juin," by Stern, edited by C. N. Nagel; "Lettres Parisiennes," by Madame de Girardin, edited by F. de Baudiss; "Société Française," by Cousin, edited by A. Bentinck-Smith; "Hernani," by Victor Hugo; Sainte-Beuve's "Essays," selections, edited by D. Ll. Savory; "Pierrette," by Balzac, edited by T. de Sélincourt; "La Mer," by Michelet, edited by W. Robertson; "Eugénie Grandet," by Balzac, edited by H. E. Berthon; "Racine et Shakespeare," by De Stendhal, edited by Leon Delbos; "The Menæxenus" of Plato, edited by J. A. Shawyer; Plautus's "Mossellaria," edited by E. A. Sonnenschein;

Martial, books vii.-xii., edited by R. T. Bridge and E. D. C. Lake; "Wisa Handbook," by A. C. Madan; "Primitive and Mediæval Japanese Texts," edited with English translation, introductions, notes, and glossaries, by F. V. Dickins; Knyvett's "Defence of the Realme," with introduction by C. Hughes; Howell's "Devises" and Peacham's "Compleat Gentleman," with introductions by W. A. Raleigh; Greville's "Life of the Renowned Sir Philip Sidney," with introduction by N. C. Smith; Evelyn's "Sculptura" and Pepys's "Memoires of the Royal Navy," with introductions by C. F. Bell; Coleridge's "Biographia Literaria," edited by J. Shawcross; "The Shirburn Ballads," edited by Andrew Clark; "Frederick York Powell," his life, with a selection from his letters and occasional writings, by Oliver Elton; "Life and Letters of Sir Henry Wotton," edited by L. Pearsall-Smith; "The Dawn of Modern Geography," vol. iii., by C. R. Beazley; "The Evolution of Culture and Other Essays," by the late Lieut.-Gen. A. Lane-Fox Pitt-Rivers, edited by J. L. Myres, with an introduction by Henry Balfour; "Hermann von Helmholtz," by Leo Koenigsberger, translated by Frances A. Welby, with preface to the English edition by Lord Kelvin; "A Catalogue of the Herbarium of Dillenius," by G. Claridge Druce, with the assistance of H. H. Vines; Æschylus, the seven plays in English verse, by Lewis Campbell; "Montaigne: A Study," by R. Warwick Bond; "Christabel," by Samuel Taylor Coleridge, illustrated by a facsimile of the MS, and by notes by Ernest Hartley Coleridge; "Corolla Numismatica," numismatic essays in honor of Barclay V. Head; "Reason, Thought, and Language, or The Many and the One," a revised system of logical doctrine under the forms of idiomatic discourse, by Douglas Maclean; "Handbook of the Ila Language," by the Rev. E. W. Smith.

The American Baptist Publication Society announces for fall publication "Odds and Ends from Pagoda Land," by Dr. W. C. Griggs; "A Short History of the Baptists," by Prof. Henry C. Vedder; "The Message of Hosea and the Twentieth Century," by the Rev. B. A. Copass; "The Book of the Prophet Jeremiah," by the Rev. C. R. Brown; "Practical Ideals in Evangelism," by Charles Herbert Rust; and "For the Work of the Ministry," by the Rev. T. Harwood Pattison, elaborated by his son, the Rev. Harold Pattison.

Houghton, Mifflin & Co. publish this week "The County Road," by Alice Brown; "Walt Whitman," by Bliss Perry; "Books, Culture, and Character," by J. N. Larned; the complete poems of Edward Rowland Sill; "The Poetry of Chaucer," by Robert K. Root; "Ecclesiastes in the Metre of Omar," by the Rev. William B. Forbush; "English Patents of Monopoly," by William H. Price, and "The Dictionary of Practical Phonography," by James E. Munson.

The Century Company will publish this month Maria Hornor Lansdale's "The Châteaux of Touraine," with color reproductions of Jules Guérin's drawings; H. G. Wells's "In the Days of the Comet"; Helen Nicolay's "The Boys' Life of Lincoln"; the new collection of "Fairy Stories from St. Nicholas"; and Richard Watson Gilder's new volume of poems, "A Book of Music."

Richard G. Badger announces the following volumes of verse: "The Jewels of King Art," by James Connolly; "The Children of Christmas and Other Children," by Edith M. Thomas; and "Foregone Verses," by William Wallace Whitlock.

Little, Brown & Co. are issuing a new edition complete in one volume, of "The Letters of Emily Dickinson, from 1847 to 1886," edited by Mabel Loomis Todd. The book contains a portrait of Miss Dickinson, a new one of her old home, and facsimiles of her handwriting.

The Macmillan Company announces for early publication, a volume, "The Worker and Other Poems," by a hitherto unknown English author, Coningsby William Dawson, son of the Rev. W. J. Dawson.

T. Fisher Unwin (London), is publishing "A Short History of Wales" by Owen Edwards; and "Saunterings in Spain," an illustrated book of travel by Major-Gen. Seymour.

G. P. Putnam's Sons have in press the authorized American edition of the first story in Fogazzaro's Trilogy. This book, issued in Italy under the title of "Piccolo Mondo Antico," will be published in the English and American editions under the title of "The Patriot." It will be followed by an edition of the second story in the Trilogy, "Piccolo Mondo Moderno," which will probably bear the title, "The Man of the World." "The Saint (Il Santo)" completes the literary scheme of the author.

Arvède Barine's "Princesses and Court Ladies" will appear shortly in translation under the Putnam imprint. The same firm will publish this autumn a small illustrated volume entitled "Westward the Course of Empire," by Montgomery Schuyler. It is in part a record of a trip to the Pacific coast, which Mr. Schuyler visited in 1905.

The first (the October) issue of *Putnam's Monthly* contains some notable matter: Undelivered addresses by John Hay; "Franklin's Social Life in France," with unpublished letters, and an essay by Maurice Maeterlinck. The proof-reading, we regret to observe, is not impeccable.

Dr. J. L. Haney of the Central High School, Philadelphia, having won an enviable station in Coleridgean scholarship, now goes further back to the field of the Elizabethans, which he enters with a booklet (Philadelphia: The Egerton Press), "The Name of William Shakespeare." In seventy pages or so, Dr. Haney seeks "simply to present in convenient form the principal facts that have been elicited concerning the origin and etymology of the name and the vicissitudes of its orthography at various periods of its history." He divides his material under nine headings: the Name Shakespeare; the Stratford Registers; Contemporary Documents; the Registers of the Stationers' Company; the Title Pages of the Quartos; Contemporary Tributes and Allusions; the Period of the Folios; Modern Editors and Critics; the Controversy over the Orthography. Although here and there the essay has a more controversial air, perhaps, than its author intended, it is, on the whole, a fair, complete, and clear exposition of the subject. So far as we have observed, it takes account of every scrap of evidence available, up to the time that it went to print; the unim-

portant data on "Other William Shakespeares," recently contributed by Miss Stopes to the London *Athenæum* (August 25), appeared, of course, too late for notice by Dr. Haney. Here is Dr. Haney's conclusion of the whole matter:

Briefly summarizing the evidence brought together in these pages, we find that the name occurred originally in numerous variant forms; that at Stratford the spelling Shakspeare prevailed for a time, though rarely after the beginning of the dramatist's career; that the Stationers' registers and other contemporary documents present a wilderness of confusing variations; that although four of the five autographs seem intended to spell Shakspeare, the title-pages of the quartos and the First Folio point more strongly to the form Shakespeare. If the usage of later scholars and critics is of less weight, it is at least noteworthy that the recent editors and biographers who have specialized most zealously upon the study of the poet are virtually unanimous for the longer spelling.

Externally, the volume is a model of good taste; type, page, and binding are alike excellent. We regret that the edition should have been limited to seven hundred and fifty copies.

A work that deserves more popular attention than it has received is Capt. Cecil Battine's (Fifteenth Hussars) "The Crisis of the Confederacy," published by Longmans, Green & Co. It is an excellent commentary upon our civil war, whose history "still remains the most important theme for the student and statesman." In Capt. Battine's view the critical point was immediately after Chancellorsville, when Lee should have been allowed to march northward at once. A subsidiary motive of the book is to display the true use of cavalry, which the author holds was developed in Virginia by Stuart, whom he regards as "the greatest warrior among the many great men so called." A confessed Confederate bias does not interfere with impartial treatment, and the work is quite worth study by those who are interested in our history as well as by professional soldiers.

The title of Gen. Newton M. Curtis's "From Bull Run to Chancellorsville" (Putnam's) suggests a history of the first half of the civil war. The book is, however, a history of the Sixteenth New York Infantry, and, incidentally, of the other military organizations of northern New York which served with the Sixteenth in the Army of the Potomac. The volume is a worthy addition to the list, now very considerable, of regimental histories; for not only does Gen. Curtis write entertainingly, but he has also seen in good perspective the part played by his regiment in the campaigns and battles which he describes. The accounts of enlisting and recruiting, and of the experiences of the regiment in camp and on the march, are also useful additions to our knowledge of the period.

"Letters from a Surgeon of the Civil War" (Little, Brown), by Martha Perry, may serve as a slight complement to the history of that distinguished regiment, the Twentieth Massachusetts. It is compiled from letters written by her husband while acting as surgeon at the time of Chancellorsville and the Wilderness.

Some new poems by Prior have been discovered. A. R. Waller, who is editing an edition of Prior for the Cambridge

University Press, writes to the London *Athenæum* that through the kindness of the Marquis of Bath he has had opportunity to examine the Prior papers preserved at Longleat. These papers, he finds, contain, in addition to the Prose Dialogues, referred to by Pope and by other writers who saw them, many hitherto unpublished poems by Prior, written by him at Wimpole and at Down Hall in his later years, together with other poems of, presumably, an earlier date. In the preface to the first volume of Prior's writings (1905) Mr. Waller announced that the second volume would contain the Prose Dialogues, mentioned above. He now adds that this volume, now in press, will also contain these unpublished poems. "This examination of the Longleat MSS.," says Mr. Waller, "has solved one or two vexed questions, which will be dealt with in due course; it has shown that Prior worked in forms of verse hitherto unsuspected; and it has proved that certain poems published anonymously are his."

The appearance of Anatole Le Braz's "Au Pays des Pardons" in 1894 was an event of considerable literary and archæological importance in France. The book was a collection of hitherto unprinted legends of the early Breton saints supplemented by sympathetic descriptions of the modern ceremonies in their honor (known as "pardons") which are the last vestiges of the ancient "Feasts of the Dead." The "Land of Pardons," just issued by the Macmillan Company, is a translation of the 1900 edition of this work, which contained one more "pardon" than the first edition. Frances M. Gostling, the translator, has performed her task well, but no translation could hope to render the strange, melancholy charm of M. Le Braz's lyric prose.

The reluctance of Rome in accepting the decision of France to effect separation between Church and State is productive of much literature, mostly polemical. Professor Meter's "Église Catholique" (Colin) is, however, an exception, for although a product of the present crisis, it is not in any way a party pamphlet. It is a clear and methodical exposition, in condensed form, of the constitution and administrative system of the Roman Catholic Church, dealing with, among other matters, canon law, the status of laymen, the right of association, organization at Rome and elsewhere, diocesan and parochial organization, missions, ecclesiastical finance. Apart from a few slips in details, the book may be commended as a convenient manual, written by a competent authority.

Comprehensive thoroughness of contemporary French scholarship in dealing with comparative literary investigation once again finds exemplification in "L'Influence Française en Angleterre au XVII. Siècle," by Louis Charlanne, professor at the University of Poitiers (Paris: Société Française d'imprimerie et de librairie). On this by no means unfamiliar theme, research finds it difficult to shed new light for English specialists; but the merit of this treatise consists less in originality of conclusions than in the extraordinary range of material laid under contribution for its composition; for the final generalizations rest on an exhaustive survey of intellectual

and social (not merely literary) influences which passed from Paris to London chiefly under the encouragement of kings and courtiers *continentalized* through exile or voluntary travel. The author's knowledge of his period issues largely from the famous memoirs of the time, supported by evidence from comedies and other light literature; he is thus able to detect French modes of thought, feeling, and practice in English dress, cooking, medicine, gardening, painting, music, etc., chiefly during the later Stuart period, without seeking to show that the foreign wave penetrated deep into the heart of the people, or in any way modified the fundamental attributes of the national spirit and mind. It is only too fatally easy to infer from the unmistakable French stamp on the drama, criticism, and didactic poetry of the time that a complete misdirection of literary energy was the outcome of this influence. M. Charlanne wisely concludes that comprehension of foreign ideals in literature accomplished much in cultivating the French (or Latin) conception of *ordonnance*, as well as in clarifying the best of English eighteenth-century prose. As he makes no mention of Miss Canfield's excellent work, "Corneille and Racine in England" (1904), we are warranted in supposing that his views are entirely independent.

Alexandre Beljame, professor of English literature at the Faculté des Lettres, Paris, died on September 17. M. Beljame was born at Villiers-le-Bal (Seine et Oise) on November 26, 1843. He published, in addition to standard educational works, translations into French of Tennyson's "Enoch Arden," Shelley's "Alastor," and Shakspeare's "Macbeth," "Julius Cæsar," and "Othello." His best known book, crowned by the French Academy, is "Le Public et les Hommes de Lettres en Angleterre au XVIIIe Siècle."

The discovery in 1888 of the famous cuneiform correspondence in El-Amarna, in Egypt, containing official communications that passed about the year 1500 B. C. between foreign kings and governors and the Egyptian King, surprised many scholars. Among these letters were some from a King of Arsapi, the exact location of which could not be settled. Now Prof. Hugo Winckler of the University of Berlin has found in Boghaz-Koi, in Asia Minor, east of the Halys, a large number of Babylonian and Assyrian cuneiform inscriptions. This place had hitherto been famous for its unique rock-sculptures; but these finds show that it was the centre of the Hittite State of the Arsapi. The tablets written in Babylonian are in the Chatti dialect and date from the times of Ramses II. and Chetasar, who, according to a covenant carved in the temple of Karnak, had made an alliance with each other. The work of excavation in Boghaz-Koi is to be vigorously pushed.

The book auction season 1906-1907 has begun. In New York the Merwin-Clayton Sales Company will dispose of a collection of first editions of American authors, including such items as Hawthorne's "Fanshawe" and Bryant's "White-Footed Deer"; the library of the late Gen. di Cesnola, director of the Metropolitan Museum of Art, rich in books on ceramics and other art subjects; a portion of the

library of the late Cyrus W. Field with numerous autograph letters; another portion of the collection of the late Thomas Nast, containing, besides the original drawings of many of his own caricatures, some of his paintings and etchings; and the library of the late Richard B. Sinton of Richmond, Va., containing some rare Virginia items. The Anderson Auction Company of this city announces the sale of the Tennyson collection of Prof. A. E. Jack of Lake Forest University, containing many of the privately printed trial books, and magazines containing the first appearance of many of the poems; the library of the late Dr. Elliot Coues, the naturalist, comprising numerous scarce pamphlets on American natural history; and the dramatic library of Charles N. Mann of Philadelphia, covering the history and literature of the English stage, and containing an extraordinary collection of American play-bills. In Philadelphia Stan. V. Henskels promises Part III. of the library of Gov. Pennypacker, including his collection of books on Pennsylvania history, the most important gathering of its kind ever offered; Part III. of the collection of engraved portraits belonging to Judge James T. Mitchell, including the portraits of John Paul Jones, Thomas Jefferson, John Adams, and Abraham Lincoln; and the autograph collection of the late Dr. Joshua I. Cohen of Baltimore, including full sets of the signers of the Declaration of Independence, the Continental Congress, the Stamp Act Congress, the Constitutional Convention, etc. In Boston C. F. Libbie & Co. will offer the library and autograph collection of the late F. Griswold Teft of Great Barrington, Mass., including some rare Cruikshank items, and several letters of Washington; the library of the late J. M. Rice of the Naval Academy at Annapolis, containing a number of rare naval books; the second part of the library of Henry G. Denny, including probably his collection relating to Harvard College, one of the most complete ever brought together.

WASHINGTON.

Letters and Recollections of George Washington, being letters to Tobias Lear and others, between 1790 and 1799, showing the First American in the management of his estate and domestic affairs, with a diary of Washington's last days, kept by Mr. Lear. New York: Doubleday, Page & Co. \$2.50.

Letters of George Washington to George and James Clinton. A Collection of thirty-five letters, of which twenty-six are unpublished, together with Washington's War Map of New York and New Jersey. New York: Privately printed.

George Washington, Patriot, Soldier, Statesman, First President of the United States, by James A. Harrison, Professor in the University of Virginia. New York: G. P. Putnam's Sons. \$1.50.

The publication of letters which increase our knowledge of the private life of Washington satisfies a desire bred of something higher than morbid curiosity. To an extent unusual with the correspondence of public leaders, Washington's letters disclose not only the man, but the statesman; and no one studying the two hundred or more in the first of the volumes before

us, or those which he wrote to his manager, William Pearce, or the correspondence which he maintained to the end of his life with Sir John Sinclair, President of the British Board of Agriculture, can fail to see that they show Washington, in the management of his household, his lands, and his money, as possessed of the same qualities of mind and temperament which he displayed in the affairs of war, diplomacy, and statecraft. Unlike generals such as Marlborough, or politicians such as Fox, Washington had no cause to be ashamed of any incident of his private life; and no amount of searching into the details which these letters furnish will impair our respect and reverence for his character. He was the same man, conservative, thorough, dignified, and just, whether negotiating for a house in which to live in Philadelphia, or dealing with Genet and the foreign policy of the Government. In the latter case, he could apply with tact and firmness the principle of no entangling alliances, "steering clear of the vortex of misery which," he says, "has brought so many of the nations of Europe to the brink of ruin" (238); and in the former he could say with equal firmness, "to occupy the premises at the expense of any public body, *I will not*" (30).

Neither the letters to Tobias Lear, who was Washington's secretary for sixteen years, nor the extracts from Lear's diary relating to Washington's last illness, nor the miscellaneous letters which complete this volume, add materially to the knowledge already possessed of Washington's declining years. His life as a landed proprietor, the extent and location of his estates, the agricultural methods that he introduced, the crops that he raised, the "hands" that he employed, and the slaves that he owned, have all been well known. But they do furnish abundant details that are new and quotable expressions on many varied topics; and they bring us into very close touch with the daily life of a great man.

Though less versatile than Franklin, Washington had an intensive knowledge of the practical side of commerce and agriculture that Franklin never possessed. There is nothing academic or speculative in his letters. They contain the thoughts and directions of a shrewd man of business, familiar with the simplest needs of his lands or his family. We find here opinions on the packing of china, the suitability of such household furnishings as carpets, mirrors, and blankets, the repair of his coach, caps for his drivers, the construction of liquor coolers, the merits of horse-mills and of wind-mills, and scores of other matters relating to his farms or his houses. He had knowledge of all persons whom he employed, particularly of those that had duties in his family or about his person, even to the washerwoman. He followed the money market, sought for and took advantage of circumstances regulating the rise and fall of prices, rents, and land values, and it is a significant commentary on his financial solvency that he could say in 1799, only a few months before he died, "This business of borrowing and discount I am quite a novice in" (p. 273). Having to provide for the education of Washington Custis, he looked into the school question, and made a number of interesting and not very com-

plimentary remarks about the "College at Philadelphia," where he deemed the discipline lax and the number of pupils too great for the tutors; though of the "College at Annapolis" he seems to have had a better opinion. His well-known views regarding slaveholding find ample support in these letters. "Were it not," he says, "that I am principled agt. selling negroes, as you would do cattle at a market, I would not in twelve months from this date be possessed of one as a slave"; and again, "The running off of my cook has been a most inconvenient thing to this family; and what renders it more disagreeable, is, that I had resolved never to become the master of another slave by *purchase*, but this resolution I fear I must break." To the first remark he added, "I shall be happily mistaken, if [slaves] are not found to be a very troublesome species of property ere many years pass over our heads."

From these letters we learn Washington's opinions on many matters of public concern, the relations between England and the United States, between England and France, and between France and the United States; on the Embargo and the Whiskey Rebellion; and, especially, on the founding, building, and government of the "Federal City," as he generally called the new capital. We learn that Washington frequently called upon Lear to recommend suitable appointees for offices under government and to aid him in the preparation of his messages to Congress. The letters are inclined to be formal and dignified in expression, as was characteristic of Washington, and for this reason it is the more delightful to meet with such phrase as "Unless some one pops in suddenly."

The editor, whoever he may be (Mrs. Eyre, Lear's granddaughter, furnished the Lear letters and signs the introduction), has taken the editorial duties very lightly. The letters are printed without comments or notes of any kind. The work could have been rendered more readable by a few explanatory foot-notes, and more useful to the student by brief introductions stating where the originals of other than the Lear letters are to be found, and how far they have been used before. All the Lear letters passed through the hands of Jared Sparks, and many of the others are already in print. Some textual criticism would have been desirable in view of the omissions, errors, and strange words that appear in the letters, due either to Washington himself or to the carelessness of a copyist. For example, "perimt" for "permit" (163), "anoner" [answer?] (196), "think" instead of "thin" (199), "draught fera waggon" (200), "over par" [overseer?] (214), "duties of your important truth" [trust?] (235), "if you to be the above mentioned flour" (243).

The letters of Washington to George and James Clinton formed part of the collection of the late William S. Appleton of Boston, recently sold at auction. The dealers who purchased a majority of the letters now offer them to the public through the medium of a small brochure of seventy-two pages, limited to one hundred copies. Of the thirty-five letters purchased, twenty-seven have never been printed, and the present owners justly place a high value on their property. Of course, the letters

should be purchased by the State of New York and published as a supplemental volume to the "Public Papers of George Clinton," issued under authority from the New York Legislature, half a century ago. But as public bodies move slowly in such matters and as autograph collectors, actuated by other motives than those which appeal to the historical scholar, do not always put their acquisitions into print, the student of Washington's military career, especially that part of it connected with the Clinton-Sullivan campaign of 1779, will find the liberal extracts printed in this volume of interest and value.

Of Professor Harrison's life of Washington we can speak with but slight approval. Its *raison d'être* is the demand of a series—the "Heroes of the Nations"—which, to be complete even approximately, must contain a life of Washington. That a book made to order may be excellent is evidenced by the presence of such scholarly works as Firth's "Cromwell" and Margolouth's "Mohammed" in the same series. That Professor Harrison has not been influenced by the high standard which these lives have set may be shown by the fact that out of 453 pages more than 200 consist of quotations from Washington's letters and from well-known secondary authorities. That he has taken little pains to equip himself thoroughly for his task can be inferred from his chapter entitled "The New Forces," where the best that he can do for Great Britain's commercial policy is to print in six pages of small type all that Bancroft has to say on the subject and to content himself with a few personal and adverse comments. If a writer is competent to produce a life of Washington, he is equally competent to make an independent and impartial study of the times in which Washington lived and of the most burning question of those times—the burden of the mercantile policy. In the performance of such a task it would not be necessary to go much beyond the writings of Beer, Lord, Ashley, Egerston, and Hertz; but it seems likely that these monographs lay beyond the limits of Professor Harrison's bibliography.

The Washington depicted in this volume is the familiar heroic and half-deified figure of the older panegyrists. The boy shines in the reflected light of manhood, and the man becomes more than human in the perfections heaped upon him and upon all who supported the American cause. Some parts of the volume are well and pleasantly written, particularly the chapters that deal with the period after 1780; but as a whole the style is that of the romanticist, embellished with imagery and superlatives.

If the Indians were the wind incarnate, the yeomen were men actuated by the purest patriotism, the highest motives, the most unselfish devotion, living exemplifications of the fury that lies latent in the ploughboy [and others] when his sweetness is turned to gall, his honey to vinegar, and his gay laugh to a sardonic grin under the nitric acid of just indignation.

This is merely rhetorical exaggeration, but the following is confused metaphor:

For these dates and events stand out in bead-like distinctness among the linked anniversaries of the decade, incising their notches deep into the living marble of the time.

Amid this cloud of words one discovers

Washington, a figure as unreal as the spectre of the Brocken. At times the clouds break, as an apt quotation reveals the man; but soon again the mist of the author's rhetoric veils the scene. It is not too much to say that the quotations are the best part of this work.

RECENT FICTION.

Puck of Pook's Hill. By Rudyard Kipling. Illustrated by Arthur Rackham. New York: Doubleday, Page & Co.

A new book by Kipling is still a literary event. We may never revive those enthusiasms of fifteen years ago, when "Plain Tales from the Hills," "Life's Handicap," "Under the Deodars," "Soldiers Three" and the "Barrack-Room Ballads" successively amazed and delighted all readers of English. The sensation created by the young journalist of Lahore was comparable to the sensation created by the Waverley novels and the verse of Byron. Then came the period of reaction. We tired a little of the novelty of his crisp and glittering phrase. In spite of the "Jungle Books," we began to ask whether the precocious boy had not shot his bolt once and for all. This theory had some support in fact. There is, for example, the unreadable "Stalky & Co."; in "The Seven Seas" and "The Five Nations," particularly the latter, there are poems, versified political tracts, unworthy of publication in permanent form; in "The Day's Work" and "Traffics and Discoveries" there are tales distinguished only for cheap smartness. On the other hand, mingled with the baser metal in "The Five Nations" are those veins of pure gold, "The Bell Buoy," "Bridge-Guard in the Karroo," "Recessional," such "Service Songs" as "Chant Pagan" and "Boots," and the pathetic "Dirge of Dead Sisters." In perfection of form and depth of feeling these poems are on the high level of Kipling's best. Then, too, "The Day's Work" contains "The Brushwood Boy"; and in "Traffics and Discoveries" the tiresome Mr. Pycroft is more than atoned for by "They." "Puck of Pook's Hill" is fresh evidence that Kipling's gift was merely in abeyance. He offers us ten stories in a new vein—a cross between fairy tales and historical romances of the elder Britain. The machinery is simple. A little boy and his sister go at dusk on Midsummer Eve to a fairy ring in the field near Pook's Hill, and play bits from Shakspeare's "Midsummer Night's Dream." Puck himself suddenly appears to them and tells them of Weland's sword. On later days Puck introduces to them Sir Richard Dalyngridge, who came over with the Conqueror; Parnesius, a centurion of the Thirtieth; and Kadmiel, a Jew, who lent money to King John. The thesis of the book is set forth in Kipling's own prologue:

See you the dimpled track that runs,
All hollow through the wheat?
O that was where they hauled the guns
That smote King Philip's fleet.

And see you, after rain, the trace
Of mound and ditch and wall?
O that was a Legion's camping-place,
When Cæsar sailed from Gaul.

Trackway and Camp and City lost,
Salt Marsh where now is corn;

Old Wars, old Peace, old Arts that cessé,
And so was England born!

She is not any common Earth,
Water or wood or air,
But Merlin's Isle of Gramarye,
Where you and I will fare.

These pictures of the England that is dead and gone, though nominally intended for children, will, we are confident, prove quite as entertaining to all grown-ups who are still young enough to visit the Isle of Enchantments. Each of the stories is full of life and movement. Taken together, however, they have a unity and interest which are marred by separate publication in the magazines. They convey an uncommonly vivid sense of that past which to most of us is hazier than a dream. No historian, for example, has ever made the Roman Wall so firm a reality as this:

You see a smoke from east to west, as far as the eye can turn, and then under it, also as far as the eye can stretch, houses and temples, shops and theatres, barracks and granaries, trickling along like dice behind—always behind—one long, low, rising and falling, and hiding and showing line of towers. . . . Along the top are towers with guard-houses, small towers, between. Even on the narrowest part of it three men with shields can walk abreast from guard-house to guard-house. A little curtain wall, no higher than a man's neck, runs along the top of the thick wall, so that from a distance you see the helmets of the sentries striding back and forth like beads. Thirty feet high is the wall, and on the Picts' side, the north, is a ditch, strewn with blades of old swords and spearheads set in wood, and tires of wheels joined by chains. . . . But the wall itself is not more wonderful than the town behind it. Long ago there were great ramparts and ditches on the south side, and no one was allowed to build there. Now the ramparts are partly pulled down and built over, from end to end of the wall, making a thin town eighty miles long. Think of it! One roaring, rioting, cock-fighting, wolf-baiting, horse-racing town, from Ituna on the west to Scgedunum on the cold eastern beach! On one side heather, woods, and ruins, where Picts hide, and on the other, a vast town—long like a snake and wicked like a snake.

The Romans who defended the wall, the Picts who lurked in the wastes beyond, the Normans and Saxons who fought at Hastings—all seem, not the pasteboard and lath figures of the historical romance of commerce, but creatures of flesh and blood and bone. In fine, "Puck of Pook's Hill" is another proof of Kipling's amazing versatility. He works on a far smaller scale than Scott, but within his limits he shows similar powers of reconstructing by imagination an age that has vanished.

The underlying ideas are those which have informed so much of Kipling's later work: the glory of England and the valor that has made her great. The import of each tale is that "she is not any common earth"; of her splendid military history every boy and girl born on British soil may well be proud. The heroes whom Kipling celebrates are good fighters, brave and loyal. Such is Sir Richard Dalyngridge, such Hugh the Saxon, such are Parnesius and Pertinax—all compact of knightly virtues. Kipling reminds us again that

there is neither East nor West, Border, nor
Breed, nor Birth,
When two strong men stand face to face, tho'
they come from the ends of the earth."

In this book, however, he does not celebrate, according to his recent fashion,

sheer brute force, mere animal prowess and daring. Sir Richard wins over the Saxons by a display of justice and mercy; and it is with these same irresistible weapons that Parnesius, his garrison reduced to a skeleton, holds back the hungry Picts. And Kipling strikes this same note in the epilogue, "The Children's Song" of dedication to the service of country:

Teach us the strength that cannot seek,
By deed or thought, to hurt the weak;
That, under Thee, we may possess
Man's strength to comfort man's distress.

Joseph Vance: An Ill-written Autobiography. By William De Morgan. New York: Henry Holt & Co.

This novel in autobiographical form is of a type now a little archaic. It might more naturally have been written a generation ago. Though the American publisher has tried to conceal the fact, it is of noble three-decker proportions. It is ill-written only in the sense of not being composed according to the present trim, abrupt fashion of novel-writing. A very skilful hand has imparted to this narrative its gentle inconsecutiveness, its fond diffuseness, its premature betrayals and redundant echoes—defects, if they be from any point of view defects, so engaging and so natural; the defects of "Tom Jones" and "Henry Esmond" and "David Copperfield." It is not a hook to be hurried through, and we do not recommend it to impatient readers. To all others, we commend it with something more nearly approaching enthusiasm than is usually expected of the jaded novel-reader of tradition. Such a book is like a child thrown to the wolves; it diverts for the moment here and there some member of the pack of reviewers from his snarling pursuit of the mediocre.

Seriously, we take this to be a novel of uncommon quality. The writer is, if you will, a sentimentalist. The hero, Joseph Vance, is, at all events. The human lives here recorded have their full share of hitterness and defeat; but the autobiographer, old, lonely, and under a cloud, has still an invincibly affectionate remembrance of the past. The son of a beer-swilling mechanic, he has been taken up, half-adopted, and educated by a learned gentleman of only moderate means. As a child he conceives a profound and unconscious devotion for a daughter of his benefactor, some five years older than himself. The relation is supposed to be brotherly and sisterly, but while he is at the university she marries, most happily, and the boy Joseph is driven to despair by the sudden realization that he has thought of her as his own. He survives, and presently marries a woman whom he sincerely loves, but who understands that his first love has been given, and is in some subtle sense still due, to the "Lossie" he might have made his wife. For "Lossie," after his wife's death, as it chances, he makes the supreme sacrifice of his life; and it is only in a "Postscript by the Publishers" that we are given a hint as to his reward. All this sounds vague and hare enough; but, indeed, we hardly know how to suggest the mellowness of this story, and therein lies its charm. In detail it is often brilliant, sometimes exuberant; it is not guiltless of facetious touches of the Wellerian order. It is figura-

tive, allusive, epigrammatic, and yet spontaneous.

In the end what one feels most strongly is that this is a work of true humour (will reform allow us the *u* for the nonce?); not even its wittiness can disguise the fact; and we doubt if any reader who has a sense for true humour will find it tedious.

The Spirit of Bambatsc. By H. Rider Haggard. New York: Longmans, Green & Co.

No whole-souled person who read "Kiug Solomon's Mines" and "She" at the proper age can take up a new romance by Rider Haggard without some gleam of hope. Those were excellent yarns of their absurd kind; and misgivings must recur as to whether a sophisticated and middle-aged palate may not be disposed to exact the reproduction of an excellence which never existed. We should hesitate to endanger a cheerful memory by re-reading those early masterpieces, and can only honestly record our impression that for Mr. Haggard the game is up. "The Spirit of Bambatsc" is, we take it, a very thin dilution of the original beverage. It contains the old ingredients, but we doubt whether, as now watered, it would go to the head of the least accustomed schoolboy. Here is the usual African setting, the usual female ghost, the familiar hurried treasure, and the expected commodity of hairbreadth escapes; but there is no longer, for us, any savor in the concoction. Alas, that there should be no known method of defending the spent author from feeble self-imitation, nothing to offset the encouragement given by publishers to the "exploitation" of the inventive spirit in its last gasp.

The Man in the Case. By Elizabeth Stuart Phelps. Boston: Houghton, Mifflin & Co.

Mrs. Ward is to be congratulated upon having, in this little tale, escaped from the morbidity and mawkishness which have made much of her work, especially her recent work, a thing popular and to be admired by the judicious. There is nothing sensational about the hook but its title, although its theme is a village sensation. It contains some credible new New England villagers, and one old woman who is more than credible. It is, moreover, free from religious or erotic sentimentality.

Moritz Lazarus's Lebenserinnerungen. Bearbeitet von Nahida Lazarus und Alfred Leicht. Mit einem Titelbild. Berlin: Georg Reimer.

These reminiscences of the founder of the *Zeitschrift für Völkerpsychologie und Sprachwissenschaft* are the record of a life of rare beauty and helpfulness. For the breadth of vision which characterized the writings of Moritz Lazarus was commensurate with the range of sympathies which won him the friendship of men in many walks of life. The hook is compiled from notes dictated by Lazarus to Nahida Remy, the pupil who later became his wife, and edited by Dr. Alfred Leicht, who as student at the University of Berlin had made shorthand copies of Lazarus's lectures, and become his assistant. These notes are amply supplemented by letters from his numerous friends and acquaintances.

There were few men prominent in the intellectual life of Germany who did not know Lazarus, and with many of them he was on terms of intimacy. For the friendships of Lazarus had a deeper foundation than the desire for genial conviviality and the pursuit of intellectual intercourse. Both these ends were satisfied in the Tunnel, the society founded in Berlin by Franz Kugler, poet painter, architect, and musician, and the Rütli, which continued the traditions of the Tunnel, and counted among its members Fontane, Menzel, Storm, Heyse, Luebke, and others. The four chapters of the hook devoted to Lazarus's relations with Rückert, Keller, Auerhach, and Heyse, and parts of the chapters entitled "Literarisches Kunterhant," "Aeckerlien's Keller," "Berliner Erinnerungen," "Schönefeld," give many a discreet glimpse of Lazarus's generous devotion. Had not the widow faithfully entered into his spirit of modesty, which at times hordered on self-effacement, these chapters would have made his character stand out in high relief as one of the most magnanimous in contemporary Germany.

The literary interest of the reminiscences is mainly due to Lazarus's own remarkable gift of portrayal. Had he chosen to write plays or stories, he could not have presented his characters more vividly. The meetings with Rückert in his garden at Neuss; the story of how he forced Keller to complete "Das Fähnlein der sieben Aufrechten"; his conversations with Fritz Reuter; the hours spent with Raabe, not inappropriately styled the German Dickens; the meteoric coming and going of the erratic Bogumil Goltz—these and many other episodes in the book are valuable additions to literary biography. The thoroughgoing seriousness with which he approached his task of presenting the life of the soul ("Das Lehen der Seele," third edition, much enlarged, 1883) induced him to make the writings of some of these men the basis of profound analytical studies. Out of these grew the reviews which occasionally were published in the magazines of the period, and are noteworthy for their insight and acumen. Thus Lazarus was one of the first appreciators of Gottfried Keller's stories: "Die Leute von Seidwyla" (*Literaturblatt des deutschen Kunstblattes*, Aug 7, 1856).

That his judgment and æsthetic sense made his conversation and correspondence constantly sought, not only by his friends, but by people who knew him only as a writer and lecturer, is evident from many incidents. He had a peculiar experience with Eduard von Hartmann, whose recent death recalls the time when, as the yet unknown author of the "Philosophie des Unbewussten," he offered the *Zeitschrift für Völkerpsychologie und Sprachwissenschaft* an article on the relation between his philosophy and Lazarus's psychology, which so offended the editor's taste by its flattering comments that he rejected it. Soon after it was published in Fichte and Ulrici's magazine without those features so complimentary to Lazarus! In the fifth chapter a meeting with Liszt is described, who had solicited his acquaintance on account of a treatise on the union and coöperation of the arts contained in the "Leben der Seele." Nor was Lazarus's personal acquaintance confined to prominent Germans. He had

met Talne and remained in close touch with him. He knew Renan, Gaston Paris, Theodore Bernard, Adolphe Cremieux, Michel Bréal, Henri Laboulaye, James Darmesteter, and George Monod. In Berlin he associated with George Bancroft, Edward Burnett Tyler, and other famous Englishmen and Americans.

Among the most interesting chapters in this book are the eighteenth, embracing a record of his intercourse with the royal family, and the nineteenth, containing a review of the work he did as lecturer at the military academy of Berlin during the four years 1868-1872. Crown-Prince Frederick, who had frequently attended the lectures, distinguished Lazarus in many ways. Perhaps the first sign of the wave of antisemitism about to spread over Germany was the sudden dismissal of Lazarus in the year 1872. The popularity which Lazarus enjoyed at court and in the academy was an annoyance to the newly-appointed director of that institution, who prided himself upon his "Christian-Germanic" spirit, an epithet which was then used as shibboleth. Almost his first act was to strike the Jew who had become so unduly prominent in a world which had so far been closed to his race.

It may have been this experience that led Lazarus to buy a country-place in Schönefeld, near Leipzig, where he spent the happiest years of his life. He retained his residence in Berlin, being appointed lecturer at the university the year after his dismissal from the academy, but in Schönefeld he did some of his best work. Here he edited his treatise on mind and speech, the third volume of his "Leben der Seele," the lectures and addresses published under the title "Ideale Fragen," and wrote the first part of his "Ethik des Judentums" (1898), which was translated into English by Henrietta Szold: "Ethics of Judaism" (Philadelphia, 1900-1). The guest chamber of this quiet house became a refuge for all friends that needed a rest or change. It was in turn occupied by Theodor Fontane and his wife, by Adolf Menzel, of whom some anecdotes are related that should interest students of art (pp. 386-7); Julius Wolff, Eduard Lasker, Georg Ebers, and many of lesser fame, but hardly one so generally known as George Brandes.

There is an error concerning the death of Dr. Martin Cohn, better known under his pseudonym A. Mels, soldier, traveller, and author. He died, not in Nizza, as stated in the text, but in a suburb of Chicago.

Nature Notes and Impressions, in Prose and Verse. By Madison Cawein. New York: E. P. Dutton & Co.

When a great genius dies and leaves us none of the broken fragments by which we may trace his artistic progress from its rude beginnings to the finished structure, we imagine that the history of artistic development has suffered a serious loss. Occasionally we may be right, but when juvenilia and random note-books are preserved and dragged into print, especially during the author's lifetime, the reader may properly entertain a different sentiment. In the case of Mr. Cawein, whose volume lies before us, we can readily believe that many who have been attracted by his contribu-

tions to recent magazine verse, or by his printed volumes, will secretly wish that the muses had included in his literary equipment a capacious waste-basket. With all allowance for his high poetic qualities which have been recognized in these columns in the past, he had not reached such a rank as to warrant publication of the inferior matter which makes up a goodly share of this volume. As an example of the undue straining after word pictures which characterizes much of the book, we may quote the following paragraph:

Gems and crystals scattered around him, on marble the color of fire; sea-green chryso-prase and copalite from Zanzibar; spar the color of amber; alexandrines—green by day, by night, purple or crimson—from the Urals; iron, with red streaks of jasper through it; lapis-lazuli and chryso-beryl; fluor spar crystals, white, amethystine, pink and green; cairngorms, dark and clear as an Ethiope's eye; topazes, smoky and blue and wine-colored; and heaped high amid them, like violets smothered under the snows of spring, great sapphires mingled and mixed with the milky fire of many opals.

All this apropos of nothing at all, so far as the records tell us. Occasionally this wrestling with nouns and adjectives reduces them to an attractive picture, of intelligible import. How much better if only the successes had seen the light. As it is, the whole output tends to give the impression that the successes themselves are not spontaneous but the mere chance triumphs of a highly self-conscious and wholly artificial method.

Railroads and their Rates, with an Appendix on the British Canal Problem. By Edwin A. Pratt. New York: The Macmillan Co. \$1.50 net.

This *apologia* was evoked by the author's conviction that British railroads have been subjected to a great amount of criticism, at once harsh, unjust, and ungenerous (p. 312). They have been censured for not basing freight rates on mileage, for their alleged favoritism to consignments of foreign merchandise, and for exacting a much higher rate per ton mile than prevails on Continental railroads.

Mr. Pratt, a well-known writer on transportation problems, has little difficulty in upsetting the notion that freight rates should be based wholly on mileage. That such a system would fail to apportion charges to cost he shows from the difference in cost of constructing and operating different miles of line. He is equally successful in demonstrating that freight rates based wholly on mileage would fail to meet competition by water or by other rail routes. Such rates would thus transform much competitive traffic into a monopoly, to the detriment of shippers generally. There can be little doubt that the principle of charging what the traffic will bear develops a larger volume of traffic and generally lower rates than would exist under a system of mileage rates. But while this contention is impregnable, it is fairly open to question whether the other line of defence, to wit, that the practice makes for the continued prosperity of extant ports or particular productive centres, is uniformly valid. It is open to the critic of Mr. Pratt's argument on page 78 to ask why rates should be perpetuated to conserve the interests of a particular entrepreneur. There is

no universally valid economic dictum such as *non quicquam movere*.

The charge that British railroads grant to foreign merchandise rates which discriminate unfairly against the British shipper is analyzed at considerable length, and is completely refuted. Mr. Pratt shows that short hauls, small consignments, and speedy delivery are the essential characteristics of the domestic British traffic. He demonstrates with equal clearness that big loads of foreign produce offer British railroads the maximum of traffic with the minimum of trouble, expense, and dead weight. The disparity in charges between rates on imported and domestic freight is conclusively justified. Striking ocular demonstration of the essential difference in conditions is afforded by the photographs of American meat trains on the Southampton docks, and similar photographs of English meat vans billed from South Devon to London. The respective loads per van are seven or eight tons, as against less than two tons.

Not the least instructive portion of the book is the comparison of the ton-mile rates on British and Continental railroads respectively. The author very properly insists that if a statistical comparison is to be validated, all the conditions and circumstances must be weighed. The collection and delivery work of British roads, their practical grant of gratuitous storage, their relatively mobile rates as contrasted especially with stereotyped French railway charges, and their purely commercial character as undertakings of private capital for profit, must all be considered before any verdict can be fairly rendered. It must be remembered that certain Continental railroads grant what is practically bounty on freight exports. It is unfair therefore to compare crudely the export rates on Continental roads with the ordinary domestic rates on British railways. As regards German roads, Mr. Pratt concludes that "the traders engaged in export business have gained very material advantages . . . while traders who do an exclusively home business are worse off" under a State régime (p. 257). The most interesting discussion in the volume is the explanation of low rates in the Low Countries (chaps. xvii, xviii). The universal presence of waterways compels low rates; and the original construction or subsidizing of the railroads, at the expense of the taxpayer, with the consequent absence of the necessity of meeting fixed charges out of current earnings, renders possible a scale of rates that would be otherwise impossible. It must be said that Mr. Pratt presents an unusually strong case for his contention that "the grievances advanced, apart from unfair and illogical comparisons, are generally either imaginary or the result of geographical or economic anomalies practically unavoidable" (p. 325).

Five Fair Sisters; an Italian Episode at the Court of Louis XIV. By H. Noel Williams. New York: G. P. Putnam's Sons.

History, like its parent, the tribal lay, can be written after more than one manner, and nearly every one defensible. Of late years a clearly defined and new species of historical work has been evolved in England, of which the book now under re-

view is a typical example. The late Mr. Wilkins used the formula to the best advantage, and it may perhaps fairly be stated as follows: Choose for your subject an historical episode possessing some striking feature, dramatic or romantic, for choice a love story in which royal personages figure. Read up the latest monographs and special studies on the subject. State the result in the best literary form attainable. Illustrate as profusely as the publisher feels inclined. Make up a pleasant looking, substantial, gilt-edged volume—and await your public. That is the approximate formula—it is set forth not as a matter of praise or blame, merely as a matter of observation. To this formula Mr. Williams more or less closely conforms. His volume looks well; his illustrations are interesting; his style, though it smacks a good deal too much of translation, is readable; his subject could hardly have been better chosen.

The *Mazarinettes*, as they were called, were the five daughters of a sister of Cardinal Mazarin, by her marriage with a member of the lesser Roman nobility, Baron Mancini. The cardinal brought them to France at the time when he dominated its government, during the minority of Louis XIV. The children grew up in the intimacy of princes, and as soon as they were marriageable became great *partis*, because of their beauty and attractiveness, because of their uncle's political predominance, and because of his enormous wealth. The eldest, Laura, was married to the Duke de Mercœur, a grandson of Henry IV. Marianne, the youngest, married the Duke de Bouillon, became the patroness of one great poet, La Fontaine, and did much towards driving another, Racine, to abandon the stage; when she died Saint Simon declared that she had been the Queen of Paris, unrivalled in beauty and wit. Hortense married a madman, the Duke de la Meilleraye, who became Duke de Mazarin by the cardinal's wish. As part of this transaction Hortense was made residuary legatee of her uncle; she lived a wretched life with her husband, and finished up as one of the beauties of the court of Charles II.; she died of drink in London. Olympe married Eugène of Savoy Carignan, who was also Comte de Soissons through his mother, Marie de Bourbon. Olympe became by this match *Madame la Comtesse*, one of the greatest ladies of France. She was one of the first of the mistresses of Louis XIV.; she had a son who was Prince Eugène of Savoy, the friendly rival of Marlborough; she was implicated in the great poisoning affair of Brinvilliers and la Voisin, fled from France, and lived the rest of her life as a suspected poisoner in Madrid and Flanders.

The fifth sister, Marie, is Mr. Williams's chief heroine. For one thing, there is far more material available about her; for another, her career was certainly the most interesting. She was apparently brilliantly beautiful and brilliantly clever, full of political ambition, and equally adept in decking her black braids with becoming ribbons. Louis XIV. was the playmate of her youth, and in his shy young days as King, when Mazarin ruled France and His Majesty was by common consent relegated to the functions of Master of the Revels, he

found in Marie an old friend with whom shyness was not in point, and whose beauty, whose heart, whose mind, were devotedly at his service. There can be no reasonable doubt that Marie loved Louis for himself, and the King, with good reason, fell very much in love with her. The story of their amours is the only edifying one of the many like it that mark the reign of Louis XIV., but for its many curious episodes the reader must be referred to the book. Here, let it suffice to say that Mazarin used his niece's romance as the determining agent in one of his most brilliant political strokes, but later separated the lovers, though not without a great struggle on the part of the King. Marie eventually became the wife of the head of the princely house of Colonna, but her romantic adventures did not cease with her marriage. They were indeed so numerous and remarkable that the reader will probably not echo the sentiment of the pious Madrilene nuns in whose charge, the Princess Colonna, the Constableness, as her title ran, was once placed, and who, according to Charles II., met her at their gate, chanting:

Libera nos, Domine, de la Condestabile.

Algiers and Tunis; painted and described by Frances E. Nesbitt. New York: The Macmillan Company. \$6.

This sumptuous volume would not be an important contribution to the literature of North Africa except for its seventy illustrations, reproduced from watercolors by the author. Decorative and unmistakably full of local color and spirit, they may be roughly divided into two classes, those representing mosques and minarets, narrow street vistas, huddled groups in marketplace and courtyard being in general more typical and satisfying than country scenes, distant views, and sunsets—though these are often excellent.

Arab architecture is invariably well suggested, its arches showing as rough and solid as actual sight presents them, while the colors, even to the tawdry green and red spirals encircling the columns, and the pale, blue-green of mosque doorways, are always true. The figures of old Arabs stalking with unutterable dignity through narrow labyrinths; gathered in solemn groups in the *souks* or under a sky of blazing blue, are highly satisfactory. Especially to be commended are the sketches of white-robed figures against the white arches of the market at Biskra (p. 58), the fruit market in the same town (p. 64), the "begging Marabout" (p. 82), and the "game of draughts" at Constantine (p. 112).

But not as much can be said of the accompanying literary, historic, and descriptive letter-press. Here the author is working in a less familiar medium, and her style, while amiable and well-intentioned, brings no atmosphere, tells nothing new, and is almost unrelieved by those touches of humor which make tales of travel and personal experience brilliant or even readable. Occasional sentences without subject or verb may be found, as on page 27 (bottom); and in the middle of page 222, where a discriminating sentiment as to afterglows is marred by its formless expression.

In spite of this laxity of language and of a certain amount of worked-over, guide-book information, the volume is unmistak-

ably written by one who possesses the artistic temperament, a keen eye for color, and upon whom light and shadow exert their magic power. She feels the delicious thrill of the ever-present, blinding whiteness, the depth of brilliant blue in the sky, the grace of draped figures and burnous folds. But something more than this is necessary. A certain psychic sense is needed to feel, even more to describe, the desert and its long, long call. This the present author lacks. She tells us the glamour is there, but does not recreate it for the reader. Perhaps she did not penetrate far into measureless Sahara spaces.

El Djem with its marvellous Roman amphitheatre, is quite inadequately treated, although the sketch gives a fair idea of its enormous impressiveness. Bardo is summarily dismissed in a single sentence, without mention of the riches in its Museum, where one may read the story of Punic as well as Roman days. But perhaps most disappointing of all is the curiously indifferent chapter upon Carthage.

There is an excellent and picturesque map, and a fair index.

Hebrew Religion to the Establishment of Judaism under Ezra. By W. E. Addis, M.A. New York: G. P. Putnam's Sons. \$1.50.

Professor Addis of Manchester College, Oxford, is a competent scholar in Old Testament matters, and his sketch of the earlier and more important periods of the development of Hebrew religion, though making no claim of originality, is in fact a careful and thorough study of its subject. The limit set is the middle of the fifth century, B. C., when the compilation of the Pentateuch was completed. By confining himself within this period the author has opportunity for discussion of all the larger and more difficult questions in the history of Hebrew religion and for presentation of its real strength and genius, while he saves himself the necessity of dealing with the more barren problems of later Judaism. The sections which treat of the primitive forms of Semitic religion and the early Jahveh worship are of special excellence. Popular interest in Old Testament themes has not seemed to extend to these important topics, and while scholars have been informed through the writings of Wellhausen and Robertson Smith, there has been no concise, clear account adapted to general circulation. One thinks of the elaborate article of Kautsch in "Hastings's Dictionary of the Bible," which is especially full in its discussion of this period, and yet Professor Addis seems to have supplied a real want in his fair discussion of what is to be known of Hebrew society before the work of the literary prophets. Even with his endeavor to be cautious it will appear to many who have had experience in trying to establish facts by means of the uncertain and conflicting traditions of the Mosaic period, that Professor Addis sometimes goes beyond the evidence. It is perhaps too much to say that it was Moses who made Jahveh the God of the Hebrew tribes collectively, and that Moses excluded the worship of all other gods. There is much to be said in favor of reserving the latter honor for Elijah. Yet on the whole, Professor Addis keeps well within the safe ground of es-

established fact, with caution to the reader when opinion is uncertain. His graphic style and ability to render a situation clear in few words make his essay suitable for popular or general use. The book is provided with an index; which some of the volumes of the Crown Theological Library lack.

Notes on the History and Political Institutions of the Old World. By Edward Preissig, Ph.D. New York: G. P. Putnam's Sons. \$2.50 net.

Following a modest title and a modest preface, the contents of this work are of a pretension more modest still. Dr. Preissig lays no claim to originality and tells us that his book has "grown out of a set of student's notes, compiled in preparation for an examination." The substance of the narrative is drawn from the writings of Prof. P. V. N. Myers; the account of political institutions owes a like obligation to "The State," by President Woodrow Wilson. It seems particularly strange that Mr. Myers should stand in need of an interpreter, or even that it should have been deemed advisable by any one to publish an abridgment of his numerous publications. The neglectful undergraduate in search of a cram book might welcome an epitome of the *Corpus Myersianum*, but Dr. Preissig gives us a book of over seven hundred pages. As there is little promise of a short cut in this portly octavo we fear it will be avoided by the retarded freshman or sophomore. Unfortunately it is not well adapted for the use of other readers.

The compiler who has devoted little attention to the subject with which he is dealing, takes a grave risk. Besides reproducing any slips which may occur in the authorities he has employed, he is certain to add numerous errors of his own. Dr. Johnson said of Goldsmith that he simply transferred knowledge from one place to another and did not know what was in his own books. But few compilers have Goldsmith's grace of style, and it is by no means an easy matter to transfer knowledge from one place to another without letting some base admixture of carelessness or misapprehension slip in. Dr. Preissig furnishes us with a curious patchwork. Passages drawn from Bagehot, Bryce, Fustel, and Gibbon are likely to be good wherever we find them. Dr. Preissig has strayed far enough from his Myers and his Wilson to make the acquaintance, in part, of these celebrated authors, but we cannot pretend that his use of their works is altogether judicious. The connecting links lack strength. The arrangement of subjects is in many ways defective. The general effect is amorphous rather than organic.

Dr. Preissig thinks that Cambyses conquered Egypt in B. C. 500; that Praxiteles, Apelles, and Plato adorned the age of Pericles; that the reign of Marcus Aurelius was "prosperous"; that the *Novels* were issued by Justinian himself; that the loss of Odessa was the cause of the Second Crusade; and that Wycliffe's preaching was the cause of Wat Tyler's rebellion. But in criticising this book somewhat severely we have not in mind the large list of *corrigenda* which it could be forced to yield, so much as faults of a more

rooted character. The following statement regarding "the [mediæval] Town and Feudalism" speaks for itself in respect to both form and substance:

The towns were not drawn into the system of feudalism without opposition, and though in time they were compelled to acknowledge the sovereignty of some feudal lord, the municipal organization—which was in opposition to the principal idea upon which rested feudalism, the latter being political power based upon ownership of land—or at least a part of its features, was preserved even until after the collapse of feudalism.

Without discussing details, we submit that a sentence of this kind, supplemented by two equally nebulous sentences concerning guilds, will hardly pass muster for an account of the relation between the mediæval towns and feudalism. In a word, Dr. Preissig's general statements are the weakest part of this book. "The Crusades," he observes, "form one of the most conspicuous examples in all history of the truth of Cowper's lines, 'God moves in a mysterious way His wonders to perform.'" But we need not multiply illustrations. Dr. Preissig's compilation from Myers *et al.* is a loose abstract of well-known volumes which has been prepared without much help from the reflective powers of the compiler.

Drama.

"PAOLO AND FRANCESCA."

The production of such a piece as the "Paolo and Francesca" of Stephen Phillips in a New York theatre this week is something of an event in these degenerate days. Perhaps the most satisfactory feature of it was the intelligent comprehension which was displayed of the treatment due to romantic drama. When the "Ulysses" of this same author was presented here, its prompt failure was assured by the incompetence of nearly everybody concerned in its performance. H. B. Irving, the elder son of the late Sir Henry Irving, evidently has laid to heart some of the lessons taught by his father. In some respects his presentation of Mr. Phillips's tragedy might easily have been improved. His supporting cast, when considered individually, is by no means a strong one. His Paolo, E. H. Williams, is far from an ideal lover, while his Francesca, Miss Dorothea Baird, has no special qualifications for the part, beyond a pleasing girlish innocence. But, collectively, the company do fairly well, working together harmoniously and generally preserving the proper atmosphere of the scene. Few of them are expert in the delivery of blank verse—most of them being inclined to chant it—but all show at least a modest acquaintance with the swing and rhythm of it. The whole setting of the piece, both costumes and scenery, is admirably tasteful and appropriate, the coloring being especially rich and harmonious.

Rich as Mr. Phillips's work is in literary graces, and strong as it undoubtedly is dramatically in some of its scenes, it can scarcely be called a great play. In construction and in general theatrical quality, it does not compare favorably with Mr. Boker's well-known drama on the same subject. Some of the expedients employed,

such as the overhearing by the concealed Giovanni of Paolo's convenient confession in the drug shop, betray an inexperienced playwright. And the course of the action throughout seems to be governed more by the necessity of situation than by the laws of nature or consequence. Beyond question the bitter jealousy of Lucrezia and the mystic forbodings of the blind Angela give rise to effective situations, but it is doubtful whether interest in the fate of the lovers is increased by ascribing it to predestination rather than to circumstance or opportunity. Moreover, there is something unnatural in the instant transformation of the childish innocent wife into the blind votaress of passion. The crisis is not sufficiently accounted for. It is not until the fourth act that the atmosphere is laden with the sense of impending and inevitable tragedy. Thenceforward, the dramatist is absolute master of the situation, and unfolds it with a fine perception of theatrical effect as well as artistic law. The invisible slaughter of the guilty lovers is infinitely more impressive than any execution upon the stage could be. There is an awful mystery about the secret hidden by the curtain through which Paolo and Francesca have disappeared, and it is intensified by the apparition, from behind, of the ghastly, silent Giovanni. As drama, this one scene is worth almost all the rest of the play put together.

Mr. Irving, knowing his own capacities, made no mistake when he selected the part of the avenging husband for himself. It is a study of a stern soldier, wounded to the core in his honor and affection, and impelled to ruthless revenge by a rage too strong for reason or compassion. It is worthy of a great tragedian. Mr. Irving is not this yet. He is too prone, as, at times, was his father before him; to fall into melodramatic excess in the portrayal of minor passions. But he is capable of rising to a lofty occasion. His management of the great closing scene evinced both inspiration and rare executive power, and stamped him as a player of whom great expectations may reasonably be formed. In face, figure, speech, and manner he is much like his father, but he is not in any sense an imitator of him, although, as is natural, he reproduces unconsciously some of his characteristic looks, attitudes, and gestures.

Famous Actor Families in America. By Montrose J. Moses. New York: Thomas Y. Crowell & Co. \$2 net.

Of the information contained in this book there is much that is useful, much more that is trivial, but very little that is original, and of that little it must be added none is particularly valuable. But Mr. Moses evidently has been a diligent student of modern theatrical literature—including not only volumes of acknowledged authority, but a vast mass of current stage biography scarcely worth the paper it is printed on. He has compiled a sufficient quantity of dry detail, dates, anecdotes, criticism, and adulation to make more than three hundred pages of solid printed matter, which might profitably have been condensed into one hundred and fifty. Apart from occasional expressions of personal opinion, of which only a small proportion can be founded on actual experience, he offers nothing in the way of knowledge or enlightenment to

any person fairly conversant with dramatic history, and he has arranged his matter in a haphazard fashion that can only be accounted for by great haste or an exceedingly slovenly literary habit. His work creates the impression, indeed, of having been constructed, in a large measure, by the aid of scissors and paste-pot. At the same time it is only fair to say that, except in the case of some dubious anecdote, he seems to have been careful and accurate in the collation of his details, and his sketches of his selected players are sufficiently full for the ordinary reader. All specialists, of course, would prefer to consult the primary sources of information, rather than the brief samples which he gives of them.

His application of the term "famous" to some of his chosen families is curiously significant of the literary and critical value of his book. In common with the majority of contemporaneous chroniclers of things theatrical, he seems to think that fame is synonymous with temporary notoriety, a product of commercial advertisement. How many of the names which he enumerates does he suppose will survive the memory of the present generation? J. B. Booth and his son Edwin were great actors, who marked a dramatic era, as did Garrick, the Kembles, and Edmund Kean. The renown of Joseph Jefferson, of E. L. Davenport, of James W. and Lester Wallack will last long, and old playgoers will not soon forget John K. Hackett, Mrs. John Drew, or George Holland, but all these, though brilliant performers, fell somewhat short of the highest rank. They towered, however, above their related juniors, and the grouping of the latter in the same category with them is preposterous.

It is a somewhat curious, and it is to be feared not very profitable, experiment which Mrs. Steele Mackaye has made in her dramatization of Jane Austen's "Pride and Prejudice" (Duffield & Co., New York). Naturally, few of the peculiar excellences of the book survive in the play, in which the lack of action, or of anything like real dramatic interest, until the very end, is only too apparent. There are still traces of the author's skill in the depiction of character, together with a certain fine flavor of the older comedy, but the dialogue bears the marks of age very clearly, and it is exceedingly doubtful whether any of our modern players would be able to speak it with the proper rhythm or emphasis.

The famous old Adelphi Theatre in London is celebrating its centenary. At first it was called the Sans Pareil, but since 1819 it has been the Adelphi. At that time Sir Walter Scott was all the rage, and the first "big" productions included "Kenilworth," "Waverley," "The Heart of Midlothian," "Ivanhoe," and "St. Ronan's Well." In 1821 Pierce Egan's "Tom and Jerry" made a great hit, and in 1830 came Buckstone's "A Wreck Ashore." In 1844 Benjamin Webster's celebrated connection with the theatre began. Under his rule Madame Céleste made a deep impression with her Cynthia in "The Flowers of the Forest," and her Miami in "The Green Bushes." John Reeve, Edward Wright, and J. L. Toole were successively principal comedians at this house. From

1850 started the production of dramas by authors of the class of Tom Taylor, Watts Phillips, Dion Boucicault, and Charles Reade. Webster rebuilt the Adelphi in 1858-59, and the Messrs. Gatti began their memorable tenancy in 1866. Latterly the theatre has been associated with the higher forms of the poetic drama.

Arthur W. Pinero's "His House in Order" will be given this winter in Copenhagen by Madame Ida Neilson, a famous Danish actress. In Paris it is to be rendered by the stock company of the Théâtre Antoine, but, presumably, without Antoine himself, who has become the manager of the Odéon.

Music.

The Art of the Singer. By W. J. Henderson. Scribners. \$1.25 net.

Probably the best thing in Mr. Henderson's book, the "Art of the Singer," is his defence of that art. In reply to the declaration of an acquaintance that singing is an artificial achievement, he says: "The truth is that while speaking is nature, singing is nothing more than nature under high cultivation. The culture of wild flowers has in some instances given us beautiful additions to the garden. Speaking is like the wild rose; singing like the American beauty." Unfortunately, it is much more difficult to achieve a Nordica, an Eames, or a Farrar than a perfected rose; each gardener has his own method and each one condemns his rivals as humbugs. Of these squabbles among teachers of singing Mr. Henderson gives an amusing account in the third of his fifteen chapters, which is concerned with breathing. Here, as in everything, the great singers are safer guides than the best of teachers, and Mr. Henderson expresses his indebtedness, in the preface, to Mesdames Nordica and Sembrich, and M. Jean de Reszke. Regarding breathing we read that "Mme. Sembrich, who is a past mistress of sustained and smooth delivery, is a firm advocate of the use of the half-breath in singing. In other words, instead of attempting to let the whole body of air exude from the lungs and then completely replenish it, one should take half breaths before the storehouse is empty, and thus keep it occupied. . . . The object of the half-breath is to prevent depletion where there is not time to get a full inspiration."

The teacher, too, has his uses, however, as our author concedes. In discussing the secret of the pure bell-like attack, he says:

The student will naturally ask how he is to know when he is getting this kind of attack. There are two ways of ascertaining. One is by one's own sensations, and the other is the report of a competent hearer. It is in the latter capacity that the trained teacher is essential; . . . the teacher is the guide whose experienced ear detects vocal error and who knows the cause of it.

The trouble with teachers is that most of them teach only "songs without words." "Nine-tenths of the songs we hear are songs without words"; that is, the singers enunciate so indistinctly that they might as well be playing violins or flutes, so far as the words are concerned. To emphasize this defect, Mr. Henderson frames this definition: "Singing is the in-

terpretation of text by means of musical tones produced by the human voice." In this sense the originators of Italian opera looked on the art of singing, but in later centuries that opera became the home of the instrumental style of singing, and it was the Austrian Schubert and the German Wagner who restored to the text its proper importance.

In a valuable chapter on Wagner Singing, Mr. Henderson makes it clear that the method of singing demanded by Wagner in his operas and his essays is far different from the present-day Bayreuth ideal. Wagner himself, he concludes, after reading his essays, "would have given much if he could have found a Jean de Reszke to introduce his Parsifal, and a Ternina or a Nordica to make known his Isolde." But the author's criticisms of Alvary and Niemann are much too severe. Alvary was, on the whole, quite as wonderful a Siegfried as Jean de Reszke; and to say of Niemann's Tristan, "It was magnificent; but it was not Wagner," is most unjust. Niemann, when he came to America, had lost the *Schmelz*, the sensuous beauty, of his voice, but he had all the other—the intellectual and emotional—qualities that make a great singer; and to condemn him simply because the sound of his voice was not always beautiful, is to fly in the face of all the good lessons enforced in Mr. Henderson's own book.

"Erinnerungen," or reminiscences of Eduard Strauss has just been issued by Franz Denticke. Eduard Strauss, though far less talented than his two brothers, Johann and Josef, nevertheless played an important rôle in the musical life at Vienna, where he had his own band for balls and concerts during a period of forty years. It was at these concerts that Richard Wagner first came before the Austrian public with samples of his later works. All three of the Strauss brothers (especially Josef, who died young) were enthusiastic admirers of Wagner, and it was through them that the Viennese heard "Lohengrin" and the Imperial Opera opened its portals to these works.

Art.

Denkmaeler Aegyptischer Sculptur. Herausgegeben und mit erläuternden Texten versehen von Fr. W. Freiherrn von Bissing. 144 plates (25 ready). Munich: F. Bruckmann.

The most prolific of pre-Greek art, and undoubtedly also the most important, is that of the Egyptians. It is remarkable that its finest surviving monuments have never been made accessible to the student, in a publication done after the most approved modern processes, in such form as might be employed in the class and lecture-room. It is to meet this lack that Baron von Bissing has joined forces with the house of Bruckmann, in the production of a fine series of heliotypes, which will undoubtedly do much for the study of Egyptian art. For this service both editor and publisher have earned the gratitude of every archæologist. The sumptuous plates vary from about 7x9½ to 9x10 inches, with generous margins. The publishers' past

achievements are sufficient guarantee of the character of the execution, although there are a few cases in which the negative from which they worked might probably have been improved.

On the whole the selection of the most important works of sculpture has been good. One or two omissions are noticeable. It is hard to conceive any good reason for not including the superb wooden doors bearing the relief figure of Hesire, now in the Cairo Museum; and the stela of the serpent-king recently acquired by the Louvre, unquestionably the finest product of proto-dynastic art. In the list of works proposed from the Saitic age, the renaissance of Egypt, we find only four subjects. This seems too few. Moreover, one of these four should certainly be the magnificent head of an old man in green stone at Berlin. If Bissing has any doubt as to its pre-Greek age, and its freedom from Greek influence, as he once said he had, an examination of the unquestionable Saitic relief installed beside it, will dispel his doubts. The relief just mentioned contains a head, which is the very counterpart of the green stone head in question, showing that the Saitic sculptors produced just such marvellous portraits long before Greek sculpture had arisen. A partiality for the pieces in his own fine collection may perhaps be forgiven the author, but, here and there, more notable works might have found place in the series but for this tendency. The inclusion of the archaic head of Naples was hardly a wise choice. The photographer also has sometimes stood too low.

The editor has supplied a text furnishing the necessary bibliography, and a comparative interpretation, with useful half-tone cuts of related works. One cannot but regret the adoption by the author of a system of chronology which places kings of the first dynasty as far back as 4500 B.C., more than a thousand years too early. This system rests upon the most arbitrary assumptions, and, judging from his recently published remarks, is no longer regarded as wholly tenable by the author himself. The author offers this publication as a basis for modern research. What would he think of a similar series of Greek sculptures without the inscriptions? The point of view selected often makes it impossible to see the inscriptions upon a work (*e. g.*, plate 12a), and in such cases the author's text should have included a fac-simile of the inscriptions. It is now necessary to resort for them to some other publication, or to work entirely without them. Whether the author should include a treatment and discussion of the inscriptions is another question. He has not done so. Surely, it adds much to the human side of the picture, when we view a relief depicting the Egyptian noble riding abroad in his palanquin 4500 years ago, to know that the carriers trudging with the heavy poles upon their shoulders are singing a song which closes with the refrain,

It is pleasanter when full,
Than when it is empty,

meaning that the burden of their lord is more agreeable to them than the empty chair. This song is recorded in the relief among the carriers (plate 18). Such disregard of the inscriptions is also a loss

in another way. Many archaeological facts find illustration or sometimes explanation in the great mass of surviving inscriptions elsewhere. The author seems not to have given attention to such sidelights from contemporary documents.

In matters archaeological some curious slips occur. In the relief of the palanquin-bearers already discussed (plate 18), the "fans" which the author sees in the hands of the attendants are, of course, sunshades. Few now accept the lines along the jaws of royal heads as fastenings for an artificial beard (plate 9). Finally, in the text to plate 10, there are not "zehn andere" statues of Sesostris I., but only nine; for only ten were discovered in all, nine besides the one published. Such errors as this would indicate that the author's notes have, at least in some cases, been published without the ripe study and research which such work demands. One cannot but regret, for the author's sake, the premature appearance of such remarks.

The faults—so easy to find—do not, however, destroy the timeliness and usefulness of the work as far as issued, and the hope that the remaining ten parts of the twelve may soon appear. Unquestionably students of art, art libraries, and the art departments in our colleges and universities will find these plates an indispensable survey of the great works of Egyptian sculpture.

Under the long but descriptive title, "Illustrated Catalogue of a Loan Collection of Portraits of English Historical Personages who died between 1714 and 1837, Exhibited in the Examination Schools, Oxford, April and May, MDCCCLVI," the delegates of the Clarendon Press publish the present model catalogue. The interest of this exhibition, like that of its two forerunners, was chiefly historical and iconographical, but a show that out of 205 numbers includes three Gainsboroughs, ten Sir Joshuas, and nine Romneys (not to mention such small fry as seven Hoppners and eight Lawrences), is not negligible from an artistic point of view. The handsome quarto, with its twenty-three plates, appeals chiefly, however, to lovers of biography and physiognomy. Here one has, for example, the chubby form and visage of Edward Gibbon as it appeared to Henry Walton, Reynolds, and Romney. These three varying presentments give a converging effect of force and vivacity under a superficial appearance of complacent mediocrity. Similar parallel studies may be made in the case of Addison, Sir William Blackstone, Matthew Prior, and others. But it must be said that the bigwiggy of Kneller and his disciples is of necessity unpleasantly prominent. The cataloguing is scrupulously minute, giving full indications of provenience, etc. Two pages of signatures in facsimile will be welcome to students of the obscurer eighteenth century painters. It will pay collectors who expect to come easily by Gainsboroughs and the like to make the nearer acquaintance of Tilly Kettle and similar minor portraitists of quality. Lionel Cust contributes a brief introduction, tracing in scholarly fashion the rise of the native school, but such appreciations as Sir Joshua "has not been surpassed in the general excellence of his portraits" are surely adapted solely to the longitude of Greenwich-on-Thames.

Three of the younger German painters, Ludwig Dill, Adolf Hölzel, and Arthur Langhammer are dealt with in "Neudachau," by Arthur Roeszler, the latest of the Knackfuss Art-Monographs. (Bielefeld and Leipzig: Velhagen & Klasing; New York: Lemcke & Buechner.) There is much resemblance between the pictures by the three men, and all show that mingling of impressionistic influence with older German (Munich?) tradition which is characteristic of so much of the art of Germany to-day. The work is vigorous but seems hardly to contain enough beauty to be worth while. Perhaps the color, necessarily absent from the reproductions, may redeem the almost brutal handling and the extremely summary drawing. The most curious things in the book are two specimens of what Mr. Hölzel calls "abstract ornament," things which others would call nonsense drawings, or mere scribbling. They are certainly so far "abstract" that they represent nothing in the heavens above or the earth beneath or the waters under the earth, but what they could ever ornament is beyond our conception.

Titian's "Sacred and Profane Love" receives still another interpretation, by Leonardo Ozzola in *L'Arte* for August. The nude figure is Venus, who persuades Helen, the draped figure, to run away with Paris. This explanation is based on the bas-reliefs that adorn the front of the fountain. These are said to represent the fatal consequences of Helen's frailty. To the left is the wooden horse by which Troy fell. Behind it Menelaus pursues Paris, the figures being merely indicated. To the right is the scene in which Deiphobus, Paris's successor, is betrayed by Helen and murdered in his sleep by Menelaus. So much for a guess at a difficult puzzle which is perhaps more plausible than any we have yet had. In the same number of *L'Arte* is reported the discovery of a large fresco by Piero della Francesca, in a building near Santa Maria delle Grazie, Arezzo. It is mentioned in Vasari and depicts St. Donato healing a blind woman. The work is of great size, fifty feet by nine, but has as yet been uncovered only in part. The heads reproduced are evidently portraits, and, though much damaged, of fine quality.

Science.

We never take up a volume of the Index-Catalogue to the Library of the Surgeon-General's Office (Washington) without being reminded of that other stupendous enterprise, the "Oxford English Dictionary." The Catalogue too may make boast of its being compiled "on historical principles." For a bibliographical example, take the rubric Monardus in the newly issued Volume XI, Second Series (Mo-Nyström). The Library has acquired this author's "De Simplicibus Medicamentis [brought from Western India]," turned into Latin from the original Spanish, by Charles Clusius, and bearing date 1574, with another edition in 1579; then, in 1602, A. Colin's French version; and, finally, a German rendering by Stünzner, of modern imprint. Herein we have exposed the real *fatum libelli*. In the field of science, again, the N-rays make

their entire appearance since Series I. of the Catalogue was concluded, and in the books and periodical articles cited we may trace the progress of human invention and discussion over this phenomenon from the beginning. Genuine history. So with Mosquitoes as transmitters of disease, revolutionizing our notion of pestilence. Biography, the Siamese twin of history, is ministered to by the unexpected entries—Molière: "Le Malade Imaginaire," "Le Médecin malgré lui," "L'Amour Médecin," and by quite a little literature regarding the dramatist's medical associations, and characters and diseases in his plays. Likewise, Montaigne is shown as a nurse, in his views on medication, his taking waters, his drunkenness, etc.; and Napoleon I.'s ailments, last moments, and autopsy are spread out for whoever would study them. For the rest, the great medical titles are Nerves and their affiliations (224 pp.), Nose (99), Muscles (46), Monsters (21)—with a section on the other creations in mythology and art; Morphine, Mouth, Myxœdema—goitre, cretinism, etc.; Neck. One may stumble on anything in this vast collection, *e. g.*, Needles, with reference to needles and pins in the body; or Negroes, with a special section for the United States, of broad inclusiveness. But "simplified spelling" we may happily not look for, in the nature of the case.

Apparently, the motive for the suicide of the eminent Austrian physicist, Prof Ludwig E. F. Boltzmann, was nervous exhaustion, aggravated by dread of losing the full control of his mental faculties. It was after his return from his last lecturing trip to the United States in 1905 that Professor Boltzmann's malady first assumed a serious turn. His lectures at the University of Vienna were announced last summer, but not given, and it was rumored that he was under constant supervision because he had repeatedly attempted to commit suicide. Professor Boltzmann was born in 1844. At different times he has lectured in the universities of Graz, Munich, and Leipsic. As early as 1887 he was honored by an invitation to become the successor of Kirchhoff in Berlin. He has written much on scientific subjects, but he is best known as the author of "Lehrbücher der analytischen Mechanik, Elektrizitätslehre und Gastheorie."

Interesting details come of the expedition in German East Africa by the Swedish explorer, Prof. Yngve Stöstedt, and two other men of science. The expedition lasted about a year; its main object was to study the animal and plant life of the southern slope of Mount Kilimancharo, where the ascent gradually passes from a tropical to an arctic climate. Stöstedt saw a number of species of animals which are extinct, or nearly so, in most other parts of Africa. He found the now rare giraffe present here in large numbers, including one kind previously unknown to zoölogists.

The Scientific Supplement (Beilage) of the Munich *Allgemeine Zeitung*, the best and most influential general scientific journal in Germany, has just changed editors. Dr. Oskar Bulle, who has had charge of the periodical for nine years, now retires, and is succeeded by Dr. Julius Petersev, also of Munich.

Finance.

THE TREASURY AND THE BANKS.

Secretary Shaw announced last Friday that, in view of the money stringency, \$26,000,000 of the surplus money in the United States Treasury would be at once deposited with national banks throughout the country. This announcement has a double interest in its bearing, first, on the question of the relation of the Treasury to the market; and, second, on the situation of the money market itself. The fact of a large withdrawal of cash by the Treasury from the market, during the past year, is the obvious ground for the Secretary's action. Between September 1, 1905, and September 1, 1906, the Treasury's cash balance, exclusive of gold or silver held against gold or silver certificates, increased \$43,000,000. The argument is that this cash ought to be restored to the market from which, through excess of revenue over expenditure and through the \$30,000,000 Panama Canal loan subscription, it had been withdrawn. It may be so restored by depositing the idle cash in bank.

Strict interpretation of the law requires, however, that a national bank receiving public moneys shall secure them by depositing Government bonds with the Treasury. But the supply of Government bonds obtainable for such purposes had become so small that banks could not qualify to the full amount desired. With this obstacle Secretary Shaw has dealt by construing the law so as to admit other deposited security than Government bonds—an expedient of doubtful legality, first adopted by him in 1902. He has also reversed the ruling of previous secretaries, whereby deposits of public money could be turned into the banks only by gradually delivering to them the accruing internal revenue. His predecessors had reasoned that money, once in the Treasury, could not be withdrawn, even for deposit in bank, except by Congressional appropriation; hence, money for deposit must be stopped on the way to the Treasury. Mr. Shaw advanced in 1903 the theory that the national banks, considered as depositories of public funds, were really part of the Treasury; hence that money already in the Treasury's vaults could be turned over to the banks on deposit.

These two actions by the Treasury illustrate rather strikingly the anomalies of the existing system. The whole discretion in the matter, even to the extent of straining the law, converges upon one man, and one man, with the best intentions, is liable to err. He might throw deposits into the banks at a time when they would merely encourage a dangerous stock speculation; he might refuse to release funds when disaster in the money market would be the consequence. The episode sufficiently illustrates the dangers of the system. It proves conclusively the need of a law for custody of the public surplus, which should remove these evils. The New York Chamber of Commerce, two years ago, proposed such a law, whereby the required collateral should be widened in scope, and interest payments required from bank depositories; the presumed effect of this plan would be to draw superfluous Government funds to the banks when they were really needed

by the market, and to send them back when they were needed no longer. Congress has hitherto refused to act on any such measure.

Mr. Shaw's announcement stipulates that the \$26,000,000 are to be widely distributed. New York and Chicago are to be allowed only \$3,000,000 each; four other cities, East and West and South, \$2,000,000 each; four others, \$1,000,000 each; sixteen others, \$500,000 each. The obvious purpose is to prevent the converging of the whole amount on Wall Street, where, through the banks controlled by them, the powerful millionaires who have been building up a fabric of stock speculation in the face of a money stringency, could seize possession of the funds. It is by no means certain that this purpose can be attained. Mr. Shaw has already warned the banks that they must not lend their public deposits in Wall Street, and they probably will not do so. But they can accomplish the same end in another and indirect way. What they can do is to leave in the Wall Street market money which is already loaned there for their account, but which they were expecting to call home. In the meantime the banks can use the newly received Government deposits to meet home requirements. In a very real sense, therefore, the secretary's deposits, even at such far-off points as New Orleans, Minneapolis, and Omaha, may act as a "windfall" to the New York speculators. This again illustrates the dangers of leaving such arbitrary power in the hands of any public officer.

A NEW NOVEL BY ONE OF AMERICA'S LEADING CRITICS

The Poet and the Parish

By MARY MOSS, \$1.50

Probably most readers of the *Nation* are familiar with Miss Moss's noteworthy reviews in the Atlantic. In this novel she seems to have successfully gotten into the inner nature of an American poet. Felix Gwynne is a man of clean life, who chafes at conventions. His sensibility and "nerves" are often as amusing as pathetic, and the account of his suffering for instance when dining with some "literary" people highly diverting. But the book is not all sunshine. There are suspense and dramatic moments.

Joseph Vance

By WM. DE MORGAN. \$1.50

"A remarkable novel—a fine novel. . . . No book has appeared for long in which the lovers of classic tradition in English fiction are likely to find such generous entertainment."—*London Spectator*.

HENRY HOLT & CO

WHAT WE ARE DOING FOR LIBRARIANS.

We now have the most efficient department for the handling of Library orders.

1. A tremendous miscellaneous stock.
2. Greatly increased facilities for the importation of English publications.
3. Competent bookmen to price lists and collect books.

All of this means prompt and complete shipments and right prices.

THE BAKER & TAYLOR CO.,
WHOLESALE BOOKSELLERS,
33-37 East Seventeenth St., New York.

CUBA AND THE INTERVENTION

By ALBERT G. ROBINSON ("A. G. R.") Large crown 8vo. 370 pages. \$1.80 net. By mail, \$1.92.

"A book which is destined long to figure among the most valuable materials for a comprehension of Cuba's history at a critical juncture. . . . The author was an eyewitness of the events that he describes, and he brought to his task a mind qualified by education and experience for the work of observation."—NEW YORK SUN.

LONGMANS, GREEN, & CO., New York

David Garrick and His Circle

By MRS. CLEMENT PARSONS

8vo, with 36 Illustrations. Net, \$2.75

Mrs. Parsons' book is first of all a life of the greatest of English actors, a record of his triumphs and a study of his methods. It is also a broad picture of social life of the day. The work will receive the praise of the judicious on the score of its delightful pen portraits—that of Garrick as the centre of interest—of the notabilities of the Augustan Age, on account of its faithful and animated pictures of the 18th century social life—particularly theatrical life and manners.

Send for New Illustrated Catalogue.

VOLUME ONE OF THE NATION, bound and in good condition. Address PUBLISHER OF THE NATION.

The Nation.

NEW YORK, THURSDAY, OCTOBER 11, 1906.

The Week.

In deciding to let the construction of the Panama Canal by private contract, the Canal Commission has adopted the wisest policy. It is doubtless the one which in the end will cost the country far less money than if the Government should undertake the whole great work itself. It is just three years since we filched the Panama Canal strip from Colombia, on the ground of urgent necessity for the immediate construction of the canal. That it has taken so long to reach this fundamental decision shows again how ridiculous was the claim that we had no time to negotiate another treaty with Colombia before making the "dirt fly." Whether contractors can now be found to undertake the work remains to be seen. We sincerely hope that they will be forthcoming; but there seems to be little enthusiasm among some who would naturally be expected to be eager to bid on the contracts. There are several reasons for this. One is that the present plans do not commend themselves in all details to engineers; another is that the Commission may attach troublesome conditions to the contracts, particularly in relation to Chinese labor.

After a long alienation Senator Albert J. Beveridge has returned to his darling theme of destiny. Destiny apparently retains him to enunciate her occasional oracles, and now employs him to predict the annexation of Cuba. It must come about, because "in the end, destiny will have her way." So speaks the silver-tongued determinist from Indiana. Now, opinions are free, and the topics of destiny and of all the mysterious ways of God with man are dogmatically discussed from a thousand nail-kegs. But these unofficial augurs speak for nobody but themselves. Mr. Beveridge, however, chooses, at a time when President Roosevelt is valiantly undertaking an unselfish negotiation of much delicacy, to declare to the world that the enterprise is impossible. He nudges the average man, and bids him regard a creditable expression of national altruism as so much moonshine. If his words have any weight whatever, they merely increase the burden Mr. Roosevelt has shouldered. Fortunately, the private opinions of Mr. Beveridge, while doubtless interesting to the State of Indiana, are not highly important to the nation at large. Least of all is Mr. Roosevelt likely to heed the cold water his friends throw upon a generous project. To the

principle of forbearance in Cuba, he is committed both by personal conviction and by self-interest. In any case, he would do his best to prevent the crumbling of that ideal of a Free Cuba for which he hazarded his life, while he knows well that the annexationist movement is highly suspect. Then, too, he is not used to kneeling ecstatically before the shrine of Our Lady Destiny, but is generally up and taking a hand himself.

The impression, helped on by his own speeches, that Secretary Taft would not take the first vacancy occurring on the Supreme bench is now confirmed. It is, of course, the effect of this decision on the next Republican Presidential nomination that will receive most attention. And yet the Taft "boom" is not of the same character as the "booms" for aspirants like Shaw and Fairbanks. It is not a thing of deals and cunning manipulation, but is based on the general and hearty admiration that is found on every hand for Mr. Taft and his services. It may be that this country will be as unable to find a man capable of carrying on his work in Cuba as it has been thus far to find a governor able to fill his shoes in the Philippines. Even in the strongest Democratic opposition to some of the policies he favors, there is never a note of the bitter or vindictive. He is cartooned by the opposition press in a vein of friendly banter, as hastening from place to place with the "lid" ready to be clapped over any centre of disturbance and held down with his own ponderous bulk. The big, sane, straightforward Secretary has made a place for himself in our public life which has no exact counterpart in our history.

An economic event, of possibly great importance, has occurred in the granting to the United States Steel Corporation of perpetual control of the Great Northern Railway's iron ore lands. In financial circles, the real significance of this contract has been lost to sight through Wall Street's feverish anxiety to know if it would not "boom" the stocks concerned. As to the bearing of this contract on the steel and iron trade of the future, little has yet been said. Yet this phase of the matter is singularly interesting. It is not known exactly how much iron ore lies in the property. Officers of the Steel Corporation, however, make no secret of their belief that this is the last large supply of iron ore available in this country. If this be true, the Corporation has taken a long step towards virtual monopoly. The railway does not sell the ore lands, but

merely leases them on royalty. But the noteworthy feature of the contract is that the royalty for the coming year—a price relatively high—is to be advanced regularly with every succeeding year. Moreover, this increase, to be recovered, presumably, in the selling price of steel and iron, is pledged in the face of a further agreement that the amount of Great Northern ore to be mined and used by the Steel Corporation is to increase three-quarters of a million tons per annum during the next ten years. The parties in interest say, of course, that their contract merely recognizes the probable relation of supply and demand. But, under these circumstances, can iron producers seriously ask retention in our tariff schedules of the \$4 per ton duty on pig iron, not to mention the utterly absurd tax of 40 cents per ton on iron ore—a tax amounting to nearly 50 per cent. of the basic price to be paid by the Steel Corporation to the Great Northern? Granting the outlook to be exactly what the Steel Corporation's experts say, the plain fact is that these "protective" taxes operate with increasing rigor to protect the Steel Trust, not only against the foreign iron-producer, but against all competitors at home.

The American Protective Tariff League, of which our dear friend Wilbur F. Wakeman is the moving spirit, is flying a flag of distress. Mr. Wakeman, in his circular letters, paints a gloomy picture. "The situation throughout the country," he assures us, "is unfavorable to Republican success." He predicts "a serious slump in the vote," so serious that "the best judges concede a loss of some forty Congressmen, which would make a difference of eighty." Mr. Wakeman heaps up the agony: "If we lose forty Congressmen (conceded) there is no telling where the losses will stop." What is the moral of this tale of woe? Send your money to the American Protective Tariff League, which is the one bulwark between us and ruin. On account of limited funds, this benevolent organization is "simply holding up work in many States." The case of Indiana is particularly pathetic. The Republican State Committee has sent a list of "ten thousand first voters with a request for at least six mailings of our documents at the earliest possible date." And for want of a few thousand dollars this flower of Indiana's youth may remain uninstructed in the glorious principles of protection. Mr. Wakeman's circulars, we are pained to observe, are being sent to corporations. The managers of the Republican campaign have professed a desire for single dollars from

plain citizens and humble toilers; they have recoiled from the thought of soiling their fingers with the tainted money of corporations. But Mr. Wakeman reasons, and justly, that if the corporations do not subscribe to carry on the propaganda of protection, no one will. If a few other subsidiary organizations like the American Protective Tariff League should enter the field, solicit contributions from corporations, and use the money for the benefit of the Republican party, the result would be exactly the same as if the party were—as it has been in the past—in direct partnership with the corporations. They drop their pennies in the slot and in return they are privileged to write the tariff schedules.

The report submitted to the New York Chamber of Commerce last week, by its special committee on currency reform, gives a lucid and temperate exposition of the weaknesses of our present bank-note system. For remedies the committee makes two distinct alternative recommendations. First, it advises that a central bank of issue be created, similar to the Bank of France or Germany; that this bank be owned partly by other banks and partly by the Government, but controlled by Government appointees; that it deal exclusively with banks, and perform the functions of issuing currency, holding public deposits, and otherwise acting as agent for the Government. As an alternative plan, the committee advises that national banks continue to issue bond-secured currency up to 50 per cent. of their capital, but that additional notes, up to 35 per cent. of capital, may be issued, subject to a graduated tax, which is to rise from 2 to 6 per cent., according to the ratio of outstanding notes to capital stock. A central bank of issue has long been conceded to be a political impossibility in this country. The public has always shown, and we believe will continue to show, unwillingness to intrust to a single body of men such power. The committee's proposal as to additional note circulation, based on assets alone and taxed progressively so as to insure early redemption when the need for the added currency disappeared, may be said to occupy middle ground between the simon-pure asset currency plan and that of a taxed "emergency circulation" set forth by Secretary Shaw. It has the advantage of providing an effective brake on actual inflation of banknote currency. Whether the complications arising from the "harvest demand" and from the glutting of Wall Street, in dull seasons, with reserve money of interior banks, would be disposed of under the new proposal, is a question more difficult to answer.

The extraordinary actions of the Mut-

ual Life directors, in their effort to force the company's agents to electioneer for the administration ticket, show that these gentlemen still fail to comprehend what a mutual life insurance company is. President Peabody assures the protesting agents that no coercion is intended. The agents refer him to the circular sent to them over the president's own signature, warning them that "all persons connected with the company are called upon to sustain the administration ticket wholly and unreservedly." No one will wonder that this performance should arouse, both among the agents and in the mind of the general public, intense indignation. In Michigan, the Mutual policyholders' committee, who have quite as ready access as Mr. Peabody himself to the facts of the controversy with the Mutual's agent at Detroit, have passed resolutions which "condemn in the strongest possible manner the brazen way in which an attempt has been made to coerce Mr. Paige." What right have the trustees of a mutual life insurance company to require in their own behalf the electioneering service of the general agents? Mr. Peabody and his friends appear to have overlooked the little fact that the policyholders own the company and have a right to choose their own management freely and unreservedly, and that for a management in power to use the machinery of the company for a personal canvass in its own behalf is a gross outrage.

Professor Hinckley Gilbert Mitchell has escaped a trial for heresy by the Central New York Conference of the Methodist Episcopal Church. According to the dispatches, he gets off on a technicality—the charges were not drawn legally—and he may at some future time be brought to the bar. The pursuit of Professor Mitchell by a few professional heresy-hunters of the sect has troubled the more liberal Methodists. He is now a man of sixty, a graduate of Wesleyan University at Middletown, of the Theological School of Boston University, and he holds a doctorate from Leipzig. He has been director of the American School for Oriental Study and Research in Palestine, and he has written half-a-dozen books on questions of Old Testament criticism. This is a creditable record, and the trustees of Boston University recognized it by appointing him to the chair of Semitic languages. The term for this appointment is five years; and when his last term expired in 1905, the trustees reelected him. But here the bishops of the Methodist Church stepped in, with their right to veto an appointment to a theological chair, and laid a ban on Professor Mitchell. The trustees, after vainly trying to get the bishops to reconsider their decision, had to yield. The people who

succeeded in driving Professor Mitchell from Boston University are now trying to force him out of the Church. Their argument is that if he is too heretical to teach he is too heretical to preach; that a church which, through its bishops, demands narrowness and ignorance in its theological professors may reasonably seek the same qualities in its ministers.

Wizards and sorcerers still play a part at the courts of despotic princes. A sorcerer in Tangier, encouraged and supported by the Sultan, has been stirring up "anti-European sentiment" among the natives. The representative of a German firm was dragged off his mule and forced to go barefoot, and the German Consular Agent was attacked with impunity. This almost recalls the Egyptian magi. The fanatic who has gained control in Tangier is said to have acquired an astonishing control over the Sultan. The same kind of troublesome person, who has a like baneful effect upon governors, mayors, and lesser potentates, is found in Western countries. But here his power is known, not as sorcery, but as "influence." And among us it has never been necessary to call in magic as an explanation of "anti-European sentiment."

The split in the English Labor Party now announced is by no means unexpected. Efforts were made during the recent Trade Union Congress to conceal the fact that there was a widening breach within the ranks, but to no avail. To those visionaries who have worried lest the Labor Party have a majority in Parliament within the next few years, experienced politicians have replied that the new party must first stand the test of a single Parliament. This it has now failed to do, for, after a single session, it has divided into two camps—the Socialists, under the lead of Keir Hardie, and the Liberals, under John Burns. This is precisely in keeping with the history of similar movements. The inability of labor leaders to agree for long or to act harmoniously for any length of time, is a genuine stumbling-block in the way of their achieving political power. Mutual jealousy has wrecked more than one such undertaking. Indeed, there are already persistent rumors that some of our labor men are sorely vexed with Mr. Gompers for his incursion into politics. In England, the labor men are not only divided over the proper attitude of the Labor members of Parliament towards the party in power, but are harassed by the expense of supporting their representatives at St. Stephens's and by the heavy cost of keeping up a political organization.

The project of boring a tunnel under

the English Channel has once more been resurrected, and special efforts are to be made to get a bill through Parliament at its next session. The idea was originally proposed one hundred years ago by a French engineer, Mathieu, but practical plans were not laid before the public until 1867, when companies were formed both in England and in France. Hitherto, whenever the scheme has been mooted, the fear of a French invasion has been invoked to defeat it, even though a small supply of dynamite would make it impossible to use the tunnel five minutes after the declaration of war. Curiously enough, this dread of France still persists, and finds expression even in so staid a journal as the *Spectator*, which gravely contends that the construction of a tunnel would seriously weaken England's insular position. The Channel, it appears, is a moat, and "you do not strengthen your defence by running a passage under the moat." In other words, a fantastic military danger is again being used to delay what would be a great blessing to commerce and humanity. Still another absurd objection is that such a tunnel "would lead to recurrent national panics," hardly a tribute to the stability of the English character. On the practical side, it is estimated that it would cost only \$50,000,000 to build the tunnel. Bills similar to the one now proposed have been rejected eight times since 1882—the last time in 1893.

Americans are in the habit of thinking of London as having the worst slums in Europe, but it seems that it is really Liverpool which deserves that distinction. Dr. E. M. Hope, the health officer of that city, declares that there is not "a city in this country, nay, in Europe, which can produce anything like the squalor that we find in some of the back streets in Liverpool." He says that this is almost entirely due to drink, and, speaking of the Hornby Street area, known particularly for its wretchedness, he affirms that it has been proved beyond question that the poor creatures in that small quarter spend twenty-five thousand dollars a year in drink. The surprising thing about this statement is that the problem of the housing of the working classes has long engaged municipal attention in Liverpool with remarkable results, so that other cities have even regarded it as a pioneer whose methods must be studied with care. As a result, the Liverpool slums, bad as they still are, have been greatly decreased in area. Side by side with the purchase and destruction of unsanitary property has gone the erection of new buildings, while the number of public houses has steadily diminished. During the last ten years, the municipality has spent \$1,500,000 in building model cottages and tenements, and over \$2,000,000 in buying up and tearing down

houses which are a menace to health.

The day seems to be approaching when men will dread wealth as they now dread sickness or insanity, and when to be fashionable will be considered criminal. The clergy are everywhere declaiming against "smart" sets, so that it is coming to be thought rather smart to be denounced from the pulpit. At the last annual Church Congress in England, the Bishop of Durham spoke of the misery of the rich. The Seven Dials and Whitechapel are no longer the centres of wretchedness, but the place to witness suffering is in the heart of fashionable London. The Bishop recommended that his hearers "take a station at Hyde Park corner near enough to the endless string of carriages to get a good look beneath the picture hats." Evidences of discontent and unhappiness would be found on the "joyless faces" of these outwardly fortunate people. As Schopenhauer remarked, there are only two forms of unhappiness: the pain of unsatisfied and the *ennui* of satisfied desire. Most people prefer the latter to the former. But the Bishop was laboring under a mistake often made by those unfamiliar with the ways of the rich and of their associates. In the smartest set, there is no sign of ill breeding more pronounced than the betrayal of a happy state of mind. The "joyless face" of a really smart person is the outward and visible sign of an inward beatitude. It has been frequently observed that a thoroughgoing Epicurean will end by being a Stoic.

Archdeacon Colley, an adventuresome but credulous Englishman, now has cause to be skeptical concerning the spirit world. He offered Maskelyne, the magician, £1,000 if the latter would reproduce by trickery certain supposed spiritualistic phenomena. Maskelyne accepted the challenge and reproduced such a celestial visitant as had been designated. "A most attractive young lady" emerged from the smoke which filled the room. Such a phenomenon, if natural, no doubt has its value, although £1,000 is rather a high price to pay; yet if supernatural it would be worth little more. When an endowment for the proposed Institute for Psychical Research shall have been secured, it might be well to set aside a sum for the production of séances like that given by Maskelyne. It would be more costly but much more expeditious than the old way of waiting for spirits which do not materialize, and rappings which perplex and discomfit. The advantage of an artificial apparition is that it comes when wanted, and really says and does things. It is to be regretted that we in America have no Archdeacon Colleys, to tempt the magicians into duplicating the

wonderful revelations vouchsafed to Mrs. Piper. They would be a "drawing feature" for an enterprising manager.

The degree of honor in which the memory of Herbert Spencer should be held is not a point on which Englishmen are of one mind. Since the Dean of Westminster rejected the proposal to erect a monument to the philosopher in the Abbey, several plans have been advocated for some national recognition of Spencer's services to speculation and science. In favor of such recognition are a number of eminent investigators, among them Bastian, Foster, and Francis Galton. But Lockyer, the astronomer, has opposed any subscription for such a purpose, and Lord Kelvin writes: "I have never been of the opinion that the philosophical writings of Mr. Herbert Spencer had the value or importance which have been attributed to them by many writers of high distinction. In my opinion, a national memorial would be unsuitable." Some have suggested that an appropriate memorial to Spencer would be the founding of certain lectureships or scholarships to awaken scientific interest and to encourage scientific research. English universities were comparatively hospitable to the radical thought of John Stuart Mill, but have shown little enthusiasm for Herbert Spencer's philosophy. Yet we know that Taine ranked Spencer with Mill. And Huxley, who often laughed at the absurd in Spencer, still had the highest admiration for his philosophic gifts and attainments.

A discussion is now being carried on in France, like the debate among Greek cities as to the place of Homer's birth. There is a question whether the late Victor Cherbuliez was French or Swiss. Upon this important point, two of the latest biographical dictionaries contradict each other. When the novelist was admitted to the French Academy, Renan spoke of him as coming from Le Dauphiné, and his ancestors from Le Poitou and Les Cévennes. In a eulogy pronounced after his death, Emile Faguet called him a native of Geneva, but by birth a Frenchman, because his family were refugees from France. Eugène Ritter maintains that he was a Genevan by ancestry as well as by birth. Ernest Tissot concludes from Cherbuliez's own account that the latter was of Swiss nativity, though of French ancestry, but he cites a number of passages from "Le Comte Kostia" and other romances to show that Cherbuliez was "an excellent Genevan who had none of the Swiss character." It is difficult, however, to miss in his novels that serious and sometimes sombre religious coloring which may be taken as a residuum of his early Calvinistic education and training.

THE MAKING OF A "POGROM."

Why should people engaging in freeing themselves from a despotic yoke turn aside from their quest of liberty to engage in horrible massacres of unoffending Jews? This question has been asked everywhere. Documents are now coming out of Russia which throw much light upon the genesis of the "pogroms" that have succeeded one another with appalling rapidity. In the first place, the Government, and not the people, of Russia, is responsible for the outrages. It has been proved beyond dispute that most of them have been started, and deliberately, by soldiers or police under the orders of their superior officers. Yet there has been no stirring protest from the masses of the Russian people; the occurrence of pogroms is not one of the indictments of the Imperial Government which are daily increasing the ranks of the Terrorists, and even making assassins of young girls of refinement and education. A reason for this condition of affairs, aside from the usual antagonism of the adherent of the Russian Church to the Jew, is that the reactionaries, with devilish ingenuity, have deceived the public as to the actual attitude of the Jews by means of false rumors or forged documents.

The Berlin *Tageblatt* has just got hold of one of the ingenious pamphlets issued by priests of the Russian Church, hundreds of thousands of copies of which, thanks to the fanatical zeal of the "True Men of Russia" and the "Black Hundred," have been circulated among the troops and the populace generally. The document begins with a spurious "secret address" of the chief rabbi to the Jewish people "in regard to their general programme of life." From it we take the following extracts:

For nineteen hundred years we have been fighting the cross, and our people have not been defeated nor have they sunk to earth; if they have scattered all over the earth it is because the whole earth must belong to them. Their power grows with every day. . . . Not, however, until we are the real masters of all the gold in the world shall we obtain the actual power we seek. The nations of the earth must be plunged into debt. . . . That is our programme. When the property of land owners has come into our possession, the labor of the Christian workmen will become for us a never ending source of wealth. We must work zealously to weaken the influence of the Christian Church, our most dangerous enemy—we must *degrade its priesthood*. Next to the gold, the press is our most important objective; we must in all nations be at the head of the newspapers. We must . . . fire the masses to revolution, in order that they may destroy themselves.

Stupid and clumsy as this forgery reads, it is none the less reported by trustworthy Russians to have had an incredible effect in inflaming the soldiery and the masses against the Jews.

The untutored *mujik* swears, of course, that these "secret instructions" of the chief rabbi are gospel truth. But the authors of the pamphlet add an appeal to all orthodox Christians, in which they assert that all the gold and the business of the country are in the hands of the Jews, to whom alone is to be attributed the present disorder among the Russian people; and that the demand for a constitutional assembly "in place of the Czar's splendid government" is made "in order that the Jews may rule Russia through this assembly." The time will speedily come, the pamphlet continues, when the Christians will have to pay the Jews in order to enter their own churches. There was a period when all their temples were mortgaged to the Jews. Shall it come again? "In the name of the Saviour, let us drive these enemies of the Czar and our Lord from among us!"

When a leaflet like this has been carefully distributed, as was done in Warsaw recently—a "pogrom" has been expected there for weeks past—the next thing is to start the story that the Jews have resorted to arms, and are attacking populace and troops. This falsehood is persisted in, even when the "pogrom" is over. Thus, in the official report of the Siedlce massacre, there is the same old official lie that the Jews fired from their houses upon military patrols, who, of course, were bound to defend themselves. The St. Petersburg press even went so far as to fasten upon one dead Jew, Wassiliew, the responsibility for firing the first shot. But, according to the reports of the Reuter Bureau, officers of the garrison had brought their wives to the leading hotels for the night for greater safety, knowing full well that the "pogrom" was at hand. The artillerymen, who subsequently demolished many houses, stated frankly that they had been instructed in advance as to their duties and just how far they might carry their plundering and robbery. The first individual shots came from the police, and were followed almost immediately by volleys fired by full companies of infantry. Then came atrocities of the most terrible description. Men, women, and children were beaten and stabbed and robbed before being butchered.

Depressing as all this is in its revelation of the ease with which "pogroms" may be set on foot, it is, on the other hand, encouraging to have the causes laid bare and to realize that the massacres are due to passing incitement rather than to long-smouldering passions. When the triumph of the revolution comes, it is inconceivable that clergy or officialdom will be permitted to massacre in the hope either of reinstating a despotic Government or of rousing religious antagonisms.

TRAINING FOR BUSINESS.

Writing in the *Revue des Deux Mondes* on the subject of commercial education, M. Jacques Siegfried gives to our American "business colleges" an importance not generally conceded on this side of the Atlantic. Nothing, he says, so astonished him during his visit to the United States in 1860 as the eight or ten schools of the type of Packard's and Bryant and Stratton's, which he then found in operation. He marvelled at the rapidity with which good business men and women were turned out of these mills, and he assigns to them much credit for the originality of business methods for which this country is celebrated. Since 1860, as he points out, there have been great advances, and he now notes that there are fully a dozen faculties of genuine colleges or universities devoting themselves to commercial education.

But whether success in commerce is due to commercial training or whether the training is a result of the success is an open question, long warmly debated. Frank A. Vanderlip, the New York banker, sees in Germany's remarkably homogeneous system of business education the explanation of her industrial and commercial progress. On the contrary, as far back as 1897, a British Foreign Office report declared that Germany's commercial training was the result of her great industrial advance. The writer was able to show, in defence of his theory, that in 1889 commercial education was at a low ebb. Since that time German foreign trade has more than doubled, and in the train of this increase has come the enormous growth of the commercial schools. These, by the way, were known in Berlin as long ago as the eighteenth century. At present, according to a recent writer in the *North American Review*, there are within the Kaiser's Empire 9 technical high schools, 4 mining academies, 4 commercial high schools, and 587 middle and lower grade industrial, technical, and commercial schools. No less than 297 of these schools are in Prussia; of the commercial type there are fully 64 in Saxony alone. This extraordinary showing—surpassed only by Belgium's—is not, as might have been expected, due to a paternalistic government, long eagerly engaged in over-sea colonial ventures in search of trade, but to private initiative, as in this country, or to the various municipalities.

For years a "German Society for Commercial Education" has carried on a vigorous propaganda. To it is partly due one notable result—the joining of business men in an effort to capture foreign markets. To this movement the commercial schools have very naturally contributed. That these schools bear evidence of the characteristic German thoroughness is only to be expected. In

this field Germans must be thorough if they would overcome their natural disadvantages. They have no such rich gifts of nature as this country, no wealth of raw material, no vast domestic market upon which to base their foreign conquests. They have had to fall back upon their wits, and literally must make something out of every blade of grass. There has been no weakening of literary and scientific teaching, no commercializing of education in general. Yet the business high schools are generally admitted to have accomplished more than either their numerous critics or their advocates had dared to hope. With praiseworthy flexibility they have been quick to adapt themselves to changing conditions and to unforeseen needs.

The new high school just opened in Berlin, for instance, has learned a lesson from the weaknesses of the older institutions. Thus it has established special faculties in particular fields, introduced practical exercises, and subordinated purely theoretical teaching. The Cologne high school, because of its geographical position, leans towards industrial questions; that at Berlin is more strictly commercial. Yet its two-year course is meant not to be a substitute for practical business training, but a rounding out of the knowledge thus acquired, a deepening and broadening of the student's general culture, together with an increase of his special or technical acquirements. Its discipline is, in brief, a recognition of what may be called the scientific needs of the modern merchant. On the social side the effort will be to find a middle path, which will prevent students from aping the manners and customs of the university students, and at the same time avoid the frankly commercial fashion.

Fortunately for us in this country, such questions do not vex student or teacher. Our commercial colleges are, however, face to face with the problem of the extent to which the practical training shall be carried. Must they adopt the laboratory system of the historical and other seminars, and establish miniature stock and produce exchanges, banking houses, with "tickers" as part of the stage setting? To our mind, the very best schooling for the American business man is still that training which will enable him to concentrate his mind upon whatever problem he has in hand. In so far it does not differ from the aim of the good old-fashioned classical teaching. What the business man needs, also, is sound drill in economics and finance, the laws of trade, and the economic policy of the Government since its origin. To this foundation should be added as much specialized learning of a practical character as may be acquired in a two or three years' course. Most of all, the

American "hustler" of the future ought to know a great deal more about foreign nations and their methods, lest the charge of narrowness should more than ever lie against him.

SUNDAY READING.

Principal Caird many years ago contributed a series of articles to *Good Words* under the general title of "Essays for Sunday Reading." These, at the request of several Scottish booksellers, have been reprinted in book form, and will be published on October 2 by Sir Isaac Pitman & Sons, who inform us that the first edition has already been oversubscribed, and that a second impression is now being prepared.—[London *Athenæum*.

In speaking of Bunyan a few weeks since we ventured the opinion that the writings of the great allegorist are less read than they were a generation ago, partly because the old distinction between "Sunday" reading and that which is appropriate for week days is disappearing. "Pilgrim's Progress" used to be the nearest approach to a story of adventure that well-brought-up children were allowed to look at on Sunday. If we may believe a recent London critic, who joins us in lamenting the declining popularity of Bunyan, England, as well as America, is falling away from the old tradition. It is significant that Macmillan used to publish a "Sunday Library," containing such works as Mrs. Oliphant's "St. Francis of Assisi," and Charles Kingsley's "The Hermits"; but though many of the volumes are still in print, the special classification has been given up, probably as of no commercial value. In Scotland, however, as the note in the *Athenæum* indicates, religion is still a serious business. The descendants of the Covenanters, who are not to be blown about by every wind of doctrine, eagerly buy books for Sunday.

The line between sacred and secular literature was often, of course, illogically drawn. No one can have any doubt about Jeremy Taylor's "Holy Living" and "Holy Dying." The worthy Mr. Tulliver himself used to read in them "often of a Sunday." Baxter's "Saints' Everlasting Rest," Jay's "Mornings with Jesus," and Kitto's "Pictorial Sunday Book" carry conviction in their titles. Todd's "Lectures to Children" would also pass the severest censor. But fiction offered difficult problems to judicious parents. Some fathers cut the knot by forbidding all works of imagination except "Pilgrim's Progress"; others temporized and admitted the churchly and impeccable Miss Yonge. From Miss Yonge it was an easy step to Martha Finley's innumerable "Elsie Books," and thence to Louisa M. Alcott. The "Elsie Books," indeed, with their positively offensive piety, are far less wholesome for any day of the week than the stories of Miss Alcott.

The growth of the Sunday-school library brought fresh complications. The books in these collections frequently bore the imprint of a denominational publishing house; they had passed the scrutiny of the pastor, the superintendent, and a committee of the primmest Sunday-school teachers. Who, then, could object to the tales which the children joyfully brought home from the "liberry"? Yet we have known Sunday-school libraries to possess complete sets of "Oliver Optic" and "Harry Castlemon." If you make a place for these lively narratives, you have practically ceased to discriminate.

The obstacles to consistent practice do not, however, explain our abandonment of Sunday reading. We follow the line of least resistance and read the first thing that comes to hand. Men who profess to have outgrown any edification from sermons devote Sunday to an orgy of sensational or vapid articles. Not content with secularizing Sunday, they insist on vulgarizing it. At present the souls of young and old are refreshed and uplifted before church (or golf) by the antics of Buster Brown, the Katzenjammer Kids and Foxy Grandpa. The rest of the week we batten on the newspapers and the cheap magazines. Our fathers' rule was good reading for the week and the best for Sunday; ours is bad reading for the week and the worst for Sunday. For most of us, then, nothing could be more wholesome than the revival of a valid distinction between Sunday and other reading. There is no reason in the nature of things why we should demoralize ourselves with trashy books and periodicals from Monday to Saturday; but, if we must indulge in such mental dissipation, and if we must skim the newspapers on the way to and from business, we may at least on Sunday allot a little time to books that are worth while. These books need not be religious, if we are superior to religion; they can at any rate have some permanent value. They can suggest to us something beyond the routine of our shop, something that does not furnish a shrieking headline, some vision of the ideal.

A famous New England divine—long since gone to his reward—used to tell of his boyhood in which his Sunday reading was strictly confined to the Bible and the Catechism. Now the Catechism, we grant, is not a book of positive charm; and yet much depends upon associations. This lad was wont to sit during warm June afternoons by an open window through which came the fragrance of roses from the garden below. The result was that even in his old age that searching question as to the whole duty of man, and the terrible threats against the unregenerate, who are "made liable to all miseries in this life, to death itself, and to the pains of hell forever"—these thunders from Sinai

always recalled to his memory the soft airs of early summer, its brilliant verdure, and the odor of the flowers. We doubt, however, whether the kindest air and the most brilliant blossoms can ever sanctify such reading as most of us now do on Sunday, or, on the other hand, can turn our minds from the shabby, sordid page to meditations on time and eternity.

THE ARTISTIC UNDERGROUND RAILROAD.

A foreign dispatch describes a collection of stolen masterpieces which is shortly to be sold in this city. Everything in the story is vague except that these paintings all have a pedigree into which fraud or larceny has entered. The tale all has the fine full flavor of the detective novel, and collectors will possibly take the news more sedately than laymen. There are, indeed, few amateurs who are not familiar with the mysterious person who possesses the sole authentic original of a Raphael or Titian supposedly in the Uffizi or Prado. This person, if he does not say "hist" like the villain of melodrama, at least looks as if he could unfold a variegated chronicle of crime. His picture, however, rarely does credit to its dubious past. Such experiences put collectors on their guard against stolen sweets at a bargain; and the present romance will, among initiates, hardly provoke any excitement.

In spite of such reasonable skepticism, there actually is an underground railroad where the artistic freight is at times of consequence. Through the ignorance of amateurs and the trickiness of dealers, copies are constantly circulated as originals. But this again produces a curious reaction, by which the originals become discredited and may actually be rejected in favor of copies and the like. There are many opportunities for such substitution. Only the other day we read that a Titian in the Royal Palace at Venice had disappeared, being replaced by an imitation. Presumably, it was under repair. The restorer's shop is the natural place for such frauds. One recalls the British collector who, sending a famous Rubens to be cleaned, for better security put many seals upon the back of the panel. In due time he received the picture again with the seals intact, only to be informed by a connoisseur that it was a modern copy. The unlucky amateur protested the impossibility of such a thing, but an examination of the panel showed that it was but half its former thickness. It had been sawn in two and the copy executed upon the back without disturbing the seals. Prompt complaint at the restorer's procured an exchange, but the owner may be pardoned if he still has misgivings as to his Rubens. Suppose two copies had been

made to provide for this very contingency!

Such an incident shows how well-known masterpieces might be shunted to the underground railroad. For one substitution that is detected, many must be carried off successfully. Evidently also such acquisitions must be marketed with discretion. It would not have done, for example, to sell the real Rubens to a neighbor of its former possessor. To see the process in full blast one need not go far. There are American dealers who, securing a good picture, say an example of the latest fad, Schreyer, distribute copies of it here and there. When the game has gone far enough, they sell the original also, and the discovery of half-a-dozen versions of the same picture brings the value of the entire group down. It is fair to add that such dealers usually redeem their spurious output when brought to book. The game is not worth a law-suit. The law, in fact, is almost impotent in such a case. It is not a crime to copy a picture, nor to mistake a copy for an original. Fraud may fairly be inferred at every stage of the transaction, but it apparently applies technically only to the painter who forges the signature, and he can never be found. Up to that point your copy is an honest thing; beyond it the most able dealer may be honestly deceived; it all makes freight for the underground road.

And the foibles even of skilful amateurs go to aid this traffic. One may recall the whimsical fate that befell a great Parisian collector who deliberately exchanged a fine Rembrandt for a copy. He really owned the original, but a casual hint from a connoisseur that the original was in England so far perturbed the Frenchman that he rushed to London and bought the supposed original at what seemed to be a bargain. At this point a benevolent dealer intervened and offered to take the putative copy off his hands. Shortly after the sale had been effected, the connoisseur changed his mind. He had seen the English Rembrandt in a bad light; it was the copy, after all. Meanwhile, the authentic Rembrandt had passed at a great price into an American gallery, where it hangs as a monument to the enlightened benevolence of a famous Parisian dealer. The copy is an embarrassing possession in the hands of its late owner's executors. It should bear a tablet memorializing the fallibility of connoisseurship and the subtle perils of amateurism.

One might multiply examples which illustrate the ease with which copies and originals may be confused. The business is, in the nature of the case, of an individual sort, and we have no reason to suppose that any number of the submerged masterpieces are coming over in

a single consignment. Somebody might ask why no notice has been taken of actual thefts, a number of which are matter of record. Simply because very few pictures disappear in this crude fashion. The clever substitution of a copy is in every way safer and neater. In this way the original may be sold repeatedly, being used merely to flatter the purchaser's eye, while a copy is packed and shipped. Of course, there is the famous case of "The Stolen Duchess," by Gainsborough. But knowing students of that romance suspect that the spectacular theft may have been no more real than the picture itself, which is only a plausible old copy. No such work ever had so splendid an advertisement; but the authorities of the underground railroad have never been the enemies of a discreet publicity.

ADELAIDE RISTORI.

It was a rich, full, and eventful life which ended when Adelaide Ristori drew her last breath on Tuesday. Happier than many of her profession, she survived to enjoy for many years the fame, the wealth, and the esteem which she had acquired by long and arduous labor. Almost a century has slipped away, and the world, as well as the theatre, has changed in many ways, since she first saw the footlights as an infant in arms in 1821. She was born in what old English-speaking playgoers would call the palmy days of the Italian stage, when Modena and Marchionni were at the height of their fame, and the richest artistic rewards were still to be gained in high tragedy and classic comedy. In Italy, indeed, the great dramatists still exert a large if in some degree a diminishing influence. They have not been abandoned, as in England and this country, for the unclean or puerile imaginings of the commercial playwright; and consequently in that favored country there is, even with Ristori and Rossi dead and Salvini in practical retirement, a rising generation of actors not unworthy to sustain the traditions of the past.

There can be no doubt that Ristori was possessed of rare histrionic genius; but it may be questioned whether, even in her youthful prime, she ever soared to those supreme heights of pathos or passion which, in moments of inspiration, have been reached by such players as Garrick, Edmund Kean, Mrs. Siddons, Salvini, Duse, or Rachel. We have the valuable testimony of at least one capable contemporary witness on this point, that of the venerable Sir Theodore Martin, who saw both Rachel and Ristori at their best, and who does not hesitate to declare the Frenchwoman by far the more powerful actress of the two. But the genius of Rachel was almost wholly tragic, whereas the range of Ristori in her younger days embraced all that was

best in Italian classic drama. She was a mistress of refined comedy as well as a potent interpreter of solemn or tempestuous emotions. Like all the great players of the older school, she passed through a long and exacting novitiate, appearing in an interminable succession of minor characters of all kinds, until she had mastered not only all the rudiments, but all the resources and graces, of her profession. Nature, it must be granted, had been most beneficent to her, having endowed her with a countenance of most regular, expressive, and dignified beauty, an imposing stature, and a form of singular grace and majesty. But for her nobility of carriage, her eloquent, but never exuberant, gesture, her mobility of facial expression, her superb utterance, and the vocal control which enabled her to roll forth declamatory verse with an extraordinary and musical sonority, or give the choicest effects of humor to playful or satirical passages—for these accomplishments she was indebted to the constant practice in stock companies, which could only avoid starvation by almost daily changes of programme.

It is only the older generation of players who will remember Ristori as she was when she last appeared in this city. Her powers then were beginning to decline. Some of the ancient fire was lacking, and neither zeal nor inspiration was always present to conceal completely the formalism of her style. But what an artist she was! With what authority and decision—with what clearness of purpose and certainty of execution—she spoke and moved! With whatadroitness she could, upon occasion, make perfect mechanism assume the aspect of living and spontaneous intelligence! One of her famous scenes was in the "Elizabeth," of Giacometti, in which the Virgin Queen dictates two different letters, in alternate sentences, to two of her secretaries, while carrying on a conversation with her courtiers. She did all this with so striking an assumption of regal and intellectual power, that her audiences were entirely oblivious of such prosaic facts as prompters and cues and gave her personal credit for achieving a mental feat of enormous difficulty. The scene always was followed by a round of rapturous applause.

In her famous parts of Medea (Le-gouvés), Mary Stuart, Elizabeth, Myrrha, Marie Antoinette, etc., she prevailed as much by her romantic fervor and charm as by her purely tragic power. Her methods were more ornate than those of the rigid French classicists, and it was this fact that tended to accentuate the bitterness of the rivalry between herself and Rachel. She was wise, probably, in declining the high honor of admission to the Théâtre Français, offered by the French Government, for

she would have found herself cribbed, cabined and confined by many of the regulations and restrictions of the House of Molière. It was her own ambition, she professed, to effect a union of the two styles, the classic and romantic, but that was scarcely feasible. She belonged essentially to the romantic school. She was not entirely satisfied, it is said, with her reception in this country. Her triumphs all over Europe and the impressionable Latin colonies of South America had made her exacting in the matter of enthusiasm. Applauded though she was here, she found us cold, and ascribed the chill to our lack of taste. When Salvini was leaving Italy for New York she is said to have remarked to him: "Give 'em comedy, Tommy. They won't listen to your tragedy." So Salvini played the feeble "David Garrick," making it seem a masterpiece, and failed dismally. His Othello quickly justified American taste, but it had more in it than Ristori ever had to give.

She was, however, a very great actress and artist, who did much for the glory of the Italian stage, which she advertised the world over. She may be said, perhaps, to have been the connecting link between the old school of Modena and his predecessors, and the later school, of which Duse is so brilliant an example.

LITERARY NOTES FROM PARIS.

PARIS, October 1.

Among the centennial memories of the year is the beginning of Goethe's lasting reverence for Napoleon—all the more interesting to us as the rising religion of Nietzsche unites the two as Supermen. Dr. Stephen Kekulé von Stradonitz, in the *National Zeitung*, publishes the new letters, and Prof. Andreas Fischer, a Swiss, devotes a hook (in German) to "Goethe und Napoleon."

When Goethe finally met Napoleon in person he said: "Here's a man!" The letters now published date from 1808, when Napoleon made Goethe chevalier of the Legion of Honor, and 1818, when the restored Bourbon promoted him to be officer of the Legion. Goethe evidently sympathized with the downfall of Prussia, whose destiny to him at least was not manifest; and he spoke currently of "Napoleon, the phenomenon," "compendium of the world," "the greatest intellect the world has ever known," "leading the most marvellous of heroes' lives." When all was over in 1815 he said—"Faust started up in my mind the ideas which I had and still have about Napoleon." In 1828 he still said: "See what a man Napoleon was. His life was a demigod's march from battle to battle, from victory to victory—it is impossible for us to imitate him." And in the last year of his life he answered to patriotic criticism: "Let my Emperor alone!"

Frédéric Masson of the French Academy continues his series, interminable hut of intense human interest, of Napoleonic studies, by a second "Jadis" (Old Times). Like

the first, it has a variety of odds and ends that did not fit into the heavier volumes—Napoleon and Women, Napoleon on Horseback (it seems he rode badly), and so on. The author, who has devoted his life to the minute elucidation of his subject, says very sincerely by way of preface:

The Napoleon idea is not one you can take up and put aside at will, simply to amuse your leisure with it and embroider it with your own fancies. It is as masterful, absorbing, despotic as was the man himself. Without let or interruption it holds the mind which follows it up. It forces you to look closely at every one of the men employed by the Emperor, to scrutinize their acts, to seek out their share in the loyalty or treason of the drama. . . . I might have before me as many years as I have already lived and I would not take a single day for other studies. After the twenty volumes I have published I would publish twenty more which I have already planned out, and then yet twenty others whose titles are running through my brain. And still, in my impotence to paint him as I see him, I should despair.

The first volume of Mistral's *Memoirs*—"Mes Origines"—takes us back to the simple life of an old soldier of the Revolution watching reverently a son, wrapped round with university diplomas of the new order, lying back and singing like a Provençal cicada beneath pale olive trees. There is a boyhood glimpse of the withered crone who still chuckled to herself at memory of the days when she posed as Goddess of Reason for the Revolution-mad village. Paul Mariéton announces an "intimate" volume on Mistral, whose modesty, he says, makes his *Memoirs* incomplete. Even so, their interest is human as well as literary, with the aged Lamartine and young Daudet crossing their pages.

The fifth volume of the monumental complete edition of the works of Victor Hugo has just been printed at the Imprimerie Nationale. The place of Paul Meurice as editor has been taken by Gustave Simon (son of Jules Simon). He keeps to the tradition of annotating with letters, notes, and private papers, so that not only the poem, but the genesis of the verses as well, may be understood. He gives fewer rejected verses, however, than his predecessor. The new volume is entirely taken up with "La Légende des Siècles." It originally appeared in the full excitement of the war of 1859—France aiding Italy to her birth against opposing Austria. Hugo wrote to his publisher: "My books always come out at the wrong time: 'Feuilles d'Automne,' on the day of the Lyons insurrection; 'Notre Dame de Paris,' the day when the archbishopric was sacked; 'Marion de Lorme,' in a week of two riots. Purchasers had to jump over a barricade." S. D.

Correspondence.

PLEA FOR SIMPLIFIED SPELLING.

TO THE EDITOR OF THE NATION:

SIR: As a member of the Simplified Spelling Board and as one who has taken the *Nation* for thirty years and written for it a great deal, I ask the privilege of replying to your editorial of October 4 on "Genuine Phonetic Spelling."

Apropos of a recent deliverance of George Bernard Shaw you make some remarks on phonetics and phoneticians, and

then, by way of showing your readers what a funny-looking thing phonetic spelling is, you print a few lines of every-day English first in the alphabet of Henry Sweet, and then in the characters of Bell's "visible speech." Then you say:

In all seriousness, the proposals of the Simplified Spelling Board either mean a systematic advance in this direction, or they mean a purposeless and futile meddling with a language that is doing very well.

Now permit me to assure you that the proposals of the Simplified Spelling Board mean neither the one nor the other of these things. On the contrary, they are a cautious application of science and common sense to the improvement of one of our social utilities which is very much in need of improvement. Phonetic spelling such as you represent has about the same relation to this practical problem as "wanting one's daughter to marry a nigger" had to the freeing of the slaves. It is true that to spell as we pronounce is the most fundamental of all the criteria that can be scientifically applied for the purpose of deciding which way spelling ought to move. But it is not the only criterion. One of two spellings, neither of which accurately reflects pronunciation, may still be better than the other. The question may turn entirely upon the best use of existing resources. Thus the choice between "draft" and "draught," between "controller" and "comptroller" in no way involves phonetic spelling or the dream of a new alphabet. And what is true of these two words is true of the *entire three hundred* in our list.

Ideal phonetic spelling has somewhat the same relation to the practical improvement of our everyday orthography that justice has to the improvement of our laws. It gives us a large guiding principle, but it is an ideal that can never be perfectly realized. And if conceivably it were pretty nearly realized at a particular epoch, a change of conditions might, and very certainly would, require in time a resettlement. The spoken word is the fundamental thing. Spelling was invented to record speech. "Language" means "tonguiness." But as the letter is palpable and relatively permanent, while the sound is impalpable and elusive, it happens naturally and inevitably that writing lags behind speech and tends to become a record of that which was rather than of that which is. Thus arises a literary language making its appeal to the eye and differing more or less from speech; and if there is a competent phonetician in the world who objects to the existence of a literary language and would like to have all writing a meticulous transcript of speech, I do not know his name. Your castigation of such people is a castigation of men who do not exist, unless it be in asylums for the insane.

But now does it follow that every peculiarity of our conventional spelling—in the literary language, mind you—is sacrosanct because a large number of people, at a particular epoch and in a particular latitude and longitude, have become accustomed to it, so that it looks "natural"? Is spelling unique among all our social utilities in that it cannot be improved in the slightest particular by the operation of conscious intelligence? Is there no criterion more solid and scientific than the private reaction of one's own nerve-cells,

which is simply a matter of visual habit? You think it dignified and beautiful to write "programme"; but teach your child to spell "program" as he spells "telegram" and "diagram," and the child will grow up without your prepossession in favor of the long anomalous form. Is there then no way of deciding between conflicting spellings? Must a man of intelligence simply follow his habit as if his habits were sacred and all equally good? When an unfamiliar spelling is proposed and begins to creep into use as an improvement, must he simply sit and wait without an opinion until the majority, moving blindly, have either adopted it or rejected it? Or is it his part to oppose everything new because it looks odd, and then, when 51 per cent. of the population have adopted it in spite of him, to go over to the majority and cling to and defend the once-hated thing because it is usage? Are majorities always right and minorities always wrong in this one sphere of human interest? Is spelling utterly beyond the reach of science and scholarship and common sense? Can a man have no opinion as to whether it is better to write "medieval" or "mediæval" without the *Nation's* saying: "Aha! you want us to adopt Bell's 'Visible Speech,' do you?"

You say the language "is doing very well" without our meddling. There is a sense in which this is true, another and more important sense in which it is not true. It is true in the sense that there is, as there always has been, an effort to improve our spelling in the direction of simplicity by dropping superfluous letters. Many hundreds of such improvements have been made, and now the whole world accepts them as improvements. No one wishes to go back to "fysshe" and "shippe" and "forreigne." But it is a mistake to suppose that these improvements made themselves by some kind of inward spontaneity and without any human effort. Men did not write "fysshe" for some generations and then suddenly discover all together that it would be better to write "fish." We have got from that which is bad to that which is better because certain persons saw the better way and set out upon it. And so it will be hereafter. Our spelling will improve slowly, and would have improved without organized effort. But it will not change itself. It will change because writers of English go ahead and adopt better forms. In other words, it will change because there will continue to be, as there always have been, spelling reformers who see the better way and have the courage to follow it. Milton was a spelling reformer, so was Tennyson; and the only essential difference between them and us is that instead of exerting our influence separately, we have banded ourselves together and undertaken a campaign of education.

In short, when you say that the language is "doing very well" without our "futile and purposeless meddling," I must call your attention to the fact that the meddling of such persons as we are is eternally and inevitably a part of what the language is "doing"; and that the meddling has not been purposeless nor futile, but has accomplished a vast amount of good.

And do you still ask why we have banded ourselves together to accelerate and guide by the light of sound scholarship an inevitable process? It is because, owing

to the peculiar developments of the last hundred and fifty years, the process is not doing its natural work as rapidly as it should. The many have actually forgotten what spelling is for. They have come to think of it as something mysterious and beyond the reach of common sense or of the questioning intellect. They go to a big book to learn how to spell, and the big book merely tells them how people *do* spell, and refrains on principle from telling them how they ought to spell. So there we are, in the position of a kitten chasing its tail, with insufficient provision for rational progress. We have come to a pass in which men of letters, particularly, are apt to imagine that the dignity and beauty of the English language are bound up with each and every conventional spelling to which their eye is accustomed, even if that spelling was originally nothing but a pedantic blunder. And the worst of it is that this tenacious clinging to our anomalous spelling imposes a woful burden upon our own children.

Is it not time for men of intelligence, accustomed to act in other matters from social motives, and to regard the welfare of a long posterity as more important than their own fleeting prejudices, to try to do something for the betterment of our spelling? We cannot do everything at once, but we can make a beginning. We can try to win friends for the idea that what is simple, regular, scientific, is really better than what is complicated, anomalous, and fantastic. And we can plead, as I do now, with men of letters, scholars, journalists, not to attach too much importance to their own visual associations, and to recognize that, here as elsewhere, they have as social beings another duty which is no less important than that of following good usage, namely, the duty of helping to make bad usage better.

And if they decline to recognize this second duty, let them at least be a little more charitable to those of their fellow men who do recognize it. I have no quarrel with the man who says: "I do not like your simplified spellings. No doubt some of our spelling is bad and might well be improved. I hope and I presume that it will be changed for the better as time passes. But bad or good, I am used to it. I have learned it, it looks natural to my eye, it falls naturally from my pen. When I write I do not wish to bother my head with little matters of spelling. I decline to change my habits." Now, personally—I speak here for myself only—I have a very large sympathy for those who take this position. But let them hold this position in the liberal spirit of men able to look upon the fashion of spelling as they look upon other changing fashions. Let them not imagine that the usage they prefer because they have become accustomed to it is a necessary part of the Eternal Beauty. Let them cease to pour ridicule upon those of us who, acting solely from a sense of social duty and in the interest of the countless millions who are learning and will hereafter learn our language, are trying at some personal sacrifice to make it a little easier to learn and to remember our devious English spelling. When we propose to trim the good old ship a little, to scrape off some barnacles, and to heave overboard some useless old lumber, let them

not raise the absurd cry that we are laying hostile hands upon the venerable craft and have no feeling for its historic identity.

CALVIN THOMAS.

Columbia University, New York, October 7.

ROWDYISM IN AMERICAN COLLEGES.

TO THE EDITOR OF THE NATION:

SIR: None among the sons of the South, distinguished alike for scholarship and all that the South holds dear in its conception of a gentleman, is more fitted to discuss academic propriety than Professor Joynes of the University of South Carolina, whose long and honorable service in the classroom always entitles him to be heard. What he has to say about the conduct of students in the South, therefore, must have weight with those who cannot speak from personal experience there. I am interested to know, however, if the line between the Southern and Northern youth is really so marked as he implies; if, for any reason, the Southern youth naturally assumes the same point of view as the German university student regarding conduct in halls of learning, or to what extent their commendable deportment in the long line of classes that have filed in and out of Professor Joynes's lecture-room has been due to the wonderful personality of the revered teacher.

I understand Professor Paulsen, in his statement about rowdyism and its absence from the German class-room, to refer to all that kind of rough, senseless sport and unbecoming, though not necessarily evil, conduct, such as class-rushes, hazing, "setting-up" rooms, painting and placarding walls, breaking glass, throwing chalk and paper balls, boisterous laughing, loud talking, humming, and the like, which is still by no means unknown in thousands of colleges and high schools in America, particularly in classes under weak disciplinarians, but which almost never takes place in German universities and seldom in gymnasia, unless, perhaps, during times of political agitation and fierce dissent from the views set forth by lecturers. From childhood the German boy and girl are taught to regard the teacher as a friend; to respect and honor academic institutions and those who conduct them. Nothing could exceed the courtesy offered the German teacher by his pupil, who invariably steps aside to make way, and tips his hat at every meeting, nor the demonstration of respect and affection made by the university men and women, who rise both at the coming and going of the professor. The German student, be he ever so reprobate, never introduces rowdyism or undignified nonsense on university property. That, it seems to me, is the chief difference between the German and the American student inclined to mischief, as I have come to know them in a score of places on two continents.

J. PERRY WORDEN.

Kalamazoo College, September 28.

JAMES DE MILLE.

TO THE EDITOR OF THE NATION:

SIR: Through an oversight I only today saw Judge Russell's letter in the

Nation of August 30th in regard to James De Mille at Halifax. I am only too willing to accept Judge Russell's correction as to the attitude of the people of Halifax toward James De Mille. My sole object in writing the letter was to arouse, if possible, some interest in the work and personality of a man for whom I have felt most sincere admiration. I had no thought of dealing at all exhaustively with his work, and for that reason did not mention either the poem to which Judge Russell refers—"Behind the Veil"—or his Rhetoric. By a happy coincidence Prof. Archibald MacMechan of Dalhousie College, Halifax, has an article on James De Mille in the September number of the *Canadian Magazine*. I could add nothing effectively to what he says as to the character of the poem, but I should like to endorse emphatically his conclusion that it is in "Behind the Veil" rather than in anything else that he wrote that we find the real De Mille. Professor MacMechan draws my attention to an error in the former letter. De Mille was forty-seven years of age at the time of his death, not forty-four. I find, also, that the alcove in Dalhousie College Library was not dedicated to De Mille by the college students, but by Professor MacMechan. I am sure it is no breach of confidence to say that Professor MacMechan, who probably is more familiar with the life and achievements of De Mille than anyone living, has been collecting material for some time for a memoir on this Canadian scholar, novelist, and poet. It is gratifying to know that the matter is in the hands of one whose judgment, knowledge, and sympathy so admirably fit him for the task.

LAWRENCE J. BURPEE.

Ottawa, October 3.

Notes.

E. P. Dutton & Co. announce the third fifty volumes of "Everyman's Library" as now ready. Among them are: Wesley's "Journals," in four volumes; Sir George Young's version of "Sophocles," two volumes of Percy's "Reliques," "Pitt's Oration," two of Borrow's books ("Lavengro" and "Romany Rye"), Maurice's "Kingdom of Christ," and a considerable number of the "Waverley Novels." The same firm will soon issue: "The King of Court Poets," life, work, and times of Ariosto, by E. G. Gardner; "Sidney Herbert: Lord Herbert of Lea," by Lord Stanmore, two volumes; "George Crabbe and His Times," by René Huchon; "The Shores of the Adriatic," the Italian side, by F. Hamilton Jackson, with plans and photographs; "Time and Clocks," a description of ancient and modern methods of measuring time, by H. H. Cunyng-hame; "Stories of the Italian Artists," from Vasari, collected and arranged by E. L. Seeley; "Egyptian Excavations," Beban el Moluk, the tomb of Queen Hâthshopsist (Hatasu), introduction by Theodore M. Davis; the life and monuments of the Queen by Edouard Naville; description of the finding and excavation of the tomb by Howard Carter; illustrations in color, photographure, and colotype.

Among the autumn issues in D. C. Heath & Company's Modern Language Series are the following: Münchhausen's "Reisen und

Abenteuer," edited by Prof. F. G. G. Schmidt, University of Oregon; Sudermann's "Teja," edited by Prof. R. Clyde Ford of Michigan State Normal College, Ypsilanti; "Wilkommen in Deutschland," a reader in German, by Prof. W. E. Mosher of Oberlin; "A German Anthology," compiled and edited by Prof. Calvin Thomas of Columbia; Racine's "Les Calpeutes," edited by Prof. C. H. C. Wright of Harvard; and "Quelques Contes des Romanciers Naturalistes," edited with notes and vocabulary by Profs. Dow and Skinner of Dartmouth. In the Belles Lettres Series of the same firm the new books will be: "The Gospel of Luke in West Saxon," edited by Prof. J. W. Bright of Johns Hopkins; "The Pearl," edited by Dr. C. G. Osgood of Princeton; "The Owl and the Nightingale," edited by Prof. J. E. Wells of Hiram College, Ohio; and a volume of "Early Sixteenth Century Lyrics," edited by Prof. F. M. Padelford of the University of Washington.

Houghton, Mifflin & Co. will issue this week "The Flock," an illustrated book of outdoor life in California by Mary Austin, and "Organized Democracy," by Albert Stickney.

Archibald Constable & Co. of London will bring out English editions of the "Life and Letters of Lafcadio Hearn," by Elizabeth Bisland; "The Poetry of Chaucer," by Robert K. Root, and "The Struggle for a Free Stage in London," by Watson Nicholson, all of which will be published in America this season by Houghton, Mifflin & Co.

The Clarendon Press of Oxford (New York: Henry Frowde) announces that the following books in its "World Classics" series will be published before Christmas: "Poems by Matthew Arnold," with an introduction by A. T. Quiller-Couch; Bacon's "Advancement of Learning" and "The New Atlantis," with a preface by Professor Case; Brown's "Horæ Subsecivæ," with an introduction by Austin Dobson; George Eliot's "Silas Marner," with an introduction by Theodore Watts-Dunton; Holmes's "Professor" and "Poet at the Breakfast Table," with introductions by W. Robertson Nicoll; Leigh Hunt's "Sketches and Essays," with an introduction by R. Brimley Johnson; Johnson's "Lives of the Poets," with an introduction by Arthur Waugh; Motley's "Rise of the Dutch Republic," with an introduction by C. K. Shorter; Scott's "Lives of the Novelists," with an introduction by Austin Dobson; "Sheridan's Plays and Poems," with an introduction by Joseph Knight; "Sophocles," the seven plays in English verse, by Lewis Campbell.

A memoir of John Baskerville, the well-known printer of the eighteenth century, will be issued from the Cambridge University Press. Materials for a life of Baskerville were collected by the late Samuel Timmins, F.S.A., of Birmingham, and given over by his literary executors to R. K. Dent, librarian of the Aston Manor Free Library. With his collaboration the present memoir has been compiled by Ralph Straus of North Kensington, who has added the bibliography.

The Royal Historical Society of England is publishing, in addition to the current volume of "Transactions," a further volume of the "Camden Miscellany," containing seventeenth century reminiscences,

and the concluding volume of Abbot Gasquet's Premonstratensian collection.

Henry Barrett Hinkley announces that if he can get subscriptions for 500 copies of a volume which he has written, "Notes on Chaucer," he will issue the book. His commentary of 180 pages will cover somewhat more than one-third of the text of the "Canterbury Tales," to wit: the Prologue and the Tales of Knight, Nun's Priest, Pardoner, Clerk, Squire, and Franklin. Among the subjects treated are the elucidation of difficult passages; the history of science; linguistic peculiarities; literary and historical references, allusions, and parallels; the extent of Chaucer's culture, and his literary sources.

A. C. McClurg & Co. are the American publishers of a new version of "The Rubaiyat of Omar," by George Roe.

"The Mirror of the Sea," a new volume of stories by Joseph Conrad, is to be published by Harpers.

Paul Elder & Co. announce a metrical rendering of the love letters of Héloïse and Abelard by Ella Costello Bennett.

Putnams have now ready two volumes of the new and attractive Knutsford edition of the works of Mrs. Gaskell, to be completed in eight. To all of these volumes Dr. A. W. Ward, master of Peterhouse, Cambridge, adds introductions giving various matters of biographical and critical interest. As the two daughters of Mrs. Gaskell have assisted him in these notes the edition has some claim to the title of "definitive."

A single volume in the Newnes-Scribner thin-paper edition contains De Quincey's "Autobiographic Sketches," "Confessions of an Opium-Eater," "The Daughter of Lebanon," and "Suspiria de Profundis." There is a good photogravure portrait of the author.

Four new volumes conclude the Scribner pocket edition of George Meredith. They contain "Lord Ormont and his Aminta," "The Amazing Marriage," "Short Stories," and "Poems."

Kipling's short story, "They," has been issued in book form by Doubleday, Page & Co. With large type and printing on only one side of the leaf, the result is a respectable little volume of eighty pages. The illustrations by F. H. Townsend are disappointing. We doubt whether any one can successfully illustrate this delicately imaginative and elusive tale. Certainly the commonplace children whom Mr. Townsend presents do not suggest the sweet and shy creatures of the House Beautiful.

Kipling's "Puck of Pook's Hill" has appeared in Scribner's "Outward Bound" edition of the complete works.

To be remarked in the October number of the *New England Historical and Genealogical Register* is the sketch, with portrait, of the late Stephen Salisbury of Worcester, Mass., and his eminently public-spirited family, now (as he died unmarried) practically extinct. Three lists also are worth mention—one, supplementary of genealogies in preparation; another, in continuance, of registered passengers from the British Isles to this country at the opening of the nineteenth century; and a third, just begun, of strangers coming to Dorchester, Mass., 1767-1789, without obtaining approbation

from the town meeting to remain, as required by law. This last is curious because the majority of the "not wanted" seem entirely respectable. The present number contains the index to volume ix. of the *Register*.

Mark Twain's career as a magazine contributor covers a great many years, and collections of his shorter pieces have been made at intervals throughout that period. Nevertheless, the latest volume of the kind, "The \$30,000 Bequest and Other Stories" (Harpers), though most of the sketches are recent, takes the reader back in places to the old *Argosy* days. Notice of copyright in one instance is dated 1872. Thus the story of the double entanglement occasioned by the burlesque and the real reviews of "Innocents Abroad" is found between the same covers with "Eve's Diary" and "A Double-Barrelled Detective Story." Mark Twain's longer discursive books are his best anthologies, but there is much of entertainment to be found in this collection.

A revised second edition of Dr. Robert Ostertag's "Handbook of Meat Inspection," issued by William R. Jenkins, has appeared in abundant season for the awakened interest in animal food products and their quality. The authorized translation is by Dr. Earley Vernon Wilcox, veterinary editor of the *Experiment Station Record*, while Dr. John R. Mohler, chief of the pathological division in the United States Bureau of Animal Industry, contributes an introductory sketch of the history and present status of meat inspection in America. In this the system of government inspection in the slaughter houses is praised, but some of the changes in the way of extended scope of examination suggested in the same article have actually been embodied in the new law.

The Macmillan Company has added "Coventry Patmore's Poems" to its list of standard one-volume editions, and will so bring many more readers to a poet about whom the worst to be said is that he called his chief work "The Angel in the House." An excellent photogravure portrait of Patmore shows the high arched brow of which one reads so often, and the half-humorous, half-introspective eyes. Basil Champneys contributes a biographical introduction, written in clean, sober style—a genuine addition to the volume, as it is impossible to understand the poems, especially the "Odes," without some knowledge of the writer's life. Mr. Champneys points out that "the strictures passed respectively on the earlier and later work are at first sight contradictory. Those on the 'Angel' are, for the most part, accusations of triviality or commonplace; those on the 'Odes' of a transcendental mysticism, unintelligible to the ordinary reader." It might be added that both the earlier and later works benefit considerably from being brought into close juxtaposition in a single volume. The reader is more impressed by their unity of purpose. He sees in both the same effort to marry heaven and earth: in the "Angel" to raise human spousals into a prelude and symbol of the eternal, in the "Odes" to lower the eternal down to human comprehension.

It would be a pleasure to speak well of P. Rámanáthan's series of lectures which have been published as "The Culture of the

Soul Among Western Nations" (G. P. Putnam's Sons). Mr. Rámanáthan, Solicitor-General of Ceylon, a gentleman eminent for his character and culture, was invited to this country last winter to lecture on religion, and the result is the present volume. Much that he says is eminently true, and there are spiritual lessons which the West may still learn from the East, but we are inclined to think that whatever profit is possible from such an interchange of ideas would come best from an honest study of India's older books and not from the present preachers of the Vedānta. We cannot but think that Mr. Rámanáthan shows more the influence of Christianity upon India than any contrary influence, when he makes the ancient faith of his land to consist primarily in *bhakti*, love. And again he seems to us to be led into doubtful paths for the sake of persuasion when he discovers in the Psalms anything akin to the Upanishads. Nevertheless, the little book may be recommended to those who wish to become acquainted with the higher religious life of present-day India. They will find little to surprise or repel them; a good deal to attract.

The Paddock lectures for 1905-1906 at the General Theological Seminary, New York, were by James Haughton Woods, instructor in philosophy at Harvard, and are now published under the title "Practice and Science of Religion" (New York: Longmans, Green & Co.). Mr. Woods pursues the comparative method in the search for the ground common to all religions, and endeavors to bring religious facts into an historical and psychological classification. He bases his argument upon the work of ethnologists such as that of the brothers Sarrasin in Ceylon and Miss Fletcher among the Sioux, and classifies religious faiths according as the judgments they imply are individual, collective, or universal and normative. Under the first division he considers primitive beliefs not strictly religious, under the second ancestral systems, and in the third he includes various forms of mysticism, of the Vedānta system and Buddhism as well as Christianity. Mr. Woods's conception of the function of religion finds expression in the following sentences:

Our religion is the larger life we feel within us, a part of ourselves, struggling with ourselves, the perfection of ourselves, to which we may always turn with passionate interest. This larger self, seemingly within us, yet ever just beyond our reach, this it is that men have tried to represent in their conceptions of their gods.

A review of the considerable literature called forth in Germany by the 500th anniversary of the birth of Philip, Landgrave of Hesse, reveals the fact that the contribution of the American student, William Walker Rockwell, is the most important. *Festreden* and *Festschriften* have appeared in great numbers, and some valuable studies of the relation of Philip to education, particularly in the matter of the founding of the University of Marburg. The first volume of a repertorium of political archives relating to the Landgrave has been issued by the Marburg archivist, Dr. Küch (Leipzig: Hirzel). On the basis of a paragraph in this volume Köhler has sought to show that Mr. Rockwell went too far in his apology for Philip in the matter of the bigamy, but the reference is too obscure

and uncertain to be of great weight. A thorough biography of Philip is still a desideratum, as Mr. Rockwell's study is specifically of the marriage and the relation of Luther to that question, the interest centring chiefly in Luther.

Recent discussions of the date and circumstances of origin of Luther's most famous hymn, "Ein feste Burg ist unser Gott," seek to confirm the opinion expressed by Heine in the celebrated passage in which he calls the poem "the Marseillaise Hymn of the Reformation." Heine says, "A battle hymn was this defiant song, with which he and his comrades entered Worms (April 16, 1521). The old cathedral trembled at these new notes, and the ravens were startled in their hidden nests in the towers." Friedrich Spitta, brother of the writer on Bach, has published an elaborate monograph bearing the title of the first line of the hymn, in which he seeks to overthrow the arguments advanced against the date of 1521. No new archival matter has been discovered, and the question turns on precarious speculations as to indications in the hymn of the reformer's situation and mood. Much of Spitta's labor is expended on an endeavor to prove that the line, "Gut, Ehr, Kind, und Weib" could have come from Luther as early as 1521. A briefer essay ("Ein' Feste Burg," by H. Groessler) also agrees with Heine, and fixes upon Oppenheim as the village in which the hymn was written, and April 15, the evening before Luther's entry into Worms, as the precise time of its composition. Appeal is had to the earliest biographers, but no documentary evidence is advanced. To the suggested parallel with Luther's remark that he would enter Worms though there were as many devils there as tiles on the rooftops, a German critic replies, "Dagegen war die Welt für Luther immer voll Teufel." The one fixed fact in the discussion is that the celebrated hymn was first printed in 1529. The arguments of Spitta and Groessler seem to have carried some conviction, for we note a one-act drama by Nithack-Stahn entitled "Luther in Oppenheim," based especially on Groessler's hypothesis.

The centennial of the birth of Henry Wadsworth Longfellow will be celebrated on February 27 under the auspices of the Cambridge Historical Society. Prof. Charles Eliot Norton is chairman of the committee in charge, and with him are associated President Charles W. Eliot, Prof. Albert Bushnell Hart, Prof. Bliss Perry, and Thomas Wentworth Higginson. At the public exercises the principal address will be delivered by William Dean Howells.

An Ibsen memorial wholly in the spirit of the great dramatist is announced by his publishers, the Gyldendalske Boghandel og Nordiske Forlag of Copenhagen, in the form of a new popular edition of the works, called the "Mindeudgave" (Memorial Edition), soon to be issued in fifty parts at 30 öre a part, or not quite \$4 for the whole subscription. In spite of the low price, which is only half that of the first popular edition published in celebration of the seventieth birthday of Ibsen, the mechanical execution of the work will be in keeping with the dignity of the author. A valuable feature of this new issue is the editorial supervision of Dr. Johan Storm, of the Uni-

versity of Christiania, which will include a careful collation of all earlier editions and the uniform use of the orthography finally chosen by Ibsen. The last play, "Naar vi döde vaagner," and several poems not printed in the preceding edition but issued separately, will be added. The publishers announce that the size of the edition will be limited to the number of advance subscriptions.

Wilhelm Raabe, the German novelist, has just celebrated his seventy-fifth birthday; and the German press has been recalling with satisfaction the recognition his works have met. The wisdom they have so often contained is punningly called *Raabeweisheit*, or, literally, "Crow Wisdom."

The sale of a copy of the third edition of "The Passionate Pilgrim" in England for £2,000 has just become public, although the book actually changed hands in July or August last. The copy is the one described by Sidney Lee as belonging to John E. T. Loveday of Williams-cote near Banbury. It was originally bound in rough calf, with five other rare tracts of contemporary date. The volume was recently broken up and each of the pieces bound separately. Of the first edition of "The Passionate Pilgrim," 1599, two copies only are known, one in Capell's collection at Trinity College, Cambridge; the other in the Christie-Miller Library at Britwell. The title reads, "The Passionate Pilgrime. By W. Shakespearc. At London. Printed for W. Iaggard, and are to be sold by W. Leake, at the Grey-hound in Paules Churchyard. 1599." Of the second edition no copy is known to exist, nor can the exact date be determined. Besides the copy of the third edition, which has recently changed hands, only one other is known, in Malone's collection in the Bodleian Library. The Malone copy has the title-page in duplicate, one with, the other without, Shakspeare's name. The Loveday copy has this earlier title with Shakspeare's name as author. From a literary point of view the book can have but scant value, though it is of great bibliographical interest. It was, of course, unauthorized, and the only portions actually by Shakspeare are two sonnets (numbers 138 and 144 of the series, as published in 1609), and three excerpts from "Love's Labour's Lost." The remainder of the book was by other hands, much of it has been pretty positively identified as by Richard Barnfield. To the third edition Jaggard added from Heywood's "Troia Britanica," the translations in verse of two of Ovid's Epistles, though he still left the title page reading, "By W. Shakespearc." Heywood took offence at this and in his "Apology for Actors," published in 1612, complained of Jaggard's conduct. Probably on account of this complaint the title was reprinted and Shakspeare's name omitted.

Following the example of Lord Amherst, the Duke of Sutherland has announced, through Sotheby, the sale of the Trentham Hall library on November 19. This library is extensive, but does not boast many rarities. It has, however, the scarce third folio of Shakspeare and several first editions, including those of both parts of Spenser's "Faerie Queene."

The books, autographs, and book-plates

of the late George M. Elwood of Rochester, N. Y., will be offered at public auction November 12 to 16 by the Merwin-Clayton Sales Company of this city. The collection includes presentation and association books, Aldine, Elzevir, Plantin, and other early imprints; missals, old Bibles, editions of "The Dance of Death," early English plays, privately printed books, and editions of Walton and Cotton's "Complete Angler"; autographs of Colonial governors, members of the Continental Congress, officers of the Revolution, war of 1812, and civil war, Presidents, cabinet officers, and American and English authors, actors, and actresses; and American, Canadian, English, French, early and modern German, and other foreign bookplates.

The number of women who matriculate and become candidates for degrees at German universities is steadily increasing. The Frankfurter *Zeitung* reports that during the summer semester the total of this contingent was 211, as compared with 140 in the winter and 137 in the preceding summer. Of these women 108 are students of medicine, 66 of philosophy, 22 of mathematics and natural sciences, 10 of economic sciences, 4 of law. The bulk of these are naturally found in the South German universities. Leipzig is the only university in the north that matriculates women. The other universities admit women only as *Hospitanten*, and of these there was a total of 1,268, as compared with 1,050 a year ago. In Russia, too, the academic status of women is improving. For the first time in the history of the Empire women are now permitted to attend the lectures in the different faculties of the University of St. Petersburg, as also in the Polytechnic Institute of that city. Switzerland has for years been the Eldorado of the woman student, and the numerical strength of this contingent has steadily grown. During the summer semester just closed there was a total of 2,193 women in the Swiss universities. In the academic year 1900-1901 it was 1,429; in 1894 it was 420. The gain is attributable chiefly to the Russian element. Of the 2,193 women now enrolled no fewer than 1,518 are Russian, or nearly 75 per cent. of the whole number. The *Zeitung*, in commenting on the attendance of women in the European universities, declares that none of the fears entertained a generation ago, when the first timid attempts were made by women to gain admittance in time honored institutions, have been realized. The university woman has not materially affected academic life or endangered the supremacy of men in the professions.

The authorities of the city libraries in Berlin have been making some interesting experiments with the purpose of determining the hygienic conditions of books that have been used a great deal by the people. With the dirt gathered from such books, some of which was known to include tuberculosis bacilli, experiments were made on guinea pigs. In the case of books used but two years, no result could be noticed, but the refuse collected from particularly soiled books, that had been in circulation from three to six years, did produce an effect. Attempts to destroy the bacilli by sterilization through formalin vapors failed; but the books themselves suffered

to such an extent that many were practically spoiled. In view of this fact the city authorities have decided to abstain from further disinfecting experiments. In conjunction with the City Medical Society and the Police Department, it has now been decided periodically to examine the public libraries and to destroy those books which have been used so much as to make them a danger to public health. Such books must be destroyed, not sold for old paper.

A SOBER LIFE OF WHITMAN.

Walt Whitman: His Life and Work. By Bliss Perry. Boston: Houghton, Mifflin & Co. \$1.50 net.

What with Mr. Binns's able but slightly rhapsodical biography, Mr. Traubel's shirt-sleeve Boswellianism, Mr. Carpenter's apostolic revelations, and other less notable contributions, we are having a little too much of Whitman. The Germans have found in him a Teutonic philosopher, and soon this discovery will be added to the current of our belated homage. It might seem an unfortunate hour for Mr. Perry's entrance upon the field, yet all this Whitmania, as it has been called, really increases the timeliness of so sober and well-considered a biography as the volume now before us.

Mr. Perry's work is modest in compass, but shows throughout that he has studied the documents with care and patience. It is, if anything, too well documented, for in reaching after unprinted letters and in ferreting out Whitman's ephemeral notes, he has sometimes failed to take full advantage of the more easily accessible and more essential material. After all, Whitman's "Specimen Days" is, and must always remain, the great mirror of his life, one of the most extraordinary pieces of self-revelation in the English language. Mr. Perry, in his laudable search after novelty, has not given quite sufficient prominence, either critically or biographically, to that prime document. But in general the narrative portions are well told and properly balanced. In particular we may note that he does not make nearly so much of Whitman's romantic episode in New Orleans as does Mr. Binns, keeping thus to the sober side of conjecture. He quotes in part the famous letter to Symonds ("My life, young manhood, mid-age, times South, etc., have been jolly bodily"), but rightly exonerates Whitman of bestiality, points to the purity of his later years, and utterly repudiates Symonds's—and others'—interpretation of "Calamus."

Much the most important sections of the book deal with sources, and here Mr. Perry has a field almost entirely his own. No one before him has treated this subject with anything like the same fulness. We are, in fact, commonly inclined to regard Whitman as a wholly isolated phenomenon, as a bolt out of the clear sky, whereas he was deeply rooted in his age and surroundings. In tracing the formal derivation of the "Leaves of Grass" Mr. Perry has shown particular ingenuity. The association of Whitman's rhythms with the prose-verse of Blake, with Tupper's sprawling lines, with the Bible, and with various Oriental poems, leaves little or nothing to be desired. To quote, for example, such a passage as this from one of Blake's Prefaces is to throw a

strong light on the processes of Whitman's impressionable brain:

When this verse was first dictated to me I consider'd a Monotonous Cadence like that used by Milton & Shakespeare, & all writers of English Blank Verse, derived from the modern bondage of Rhyming to be a necessary and indispensable part of the verse. But I soon found that in the mouth of a true Orator, such monotony was not only awkward, but as much a bondage as rhyme itself. I therefore have produced a variety in every line, both of cadences & number of syllables. Every word and every letter is studied and put into its place: the terrific numbers are reserved for the terrific parts, the mild & gentle for the mild and gentle parts, and the prosaic for inferior parts: all are necessary to each other. Poetry Fetter'd Fetters the Human Race!

Mr. Perry shows how widely disseminated this easy doctrine was in the fifties and sixties, and how naturally it imposed itself on Whitman's liberty-loving and untrained mind. The veritable *trouvaille* of the book is Samuel Warren's "The Lily and the Bee," which was published in England in 1851, promptly republished by Harpers and reviewed in *Harper's Monthly* of November, 1851. The rhapsody describes a day and night passed in the Crystal Palace, but its real subject, avowed by the author, is "Man—a unity":

"In dusky, rainless Egypt now!
Mysterious memories come crowding round—
From misty Mizraim to Ibrahm—
Abraham! Joseph! Pharaoh's Plagues!
Shepherd Kings! Sesostris!
Camshyses! Xerxes! Alexander! Ptolemies! Antony!
Cleopatra! Caesar—
Isis! Osiris! Temples! Sphinxes! Ohelisks! Alexandria!
The Pyramids.
The Nile!
Napoleon! Nelson!
—Behold, my son, quoth the Royal Mother, this ancient wondrous country—destined scene of mighty doings—perchance of conflict, deadly tremendous, such as the world has never seen, nor warrior dreamed of.
Even now the attracting centre of world-wide anxieties.
On this spot see settled the eyes of sleepless Statesmen—
Lo! a British engineer, even while I speak, connects the Red Sea with the Mediterranean: Alexandria and Cairo made as one—

A unit unperceived,
I sink into the living stream again!—
Nave, transept, aisles and Galleries,
Pacing untired; insatiate!
Touchstone of character! capacity! and knowledge!
Spectacle, now lost in the Spectators; then spectators in the spectacle!
Rich; poor; gentle; simple; wise; foolish; young; old; learned; ignorant; thoughtful; thoughtless; haughty; humble; frivolous; profound!

In form and style this strikes us as one of the really remarkable literary parallels. There needs but a touch of genius to fit the lines to stand with the most characteristic of Whitman's.

And the passage from this to the sources of Whitman's philosophy is easy and direct. Here again Mr. Perry has done good service in pointing to the poet's derivation from New England transcendentalism, from German romanticism, and (*ab Jove principium*) from Rousseau. He might with profit have pursued these investigations to closer quarters, for he had here the opportunity and, we assume, the knowledge to make a genuinely original contribution to American letters. More specially, he might have insisted on the largely, but not entirely, indirect relation of the American to the German Romantics. Whit-

man was in his own desultory way a reader of the Kantian philosophers. How welcome would be a comparison of his egotism with Fichte's and his nature-cult with Schelling's, to name the two points of contact that first occur. It is not strange that Germany to-day is finding its own in Whitman.

In his closing chapter of critical estimation Mr. Perry, as was to be expected, strikes a note of just appreciation while avoiding the flatulent extravagance of Mr. Burroughs, Dr. Bucke, and the other professed Whitmanites. Possibly he goes a step too far in calling Whitman "the most original and suggestive poetic figure since Wordsworth," unless we give to the words "original" and "suggestive" their strictest meaning. The corrective to such apparent exaggeration may be found in the apt coincidence of some verses of Whitman's found on the same scrap of paper with Keats's ode "To Autumn." In more specific criticism Mr. Perry's keenest *aperçu* is in showing how "Whitman's mind passes immediately from the individual to the mass," and so misses the whole range of intermediate relations of men in the family and in society. Altogether the volume will probably take its place as the sane and authoritative life of Whitman for many years to come.

STUDIES IN HISTORY.

The Canadian War of 1812. By C. P. Lucas, C.B. New York: Henry Frowde. \$4.15.

The title of this book gives a very adequate clue to its contents. The War of 1812 might equally well be considered from the standpoint of Great Britain or of the United States, but Mr. Lucas views it as a struggle wherein the only laurels to be won were gathered by the Loyalists of Upper Canada. They alone were fighting for their hearths and the right to live under the flag of their choice. For England the war meant another burden which must be assumed at a time when she was crushed by taxation and straining every nerve in her mighty struggle with Napoleon. It could bring her neither glory nor profit. For the United States it was a disputed issue in politics which bred sectional discord and carried New England to the verge of secession. Canada, on the other hand, suffered deliberate invasion, and her people were given a chance to show whether or not they would submit to annexation by the sword. In some such light as this it is that Mr. Lucas regards a contest which embraced three distinct elements.

We take some pains to define the exact scope of the volume, because the author works within rather narrow limits. For example, his account of the events which caused the war would seem inadequate in a book that dealt with the contest as a whole. Even when we consider the avowed restriction of aim, it appears strange that Mr. Lucas should not have given the same attention to antecedents which he gives to the Treaty of Ghent. "The war party in the United States," he says—"the anti-English party to whom the men of Massachusetts were so strongly opposed—had a definite programme, illustrated in speeches and proclamations, and, as the British commissioners at Ghent roundly

declared, notorious to the whole world, though not explicitly avowed by the government. That programme was to conquer and annex Canada." What this work lacks is a chapter of twenty pages or so on the state of feeling in the United States during the period when Henry Clay talked of negotiating peace at Quebec or Halifax. Mr. Lucas says nothing about the wholesale seizure of American shipping by Napoleon, despite which Madison's Government went into a war with England, though incidentally helping France. Neither does he touch upon the spirit disclosed by Simcoe a short time earlier when he was expecting an invasion from Wayne. Of course, every man is entitled to write his book in his own way. We would only make it plain that Mr. Lucas plunges into an account of hostilities along the Canadian frontier without furnishing his reader with such data as would explain the state of feeling on either side of it. A party in the United States sought to seize Canada. The people of Upper Canada remembered their Loyalist extraction. So much Mr. Lucas tells us. But all the interesting details of recrimination are left out.

A little is said of the combats at sea and of the attacks upon Washington, Baltimore, and New Orleans. Otherwise the book is in the strictest sense "an instalment of Canadian history," as Mr. Lucas calls it. The sources, in the main, are official dispatches. Slight use has been made of autobiographies, vindications, and ephemeral literature, like Hull's "Memoirs," Wilkinson's "Memoirs," and Armstrong's "Notices of the War." The narrative, so far as it deals with Upper Canada, is full and satisfactory. The same can hardly be said of the treatment which Lower Canada receives. That the sons of the Loyalists should defend themselves from attack was natural enough, but the psychology of the French Canadian on this occasion is much more interesting. Here Mr. Lucas offers no considerable assistance. Apart from a brief notice of the fight at Chateauguay, and some account of Prevost's movements on Lake Champlain, the allusions which he devotes to Lower Canada are few and perfunctory. He does indeed say that, "when, on the declaration of war, the militia was embodied in the Montreal district, a serious riot took place at Lachne, which was only put down with the aid of regular troops," yet what it meant in terms of political disaffection we are left to guess. The name of Plessis is not mentioned in the index, and we have discovered it nowhere in the text, but the importance of his services to the movement was inestimable. In 1813 the Crown granted him, as Bishop of Quebec, an annual allowance of £1,000, an official recognition of what he had done to preserve the loyalty of the *habitants*. Mr. Lucas quietly passes over one of the largest questions which is suggested by the war of 1812, namely, the attitude of the French Canadians, and the grounds for their attitude. Apropos of Chateauguay, he observes: "Hitherto the cause of Canada had been mainly in the keeping of British troops and settlers of British birth; but at Chateauguay only French Canadians were engaged, and this fight proved to demonstration that the war was a national war for Canada." This statement by no means ex-

plains the complicated situation which existed in 1812 on the banks of the St. Lawrence. Moreover, Mr. Lucas's sketch of military events in Lower Canada is less distinct and thorough than might have been desired.

We have now exhausted our list of strictures. For the rest, Mr. Lucas's story of the campaigns in the Niagara peninsula and along the Great Lakes is excellently told. He has warm praise for a patriotic militia, but insists upon the sovereign value of regular troops as a nucleus around which the citizen soldiery can rally. In summing up the lessons of Queenston Heights he says:

There was equally good fighting material on either side of the Niagara River, but, while the spirit and discipline of the Canadian militia were beyond all praise, those qualities were absolutely non-existent on the American side. The reasons are not far to seek. The citizen soldier is at his best when he has his back to the wall, fighting for his home; when he has at his shoulder to steady him a good type of trained regular soldier; and when the general in command is more than a general, personally attracting the sentiment and patriotism of those who are under his lead. All these conditions were present on the Canadian side, all were wanting on the American.

This passage will convey some impression of Mr. Lucas's style, but it must not be inferred that because he praises the conduct of the Canadian militia under Brock he holds a brief for the subjects of George III. His tone throughout is discriminating, and though admiration for the courage of the Loyalists may be said to dominate the narrative as a whole, it does not lead to special pleading on their behalf or wilful detraction from the merits of their opponents. No one who has had Mr. Lucas's connection with the Colonial Office could be expected to feel regret that "the Loyalists and their descendants fought for their own and kept their own." But such an animus as of old marked James's "Military Occurrences" is wholly absent from this admirable volume.

History of the "Bucktails." By O. R. Howard Thompson and William H. Rauch. Philadelphia: Eclectic Printing Co.

The record of the "Bucktails," officially known as the Kane Rifle Regiment of the Pennsylvania Reserve Corps, thoroughly entitles it to a history of its own. The regiment was distinctive for other reasons than its nickname. It was, for instance, never regularly mustered into the Federal service, save by order of the Secretary of War, but was mustered out. It served the United States Government for two months when only in the employ of Pennsylvania, and was afterwards held merely by the State muster, which provided for a transfer to the United States service that was never made. Comprising many riflemen from the wilder parts of Pennsylvania, the regiment early earned the reputation of being a hard fighting organization, as is attested by Confederate officers as well as by its Federal commanders. The "bucktail," which each soldier pinned to his cap, was not provided for by an army regulation, but is an excellent illustration of the value of a distinctive badge or part of a uniform in creating *esprit de corps* in a military or-

ganization. Thanks to it, this regiment was known throughout both armies. Campaigning in Maryland in the State service, before entering the Federal, the Bucktails had their first serious engagement at Dranesville in December, 1861. At Mechanicsville, Gaines's Mill, New Market Cross Roads, and Malvern Hill, they fought and bled. So, too, they took part in the valley campaign of 1862, served with Pope at the second battle of Bull Run, and then at Antietam and Fredericksburg. At Gettysburg they lost a colonel who was the brother of Bayard Taylor, and they wound up their extraordinarily full service by campaigning under Grant in the Wilderness.

The volume before us has been compiled on behalf of the regimental association with obvious industry and touching affection for this notable organization. Unhappily its authors were plainly inexperienced both in the art of bookmaking and of writing history. Hence, it does not add much to the growing collection of valuable regimental histories. For the Bucktails' sake their notable service should some day be put into a more readable and significant form. Had this book been prepared by a trained editor, there would have been no necessity for the thirtynine "corrigenda" entered at the end, and for many other errors not noted by the compilers. It is especially regrettable that when strenuous efforts were made to complete the roster of the regiment, the results were in no way tabulated. As to the total number of killed and wounded, the deaths from disease, the loss by desertions, etc., the reader is left in ignorance. The historian who would ascertain these facts must look for them elsewhere.

Dixie After the War. By Myrta Lockett Avary. New York: Doubleday, Page & Co.

In a previous volume Miss Avary gave us a Southern woman's view of events at the time of the civil war; she now repeats the process for the even more painful years the South passed through after the war was over. The book is largely a collection of anecdotes, scraps, and cuttings, grouped under appropriate chapter heads, and a good deal of the material is fresh and entertaining. The point of view throughout is feminine, which explains a certain note of overstatement or intensity that adds to the emotional, if it detracts from the historical, force of the book. A Southern officer once observed: "Woman's is the aftermath of anguish. It has taken a long time to reconstruct Southern women. Some are not reconstructed yet. Suffering was stamped too deep for effacement. The Southern woman and her loved ones lacked food and raiment; her home was burned over her head. And women could only sit still and endure while we could fight back."

The volume abounds with anecdotes. The young ladies of Richmond, after the military occupation, adopted a veil that completely screened their faces from observation. This was hard on the younger Northern officers, and here is how one of them, wittily and gallantly, entered his protest: "Mary Triplet, our famous blonde beauty, then in the rosy freshness of early youth, was walking along when the wind took off her veil and carried it to the feet of a

young Federal officer. He bent, uplifted the vagrant mask, and, with his cap held before his eyes, restored it." Indeed, the Richmond ladies were most inflexible; is it not told of one of them that she walked the whole way from Petersburg to Richmond, twenty miles, for fear the oath of allegiance would be administered to her if she boarded a car?

Occasionally we are afforded a glimpse of matters of greater political importance than these. As, for instance, this impression of Lincoln at the time of his flying visit to Richmond a few days after the occupation of the city:

There was something like misgiving in his eyes as he sat in the carriage with Shepley, gazing upon smoking ruins on all sides, and a rabble of crazy negroes hailing him as Saviour! Truly, I never saw a sadder or wearier face in all my life than Lincoln's.

A little judicious pruning, a little more care for style, a little more regard for accuracy in historical detail, would have made of this a really good book; even as it is, it presents with vivacity a picture that gives a strong, if somewhat one-sided, impression of notable events. The illustrations are good, and it would be difficult to resist the charm of the pictures of several Southern women of the war period here reproduced.

RECENT FICTION.

The Subjection of Isabel Carnaby. By Ellen Thorneycroft Fowler. New York: Dodd, Mead & Company.

The brilliant Isabel's "subjection" applies to her state and not to the process, which has been thoroughly accomplished before the book begins. Those who knew and delighted in her in the earlier novel will be glad to find that, though in theory an abject wife, she has lost none of her power or her desire to shine for all. As her sponsor, the author, says, "She was too true a woman to flirt after she was married: and she was much too true a woman not to want to do so." The story, however, does not deal with Isabel's flirtations or abstainings therefrom, so much as with a matchmaking adventure of hers, and with the large crowd of consequences that followed, bringing, first, woe, and subsequently, weal, after the author's usual optimistic fashion.

Her fashion is in no danger of founding a school, for Miss Fowler is not imitable. The combination of fun with brilliance is her own absolutely. Her ceaseless sense of the incongruity of congruities, and vice versa, makes an effect as of punning with ideas. Gilbert does this, but Miss Fowler does it with a feminine difference. She glorifies the illogical. She is, moreover, by a strange anomaly, a deeply religious writer with a fervor and faith which manifest themselves not only in orthodoxy, but in cheerfulness. Whatsoever tragic or melodramatic episodes may occur are beneficently free from gloom. And if her faith makes her hopeful, her grounding in Scripture gives her a style and a resource in imagery possible only to the intimate friends of the best literature. There are a few excellent little sermons in the book, and many evidences that the writer thinks her thoughts in the language of David and Paul.

A religious temper and an exuberantly

merry temperament should and do furnish merits enough to float a story quite as full of emptinesses as its predecessors—so far as mere story goes. Indeed, having flown higher in incident than they, it has gone correspondingly deeper in absurdities, welcome, likable absurdities. It is a boon to have within reach such sayings as twinkle on every page:

The pronoun which we place before a verb makes all the difference to the verb we use. For instance, "I speak the truth," "You are unwarrantably severe," and "He makes himself detestably disagreeable," are really in essence the same verb adapted to fit the various pronouns.

There are two things which every man or woman that ever was born believes, about himself or herself: namely, that he or she has a strong sense of humor, and is a small eater!

A man will do anything that a woman asks as a favor, and nothing that she advises as the wisest course.

These are a few of her many portable conveniences. Another, "It is man's place to rule; and the minute that he lays down his sceptre, woman snatches it up and hits him over the head with it—as he richly deserves"—embodies the prevalent attitude of the book upon the relation of husband and wife. It is exemplified by all the married folk in the story; in the case of Fabia the illustration may be called a caricature. A counsel of this sort of perfection is not, however, likely to be widely mischievous in America. There is small menace of contagion in the example of Janet, who, on her husband's return from a fourteen months' unexplained absence, not only volunteers not to question him, but adds, "As long as you tell me that you have been well and happy I am content."

The Heart that Knows. By Charles G. D. Roberts. Boston: L. C. Page & Co.

Another novel of the season from a popular American writer, which reads discouragingly like a pot-boiler, another disappointment for the reviewer who ardently wishes to find goodness in what is pretty sure to be widely read. Here is plenty of material for a really powerful story, but no life in the actual product. We imagine the author sitting down (between a college lecture and the composition of a Nature Article) to the fabrication of a plot which should be properly compounded of sea adventure and heart interest. No fault is to be found with the resulting structure, as a structure. Things happen: there are stirring scenes at reasonable intervals. There is a promising diversity of *personæ*, taken at their face-value. The scenario is moving.

A beautiful girl in a Northern coast village is deserted on her wedding morn by a man who should have been the unrecorded hero of a quiet domestic romance. This initial event is due to the machinations of a village adventuress, who by forgery persuades the honest groom of his bride's infidelity. Not without local precedent the girl has ceased to be a maid somewhat before the hour when the church should have set its seal upon a solemn betrothal. Ignorant of any cause for her desertion, she lives to give birth to a son who even in youth dedicates his life to revenge upon his mother's betrayer. He goes to sea, and searches the corners of the earth in vain for traces of his unworthy father. The

pursued has changed his name, and a close intimacy between him and the pursuer has sprung up before the fact is discovered. The son, still driven by his sworn purpose, tries to nerve himself to the deed of righteous vengeance, but "the heart that knows," the filial instinct, discerns the blamelessness of his intended victim, and the avenger's hand fails. Explanations ensue, and there is a return of the two wanderers to the lonely mother who waits in the far Northern village to welcome them. Substance here for a lusty melodrama, or, in a powerful hand, for a really moving interpretation of human experience. In fact, the tale leaves a dispiriting impression of tenuity and tameness. We have a right to expect better things than this from Mr. Roberts or nothing at all. Ten years ago he was recognized as one of our promising poets. Since then, we may suppose, he has proved too "magazinable" for his good. He should now be in his prime; but what he does fails to fulfil, and threatens to destroy, our hopes of him.

Moon-Face and Other Stories. By Jack London. New York: The Macmillan Co.

These stories present Jack London at his shallowest, but by no means at his worst. Everything in them, even their brutality, is subordinated to a trivial ingenuity of plot. With the exception of the longest of them, "Planchette," they are not dull; but they do not reassure us that this writer is what he was hailed to be when first he flashed upon our ken: a second Kipling. We would suggest as a sub-title, "Diversions of a Literary Bounder."

The Face of Clay. By Horace A. Vachell. New York: Dodd, Mead & Co.

Mr. Vachell will be recalled as the author of "Brothers" and "The Hill," the latter published but a short time ago. "The Hill" was one of the best stories of school-boy life ever written. "The Face of Clay" is, as such things now go, what would be called a very good story. It has dignity as well as interest. Notably, though it has to do with a group of artists, it does not make copy of the cheap and silly aspects of the so-called "artistic temperament." It does not err, as "The Incomplete Amorist" has recently erred, in making a cat's-paw of the homely slighted shepherd's trade. What compromises the seriousness of Mr. Vachell's tale is its melodramatic quality, felt at the outset, and pretty well usurping the attention toward the end. Our villain's machinations, our hero's triumphant virtue, cast their shadows too far before. The whole affair is too patently composed according to a known recipe. This has been true of some of Mr. Vachell's other work. What "The Hill" lacked of reality was due to the neatness with which the punishment fitted the crime, and virtue drew its salary. This amenity, we suppose, tends distinctly to elevate a novel to that envied shelf where the "ten best-sellers" inhabit. But who of sensible years wants to read that kind of book a second time? "The Face of Clay" is, we fear, on its first and last legs.

The Gentleman Ragman. By Wilbur Nesbit. New York: Harper & Brothers.

A Middle West town, an editor, a Virginian, a feud, a detective—the words sug-

gest the most hackneyed ingredients of fiction. But though they indicate the material of Mr. Nesbit's story, they give small hint of the treatment. The narrator is a boy in an editor's office who tells the tale in boy language; the detective is another boy, eaten up with the zeal of Gaboriau and his ilk; the Virginian is temporarily thrust into the profession of ragman, while seeking to evade the painful necessity of shooting an hereditary enemy; the journalist is the funny man, and helps in the end to furnish forth the double wedding. The self-exiled Virginian, contriving to get tangled in sundry social matters of the town, plays knight-errant to a damsel in distress, and the two boys attach themselves to him as faithful squires in many laughable adventures. An ample native Americanism in man, woman, and boy is unfolded with full measure of native American humor in the language of the country, resulting in a fabric inexpensive but entirely wholesome and clean.

The House of Islâm. By Marmaduke Pickthall. New York: D. Appleton & Co.

This Oriental story is in effect a "cock and pye" novel of adventure done into Mohammedan. It has the attractions and drawbacks of all writings of its school for their respective admirers and repudiators. On the whole, it is to be welcomed as a variant and a poetic variant upon similar affairs conducted in France, England, the Netherlands, Virginia, and countries (usually ending in *a*) not on the map. The adventures cluster about the pilgrimage of a certain saintly old Shems-ud-din to the Holy City to place under a Frankish doctor's care a beloved daughter who is sick unto death. "Thou hast let the girl grow between thee and the Praiseworthy; wherefore the Almighty slays her, as one breaks the small branch of a tree, that He may see thee," his friend tells him. "The right is with thee, O Hassan, but—O my pearl of pearls!" The grave purpose of the pilgrimage and of the sojourn in the city does not preclude entanglement with a deal of secular adventure, seeing that the retinue embraces elements ranging from half-tamed brigands with pronounced tastes for gore and stolen ammunition, to fanatics ready to do any violence for religion's sake. The story is drenched in the atmosphere of Oriental wile—politician pitted against saint, buyer against seller, and one religion against the other. The stir and turmoil abate not from cover to cover, beating always about one central point of repose—the fine old scholar and saint. It is he who holds the story together, and even his hold is slender, the impression being less of a novel than of a book of deeds and of manners. With the Oriental landscape and customs, and with the workings of the Oriental mind, its guileless wiles and its motiveless subtleties, the writer is obviously quite at home. The geography, architecture, and figures are in admirable proportion; the characters stand out and live; the style is swift, pictorial, amiably cynical, fitting its theme.

Holyland. Authorized translation of Gustav Frenssen's "Hilligenlei," by Mary Agnes Hamilton. Boston: Dana Estes & Co.

"Holyland" is one of those books that

owe success to appearance at the right moment. The spirit of investigation may have destroyed the fictitious fabric of theological systems, but it has not destroyed religious faith. This is apparent in the attitude assumed by modern German scholars and in the treatment of the religious motive in fiction. The religious message of the book is contained in the story of the life of Christ, written for the common people by Kai Jans, and bequeathed to the woman he loves. The author assures us in an after-word of the German original that this story is based upon the works of the great Biblical scholars of his country. But whether this popularized version of the New Testament has the convincing and suggestive strength needed to make of Hilligenlei a Holyland in something more than name, is by no means proved. The characters which the author has grouped about the hero, in whose struggles and hopes he may have embodied experiences of his clerical life, are well on the way to work out their own salvation; they even speak of having found their Holyland long before they become acquainted with that manuscript. For each has his own conception of the meaning of the word.

Another element of success is the erotic side of the novel. Erotic problems play such a prominent part in modern German literature, that even the average reader is no longer shocked by passages that have been censured by critics far from conservative. For this very reason the book is not likely to appeal to the Anglo-Saxon. In the author's conception of love the spiritual element is entirely absent; and some of the situations in which he pictures his characters lack refinement. But most of the German readers who have become admirers of Frenssen through this, his latest work, were captured neither by the religious nor the erotic element. The book is filled with a consciousness of Germanic strength and sounds a patriotic keynote which never fails to find an echo in the multitude.

With the exception of a few passages which bear evidence of struggle with the style of the original, the translator's painstaking work has been signally successful.

Afghanistan. By Angus Hamilton. New York: Charles Scribner's Sons. \$5 net.

Angus Hamilton, the author of the volume entitled "Afghanistan," is a serious student of Central Asian politics. His latest book is the result of patient, laborious study, and investigation of the modern historical, political, and geographical conditions of the buffer state between India and Russia. The book is heavy reading, for Mr. Hamilton is not concerned with the usual traveller's picturesque account of the strange manners and customs of a strange country. He gives us statistics on trade routes, railways, trade movements, trade values, duties, products, population, systems of government, strategic communications, minute descriptions of towns and cities, tables of weights and measures—such data as appeal to the man who wants a thorough working knowledge of Central Asian affairs.

The main subject of discussion in the book is the growth of railway systems to

and in Afghanistan. Until recently Russian Turkestan was at a disadvantage from being too remote from its base of supplies. European troops to reach Central Asia had to travel the long route from Moscow to Baku, thence over the Caspian Sea by a twenty-four hours' passage, and then to the end of their journey by the long Trans-Caspian Railway. This tedious journey is now a thing of the past. The Orenburg-Tashkend Railroad makes the continuous trip from St. Petersburg to Tashkend, 2,400 miles, and joins the southern-central Russian depôts with the bases in Central Asia. Such an advance is, of course, a decided help to Russia in pushing southward. This route, be it noted, is in the direction of the shortest line to India. Were there no international difficulties, as at present, the line could be carried from Kushk, the present terminus of the Murgab Valley division in northwestern Afghanistan, to Herat, the key of India, thence to Kandahar on the southern boundary, and to New Chaman where it would join the Indian system of railways. With this line completed the Anglo-Indian traveller could shorten his journey by seven days' travel via Calais, Berlin, Warsaw, Baku, Merv, Kandahar, thence into India. He would thus avoid those bad dreams—the horrors of the Red Sea and the monsoon. But for the time being the scheme is an idle dream. Russia will devote herself to strengthening her advantage along the Northern Persian and Northern Afghan border by bringing her railway resources to the edge of the glaciis, and, incidentally, by controlling all trade from the north.

As Herat, the key to India, is the most obvious objective of Russian railway policy, Mr. Hamilton gives careful attention to that city and to the western border of Afghanistan. His account of Herat and of the Herati is not optimistic. Herat, quite in contrast with Vambéry's brilliant account of it, is described as having declined from its quondam opulence. It is no longer the great central trade mart between India and Persia. The Herati, too, have been so dulled by misfortune, pestilence, and famine, that they are willing to surrender unconditionally to the highest bidder—to Russia. They have been intimidated by Russia's impressive show of strength in Central Asia. Mr. Hamilton's view of the situation in Herat, as well as in the whole of Afghanistan, is summed up thus: "Russia is really the supreme and dominating factor in Afghanistan, not only along the northern, eastern, and western frontiers, but throughout the kingdom."

As Kandahar is a rich trade centre, Mr. Hamilton advocates a railway to it, both for commercial and strategical purposes. Such a line would, he asserts, offset Russia's schemes of aggression. Substantially, Mr. Hamilton's view is that every advance made by Russia in the Middle East should be measured equally by England in the South. It cannot be denied that the author makes a plausible argument, but it can be argued with equal force that such schemes do not insure the desired integrity of British India. Recent writers, notably Prof. Goldwin Smith and F. G. Abbott, editor of the *Calcutta Statesman*, take another view. If disintegration occurs, they argue, it will come largely from within the country. Professor Smith urges that

"no race can forever hold and rule a land in which it cannot rear its children." Mr. Abbott sees that sincere coöperation between the natives and the English is the solution of the troublesome question. In only one State—Baroda—has this sincere coöperation been successfully tried. In connection with the political status of Afghanistan Mr. Hamilton writes entertainingly of Amir Abdur Rahman, and of his son, the present ruler, Amir Habib Ullah. In his final chapter he traces in detail the various Anglo-African relations. His account of Sir Louis Dane's recent mission to Kabul shows how fruitless was England's endeavor to gain the master hand in Afghanistan. Mr. Hamilton is sanguine enough to write concerning the mission "that the subjugation of Afghanistan to the interests of India is incomplete." As a matter of fact it is evident to everybody, as well as to Mr. Hamilton, that the purposes of British policy in Central Asia have received a decided check. The one British statesman who opposed sending the mission, and who thereby showed sound political sense, was Lord Curzon—to whom Mr. Hamilton, by permission, dedicates his volume.

Historic Bibles in America. By John Wright. New York: Thomas Whittaker.

The author of "Early Bibles of America" and "Early Prayer Books of America," the Rev. John Wright of St. Paul, has just published what may be called a companion volume to the former "Historic Bibles in America." In the earlier book, published in 1894, a number of Bibles printed on the American continent were described, and a large amount of interesting material, bibliographical, as well as biblical, was brought together. In the new book, "Historic Bibles," Dr. Wright describes a number of Bibles (some few printed in America, but many foreign editions) which have at some time belonged to people more or less famous, and which are now in American libraries, public or private. Some of the Bibles described are of value and interest themselves, but many others have only their "association" interest.

We learn that George Washington's family Bible (Baskerville's edition, Birmingham, 1772) is now owned by Christ Church Parish, Alexandria, Va., to whom it was presented by George Washington Parke Custis in 1804. Washington also owned a copy of the folio edition of Brown's "Self-Interpreting Bible," Hodge & Campbell, New York, 1792. This was the first Bible printed in New York. Washington's name heads the list of subscribers. The Bible described by Dr. Wright as the "Bassett-Washington" Bible, on account of its having belonged to Ella Bassett, widow of Lewis D. Washington, should have been called Mary Washington's Bible. There is no reason to doubt that it originally belonged to Mary Ball Washington, the mother of George Washington, from whom it descended to her daughter Betty, who married Fielding Lewis. Dr. Wright apparently was not aware that the family record which he quotes (which is on a blank sheet, wafered into the book with sealing wax) is probably in the autograph of George Washington. The first entry is

the record of the marriage of Augustine Washington and Mary Ball, on March 6, 1730-31. The second entry is of the birth of George Washington, "Born ye 11th Day of February, 1731-32, about 10 in the Morning & was Baptised the 5th of April following." The eleven days which were stricken out of September, 1752, made the eleventh day of February, Old Style, the twenty-second, the day we celebrate. This valuable and interesting volume is no longer at Mount Vernon, as Dr. Wright indicates, but is now offered for sale by a well-known firm of booksellers in New York city.

In his preface Dr. Wright says that he has been twelve years collecting his notes regarding the Bibles described, and that the ownership of some of them as noted by him may not now be correct. This is the case with the most valuable specimen of the first edition of John Eliot's Indian Bible, the famous Hardwicke copy. This book long ago left the Kalbfleisch Library, to which it is here credited, having been acquired about ten years ago by Marshall C. Lefferts. At the disposal of the Lefferts collection it was purchased by E. D. Church, who now also owns the fine Barlow copy of the first edition of Eliot's New Testament in Indian, having the autograph of William Herbert, which Dr. Wright describes as being in the library of C. S. Bement of Philadelphia.

The quarto Bible having the imprint "London: Printed by Mark Baskett, Printer to the King's most Excellent Majesty; and by the Assigns of Robert Baskett, M.DCC.LII.," for which \$2,025 was paid at the sixth McKee sale in 1902, is now owned by George C. Thomas of Philadelphia. This is supposed to be one of the small edition surreptitiously printed in Boston by Kneeland & Green for Daniel Henschman, as related from hearsay by Isaiah Thomas in his "History of Printing in America." As the printing of Bibles was a monopoly, Thomas explains that by inserting the London imprint the Boston bookseller Henschman hoped to be able to dispose of his Boston-printed counterfeit at a larger profit for himself than by importing books printed by the licensed printer. The counterfeit New Testament in duodecimo, which, according to Thomas, was printed for Henschman and other booksellers by Rogers & Fowle in an edition of two thousand copies shortly before the Bible printed for him by Kneeland & Green was published, has not yet been identified. It also contained a London imprint. Thomas says further that "privacy in the business was necessary," and that "few hands were intrusted with the secret." If some bibliographer will bring together and compare a number of old Bibles and Testaments which are known to have been in the possession of New England families about the middle of the eighteenth century, some interesting facts as to these counterfeit editions may be brought to light.

The Knowledge of God and its Historical Development. By Henry Melvill Gwatkin, M.A. New York: Imported by Charles Scribner's Sons. Two volumes: \$3.75 net.

Professor Gwatkin published a volume of sermons not long since under the title "The

Eye for Spiritual Things," which were of the best type of English preaching. The discourses were chaste, dignified, scholarly, and truly spiritual. Evidences of the same pleasant culture and reverent piety are not wanting in the more ambitious undertaking now appearing as the Gifford Lectures for 1904 and 1905, yet with the work as a whole one must confess to disappointment. The lecturer set before himself the very considerable task, both of examination of the principles on which theistic doctrine rests, and also of a historical survey of the principal forms of belief in God. His work is a philosophy of religion and a history of theism combined in one, and neither as a philosophy nor as a history is it satisfactory. Omissions of important themes and inadequate treatment of others were inevitable to an attempt to cover so wide a range within the allotted time.

As an example of insufficient treatment yielding no definite result may be cited the lecture on the Knowledge of God in the Old Testament, which opens the second volume. Of the forty-six pages not a few are taken up with the handling of critical matters, in which the author leans toward conservative opinions, while recognizing the need of criticism and the certainty of many important critical conclusions. But even if one does not stumble at the assertion of the prevalence of an ethical monotheism before the time of the conquest, nor at the suggestion that the doctrine of a future life was familiar in Israel, "if only as an Egyptian belief," he will claim the right of protest to find no clear conception in Dr. Gwatkin's pages of the Hebrew contribution to the knowledge of God, or of the development of theistic belief in Hebrew religion. At one point we read that "the truths of God are not impressed on common mortals by cold reasoning and dry-astid antiquarianism, but only by the enthusiasm and self-sacrifice of men who live by the truth, and count all other things as loss if they may gain truth." Here we seem to be in sight of a reasonable account of Israel's faith, but there follows only a plea for the historicity of Abraham, while the truths of God which were impressed by the enthusiasm of Amos and Hosea are not expounded. Similar incompleteness and lack of ability to bring essentials into the clear might be remarked in the lecture on the religion of the New Testament, and indeed are characteristic of the entire treatise. The defect is doubtless incident to the largeness of the subject, but it is serious nevertheless.

Dr. Gwatkin would appear to be most broad and tolerant in many respects, but his manner toward Roman Catholics is sometimes offensive, as when he says that "the high priest of irreligion calls himself the vicar of Christ," and refers to the Roman Church as "the most degraded of all the sects."

Demosthenes against Midias. By William Watson Goodwin. Cambridge University Press. New York: The Macmillan Co. \$2.20.

The oration against Midias throws light on Athenian politics and manners, and is, in the main, an extremely able and brilliant specimen of the orator's powers. "For Scholars," as Professor Goodwin re-

marks, "it has a unique interest as the only existing argument in a case of *προβολή*" (*probolé*). The upshot of the case might also raise some nice questions as to the psychology of the pleader and the ethical standards of his profession.

While the particular incidents that gave rise to the case wear an antiquated air, Midias is himself a type which may appear, with Protean variations, in any democracy. He might have flourished and bullied under the Tweed régime, in New York, or more recently in St. Louis. His methods are strikingly modern. His aim, however, was not so much peculation as political office and partisanship to shield private fraud and revenge. Wealthy, overbearing, arrogant, he managed by ingenious chicanery and powerful friends to evade the penalties of his frequent outrages. A picturesque witness of the enormity of these outrages is the disfranchised arbiter whom Midias had crushed and ruined in revenge for an adverse judgment, and who, while appearing before the court at the summons of Demosthenes, is legally disabled from opening his mouth. This dumb and ruined man is an incident in the long quarrel which culminated in the *probolé*, a casual victim in the legal feud whose windings are described in the speech.

The immediate occasion of the procedure known as *probolé* was this. At the highest festival of Dionysus, Demosthenes, while acting as *choregus* for his tribe, and presiding at a function on which he had spent lavishly from his own purse, was struck in the face by Midias repeatedly, with his clenched fist. The occasion, the place, and his official position made the person of the *choregus*, as it were, sacrosanct; and the mob of bystanders, enraged at the insolence of the assault, shouted, "Prosecute him! Don't compromise!"—an eminently Attic scene, more civilized and urbane, at any rate, than a lynching. Encouraged by this wave of popular sympathy, Demosthenes, the day after the festival, brought his grievance before the Assembly, holding special session in the Theatre. In spite of the strenuous efforts of his friends, a vote of *probolé* condemning Midias was unanimously passed. Such a vote of censure was only a preliminary step, a *præjudicium*, carrying moral weight, but leading in itself to no penalty. After a considerable interval, Demosthenes proposed to follow up this verdict, before a regular court; and the speech which Professor Goodwin has edited was prepared with this view.

Nothing in the oration on the Crown is more dignified, more forcible, and illuminating—more worthy of the large discourse of Burke, than the closing passage which elucidates the sanctity of the law and the majesty of constitutional government. "The laws," he says, "are but letters inscribed on brass or stone. It is you judges who give them force by your verdicts, and who, in turn, depend on them for safety." But the final issue of the case is an anti-climax to the weight and splendor of such sentiments. Repeatedly, in the course of his plea, Demosthenes dwells on the duty of a good citizen to pursue the criminal and to vindicate the laws for the sake of the commonweal. "Others have compromised, have said a long farewell to the laws and to the righteous indignation which a citizen should feel for their violation;

others have yielded to the persuasion of money, have come to terms privately, and have dropped their suit. I, on the contrary, will do none of these things. I have been approached repeatedly with large offers, with entreaties, with cajolery, even with threats. If I yielded, I should feel that I had deserted my post. I should become defendant instead of plaintiff, if I am not purged from this outrage by your verdict." He asks, accordingly, for a penalty of death, or confiscation of the estates of his opponent.

After all this eloquence, Demosthenes does the very thing he has denounced. We learn that, as our editor expresses it, yielding to the urgency of friends, "he decided not to bring his suit into court, and accepted half a talent as a gift from Midias." This, certainly, is a bewildering fiasco. It may be quite true, as Professor Goodwin urges, that the orator was influenced by a sense that his public career was in peril, that he could not afford a victory over an adversary so sinister and powerful; he may have thought that he could better serve the State by using his voice in the counsels of the Olynthiac Oration than by a private triumph over such an opponent. It may be true also that this small sum was honestly due him for previous loss and damages, though Weil and Holm, among others, take a harsher view of the spirit of the transaction. But if the compromise was defensible, what becomes of the lofty arguments of the speech? He forges a thunderbolt white-hot with a fine, moral indignation, and then the bolt is suddenly laid away to cool.

Professor Goodwin's notes have all the brevity, point, and helpfulness which are naturally to be expected from the editor. Many of the annotations touch on questions of the uses of the moods which the author has made his own especial province, or upon questions of Attic Law, in which he is peculiarly at home. The appendices furnish a highly valuable apparatus—an Historical Introduction to the case, treatises on Public Services performed by individuals, and also on Peculiar Forms of suits under the Attic Law. The latter especially discuss and sift all the available evidence as to certain moot points, applying to them the light afforded by Aristotle's "Constitution of Athens." The searching dissertation on the process of *eisangelia* (impeachment), for example, explains the safeguards which in the fourth century would have prevented the repetition of that mad and tumultuous action of the Assembly which, though withstood for a single day by the firmness of Socrates, resulted in a sentence of death pronounced on eight generals, without trial or hearing. This monstrous proceeding, a pure outbreak of mob feeling under stress of domestic bereavement, was entirely alien to the spirit of Attic Law. Although litigious and even waspish, the Athenians were distinctly law-abiding. In spite of recurring civil disorders, they were on the high road to the moderation, the fixed processes, the law and order, of civilization.

As this speech was never delivered, it naturally lacked complete revision. Its arrangement is also pretty certainly not that which the writer would finally have adopted. The editor leans heavily on the

authority of Σ, which he has revised for his purpose, using the facsimile in the Harvard College Library. In §41, line 4, he has discovered that Σ has *ποίησθαι* only, not *τοῦτο ποιήσθαι*, as generally stated (Dindorf, Weil, Blass, King.) For this reason he adopts the reading *ἃ μὲν ἂν τις . . . ἐξαχθῆναι*, omitting *τι* before *πράξαι*. This is an obvious improvement. In §203, our editor follows the MSS. in reading *νεμείσθε* and *ἐμβήσθε* instead of the infinitive. Finally, the breathless sentence which runs its mazes through §215 and §216 is at least extremely vivid and picturesque in its details, and, perhaps, even in its effect of breathlessness. It is quite likely, as the editor says, that Demosthenes would never have allowed it to stand; and yet there is a possibility that (if the reading of the poorer MSS. is adopted) this very haste and involved expression may have been designed.

If there is any criticism to be made upon this work, it is that an editor so accomplished did not give a little more freely of his ripe learning and scholarship. A few phrases and passages here and there would bear commentary which are passed over in silence. Restraint is, of course, praiseworthy—restraint in an elder scholar is peculiarly admirable. But, after all, this book is for the student, and no one will ever accuse Professor Goodwin of "sowing from the sack." If we are to have the boon of the "Agamemnon" from the same hand, it is to be hoped that the publishers may concede a generous body of notes proportioned to the peculiar fitness of the editor and to the difficulty and beauty of the play.

On the Spanish Main: or, Some English Forays on the Isthmus of Darien. With a description of the buccaneers and a short account of old-time ships and sailors. By John Masefield. With twenty-two illustrations and map. New York: The Macmillan Company. \$3.50.

This is a book made up from many books, of which Dampier's "Voyages," Esquemelin's "History," and Burney's "Buccaneers of America" are perhaps the best known. It also has some chapters on the primitive ships and sailors of the modern world, entertaining to experts, but sometimes difficult for the landsman to follow. It is, in consequence, a hodge-podge of everything relating to the Spanish main, into which fable may be presumed now and then to have made its way, without materially impairing the basis of fact. The map and illustrations are good, but the narrative is not consecutive and orderly enough; it is too much made up of episodes to serve as a systematic history. The writer's style, too, is marred by attempts at fine or "picturesque" writing, which is out of place, and far from good. It may be, for instance, that that great buccaneer, Morgan, when he was engaged in endeavoring to arrange with devout New England deacons to fortify a West Indian island as a pirates' "refuge and sanctuary," "chuckled to himself," but to picture him as "agonizing" about the Spanish Inquisition with earthquake and "eclipse" is to do an injustice to the English language, if not to the simple, straightforward cut-throat himself.

English writers have been generally care-

ful to discriminate between adventurers who held regular commissions from their sovereign, and buccaneers who had none. Drake and Hawkins belong, according to them, to a wholly different class from Morgan; Dampier to still another. They also distinguish between buccaneers and ordinary pirates (*hostes humani generis*), on the ground that the buccaneers had a common enemy—Spain. They point out that the English, Dutch, and French adventurers who ravaged the Spanish Main did not prey upon one another. Spanish historians, however, do not follow them, but regard not only Morgan and Oxenham and Mansveldt, but Drake and Raleigh, as having committed acts of undisguised piracy. It must be confessed that the English view is not wholly satisfactory. The real reason why Englishmen, Dutchmen, and Frenchmen made common cause in the Caribbean against Spain was merely that all treasure was Spanish. Had the Panama route been French, and had the treasure ships been bound for France, and Cartagena and Nombre de Dios been possessions of the French King, it would have been in spite of that king's beard that the capturing and pillaging and slaughtering and sacking would have gone on. Of course, it will not do to make a test of the way in which war was carried on. Pillage and sack, fire and sword, enslavement and ransom, were all part of lawful warfare in the seventeenth century, and the leaders of the buccaneers were in so far no worse than many a regular commander, on sea and land. In the last resort, to get at the status of any of the adventurers whose names are so inseparably associated with the Spanish Main, we must ask whether they were commissioned by a regular government; if they were, they were *ipso facto* distinguished from the buccaneers, who were not commissioned at all. Spanish historians may be pardoned for not being able to get so much satisfaction out of the distinction as we do.

A superficial distinction may be drawn, as we have observed, between buccaneers and later pirates like Kidd, from the fact that the former made a common enemy of Spain, but we doubt whether this sensibly improves their standing. That they were really pirates, with no common aim but plunder and debauchery, is shown by their failure to effect any permanent establishment anywhere. With the right sort of leader and any settled discipline and government, they might have easily wrested cities, provinces, or islands from Spain and become founders of a Caribbean empire, where some one of the enemies of Spain would have been glad to protect them. But their enterprises never attained or aimed at any political end; their expeditions conclude in a division of booty, and the solitary leader who seems to have had great organizing capacity evidently had only his own private advantage in view. He was a thrifty man and ended his career as Sir Henry Morgan, governor of Jamaica, noted for the severity of his measures against buccaneers. The account of his life, given here, is very illuminating.

The history preserved in Mr. Masefield's pages, and in the books from which he has drawn it, is chiefly valuable as being the only account we have of the actual life and customs of a community making a business

of piracy. To a boy it is a book of excitement and adventure; to a student of history a curious illustration of how thin the veneer of civilization is, and how easily and completely, the restraints of law and police rule removed, the predatory and homicidal instincts reassert themselves. The Anarchist of to-day, who thinks that the only thing which interferes with peace on earth and good will to men is Government, would have amused the buccaneers greatly. When they got beyond the reach of the law they got what they wanted, and what it was we know very well. As a matter of fact they reduced anarchism to a system. When forced to do so they worked hard as wood-cutters and hunters. When they got a good boat and plenty of firearms and gunpowder, they threw off the evil restraints of government and killed, robbed, and ravished. So far as we know, they were much as other men in nature and disposition. But they had a great opportunity and improved it gloriously.

Principles and Methods of Taxation. By G. Armitage-Smith. London: John Murray.
The Taxation of the Liquor Trade. Vol. I. By Joseph Rowntree and Arthur Sherwell. London: Macmillan & Co. \$3.25.

In the thick of the discussions of tariff reform and the taxation of land values, at least a few Englishmen have found time for other questions of finance, as the volumes now before us testify. Mr. Armitage-Smith's "Principles and Methods of Taxation" is a small work of 195 pages, which undertakes to give a concise account of "the British system of taxation and the principles upon which it is based." In order to do this, however, the author considered it necessary to dip into such topics as public debts and expenditures, general theories of taxation, and the financial systems of France and India; with the result that his treatment of his main subject is painfully brief, altogether superficial, and almost wholly unprofitable.

Chapters four and five deal with national taxation in Great Britain, and chapter nine treats of local taxation. From these the general reader may derive some profit, but the careful student will glean substantially nothing. Upon such important and interesting subjects as the income tax and the death duties, the author is particularly disappointing. One wonders, too, what he could have meant by saying that the modern income tax "has been evolved from the earlier poll tax" (p. 63). For Prussia, of course, this statement is true; but in England an interval of one hundred years separated the last poll tax from the first income tax. The American reader will wonder also at the statement that Massachusetts employs the income tax for local purposes only (p. 162). Further criticism of the book is needless; it is a hopeless task, in a volume of this size, to combine an adequate account of British taxation with numerous excursions, at random, into the general field of public finance.

Far different is the verdict upon Rowntree and Sherwell's "Taxation of the Liquor Trade." This is the first volume of a more extensive and successful study than any English or American writer has yet made in the field which it covers. Leaving the taxation of beer and spirits for a sub-

sequent volume, the present instalment of the work treats of license taxes upon dealers in intoxicating liquors. While concerned chiefly with the English publican, the authors have made a careful study of license taxes in the British colonies and the United States, and for the latter country have given us the best available account of a subject which, in its fiscal aspects, has been wholly neglected.

Originally, the trade of the publican in England was virtually "free and unconfined." Light taxes were gradually introduced, in a more or less casual manner, and for the purpose of regulation rather than revenue. Toward the end of the eighteenth century the rates were slightly increased under the pressure of war expenditure; but they remained very low during the nineteenth century, as may be seen from the fact that the average cost of a license to sell spirits, which was £5 in 1800, was but £7 18s. in 1880, although population had increased out of all proportion to the increase in the number of licenses granted. Parliamentary enactments and the action of the licensing authorities had gradually restricted the trade and conferred upon licensed publicans a quasi-monopoly; yet no taxation commensurate with the enhanced value of a license had ever been attempted.

By 1880 the situation was little short of a "fiscal scandal." For twenty years the number of licensed dealers per 1,000 of the population had steadily declined, while the per capita expenditure on alcohol had risen from £2 18s. to £3 15s.; and it was too clear for argument that the publicans were enjoying a virtual monopoly conferred upon them by legislation. Accordingly Mr. Gladstone carried through a measure which raised the license duties some fifty per cent., placing them at substantially the rates that are now in force. This act increased the revenue immediately by fifty per cent., but our authors contend, and successfully, that it was absurdly inadequate then, and is scandalously so to-day. The highest charge, for dealers occupying premises having an annual value of £700, is but £60; and from this figure the duties taper down to £4 10s. for premises having an annual value of less than £10. Seventy-five per cent. of the public houses pay £25 or less, and only four per cent. pay more than £40. Meanwhile, since 1881, various restrictive measures have decreased the absolute number of publicans' licenses in the United Kingdom from 96,727 to 91,502, while population has increased by 8,000,000, and the national expenditure upon alcohol has risen from £145,538,000 to £168,987,000.

As the authors observe, "with 5,225 fewer public houses, there is an increased drink expenditure of £23,449,000." And finally, the conditions are made worse by the fact that the brewers, who more and more tend to become the same persons as the retailers, have been greatly enriched by changes introduced in 1880 in the method of taxing beer. A law enacted in 1904 provides for more adequate compensation for new licenses, but does nothing with established public houses, which are left in undisturbed enjoyment of the monopoly profits created for them by legislation.

To give point to their argument, Messrs. Rowntree and Sherwell have studied the

policy pursued by the British colonies and American States in their dealings with the liquor traffic; and are able to show that, judged either by colonial or American practice, the license charges in Great Britain are extremely low. In practically every colony the scale is higher than that prescribed by Gladstone's act of 1880, and in many of the American States it is strikingly so. Since the "high-license" movement which started in 1881, various American States have raised the minimum license charge to figures that far exceed the average British duty, and in some cases even the highest duty prescribed by Gladstone's act. In Massachusetts the minimum charge for a first-class license is \$1,000, as compared with a maximum duty of \$300 in Great Britain; and other commonwealths supply equally telling illustrations. In the 122 American cities having a population of 30,000 or more, the average charge for a license is \$735, as compared with the British maximum of \$300. In these cities the average rate of taxation is more than five times the rate in cities of similar size in Great Britain. As a natural result, the revenue derived from licenses is incomparably greater in the United States. New York city, with two-thirds the population of London, receives seven times as much revenue from this source; and thus the comparison continues through practically the entire list of cities. With this showing, it will be difficult hereafter for the representatives of the British publican to argue that he would be unfairly treated if the existing scale of duties were materially increased.

Our authors are concerned chiefly with the fiscal aspect of the license problem, and it is from this point of view that their performance must be judged. Tested by such a criterion, they have done their work well, and have left few loopholes for the shafts of the severest critic. The completion of their book will be awaited with interest. Of course, the British duties on beer and spirits offer no such shining mark for ardent financial reformers as do the absurd license charges established by the act of 1880; but they afford an admirable field for investigation and for the comparison of British and foreign legislation. It is work of this sort, rather than the writing of brief manuals upon "Taxation," that financial science really needs.

Canada: The New Nation. A Book for the Settler, the Emigrant, and the Politician. By H. R. Whates. New York: E. P. Dutton & Co. \$1.50 net.

Mr. Whates, who is a good observer and a lively writer, came to Canada at the beginning of 1905 as a correspondent of the *London Standard*, and spent five months in studying the emigration movement. He passed his time with working people, and sought to learn their views on social and political questions. Ostensibly he was an immigrant in search of work; really, he was a political Socrates, going in and out among lumber camps and wheat fields to see what the average Canadian is like, and how his mind works. The present volume falls into two parts. The first, entitled "The Emigrant in Canada," is largely a narrative of personal adventure with reflections interspersed, and represents in the

main articles which have already appeared in the *Standard*. The second, "An Analysis of Canadian Thought," deals with the relations of the Dominion to both the United States and England, discusses fiscal issues, and even contemplates such religious tendencies as have a bearing upon political destiny. Mr. Whates says of his chapters:

Their general tendency is to encourage the emigration of hardy young men with some capital, much intelligence, and determination of character. They are calculated to deter the indiscriminate emigration of people who find themselves crowded out of the English labor market by long endurance of defeat in the battle of life in great cities.

The French element in Canadian life receives somewhat less attention than it deserves. Mr. Whates did not allot a large part of his time to the East and has little comment to offer upon the relations of the races. For this subject one must go, in recent literature, to M. Siegfried. So far as immigration questions are concerned, Mr. Whates's book does not suffer materially from its neglect of the place which Quebec occupies in Canadian politics, but when it comes to an analysis of Canadian thought one feels a distinct limitation to the value of the author's views. Indeed, there are two limitations. Mr. Whates apparently knows nothing at first hand about the French Canadian, and, secondly, he was at pains to avoid the Canadian manufacturer. Of course, Canada is essentially agricultural, but the manufacturing class, from the control of wealth, has a considerable leverage. However admirable the reclamer of the wilderness may be, he has less political initiative than is possessed by the urban classes, who are dominated by the manufacturing interests.

Mr. Whates concludes that Canada is headed straight for independence—not necessarily for an independence which shall preclude connection, sentimental, or even nominal, with the British Empire, but which shall give her national self-consciousness.

Drama.

AN AMERICAN PLAY.

Many scores of American plays of different kinds have been produced since Royall Tyler's "The Contrast" was first played in 1787. We have had the old frontier drama, the Yankee plays—of the "Solon Shingle" type—war and slavery pieces innumerable, the romantic melodrama of the imaginary Wild West, the modern social comedies of Bronson Howard, Augustus Thomas, Clyde Fitch, and miscellaneous compositions of all sorts. In fact the hulk of American dramatic writing is considerable. But by far the greater part of it has been of a light, local, conventional, ephemeral or merely sensational character, without any general, not to speak of national, significance or any distinctively American atmosphere, motive, or spirit. Most of it has been completely worthless as a genuine reflection of human nature, and consequently utterly futile as drama. On that account such a play as "The Great Divide," by William Vaughn Moody—just produced in the Princess Theatre in this city—which is not only essentially American in concep-

tion, but deals in a bold, striking, and original way with the passions and prejudices which are among the conflicting elements in a vast and as yet unassimilated population, is particularly welcome. It at least demonstrates the possibility of a real national drama in the future. A certain extravagance in the terms of the problem to be solved betrays the inexperience of the author. He takes as his heroine a delicate and refined woman, representative of the best New England culture, and for a hero a rough Arizona miner, whose nature, fine in the beginning, has been brutalized by debauchery and drink. His scheme is to unite them through the agency of that great leveller, love. To do this he devises a scene—undeniably shocking in suggestion, in spite of tactful handling—in which the woman is threatened with the foulest outrage by three men, of whom the hero is one. In despair she promises to give herself to him, in marriage, if he will save her from the others. He does so, and then, after some profession of remorse, ruthlessly enforces his bargain, while consenting to legalize it. This is the first act; the two next show how he atones for his ruffianism by his patient service, his entire devotion, and resolute guardianship, until at last, after the birth of a child, the woman's heart, conquered by his virility, repentance, and doglike faithfulness, yearns for him and will not let him go. Plainly, there is much in this which is contrary to all human experience. The offence is too great, the conversion too radical, the forgiveness too superhuman. But the tale is unfolded with uncommon skill and plausibility, and the conflict of opposing wills, emotions, and natures creates a constant and cumulative dramatic interest rare indeed in a modern play. Mr. Moody's next drama will be awaited with eager curiosity. Already he has won a distinguished place among our younger poets, and there seems no reason why, as a playwright, he may not in the near future assume a position at least equal to that of the English Stephen Phillips. He is very fortunate in his present company which is excellent. The performances of Miss Anglin and Henry Miller in the leading parts, are particularly good.

Adelaide Ristori, on whose career we comment elsewhere, died at Rome on Tuesday. She was born in 1821, at Cividale, a small town of the old Duchy of Friuli. The daughter of obscure comedians, she played children's rôles at four years of age, and when twelve years old played soubrette and ingénue parts. Two years later she appeared in "Francesca da Rimini." When she reached the age of fifteen she entered the Sardinian stock company, and was taken under the protection of Charlotte Marchionni, the leading actress of the troupe, who gave her valuable lessons. In 1847 she married the young Marquis Capranica del Grillo, and for a time abandoned her dramatic career. She reappeared on the stage in 1849 at Rome, but it was not until 1850 that she regularly resumed her profession. In 1855 she took Paris by storm. Lamartine wrote verses about her, and the French Government tried to persuade her to join the Théâtre Français; but she declined. She visited England in 1855, Spain in 1857, Holland and Russia in

1860, and the United States in 1866. She made her debut at the French Theatre, New York, as "Mdea," and she played in Brooklyn, Boston, Philadelphia, Chicago, New Orleans, Washington, Baltimore, Cincinnati, St. Louis, Louisville, and other cities. After a trip to South America she returned to this country. In 1880 she formed a company in Rome and made a final tour of Europe. In 1884 she made a farewell visit to the United States. She retired in 1885. Her eightieth birthday was the occasion for many festivities throughout Italy. King Victor Emmanuel went in person to her house to congratulate her, and mayors and other dignitaries of towns paid their respects to her. The gifts to her included a gold medal expressly struck by order of the minister of education.

Music.

Aus der Glanzzeit der Weimarer Altenburg.
Von La Mara. Leipzig: Breitkopf und Härtel.

"La Mara," the indefatigable writer of music books, and editor of the letters of composers, notably Liszt, has once more earned the gratitude of music-lovers by issuing a volume of letters by eminent persons, addressed to the Princess Carolyne Sayn-Wittgenstein, to whose influence it was owing that Weimar, in the days of Liszt, once more became as remarkable a centre of the higher life as it had been in the time of Goethe. It was she who persuaded Liszt to give up his brilliant career as pianist (thirty-nine years before his death) and devote himself thenceforth to composing, teaching, and conducting. It was she who provided a home for him at the Altenburg, which thenceforth became the rendezvous of nearly all the men and women famous at that time in the world of art and letters. Liszt's letters to the Princess, written during his temporary sojourns elsewhere, have been issued separately in four volumes. The present collection contains letters from Richard Wagner, Clara Schumann, Fétis, Berlioz, Gutzkow, Genelli, Dingelstedt, Hoffmann von Fallersleben, Schnorr von Carolsfeld, Alexander von Humboldt, Moritz von Schwind, Gustav Freytag, Varnhagen von Ense, Anton Rubinstein, Christian Rauch, Bogumil Dawison, Eugène Delacroix, Jacob Moleschott, Ludwig Richter, Gottfried Semper, Wilhelm von Lübke, Friedrich Vischer, Friedrich Hebbel, Carl Gustav Carus, Pauline Viardot-Garcia, Leopold Damrosch, Adolph Menzel, Alfred Meissner, Jules Janin, Paul Heyse, and many others.

Baron von Liebig once said to Liszt regarding the Princess Sayn-Wittgenstein: "I have never met her like! In one hour she can squeeze out of the wisest and wittiest savant all there is in him." The letters here presented to the world recall that remark. The writers all seem anxious to say something about themselves of real interest, and the result is that nearly all of these letters (249 in number, covering 441 pages) are worth reading. The secret of her popularity among men of genius is clearly revealed by two of her correspondents, Ernst Förster, and the eminent

painter Buonaventura Genelli. Förster was made happy by being asked to read to her the third volume of his history of German art before it went to press; and in one of his letters he says: "You explore the depths of a work of art with the enthusiasm of the creative artist and thus delight him even beyond the grave." Genelli expresses the wish that the best of his works might be in the hands of such genuine connoisseurs as herself and Liszt, who would not keep them, as it were, in a coffin; in that case he would be only too glad to burn the others, could he get them back.

It has been said that Liszt accelerated the popularity of "Lohengrin" by ten years by the essay he wrote about it. Copies of it were sent by the Princess to many of her friends, including Genelli, who wrote that it had aroused in him an incredible eagerness to hear the opera. "What an eloquent style, what a many-sided culture, what a noble soul, bold and free from envy, speak to us from every line! I doubt if ever an artist has thus entered the lists for another artist's works." Michael Angelo, he remarks on another page, "if he had been asked to write his opinion of Raphael, would doubtless have said something foolish, for he had asserted that Raphael was not really a genius, but simply a hard-worker. How contemptuously Cellini (whose one great achievement is probably his autobiography) speaks of the far superior talent of Bandinelli. Truly, it requires a great love and devotion *alla* Liszt to place the art works of others in the most favorable light."

After hearing "Lohengrin," Genelli makes the amusing comment: "Neither my wife nor I could perceive the least trace of lunacy in this opera, nor did we have the sensation, in listening to these strains, as if we were having nails driven into our skulls for three hours, as a local musician is said to have expressed his feelings in regard to this music." As for Wagner's own letters to the Princess they contain not a few characteristic touches. There are not many references to his health, but he signs one of them "Richard der Catarrhist." He laments his inability to come to Germany and live at Weimar. "How soon the few years allotted to us will be at an end, and how much we are likely to regret toward the close having spent our time among apes and dogs instead of with those who are dearest to us." When he had composed his Rhinemaiden music for "Rheingold" he was so pleased with it that he copied the themes in full and sent them to the Princess; they are reproduced in facsimile at the end of this volume—a marvel of calligraphy. There are interesting references also to the "Walküre." In one letter he says:

What fascinates me in great poets is always rather what they are silent about than what they say; indeed, the true greatness of a poet I learn almost more from his silence than from his words; this is what has made Calderon so great and dear to me. What makes me love music so unspeakably is that it preserves silence about everything while saying the most unthinkable things; strictly speaking, music is, therefore, the only true art, the others being mere attempts.

These samples must suffice to indicate the interest of La Mara's latest volume. We cannot refrain, however, from adding an amusing anecdote related therein about

Liszt. Being urged, one evening, to play at an unceremonious gathering, he exclaimed: "Puisque vous êtes si extraordinaire en toutes choses, je vais vous faire quelque chose d'extraordinaire—je vais vous jouer le Sehnsuchtswalzer en gants"; whereupon he sat down and played Schubert's waltz without taking off his gloves.

Three weeks earlier than last year, the musical season in New York was opened on October 8, at Carnegie Hall, with an operatic concert by Ruggiero Leoncavallo, one of the three composers who created the "veristic" school of Italian opera—works written with a dagger dipped in blood. There were eight Italian singers and an orchestra announced as that of Italy's leading opera house, La Scala of Milan, which proved to be quite inferior to that of our Metropolitan Opera House. The programme included a march, "Viva L'America," dedicated to President Roosevelt; an "Ave Maria," dedicated to the Pope, and excerpts from five of Leoncavallo's operas—"Chatterton," "Zaza," "I Medici," "Rolando di Berlino," and, of course, "I Pagliacci," the only one of his operas which has enjoyed a success. For critical hearers the interest of the occasion centred largely in the selections—the overture and a duo—from "Rolando di Berlino," the opera which Leoncavallo composed at the request and with the aid of the German Emperor. If we may judge by the specimens of the music heard on Monday, "Rolando" is pretentious stuff, adroitly written, like most of Leoncavallo's music, to bring out vocal effects, but barren of melodic or harmonic ideas. The concert as a whole was painfully monotonous, all the offerings being mere *Kapellmeistermusik*, such as almost any musician might write by the yard. The most individual offering was the "Ave Maria," which was written for the benefit of the earthquake sufferers in Calabria.

During the three seasons that the New York Philharmonic Society imported famous conductors from Europe, Wassily Safonoff attracted the largest and most enthusiastic audiences. His permanent engagement followed as a logical consequence, and he will preside over all the concerts of the coming season, the dates of which are November 16, 17, 30, December 1, 21, 22, January 4, 5, February 8, 9, March 1, 2, 15, 16. Among the soloists so far engaged are Maud Powell, who will play a new violin concerto by Sibelius, the Finnish composer of whom such great things are expected; Josef Lhevinne, who made such a sensational debut last year in a Rubinstein concerto; Burgstaller, who will assist in a special Wagner programme; Ossip Gabrilowitch and Hugo Heermann.

Vienna is to hear four new operas this season—Humperdinck's "Heirath wider Willen," Erlanger's "Der Polnische Jude," Schillings's "Moloch," and Zemlinski's "Der Trauerzug." In Paris, Paul Vidal, the new conductor who succeeds Taffanel at the Opéra, will produce Massenet's "Ariane" and two of his own operas—"Midas" and "La Fille de Rameses." Massenet's "Ariane" will also be heard at Brussels, where the list includes, besides, Strauss's "Salome," Messager's "Madame Chrysanthème," Berlioz's "Troyens," Debussy's "Pelléas et Mélisande," and Smetana's "Bartered Bride."

It has always been supposed that Brahms wrote hardly any letters. It now appears that he did write a considerable number. Those addressed by him to Herzogenberg and his wife are to be printed this autumn. There are a good many to his life-long friend, Joachim, which will make another volume. These letters will probably furnish interesting reading, for Brahms was often witty and entertaining.

Is Ernst Boehe the coming music man in Germany? He is a young composer, of about twenty-seven, whose name was prominent on concert programmes last year. His cycle, "The Wanderings of Ulysses," was first performed in Munich three years ago and made him famous at a stroke. Last season it had sixty-five performances in Germany, a record exceeding Reger's much-discussed Sinfonietta and equalled only by Strauss among the living writers.

Art.

The Metropolitan Museum of Art is exhibiting a number of recent acquisitions. Among them are the following bronzes: "The Sluggard" and "Needless Alarms," by the late Lord Leighton; "Peace," by the late E. Onslow Ford; "Eve," by Thomas Brock; "Tragedy and Comedy" and "Perseus," by Alfred Gilbert; and "Spring" and "The Age of Innocence," by Alfred Drury. The purchase of these bronzes is in pursuance of the new policy of securing important contemporary work. The museum has also received a set of electrotype reproductions of thirty-eight silver vessels, cooking utensils of a Roman general, found near Hildesheim in Germany in 1868, and now in the Royal Museum of Berlin. Sir William Van Horne has presented "A Spanish Dancer," a portrait of Carmencita, by William M. Chase.

A collection of works by William Holman-Hunt, gathered with the coöperation of the artist, is exhibited at the Leicester Galleries, London. The show opened last Saturday and will continue for six weeks. With the exception of "The Light of the World," which was recently exhibited in London and is now in the colonies, all the most famous works of Holman Hunt are shown. The City of Birmingham is lending "The Two Gentlemen of Verona" and "Christ in the Temple," and the Manchester Corporation "The Shadow of Death" and "The Hireling Shepherd"; besides which there will be the "Triumph of the Innocents," "The Lady of Shalott," the artist's portrait of himself destined for the Uffizi Gallery, and numerous other paintings and water-colors.

Signor Corrado Ricci, an authority in his sphere, who has, after much demur, accepted from the Italian Government the position of director of fine arts, announces a general catalogue of the entire art-patrimony of Italy. In each commune competent persons are to be charged with the critical description and history of artworks, their dimensions and state of preservation. Signor Ricci will himself publish a monthly bulletin like that already devoted to archaeological finds, with illustrations and exact information concerning new acquisitions, restorations, and dis-

coveries. Best of all, the money for these undertakings has already been appropriated.

The admirers of the painter Degas—he has his faithful more numerous out of France than at home—will regret to learn that his painting days are over. He is now almost totally blind, but the art impulse is ever strong within him. He has turned to sculpture, and all day long silently works at figurines as strange and living as the wonderful studies in perspective among ballet dancers which merited for him the name of Michel Angelo of shoulder blades. He never exhibited at the Salons; those who liked his work came to buy at his studio. One American collection is said to be rich in samples; and dealers have cornered more for the promising future.

The Art Club of Philadelphia will hold its eighteenth annual exhibition of oil paintings and sculpture from November 19 to December 16.

A large exhibition of works by the German sculptor, Reinhold Begas, is being held in Berlin under the auspices of the Society of Berlin Artists, in celebration of the artist's seventy-fifth birthday.

Science.

AMERICAN ELECTROCHEMICAL SOCIETY.

The tenth general meeting of the American Electrochemical Society was held at Columbia University on Monday and Tuesday. Among the papers read were the following: Henry S. Carhart, "Formula for the E. M. F. of a Helmholtz Concentration Cell"; Carl Hering, "Visible Migration of Particles Between Electrodes"; S. S. Sadtler, "Some Small Laboratory Appliances for Electric Fusion and Other Work"; J. W. Turrentine, "Copper Cathodes in Nitric Acid"; H. K. Tuttle, "Electrolytic Deposition of Gold from Bullion"; G. H. Cole and H. T. Barnes, "An Aluminum and Magnesium Cell"; Francis R. Pyne, "Melting Points of Some Cryolite-Alumina Mixtures"; F. B. Crocker, "The Decker Primary Battery"; E. F. Roeber, Ph.D., "Pyrometers, Theoretically and Practically Considered, with Remarks on the Definition of Temperature"; F. F. Schuetz, "A Thermo-Electric Pyrometer for General Industrial Applications"; P. B. Sadtler and W. H. Walker, Ph.D., "Double Decomposition of Zinc Sulphate and Sodium Chloride"; H. E. Patten, Ph.D., "Some Factors Affecting the Distribution Law"; Charles Baskerville, Ph.D., "Use of Ultra-Violet Light in the Laboratory and in Practice" (with experiments).

The president of the society, Carl Hering, was in the chair; and Prof. Charles F. Chandler made an address of welcome on behalf of Columbia. The members visited the Waterside station of the New York Edison Company, met at informal dinner on Monday night, and on Tuesday evening attended a reception to Sir William Perkin at the Chemists' Club. Some of the members were present at the dinner to Sir William Perkin on Saturday night, in celebration of the fiftieth anniversary of his discovery of coal tar dyes.

Petermann's Mitteilungen, No. 8, opens with a description of the physical features of Servia, by Professor Adamović, having especial reference to the distribution of plant life. It is accompanied by a chart in seven different colors, corresponding to the vegetable regions into which the country is divided. Professor Sapper's account of Lanzarote, one of the Canary Islands, is largely devoted to the volcanoes and volcanic cones of which there is an extraordinary number on the island. An appreciative review of the reports of the Princeton University expedition to Patagonia closes with the remark that the late J. B. Hatcher's narrative of the expedition "was one of the best, if not the best, book treating of the geographical characteristics of Patagonia." There is also an extended notice of the recent report of John Hayford of the United States Coast and Geodetic Survey, on the geodetic evidence of isostasy and its bearing upon some of the great problems of geology.

The St. Petersburg Academy of Sciences has accepted the offer of the millionaire Rjabusinsky of Moscow, who promised to give half a million rubles to equip a scientific expedition to Kamtskatka. The expedition is to start early next year and to return two years later.

This week Houghton, Mifflin & Co. issue Volume VI. of "The Proceedings of the International Congress of Arts and Sciences" at St. Louis, September, 1904. This volume is devoted to Medicine and Technology. Among the contributors are Dr. Ronald Ross of Liverpool; Prof. Johannes Orth of Berlin; Dr. Kitasato of Tokio; Sir Lauder Brunton of London; Prof. Clifford Allbutt of Cambridge; Professor Liebreich of Berlin; Dr. F. S. Dennis of Cornell; Professor Thayer of Johns Hopkins; Professor Eschschrich of Vienna; Dr. Jacobi of Columbia; Professor Christy of California; Professor Pupin of Columbia.

Henry Holt & Co. have concluded a contract with Dr. Frank H. Knowlton, president of the Biological Society of Washington, for his "Birds of the World," edited by Robert Ridgway, curator of birds, United States National Museum. This book will appear in the new American Nature Series.

Finance.

OUR BORROWINGS ABROAD.

The attention of financial markets, in this country and abroad, has for several weeks converged on what may be called Wall Street's floating indebtedness to Europe. Ever since the New York Associated Banks, on September 8, reported a ratio of cash reserve to deposit liabilities below the percentage required by the National Bank Act, European markets have been in commotion over our bankers' manœuvres to draw on foreign capital. Loans in enormous sums were placed by Wall Street in London, Paris, and Berlin. Having placed such loans, the American borrowers proceeded to draw on the proceeds in the form of gold. The Bank of England, taking alarm, raised its rate of discount; the Imperial Bank of Germany followed,

This protective measure had no effect whatever. Wall Street was ready to pay the higher price. Our bankers continued to borrow; since the first week of September, they have engaged for import, chiefly from London, but partly also from Paris and Australia, no less than \$43,000,000 in gold. From the Bank of England's own reserve, something like \$15,000,000 has been withdrawn for export to New York; in addition to which, nearly all the gold arriving in London from the Transvaal, which usually flows automatically into the Bank, has been captured by our bankers. This has happened at a time when England's internal trade, like our own, was drawing heavily on the city bank reserves, and when export of gold to Egypt, whose cotton trade is at its height, was taking \$5,000,000 gold or thereabouts weekly from the Bank of England. The Bank of France, whose powers are more arbitrary, and which is apprehensive over a possible financial crisis in Russia, of whose public securities France is believed to hold \$2,500,000,000, refused to give up its gold. As a consequence, stock of gold in the English bank has fallen to the lowest figure reached at this time of year since 1893.

How was this remarkable "raid" on Europe's gold reserve made possible? That the motive was to repair the strength of our own banks, overstrained by demands from unprecedentedly active trade and excited speculation, is known well enough. But how did our bankers obtain such quite unparalleled command over Europe's supply of capital and stock of gold? The answer involves some interesting phenomena of present-day finance. Outside of Wall Street, few people are aware of the magnitude of international borrowings conducted on pure credit. Money borrowed in London, on the pledge of the best American securities, is a simple matter; but the so-called "finance bill" is not so familiar. A banking house, in high standing on all the markets of the world, does not have to pledge collateral. It may borrow abroad, and often does, on its simple note-of-hand, sums ranging in the tens of millions.

In 1900, America was a creditor of Europe on operations of this sort; the common estimate then was that our banking houses had advanced to foreign markets—partly through investment in European securities, partly through outright loans—no less than \$200,000,000. The wild "promotion boom" of 1901 reversed the situation; we were then believed to be owing Europe an equal sum. In due course that floating debt was entirely liquidated, largely through the sale of our stocks to our foreign creditors, at a heavy sacrifice, in 1903. In 1904, there was reason to believe that our international account stood at an even balance. To-day, many of the best-informed banking experts estimate that another debt of not less than \$500,000,000 has been contracted in Europe.

But again, how did our borrowers obtain such credits, and how could Europe spare them? On the answer to this question, not even practical bankers are agreed. Last summer it was conceded, however, both at home and abroad, that American credit on these foreign markets stood at perhaps the highest point ever reached. In part, this was a consequence of our abundant har-

vests, and our heavy export trade. The country's excess of merchandise exports over imports, for the first eight months of 1906, was not, it is true, as large as in 1901, 1900, 1899, or 1895; but it exceeded all other recent years, and its continuance was foreshadowed by the remarkable outlook for our crops this year. This factor is important, because this balance on the merchandise returns is expected to square accounts for our foreign floating debt. The "finance bill" borrowing is in effect the anticipation of what Europe must pay to us when our wheat and corn and cotton go abroad.

Beyond even this consideration stands the fact that the imagination of the European money-lender has undoubtedly been impressed by the long continuance of our great prosperity, and the promptness with which our financial markets recovered from the reaction of 1903. Nor should the practical observer overlook the fact that the extravagantly high rates bid for money on Wall Street, this year and last year, have made strong appeal to the profit-earning instincts of foreign bankers. Had they believed these abnormal bids to be a sign of financial rottenness, they would doubtless have held aloof. But having no such suspicion, they have insisted on heaping up fresh advances, to Wall Street speculators as well as to international bankers—this in the face of protest from the foreign borrowing community, and of active opposition by the Bank of England.

It may finally be asked, is there, or is there not, an element of danger in this situation? The answer to such a question must depend on circumstances. This much is clear, that the borrowing of such sums from Europe places our finances in a position more vulnerable to unexpected accident than they have occupied in many years. Debt of this sort is not always easy to provide for. Similar borrowings had been made, with the utmost confidence, in the course of the Wall Street speculative craze in the early months of 1901. Our foreign credit then, as now, was unimpeachable, and for similar reasons; and we used it to the full. The sequel was that the unexpected happened in three or four directions. Two great banking interests fell to quarreling, and the financial markets collapsed under their struggles. The corn crop failed, and our export trade declined \$100,000,000 for the year. The shock of President McKinley's assassination startled both home and foreign investors. Along with this, Europe, which had been watching our "boom" with complacent admiration, suddenly arrived at the conclusion that our promoting and speculating bankers had over-reached themselves. They recalled their loans; our money markets had to draw on their own already overstrained resources to provide the means, and a period of severe depression followed.

HENRY HOLT AND COMPANY 29 W. 23^d St. NEW YORK

De Morgan's JOSEPH VANCE: The *Nation* says: "We commend it with something more nearly approaching enthusiasm than is usually expected of the jaded novel-reader of tradition. . . . We hardly know how to suggest the mellowness of this story, and therein lies its charm. In detail it is often brilliant, sometimes exuberant. It is figurative, allusive, epigrammatic, and yet spontaneous. . . . A work of true humor."

The *N. Y. Times Review* says: "As admirable in detail as in mass effect; a book worth reading and re-reading and keeping in your house."

Beebe's THE BIRD: Its Form and Function (American Nature Series, Group II.)

By C. WILLIAM BEEBE, Curator of Birds in the New York Zoological Park, author of "Two Bird Lovers in Mexico." With frontispiece in color and 370 illustrations from photographs. 496 pp., sq. 8vo. \$3.50 net. This book is the first of the new "American Nature Series."

Stone and Beebe's THE LOG OF THE SUN

A Chronicle of Nature's Year. 52 brief papers, by C. WILLIAM BEEBE. 191 illustrations (fifty-two in color) of Nature's varying aspects, by WALTER KING STONE. 8vo. Boxed, \$5.00 net. By mail \$5.33.

Lester and Knowles's A CHEERFUL YEAR BOOK

With a prolog and epilog by Carolyn Wells. Over 60 humorous drawings by C. F. Lester, with remarks to match by F. M. Knowles, also weekly engagement blanks, each faced by a picture. 12mo, full gilt, boxed. \$1.50 net, by mail \$1.62.

Arthur Colton's THE CRUISE OF THE VIOLETTA

A highly fanciful sea story in the vein of the author's "The Belted Seas." \$1.50.

Mary Moss's THE POET AND THE PARISH

Au amusing and often dramatic story by one of America's leading critics, that shows the inner nature of an American poet. \$1.50.

Mrs. Dolores Bacon's A KING'S DIVINITY

By the author of "The Diary of a Musician." A romance with a regal American heroine that illustrates a king's humanity perhaps more than his divinity. Illustrated \$1.50.

Mrs. Hugh Fraser's IN THE SHADOW OF THE LORD

A Romance of the Washingtons. By the author of "A Maid of Japan," "Letters from Japan," etc. \$1.50. A very well known American critic has assured the publishers that this novel has the "tone of dignity and moral elevation" appropriate to the subject. 2nd edition printing.

Burton E. Stevenson's AFFAIRS OF STATE

A humorous and exciting tale of American girls in Holland, by the author of "The Marathon Mystery." Second printing. Illustrated, \$1.50.

Chas. D. Stuart's CASA GRANDE

A stirring tale of squatter days in southern California. \$1.50.

Marion A. Taggart's DADDY'S DAUGHTERS

A good book for older girls by the author of "Nut Brown Joan." Illustrated \$1.50.

The Publishers' "Fall Announcements" will be sent on application.

THE UNITED STATES AND PORTO RICO

With Special Reference to the Problems Arising Out of Our Contact with the Spanish-American Civilization. By LEO S. ROWE, Ph.D., Professor of the University of Penna. Crown 8vo, pp. 280. Price \$1.30 net; by mail \$1.40.

LONGMANS, GREEN, & CO., New York

JUST OUT. PROF. HYSLOP'S NEW BOOK. BORDERLAND of PSYCHICAL RESEARCH

Treats of Normal and Abnormal Psychology. Price \$1.50 net. 12c postage. HERBERT B. TURNER & CO., Boston, Mass.

Fourth Edition Just Ready.

WRITINGS BY Dr. C. T. STOCKWELL. THE EVOLUTION OF IMMORTALITY.

Suggestions of an Individual Immortality based upon our Organic and Life History. FOURTH EDITION; REVISED AND EXTENDED. Cloth, gilt top, \$1.00 net (postage 8 cents).

"One of the most suggestive and best developed essays on personal immortality which later years have produced."—Literary World. "A thoughtful and suggestive treatise."—The Independent. "Well worthy of study."—The Critic. "A thoughtful book worth reading."—Atlantic Monthly.

NEW MODES OF THOUGHT.

The New Materialism and The New Panteism. Cloth, gilt top, \$1.00 net (postage 7 cents).

"Here we have presented, in the most concise and comprehensive shape, what has not hitherto come into print: the momentous trend of chemistry, physics, and philosophy to one and the same end."—Springfield Republican. "Here is a volume one should possess. Read the chapter, 'Begotten, not Created,' and you will thank the critic for calling your attention to the book."—Unity.

JAMES H. WEST CO., Publishers, Boston.

Poetry and The Individual

An analysis of the Imaginative Life in relation to the Creative Spirit in Man and Nature

By HARTLY BURR ALEXANDER, Ph.D.

"Most admirable for its sympathetic and sure apprehension of the present age (its individualism, introspection and courageous faith), and for a captivating strain of poetry and eloquence which pervades the whole."—*Journal of Philosophy*.

Crown 8vo. Net \$1.50.

G. P. Putnam's Sons, 27 & 29 West 23d St., N. Y.

CHAUCER A Commentary on the Prolog and Six Tales. Rich in new material. Price \$2.00. Circular on application. Address, H. B. Hinckley, 54 Prospect St., Northampton, Mass.

Some exceptional announcements from McClure, Phillips & Co.

A book of timely significance by the author of "In Tune with the Infinite."

In the Fire of the Heart

By Ralph Waldo Trine

Mr. Trine's new book deals in the same concrete manner of treatment which characterized his former work and gave it its wide appeal with the great social and political problems of the day. These he tries to see in their universal significance and in their bearing on the deeper spiritual life of the individual and the race. Mr. Trine's is the first book to deal with the whole problem of modern life in the spirit of a broad humane interpretation.

Cloth, postpaid, \$1.12; net, \$1.00

Letters to a Chinese Official

By William Jennings Bryan

A reply to the famous "Letters from a Chinese Official." A superb vindication of our national life, that reflects the sterling Americanism of the great leader of Democracy. "A little volume," says the *Philadelphia Ledger*, "that is imbued with the true spirit of American patriotism and American ideals at their highest and best."

Paper boards, postpaid, 56c; net 50c.

From King to King

By G. Lowes Dickinson

Author of "The Meaning of God," etc.

In this little volume Mr. Dickinson has condensed into a dozen dramatic dialogues, the whole story of the Great Rebellion from the beheading of Charles I. to the return of Charles II. at the Restoration. Cromwell, Charles himself, and many others are participants, and the sketches reveal, with wonderful insight, the inward spiritual significance of these great events.

Paper bound, postpaid, 55c; net, 50c.

The Religion of All Good Men

By H. M. Garrod

Fellow and Tutor of Merton College, Oxford.

Five scintillating essays by one of the most brilliant of the younger English essayists. The subjects include—Christian, Greek or Goth?—The Religion of All Good Men—Hymns—Economics of Religion, and Christ the Forerunner. All of these have been published in the *Hilbert Journal of Metaphysics*.

Cloth, postpaid, \$1.32; net, \$1.20.

My Impressions of America

By Charles Wagner

Author of "The Simple Life," etc.

Pastor Wagner's impressions of American characteristics and home life, which he viewed at close range during his visit to this country two years ago. The observations of the good Pastor, and his exhaustive record of his experiences here, make very entertaining reading.

Cloth, postpaid, \$1.12; net, \$1.00.

NOTEWORTHY FICTION

A. Conan Doyle's

Sir Nigel

A wonderfully fine romance of the Middle Ages, with all the brilliant pageantry, the barbarity and the sweet chivalry of the period. Conan Doyle's most finished work.

Six illustrations by the Kinneys. \$1.50

Eleanor Gates'

The Plow-Woman

A powerful story of the plains. The epic of the woman pioneer—the brave, strong, patient women who have helped to build our great West.

Cloth, \$1.50

Ivan Strannik's

The Shadow of the House

A delicate portrayal of character development. "A powerful, absorbing, quite unusual story."—*St. Louis Globe-Democrat*. The author is the latest Russian novelist to come into prominence.

Cloth, \$1.50

Marion Hill's

The Pettison Twins

The stories of Rex and Regina, the appealing little mischief-makers who have given so much pleasure to McClure's readers.

Illustrations by Fanny Y. Cory. \$1.50.

C. N. & A. M. Williamson's

Rosemary in Search of a Father

A charming new story, issued in holiday form, by the authors of "Lady Beatty," "My Friend the Chauffeur," etc. It will surprise even the author's most ardent admirers by its graceful humor and charm.

Illustrations in photogravure, and decorations. \$1.50

Stanley J. Weyman's

Chippinge Borough

Readers of Mr. Weyman's *The Long Night* will enjoy his new novel of English politics. It has all the literary grace which characterizes Mr. Weyman's work.

Cloth, \$1.50

Ed. Phillips' and Arnold Bennett's

Doubloons

A gripping, modern tale of buried treasure. It serves as a vehicle for a delightful and fantastic humor which has not heretofore been found in Ed. Phillips' work.

Cloth, \$1.50

Kate Douglas Wiggin's

and Nora A. Smith's

The Fairy Ring

These noted authors have collaborated in editing what is designed to be the standard fairy book for children.

Cloth, \$1.50

The Nation.

NEW YORK, THURSDAY, OCTOBER 18, 1906.

The Week.

The better sentiment of the South is voiced again by William H. Fleming, former Representative from Georgia. In our issue of July 5 we commented on his able and temperate address at the University of Georgia on "Slavery and the Race Problem in the South." He has now written to the *Augusta Chronicle* a letter in which he discusses race troubles. He not merely declines to condemn a whole race for the crimes of a few degenerates, but boldly criticises some of his fellow citizens who have inflamed the mob spirit. Mr. Fleming points out that Hoke Smith "openly proclaimed upon the stump his purpose to subvert a portion of the Federal Constitution on the suffrage question by a fraudulent administration of the proposed State law, and gave his audience detailed explanations of how this fraud was to be perpetrated." As Mr. Fleming says, if Hoke Smith could thus spit upon the highest law of the land, why should the mob be blamed for defying the law against murder?

We cannot explain Secretary Shaw's latest scheme for American banking, except on the supposition that the Secretary has confused himself with Providence. In Mr. Shaw's opinion, as enunciated at the recent convention of Kentucky bankers, "it would be both wise and safe to clothe the Secretary of the Treasury with authority to require banks to increase their reserve at certain times, when money is redundant, and to expressly permit the maintenance of a somewhat lower reserve at other times." The scope of this new financial Providence is pretty vague. The Secretary does, indeed, hint that only a "somewhat lower" reserve than the law's requirement should be expressly permitted at a time of stress; that is, he doubts whether even an all-wise financial minister could be trusted without limitation. But the point is, that the Secretary of the Treasury is conceived of as the man who will know at all times what is right and what is wrong, and who, if he be placed above the law, will employ his powers without making mistakes and without yielding to undue pressure. His very speech shows that Mr. Shaw has slight comprehension of the true meaning of the law which he proposes to supersede. He lays much stress on the fact that the severe penalties, prescribed for national banks which fail to maintain the reserve required by law, are discretionary with

the Treasury authorities. But he altogether ignores the fact that this discretion necessarily was left, in view of the fact that there are times—in 1893 and 1873, for instance—when, through no fault of theirs, maintenance of the 15 or 25 per cent. cash reserve by banks becomes impossible. In an unreasoning panic of depositors, the Government should keep its hands off. This is, however, wholly different from a provision that the Secretary may suddenly announce, when he sees fit, that no bank need any longer keep the legal reserve. As an illustration of the conservatism with which such arbitrary power as the Secretary proposes might be exercised, we have the famous case of September, 1902, when Mr. Shaw himself announced overnight that banks need no longer keep any cash reserve against their \$117,000,000 public deposits. This dispensation was so full of dangerous possibilities that the New York Clearing House promptly forbade the banks in its membership to make use of it.

Gen. Leonard Wood not only wishes the American garrison in the Philippines to be kept at its present strength of 20,000 men, but asks for more artillery. He wants also a squadron from each of the fifteen regiments of cavalry instead of four whole regiments, as at present. This does not seem to indicate great confidence in a lasting peace in the islands, particularly as there are fully 10,000 native troops to be drawn upon. Just at present, what the Philippine Government needs more than troops is something like a settled policy. Since 1899 there have been no less than six American governors—Lord Cromer has represented England in Egypt ever since the occupation—and the term of Gen. James H. Smith, which has just begun, will, it is understood, be of very limited duration. Indeed, Judge Magoon, who was recently appointed vice-governor, was heralded as the man who would follow Gen. Smith within a few months. But, after some vacillation, Judge Magoon was made ruler of Cuba; and no one knows whether the Philippine place is to be kept open for him, or whether some one else is being sought. There is apparently no one in the islands who is big enough for the position, and the supply of men in this country with anything like the requisite experience and tact is extremely limited.

The appointment of Professor Wallace Clement Sabine as dean of the Lawrence Scientific School is further evidence that, since the idea of an alliance between Harvard and the Institute of Technology has been dropped, the devel-

opment of scientific teaching at Harvard will be pushed with vigor. Born in 1868, Mr. Sabine is still—as academic honors go—a mere youth, not yet forty. His undergraduate course he took at the Ohio State University. Then, after several years of study at Harvard, he was appointed assistant in physics, and has since risen steadily to a full professorship. He has already made a reputation in architectural acoustics. In energy Mr. Sabine is as worthy a successor to the late Dean Shaler as the authorities of Harvard can hope to find. As a scientist, he has been more rigorously, and perhaps narrowly, trained than Mr. Shaler, whose specialty was the all-embracing subject of geology and everything else of human interest. As an administrator, Mr. Sabine has shown marked capacity. In his new position he will have ample opportunity for the exercise of all his powers; for within a few years the Gordon McKay millions will be available. With the income of this vast fund at command, the Scientific School of Harvard University may become the finest institution of its kind in America, and even in the whole world.

At the meeting of the Western Massachusetts Library Club, W. I. Fletcher of Amherst made a plea for more scholarly administration of libraries. During recent years the machinery of arranging and cataloguing books has been brought to great perfection; yet Mr. Fletcher would not have attention too largely directed to these matters of technical economy, or to elaborate classifications. It would be desirable, especially in our university libraries, if those who wish to study any particular subject could have the advice of some one versed in bibliography. This is the method in many European libraries, and gives life to the dry bones of the analytical catalogue. But, of course, the engagement of men familiar with what has been written in the different sciences and arts would greatly increase the expenses of administration. Still, this office can be effectively discharged by professors and tutors, if they will take the time for it. Probably more can be done for the best students by library "clinics" than by lectures or prescribed lessons in a text-book.

"The League of the Russian People" has issued what Americans would call a platform for the elections for the next Duma. It enjoins candidates to favor continued oppression of the Jews, by depriving them of the franchise, by excluding them from army and navy, and from the schools and universities, by

preventing them from receiving Government concessions, and denying them employment as ship captains, druggists, or journalists. This news lends special interest to a dispatch to the Berlin *Vorwärts*, to the effect that the Social-Democratic party and the General Union of Jewish Workingmen in Russia, Poland, and Lithuania, have recently been reunited. The schism thus healed arose in 1903. The principal cause lay in the peculiar conditions with which the workmen of the Pale were confronted, as members of a race exposed to exceptional treatment by the Government and to the enmity of their neighbors. But a deeper reason must have been the fear that even the triumph of the revolution would bring no absolute guarantee of fair treatment for the Jews. Indeed, it is still uncertain what part was played, during the Odessa massacres of 1905, by that large section of the Christian proletariat of the city which must surely have been under revolutionary influences. It is a fact that they offered practically no help to the victims; in any case, their fellow Socialists among the Jews could scarcely regard them as allies. The present reconciliation is probably, in part, a result of the terrible ordeal through which all the revolutionary elements in Russia have been passing. But we are inclined to see a still stronger influence in the close *rapprochement* that is being brought about between Jewish and Christian workmen. The London *Times* reports from Odessa: "The Christian labor organizations have issued a proclamation declaring that if there should be a fresh outbreak, they will defend the Jews to their last drop of blood."

France and Spain, which are both pushing an anti-clerical policy, illustrate capitally the right and the wrong way of agreeing to disagree. France has cut off all diplomatic relations with the Vatican, and although the tone of the bishops becomes more conciliatory, and the Government declines to dispossess the Catholic parishes summarily, no way appears to the compromise that is plainly in the air. In the end, we presume, some representative of the Government will confer with some emissary of the Pope. The present deadlock shows that it is unwise to dissolve a partnership by abruptly ceasing personal relations. There are usually outstanding matters that need discussion. Spain has realized this, and, though she carries forward the movement for secularizing marriage and education, and expropriating even the consecrated soil of Catholic graveyards, she does so in unbroken conference with the Vatican. Premier Dominguez evidently realizes that if it takes two to make a quarrel, it takes as many to patch one up. This

lesson might be studied to advantage north of the Pyrenees.

The anniversary of the peace of Portsmouth was marked in Tokio by serious disturbances growing out of the action of the street railway companies in raising the customary fare from three to four sen. This followed immediately on the merger of the three companies formerly operating independently in the capital. Cars were attacked, motormen were mobbed, and night traffic was brought to a standstill. According to the *Japanese Mail*, all the leading Tokio papers were in open sympathy with the rioters, and the influential *Kokumin Shimbun* urged that the street railways be taken over by the municipality. The rioters were mainly drawn from among the jinrikisha coolies, who have felt the competition of the street cars keenly, and who were in fact prominently concerned in the September disturbances of a year ago following the announcement of peace with Russia. The *Mail* speaks of the activity of the Soshi, elsewhere described as comprising the "higher ranks of the city's riff-raff." In Tokio they are organized in bands, presumably a relic of the old clan relationship, and may be regularly hired for political demonstrations or services of a more forcible kind, the price varying with the sanguinary nature of the enterprise. Thus it would seem that the national discipline and "efficiency" manifest themselves even in mob violence.

The English magazines for October have several articles bearing on the government of Egypt. The severest critic of Lord Cromer is Wilfrid Blunt, who recently published a pamphlet entitled "Atrocities of Justice under British Rule in Egypt." He returns to the attack in the *Independent Review*. His chief contention is that the government of Egypt should be nationalized forthwith in order to prevent further miscarriages of justice. As between natives, Mr. Blunt has no fault to find with the courts; he is, however, very hard upon Lord Cromer's policy of dealing with matters like assaults upon foreigners by natives, with such severity as to surround the army of occupation "with a sanctity which puts it above the law." In the *Contemporary Review*, Harold Spencer, who is far more favorable to Lord Cromer, also makes a strong argument for more self-government and for a policy which will take the Egyptians "more intimately into our counsels." The questions before Parliament, as the London *Tribune* points out, will be whether the unrest in Egypt is due to thwarted national development, and just how far the Pan-Islamic scare of last summer was owing to religious and race hostil-

ity, or to an attempt to head off any movement granting further self-government to the Egyptians. They, like other conquered peoples, obstinately refuse to worship a higher civilization or to be content with a government of foreigners.

The Chinese Government has given fresh proof of its new life by appointing a commission of inquiry into the best means of prohibiting the traffic in opium within the next ten years. In no other way could it more deliberately shame one of the civilized nations—England—some of whose newspapers and statesmen still talk of China as if it were a decaying nation over whose destinies they were by divine right the sole guardians. For it was England which deliberately fastened the opium curse upon China, pushing by force of arms upon an unwilling people a trade which grossly injured its *morale*. Before the Opium War of 1840 the Chinese had realized perfectly that this poison was ruining China, and had passed a law condemning opium-smokers to strangulation and dealers to decapitation. But England compelled China to legalize the opium traffic, largely owing to the influence of the Government of India, which, like its predecessor, the East India Company, was the chief beneficiary of the nefarious business. Many English statesmen, Bright, Cobden, Gladstone, and Lord Brassey, have roundly denounced this great crime. Of late, the Indian opium trade has languished, because the domestic cultivation of opium was encouraged by the Chinese, in the hope that if the import trade ceased to pay, England would no longer insist upon it, and China would then be free to deal with the home producer. In 1880, 14 per cent. of the total revenue of the Indian Empire came from opium; to-day it is only 7 per cent., and in cash value the trade has decreased from \$25,000,000 to \$11,475,000. Fortunately, Mr. Morley, the biographer of Cobden and Gladstone, now Chief Secretary for India, is animated by the same spirit which actuated them in their relations to the Eastern races. As far back as May 30th last he declared his willingness to cooperate with the Chinese Government, if it honestly wished to restrict the consumption of the drug. Whether or not a total prohibition of the use of opium is possible, it would be hard to say. Probably the commission of inquiry, particularly if it should have the cooperation of Sir Robert Hart, will recommend an attempt to diminish the use of the drug by heavy taxation, rather than by outright abolition. But whatever the results of the studies and experiments now to be made, this fresh proof of the renascence of China is a significant event; and Mr. Morley's act is a bit of historic justice which

must encourage all who fight the battle of the weaker peoples against the stronger.

The India Sanitary Report for 1904, just published in England, brings out the startling fact that nearly a million persons—938,010—died of plague in that year, the ninth since the beginning of the present epidemic. In every one of the nine years, save 1900, there has been an increased death-rate, there being 251,525 more deaths in 1904 than in 1903. The total deaths in India since the beginning of the epidemic have reached the enormous figure of 3,263,810. Naturally, the report devotes much space to the measures adopted in the effort, thus far futile, to check this dread disease. The campaign is largely directed against the rat as the chief means of transmission; and disinfection has been found to be of little use. But the work of enlightenment is difficult, for, as the report declares: "It is not easy to deal with a religious tenet that forbids the holder to leave an infected place, with a tenderness for animal life that will not sanction the destruction of a deadly serpent, with ignorance that is convinced that plague is introduced and festered by Government in order to reduce the redundant population, with suspicion that sees the disseminating agents in every disinfecting party, or with timidity that may be turned by an ill-considered action into fanatical frenzy." It is interesting to note that dealers in grain are nearly always among the first victims, and the mortality among them is particularly high. Perhaps their premises are unusually attractive to the rats. Wherever the rats are destroyed there is immunity, or comparative immunity, from the disease.

The subject of fatigue and rest is continually up for public and private discussion. Before the Physical Section at the last meeting of the British Association, Drs. Theodore Acland and Bevan Lewis had something to say in opposition to prevalent theories. They contended that change of occupation is not necessarily recreation, and that physical exercise is not a substitute for sleep. The toxic bodies produced by exhaustion of one set of centres affect centres which have been unused, so that the evil effects of an overworked brain are not counteracted by muscular activity. The same subject has lately been discussed by M. Féré, a physician at Bicêtre, who also challenges the popular doctrine that rest is secured by a change of work. The only remedy for fatigue is sleep. Stimulants may induce energy temporarily, but fatigue follows all the more rapidly. At the meeting of the British Association it was shown that there are marked individual differences in the depth and time of slum-

ber. Those who work by day get a maximum soundness of sleep in the early hours. Night workers begin by sleeping lightly, and the maximum soundness comes during the later hours. Neurotics have two maxima of sound sleep, one at the beginning, the other at the end of their rest. Between these extremes, their sleep is so light that it is easily disturbed, and insomnia may become habitual. The comparative soundness of sleep may be determined by the character of dreams. When the dreaming is fantastic and incoherent, sleep is deeper than when the imagination pursues a more logical and orderly course. It is unlucky, however, that excessive fatigue, for which sleep is the only safe remedy, often produces insomnia, thus making the remedy unattainable.

A reactionary view of the emancipation of women is taken by a clever German writer, whose *nom de plume* is Félicie Ewart. She complains that those of her sex who set out to compete with men in active life usually fail. In the study of medicine particularly, while they are diligent and ambitious, they are deficient in manual skill and incapable of applying the knowledge which they have acquired. In proof of this thesis, she asserts that during the last twenty-five years Germany has produced no distinguished woman-physician. She urges those of her sex who have professional ambition, to adopt work in which competition with men is not so keen, such as nursing the sick and the hygienic care of children, in respect to which Germany is surpassed by England and America. A writer in the *Rundschau* disputes the fairness of these statements; because women have had opportunities of professional study during a comparatively short period, and the number of them at the universities has been small. In Switzerland, for example, women have attained considerable eminence in the medical profession; and even in Berlin some have practised with success. Both the writers just mentioned advise women to be less ambitious in their ideals. Too many try to be "leaders, painters, singers, and piano-players"; but nature is not so gracious as to give many the talent for such pursuits. In Germany, as in this country, some women of high social standing have not hesitated to join the ranks of the *commerçantes* and of the wage-earners, and have won respect for their courage and industry. The matter of employment for women is also discussed by a writer in the *Independent*. He suggests that more women should make the care of the hair a specialty—not simply as hair-dressers, but as scientific experts in preventing baldness. But however limited the opportunities at present for the treatment of the outside

of the head, many women, we trust, will still make a specialty of furnishing what is needed for the inside.

While criticism has led theologians to take up the reconstruction of creeds, many of the laity have been driven by it into a kind of mysticism. J. Arthur Hill presents in the *Hibbert Journal* the results of psychical research as the promise of a new religion. His article is instructive as showing how a man may fall out of the frying-pan of the old theology into the fire of what—for the want of a more precise term—may be called neo-superstition. He is sorry to give up the cherished convictions of the Christian, and he is the sorrier because none of the ethnic religions can be substituted. But he turns to psychical research, because it is the only thing that has helped us to understand "what we call death." Mr. Hill tells us that the Society for Psychical Research has for twenty-five years been accumulating evidence which "tends to show" that a disembodied consciousness is not impossible. Thus his is a hope which rests upon a hypothesis, which is in turn supported only by another hypothesis. If survival after death is indicated by genuine evidence, and if communications from departed souls are possible, then we may receive some help towards the solution of religious problems. We do not think it probable that Mr. Hill's suggestions will meet with favor even from those who have parted with the old creed. Those who demand scientific demonstration will scarcely pin their faith to the data which the Society for Psychical Research publishes, nor to what Mr. Hill calls a new religion "such as F. W. H. Myers has foreshadowed in the epilogue to his great work." If Christ and the Apostles have faded away in a haze of legend and uncertainty, neither the believer nor the unbeliever is likely to be persuaded by the prophecies of the crystal-gazer or by the apocalypse of the medium. For even admitting the veracity of the spiritualistic disciples in relating their own experiences, what reason is there for supposing that their ideas come from disembodied spirits? The fallacy of the spiritualistic "demonstration of immortality" consists in assuming that there is a world of disembodied spirits (which was the very thing to be proved), and in then attributing to disembodied spirits the phenomena which are said to be present. The mysterious and usually foolish beings who are summoned from the realms of light or of darkness may attract the curious, amuse the credulous, and put money into the purse of the charlatan; but even the miracle of Joshua and the adventure of Jonah are more credible than the idle tales which we are asked to accept as scientific documents.

MUNICIPAL GOVERNMENT BY COMMISSION.

After five years of government under a municipal commission in the city of Galveston, many enthusiastic Texans are saying that in this plan is to be found a remedy for what James Bryce called "the one conspicuous failure in the United States." In the eighteen years since that judgment was passed, however, there has come not only the gain of an aroused public conscience, but a changed view of the importance of the municipal government. Very significant has been the great increase in the mayor's power and responsibility, with the curtailed functions of aldermen. Nevertheless, the evils of our city governments have remained. The condition of our urban population, as it was in 1790, with only 3.3 per cent. of the inhabitants living in cities of over 8,000, did not invoke the constructive genius of the American constitution-makers. Hence the principal features of a form of government framed to meet the needs of a State were somewhat arbitrarily applied to a municipality. Thus the municipal-commission form of government appears to be revolutionary. It means the practical abandonment of a doctrine that is the very keystone of our Constitution—the division of powers.

The working of the Galveston Commission, as narrated by George K. Turner in *McClure's*, suggests the possibilities of the new idea. In the case of Galveston, it was born of the great storm of September, 1900. In the critical period following, the old form of government with mayor and aldermen was found to be worse than useless. A realization of this fact and the paramount desire to obtain concentration of authority and responsibility without hazarding everything on the choice of an all-powerful mayor, resulted in the evolution of the municipal commission. It was, to be sure, not entirely a novelty. The Board of Commissioners of the District of Columbia doubtless pointed the way. The government of English municipalities offered models of the high centralization sought. The New England town selectmen presented examples of small bodies of responsible representatives chosen at large. But more than any existing form of government, the great modern business corporation, with its maximum of efficiency and its minimum of red-tape, served as an inspiration.

The Galveston Commission is a body of five men, at first partly appointive, but since 1903 elected from the city at large. It consists of a Mayor, or general manager, elected specifically for his office, and four managers or directors, chosen without designation. The commissioners apportion the departments among themselves, choose all the

other officers of the city government, legislate for the city, and are responsible for the enforcement and administration of the laws. A majority vote of the body is final. The mayor has no veto or appointive power; his authority is confined to his acts as presiding officer of the board, and his vote as a commissioner. The four departments are those of finance and revenue, police and fire, streets and public property, and waterworks and sewers. In the time of her great need, Galveston's call to the service of the city was answered by the choice of a board made up of five of her best-known citizens. Doubtless declared that the service of men of such high standing could not be obtained in ordinary times. Yet at the end of five years, four of the original commissioners are still in office, the one change being due to the death of Mayor Austin in 1905.

The measure of the Commission's success lies in its achievements, not in the character of its members. They found Galveston bankrupt; to-day her credit is above par, and a saving of one-third in the running expenses has been effected. Simply by more efficient methods of collection, a revenue almost as great as that recorded before the storm has been obtained from assessments \$425,000 smaller. Extensive public improvements have been carried on, and the city has at the same time assumed \$1,500,000 of the cost of building the great sea wall. No less striking has been the Commission's method of coping with social disorders. Galveston before the storm had the evil reputation of being the most "wide-open" city in the entire South. The Commission has succeeded in enforcing midnight saloon closing, has abolished gambling houses and policy shops, and has regulated the dance halls. The reformed police force is able to preserve better order than did a force one-third larger previously. Prior to the disaster, the city possessed no public sewerage system, and the streets were badly paved, and lighted only as the whim of the aldermen dictated. Under the Commission's administration, a sewerage system has been constructed, and the streets are better paved and lighted than those of any other city in the Southwest.

Of this record, the people of Galveston are justly proud; they believe they have solved the problem of municipal government. Nor has their success passed unnoticed in other cities. Houston has lived under a similar charter for two years. Three other Texan cities, Dallas, San Antonio, and Fort Worth, have already voted favorably, or are planning to vote, on the adoption of the new idea. Norfolk, Virginia, has a modification of the system; while, first of all Northern cities, Des Moines has appointed experts to report on the

feasibility of the plan. It remains to be seen whether, in the cities of the North, where party politics enter more largely into the question than in Southern municipalities, the same degree of success is possible. But that the system is worthy of a thorough trial, the record of Galveston renders beyond dispute.

BEAUTIES OF THE ART TARIFF.

It may occur to certain visitors to the Columbia University Library, where splendid illuminated manuscripts belonging to J. Pierpont Morgan are temporarily exhibited, to inquire: Why are these treasures of art in America, whereas Mr. Morgan's paintings, bronzes, enamels, tapestries, etc., remain in Europe? The answer is simple: the manuscripts are not in the eye of the law works of art, and come in free of duty, whereas the rest are included under the category of paintings and statuary and must pay 20 per cent. *ad valorem*. Now, the Morgan manuscripts include some ornamented by illuminators who were also esteemed painters, as was frequently the case in the fourteenth and fifteenth centuries. Hubert van Eyck, one recalls, is a notable instance of such a double activity. And here the tariff displays one of its most delightful inconsistencies. The Philadelphia amateur who was fortunate enough to secure that peerless Hubert van Eyck, "St. Francis Receiving the Stigmata," had to pay handsomely in the customs for his enterprise, but a bibliophile who had the luck to land a manuscript containing a score of paintings by the same hand, of the same dimensions, and in the same medium, could parade his prize fearlessly before the assembled customs service. Mr. Morgan, as we have noted, has thus in a single breviary imported an entire gallery of Flemish art of the finest period without paying a cent. The thing should be looked to when the tariff is next revised; the native illuminators of America should not be exposed to the pauper competition of the Middle Ages and Renaissance. Meantime, we advise all collectors who come into the possession of small paintings to have them bound up and pleasingly accoutred as manuscripts.

Feeling that even a protective chain is no stronger than its weakest link, we are constrained to point out another oversight in the Dingley bill. Statuary is taxed its 20 per cent., but the most superb specimen of mediæval sculpture in metal or ivory that happens to be a book-cover escapes the duty. On the other hand, a beautiful wooden chest with sculptured ornament would apparently have to pay 35 per cent. as "house or cabinet furniture, of wood, wholly or partly finished" (Dingley act, paragraph 208). Supposing the case of two Donatellos, one of wood, the other of

bronze: the owner of the wooden statue would be penalized 15 per cent. for preferring the more perishable material. A similar discrepancy exists in the matter of drawings and prints. If one were the proud possessor of a drawing scratched on paper by Rembrandt's pen, the tribute to the Government would be the consecrated 20 per cent.; but if one bought instead an impression from an exactly similar sketch scratched on copper by Rembrandt's dry-point, that would come in free, because it was an etching and "printed more than twenty years at the date of importation." At many points we meet the same absurdity. One is mulcted heavily for bringing over a painting by Dürer or Holbein, but one may import freely the almost priceless books containing numbers of their finest designs.

Weak-kneed amateurs will doubtless be inclined to utilize the stupidity that gives this leeway to bad Americans who fancy the art of "abroad." The *Nation*, though no friend of any protective tariff, is a believer in consistency, and submits that, if collectors are to be penalized as such, and native art protected at all costs and against its will, the job should at least be done thoroughly. Obviously, any moral obliquity that attaches to a man who likes a painted Van Dyck portrait falls with equal weight upon him who happens to prefer an etched portrait by the same master. If either amateur should be asked to contribute to the support of the national Treasury, both should be subject to a common treatment. Why should the guilty man who buys the brush-drawings of Hokusai be made to pay handsomely for his taste, when the equally culpable lover of virtual facsimiles of these drawings in color-print or album goes scot free? The thing is not to be endured.

We have been pleading the enemy's cause with our usual candor in urging that the tariff on works of art should at least be applied with some intelligence, equity, and common sense; that it should not bear intolerably upon one class of collectors and spare others entirely. We desire to show that even on the strictest basis of protectionism, the schedules as they stand are full of glaring absurdities and inconsistencies. By the same token, it should appear that the art schedules need revision and equalization, quite apart from any general revision of the tariff, or from any special pleading for free art. We should, however, be less zealous in exposing these unstopped loopholes in the present tariff, were we not confident that any committee of any party that honestly explores the legislative monstrosity which the tariff on art, studies its theoretical confusion, and observes its practical maladjustments, will arrive at the inevitable conclusion that the only way to reform is to abolish.

CHANGES IN FOREIGN MISSIONS.

The enthusiastic meetings held at Williamstown last week, in commemoration of the centenary of American foreign missions, were a fitting recognition of a mighty work. It grew from small beginnings. That little band of Williams students who, a hundred years ago, devoted themselves to the evangelization of the heathen, builded better than they knew, in every sense of the words. Great changes have taken place, as well in the idea of the enterprise as in the methods employed for its success. For one thing, there has been a change in the conception of the non-Christian world. Unbelievers of alien races were once condemned by theologians to endless torment. To-day, it is the present, not the future, condition of the heathen which is most talked about. Missionaries themselves are willing to leave as problematic the destiny of those who never hear the gospel. Their chief energies are devoted to the work of extending the civilization of Christian nations. Their undertaking is now looked upon by many intelligent observers as a struggle of enlightened progress with dark stagnation.

In the popular mind also there is a wholly new idea of the missionary. The traditional picture in the Sunday-school books was accepted as a faithful representation. He stood decently clad beneath a palm tree, with a sun umbrella over his head and a book in his hand, surrounded by undraped savages who seemed to be in doubt whether to hear or to eat him. But the missionary of to-day is thought of as the representative of wealthy and powerful churches, who preaches the gospel by action as well as by word.

Within the observation of all, the qualities of the modern missionary differ from those of his predecessors. He does not, like Henry Martyn at Rajemahl, portray the flames of hell to the inquiring tribesmen, or bewail in carefully kept diaries his own guilt and the doom of those who are deaf to his entreaties. Nor does he, like Adoniram Judson, ask the hand of his future wife that "the heathens" may "be saved through her means from eternal woe and despair"; nor like Robert Moffat hear an inward voice call him persistently to the work of rescuing men from hell. He is less an inspired prophet than a man of affairs. There is now a tendency to prefer the enlightenment of the reason and the cure of the diseased body to the visions of the seer. This is largely because money has been provided for education, and for medical care, to an extent impossible in times when the missionary went out alone and poor.

Men like Mackay of Uganda and Jesup of Syria have given an intellectual impetus even to the savage African and

the indolent Oriental. And adventurous courage, similar to that of the earlier missionaries, is displayed by their successors who cut their way through the jungle, ascend fever-breeding rivers, and go unarmed among cruel fanatics and barbarous tribes. Missionaries are no longer merely ministers of the gospel who address the heathen in their native tongues. They are physicians as well as priests. They build hospitals and administer them. They establish printing presses and direct them. They are linguists who translate a whole religious literature into the imperfect dialects of primitive tribes. They are advisers at the courts of Eastern princes and instructors at colleges planted in regions of dense ignorance. They are often in advance of European and American traders, and find themselves, at length, opposing the vices of civilization on the one hand and those of barbarism on the other.

The missionary physician and the missionary ethnologist bring the results of their research to the learned societies of Europe and America. But there is less of that haste to baptize which was once manifested by the heroic Jesuit missionaries to the North American Indians. The new missionary may still have something to learn in the way of tact, but in general his methods are more tactful, careful, and gradual than those of a generation ago. Women are sent into the Zenana. Unsectarian societies attract unbelievers by offering them the comforts of civilization before introducing them to the principles of Christian doctrine. Missionary work has been organized and specialized. There is a "Students' Movement" which gets its recruits from the universities. There is an "Inland Mission" which has penetrated far into the Chinese Empire. During the last fifty years the American Board has expended \$30,000,000 in the missionary cause. The familiar objection that this money might better have been employed at home for the poor at our doors, is met in part by the founding of asylums, free hospitals, and other benevolent institutions in the very countries whence immigrants come to us. Besides, be it noted, the most generous supporters of home charities are often the staunchest friends of foreign missions.

A notable change in connection with this religious movement is seen in the method of its advocates when they appeal to their Christian constituencies for aid. The missionary sermon of the present resembles the address of a returned ambassador, rather than the exhortation of an evangelist; and the organization of a missionary board is the miniature of a foreign office. There are doubtless many who regret the apparent secularization of the cause; who still have visions of the *valle inferna*, if not of the *sempiterna flamme*. They would trace their present success to the

piety and prayers, and the baptism of blood, of laborers and martyrs. But even those whose faith is not ardent must read with admiration the story of missionary enthusiasm and heroism. They cannot fail to recognize in it a force in that wide evolutionary process which goes painfully onward towards the regeneration and federation of the world.

BISMARCK'S RETIREMENT.

The publication in Germany of the memoirs of the late Chancellor Prince von Hohenlohe, giving the inside history of the dismissal of Prince Bismarck, was bound to create a sensation. The whole Empire seemed to rock on March 21, 1890, when the announcement was made that the young Emperor had calmly sent over the side the veteran and masterful pilot who had launched and so long guided the ship of state. Germany without Bismarck? The thing seemed incredible, and the explanations which have since been furnished have been as varied as the colors in the spectrum. In Germany, the net result was a widespread belief that the Emperor was jealous of the Iron Chancellor, and, desiring to have things entirely his own way, had humiliated him in a moment of pique. That Bismarck himself held this view is known. Speaking in English to an American visitor at his home only a few months after his dismissal, the Chancellor said that he had been "literally kicked out of office," and he was unsparing in his denunciation of the Emperor and of the ministers to whom he attributed his loss of power. According to Von Hohenlohe, Bismarck declared to him that three weeks before he had not thought of resigning. "I ought," he added, "to have expected it, since the Emperor now means to govern alone."

Most of the defenders of Bismarck have based their case upon the ingratitude of the Emperor. The actual details have hitherto been more or less veiled in mystery. The Bismarck memoirs and letters thus far published bear lightly, if at all, upon his retirement from office. Not so the Hohenlohe memoirs. The writer of this important record arrived in Berlin on the day of the news of Bismarck's resignation. He speedily ascertained, so he notes in his diary, that the break between Emperor and Chancellor had been inevitable for weeks; that more than a month previously, the Emperor, angered by Bismarck's slights and the derogatory way in which the Chancellor had spoken of him to the members of the diplomatic corps, had discussed with Count Caprivi the latter's eventual appointment as Chancellor. A rumor of this conversation having reached Bismarck, the situation at once became impossible. To make matters worse, the Kaiser learned that Bismarck

had complained to certain diplomats of the Imperial policy in regard to the betterment of the working classes; while Bismarck was infuriated by hearing that other ministers saw more of the Emperor than he did himself. Finally, the Emperor, as Von Hohenlohe quotes him, declared that it had become a question "whether the Bismarck dynasty or the Hohenzollern should rule over Germany."

This statement and others the Kaiser made to Von Hohenlohe, when visiting him on April 24, 1890, and they were duly recorded in the diary now published. To the other reasons, the Kaiser added that Bismarck wanted a new law against the Socialists, and demanded the dissolution of the Reichstag, when that body refused to pass the bill. Besides, he wished to take energetic measures against strikers and all tumultuous assemblages. To this the Emperor replied that he did not "wish to begin his reign by shooting down his subjects"—certainly not until he had "investigated their complaints and done his best to remove their just grievances." All this now appears, we believe, for the first time, and places the Kaiser in so favorable a light that his strong protest against the publication of the Von Hohenlohe memoirs cannot be based on any feeling that harm has been done to himself. He may, however, feel that the charge, restated by Von Hohenlohe, that the break with Bismarck was due to a difference of opinion as to the advisability of a Russian alliance, will be injurious to him. Again, he may fear the publication—now threatened—of the third volume of the Bismarck memoirs, which is reported to be in a vault in the Bank of England. But the upshot can only be to strengthen his position, though making people regret that the conciliatory and liberal spirit he then displayed towards Socialists and the working classes has apparently left him.

As time has passed, the Kaiser has apparently more and more leaned towards Bismarck's original point of view in all that relates to dealing with the Social-Democrats. At the same time, the firmness and vigor which so astounded Bismarck and the whole Empire have stamped the Emperor as the most able of the Hohenzollerns. Bismarck had never dealt with such stern stuff; to offer his resignation to the old Emperor was with Bismarck a commonplace way of bringing William the First to his knees. There is a fairly comic instance in the published correspondence between them. As far back as May 4, 1875, Bismarck asked to be allowed to retire with the legal pension. The Emperor's reply is pathetic; the secretary who wrote the letter is to be put under oath not to reveal its contents; as for the Emperor, he is *tief*

erschüttert (deeply shaken). Doubtless, Bismarck felt certain that the mere threat of his resignation would bring the young sovereign to terms, as it so often had his grandfather. The bitterness of his disappointment certainly contained a large admixture of amazement.

The impropriety of publishing the Von Hohenlohe memoirs at this time is as yet hardly apparent to an observer at this distance; we confess that we cannot quite understand the need of the Kaiser's raging telegram to the son who permitted the book to come out, or the latter's dismissal from office. Even in his dispatch the Kaiser seems particularly piqued because the publication was made without his consent. It is a violation, he contends, of all decency to publish the "intimate conversations of a monarch" during his lifetime. Such things have, it is true, been rare; but no established rule of this kind has ever been recognized. Intimate conversations with Queen Victoria might or might not have yielded a sensation during her lifetime. In this case, aside from the Emperor's dignity, nothing else seems hurt, unless the memoirs contain something more startling than has yet reached this country. At any rate, thanks to the Kaiser's free advertisement, the publisher's fortune should be made, and multitudes will read one firsthand account of a famous historic quarrel of which otherwise they might have died in ignorance.

THE ABERDEEN QUATER-CENTENARY

The splendid solemnities of the last week of September at Aberdeen formed a grand review of four centuries of the history of the "happy hyperborean Athens." Within a very few years, Bologna, Glasgow, Edinburgh, Dublin, Harvard, and Yale have celebrated their secular festivals. Breslau, Berlin, Leipzig, St. Andrews and others are speedily to follow. These celebrations are not, in mercantile phrase, a stopping of the wheels of university business for a merely reminiscent taking account of stock; they have come to be the occasion for a supreme effort to take some step forward in the endless march which universities must make to keep, not abreast, but well in advance, of human progress.

Of the four Scottish universities, all but Edinburgh (1583) date from the fifteenth century. St. Andrews is the oldest. Founded in 1411, she lacks but one brief lustrum ere she is entitled again to celebrate—and this time the fulfilment of half a thousand years of life and action. Glasgow followed next, four decades later. Last in that notable century came the College of St. Mary the Virgin, now King's College at Aberdeen. The Papal Bull authorizing its foundation was given on February 10, 1494-5, by Pope Alexander VI., at the instance of King James IV. The original parchment has happily escaped the vicissitudes of time and is still preserved in the muniment room of King's College. After premising the inestimable value of learning and the backward and even barbarous con-

dition of Scotland, the hull states that His Holiness proposes to establish in Aberdeen what is termed a *studium generale et universitas*, patterned after the examples of Bologna and Paris. The international and thoroughly democratic character of science and of academic life was a note that was sounded again and again by the orators of the celebration; but it is remarkable that virtually the same note is struck by the fundamental charters of the mediæval academic system of the Roman Church; and the hull just mentioned confers upon the graduates of the college the right to teach in any university of the world.

Aberdeen University as now constituted is the result of the merging of two distinct establishments: the one, King's College, founded by the Bishop of Aberdeen, the famous William Elphinstone; and the other, Marischal College, founded ninety-nine years later (1593), by George Keith, fifth Earl Marischal. The difference of origin of the two foundations is strikingly reflected in the two mottoes, both admirable, which were to be seen in all the glories of exquisitely illuminated typography on divers festival publications. The one is the motto, adopted in 1860, of the University of to-day, "The fear of the Lord is the beginning of wisdom," *Initium sapientiæ timor Domini*—universal enough, it is true, but distinctly ecclesiastical also, and thus fitly embodying the spirit of a Roman Catholic prelate, the pious Elphinstone. The other is the legend on the arms of the Keiths: "They have said.—What say they?—Let them say." Like the device of the Rohans, "Roi ne puis.—Duc ne daigne.—Rohan suis," it tells a whole story, no less laconically, and with a fine contempt for public opinion such as our universities might do well to emulate oftener than they do.

The first event of the programme of the week was the Commemoration Service in the University Chapel, King's College, on Tuesday morning, September 25. An old authority says that Elphinstone "caused build the magnifick edifices of the Colledge, Church, professors houses and gardens therein." The Chapel and Crowned Tower still remain, as the true avouch for that epithet "magnifick." A superb carved oak screen divides the chapel from the antechapel. The pulpit and the stalls of the nave and apse, and especially the canopies, are adorned with carving of a beauty so exquisite as well to bear comparison with some of the best in Ulm and Nuremberg. Before the steps of the chancel is the tomb of Elphinstone. On it lay lovely white flowers, and evergreens tied with ribbon of royal purple, a convincing example of the truth so well expressed by President Eliot, "Universities have long memories." At half-past ten the magistrates of Aberdeen and the officials of the university entered the chapel, the magistrates in their scarlet fur-faced robes and chains of office, the rest in their picturesque academic costume. The morning had dawned chill and gray and dull; but just before the service began the sun broke through, lighting up the decorated ceiling, the glorious windows of stained glass, the carvings, and the colors—bright or sombre—worn by the distinguished assembly, with a splendor and beauty such as few of us see in a lifetime and the most of us never. The service was simple, dignified, and impressive. Among those who had

leading parts were Dr. Iverach, principal of the United Free Church College; his Grace the Archbishop of Canterbury, and the moderator of the General Assembly of the Church of Scotland. The sermon from the text, "Their line is gone out through all the earth and their words to the end of the world," was fit for the occasion, reminiscent rather than hortatory. The famous "Aberdeen Doctors" and the well-known Irenicon of John Forhes of Corse furnished matter of mention, the Irenicon, in particular, as sounding "in an age of schism a signal note of ecclesiastical unity which our services to-day [witness the participation of the Church of Scotland, the United Free Church, and the Church of England just mentioned] significantly echo."

The proceedings of the afternoon were on a larger scale and more spectacular. They consisted, in brief, of a procession from Marischal College to Strathcona Hall; the formal reception therein by the Chancellor, Lord Strathcona and Mount Royal, of the delegates; and the presentation to him of the letters missive brought by each delegate from the university or learned corporation represented. Marischal College is a vast structure of cold gray granite, that sparkled bright in the autumn sunshine and reminds one in its architectural adornment not a little of Milan cathedral. A circuitous line of march about an hour long gave to the multitude of Aberdonians who lined the streets a chance to see, together with a show of gorgeous color, the faces of men whose names, like those of Bryce or Becquerel, have long been celebrated. A fanfare of trumpets announced the start, and the arrival at the great hall was greeted by the strains of "Gaudeamus." The Chancellor, Lord Strathcona, and the Principal, Dr. Lang, welcomed the guests on behalf of the university, and the Lord Provost on behalf of the city. The delegations from the several countries then advanced, each to the music of its national anthem. Each delegation had its spokesman, who made a brief address on behalf of his colleagues.

The delegations were divided into three main groups: (1) Great Britain and Ireland; (2) British dominions beyond the seas; (3) Foreign countries. The Vice-Chancellor of the University of Oxford, Dr. Merry, made a graceful address for the first division, and Principal Peterson of McGill University, Montreal, for the second. The Americans advanced to the strains of "Hail Columbia." Their spokesman was Prof. James William White of the University of Pennsylvania. The Johns Hopkins was represented by Dr. Howard Kelly; Columbia by Arnold Hague; Yale by T. R. Lounsbury; Harvard by Ahcott Lawrence Lowell and C. R. Lanman; and the American Philosophical Society by Andrew Carnegie. Then came the men from Austria-Hungary, and for them Schipper of Vienna spoke, and in excellent English, while the delegate from Buda-Pesth, with concession to our ignorance of his native speech, brought his good wishes in stately Latin. It was, of course, the soul-stirring Marseillaise that thrilled us as the Frenchmen went up, led by Becquerel, who spoke eloquently in his own tongue. Perhaps half a dozen of them wore the striking costume of the *Institut*, the green-embroidered coat and breeches. The Rt. Rev. Monsignor

Fraser, representing the Vatican and the Scots College, brought to the Chancellor a medal from His Holiness. The receptions accorded by the vast assembly to Japan and to Russia were especially cordial. Not a few of the foreign delegates are well known in America by reason of their visits here, or of their lectures or writings. Such were our recent guests Hoeffding, the eminent psychologist, and Jespersen, author of notable works on English and on phonetics, who represented Denmark; such was the archæologist Lanciani, who spoke for the Italians; and such was Salomon Reinach, "the last of the great encyclopedists" as they call him in Paris, whose articles have often appeared in the *Nation*.

Crowded as the day had been, there still remained two events of interest, the banquet in the Music Hall, given by the Lord Provost, Magistrates, and Town Council of Aberdeen, and the torchlight procession of students. The decorations, the meats and drink, and the music, now from the organ, now from the band, now from the Male Voice Choir, and now from some very Scotch pipers, were quite beyond all praise. If his other qualifications were not more than ample, the Rt. Hon. James Bryce is himself a Scot; and so, who could more fitly propose the toast "Our distinguished visitors"? The Archbishop of Canterbury responded. It was noteworthy that His Grace, and the Chancellor as well, laid stress upon the service rendered by the University in training teachers for the simple elementary schools. In the procession of students in fancy dress the variety was interesting and amusing. Red Indians in full war-paint rubbed shoulders with sisters of mercy; a Spanish toreador, skeletons in trailing white flimsy, "darkies" and "maidens" galore—all added to the fun.

Simultaneously, although not strictly as a part of the University celebration, a reception was held at the Aberdeen Grammar School to commemorate its 650th anniversary.

On Wednesday, September 26, the principal events were the conferring of honorary degrees in the morning; the students' sports, and the reception by the University in King's College Library in the afternoon; and the students' hall in the Music Hall and the reception in the Art Gallery in the evening. The conferring of degrees took place in the Mitchell Hall, a noble room with a magnificent window of stained glass, which fills the whole end over the dais. After the introductory exercises the Promotor in Divinity presented to the Chancellor the eminent theologians, eighteen in number, each with a brief but graceful characterization. Each, as his name was called, ascended the dais, and while the Chancellor capped him with black velvet the sacrist put over his shoulders the brilliant Aberdeen hood, and with cordial greetings from the presiding officers and the audience, the new doctor returned to his place. Notable among the number were the Archbishop of Canterbury, Canon Driver, Professor Sayce, the Bishop of Ripon, and Professor Charteris. The procedure for the honorary graduands in law was essentially the same. Almost the very first was the Lord Chief Justice of England, Lord Alverstone. Lord Balfour of Burleigh, in his robes as a peer of the

realm; Becquerel, the physicist; Bryce in his Oxford robes, and Carnegie in the gorgeous purple which he wore as lord rector of St. Andrews at the Franklin celebration last spring—all received hearty cheering. The capping ended, the Chancellor delivered an address, emphasizing the close connection of the Scottish universities with the national life, and their stimulating influence on the schools of the country, and then, after mentioning Sir William Macdonald's great gift of a College of Agriculture as adjunct to McGill University, he urged the need of relating a still greater proportion of their work to the practical activities of life.

The imposing ceremonies ended, the company again assembled—this time at King's College library, where Lord Strathcona and Principal Lang received the guests for two hours. Professors were on hand to serve as cicerones—to the chapel, where an organ recital was given, to the library and the Senatus room, to St. Machar's Cathedral and so on. In the Greek room Professor Lanciani gave an illustrated lecture on his excavations of last spring at Ostia near Rome. Many were tempted just beyond the lawn, where a garden party was in progress, to the athletic field. Of the reception in the Art Gallery, and of the students' ball, which more than filled the evening, space fails me to speak.

The climax of the celebration was reached in the events of Thursday, September 27, the royal visit and the Chancellor's banquet. For the royal entry the streets were beautifully decorated. The King and his party appeared before the assemblage in the quadrangle of Marischal with royal punctuality at five minutes before the appointed hour of one. The salient features of the picturesque ceremony were the presentation of an address, the King's reply, and the formal opening of the buildings. The reverend Principal read the address, which began with a quaint old phrase, "We, the members of the University of Aberdeen, desire to offer our humble duty." The King wore the brilliant uniform of a field marshal with the Order of the Thistle, and the color and look of health were in his face, while the paleness of the Queen's was somewhat intensified by the deep black in which she was attired. The King, on receiving the address, made reply in clear and ringing tones, and, to the request of the Chancellor, who presented His Majesty with a key, responded with the brief proclamation: "I now declare these new buildings open." A fanfare followed, the royal party proceeded to inspect the buildings, and on their return the function was over.

Lord Strathcona's banquet was an undertaking no less bold than successful. The guests numbered some 2,460. The food was all prepared in London and brought in a special train, with 700 selected waiters to serve it. In addition to the "loyal toasts" (the King and the royal family), and the health of the Chancellor as our host, there were three others. Of these the first was the University of Aberdeen, proposed by Lord Balfour of Burleigh and responded to by the principal. The second was "Sister Universities and other Learned Institutions," proposed by the Rector and responded to by Professor Jackson of Cambridge and Professor Lanman of Harvard;

while the third, the "City of Aberdeen," was proposed by Andrew Carnegie, the Lord Provost responding.

PRESIDENT JORDAN AND SIMPLIFIED SPELLING.

TO THE EDITOR OF THE NATION:

SIR: One feature of the "Simplified Spelling Board" seems to have escaped notice in the *Nation* and elsewhere. So far as I know, the published list of members is merely nominal, the membership, as a whole at least, not having been consulted as to any acts of the board. It is a list of men who have expressed a general sympathy with such simplification of spelling as may be found practicable. The present writer, as a member of the board for a year or more, is responsible solely for a futile protest against the monstrous word "thru." This word, which finds no philologic defenders, has done much to impair the progress of the movement.

DAVID STARR JORDAN.

RECENT BIBLICAL CRITICISM.

TO THE EDITOR OF THE NATION:

SIR: I read with much interest, in a recent issue of the *Nation*, a review of "James, the Lord's Brother." Will you kindly name some book which will give the conclusions of the best Bible criticism on the authorship and authenticity of the books of the Bible, their character and value as literature, and the attitude of modern scholarship and thought on the miracles of the Old and New Testaments, the Virgin Birth, the sonship of Jesus, the Resurrection, and all of those questions which have been the battleground for the controversy between Faith and Doubt? A. W. R.

Swainsboro, Ga., October 9.

It would hardly be possible to name any single volume which discusses with anything like thoroughness all of the questions suggested in the above letter. Possibly "The Use of the Scriptures in Theology" by William Newton Clarke (Charles Scribner's Sons) would be the nearest approach to it. Dr. Clarke's primary purpose is to exhibit the results of Biblical criticism in the construction of Christian doctrine, rather than to elucidate the criticism itself, but he conveys incidentally a considerable amount of reliable information as to the assured achievements of Biblical students, while to the general reader a fair and thoughtful presentation of the practical outcome of critical work is of distinct advantage.

For thorough study of the questions involved, both the "Encyclopædia Biblica" (4 vols., Macmillan & Co.) and the "Dictionary of the Bible" edited by Dr. Hastings (5 vols., Scribners) are indispensable. The former is the more radical, and in certain matters less trustworthy, but its articles are often of superior merit. Both of

these monumental works contain contributions on all important Biblical topics, and each is a library in itself. On Old Testament subjects the "Jewish Encyclopædia" (12 vols., Funk & Wagnalls) may be consulted to advantage. As to the authorship and authenticity of the several books of the New Testament, the recent "History of the Early Christian Literature" (Putnams) by Baron von Soden is of decided merit. Similar questions as to the Old Testament are considered in Canon Driver's "Introduction to the Literature of the Old Testament" (Scribners), and in less technical form in McFadyen's "Introduction to the Old Testament" (Armstrong & Son). For an insight into the higher criticism of the Old Testament and the best uses to which it can be put, there is still nothing better than the commentaries of Prof. George Adam Smith on Isaiah and the Twelve Prophets (2 vols each, Armstrong & Son). Paul Lobstein is the author of a treatise on "The Virgin Birth" (Putnams), and all subjects connected with the life and teaching of Christ find scholarly examination in Prof. Nathaniel Schmidt's "Prophet of Nazareth" (Macmillan & Co.), with which may be compared a book entitled "Jesus" by Professor Bousset (Putnams). The works of Weizsäcker (Putnams) and McGiffert (Scribners) on "The Apostolic Age" are two of the principal authorities on the work and writings of Paul. The literature of Biblical criticism is enormous, and in German is even more extensive than in English, and the books named must be taken as only a few of the more recent and important on the subjects indicated in the letter of A. W. R. For vigorous assertion of distinctive Christian faith in the face of criticism and with the modern attitude toward the miraculous, one might refer to Herrmann's "Communion of the Christian with God."

THE REVIEWER OF "JAMES, THE LORD'S BROTHER."

TEACHING LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: In your editorial on "Teaching Literature" you seem to raise two questions: Can literature be taught? Is it worth teaching? Since the function of the teacher is to direct and assist students in their work, it seems clear that if literature can be studied, it can be taught; and also that if it is worth studying it is worth teaching. I would, therefore, shift the point of view from the teacher to the student, and ask, Can literature, especially English literature, be studied? and—since it unquestionably can be studied—Is it worth studying in college? Recalling the work I did in this subject at Harvard under Professor Child, I am convinced that nothing in the college curriculum is better worth studying.

Failure to get good returns results most often from directing the student's attention to the least important phases of the subject. History and criticism are all well enough, but they are not the main thing to be studied. If literature embodies the knowledge and wisdom of the human race—if it is, as Matthew Arnold called it, a "criticism of life"—then surely the thought expressed in literature should be the main object of study. The

important thing in studying an author is to find out, not when, where, why, or even how he wrote, but what he wrote. What is his thought? What message has he for mankind? This, as every student of literature knows, is no easy task. The teacher who directs such study will need a wide and exact knowledge of language and history, grammar and philology in their broadest sense. And the student of any really great author will find a task worthy of his best strength and effort.

But finding the meaning is not the whole of the student's task. This meaning must be "weighed and considered"—tested by the views of other writers, and by the student's own experiences until its truth or falsity is established—at least to the student's satisfaction. In this way, the thoughts expressed in literature become the student's own, and every truth accepted becomes a standard by which to try the conduct of life. Thus, character is developed and the true end of all liberal study is attained.

By this method of study, too, young persons learn to appreciate and love good literature. Appreciation is largely a matter of understanding. The school boy who tries to read a great piece of literature doesn't like it because he doesn't understand it—"doesn't see any sense to it." The teacher who has him study its grammatical or rhetorical qualities doesn't help him see the "sense to it." But the college student, somewhat more mature, will find out the sense and learn to love what before was mere "rubbish."

If the thought instead of the form, the soul instead of the body, of literature is to be studied, English literature would seem to have some inherent advantages for the English-speaking student, in that the language, the medium of expression, presents fewer difficulties. Every student of Latin or Greek knows how little attention is given in the classroom to the thought—how hazy the idea remains after the class translation. The minds of teacher and pupils alike are concentrated on the language. If a vague sense of the meaning is obtained, no use is made of it, and it is soon forgotten. The difficulties of getting the thought from a foreign language make such a result almost inevitable. In the study of English, however, no such hindrances are met with, and the thought naturally takes its rightful place in the student's mind.

True, English literature may be studied at home, especially a home of culture. So may calculus, but both would be studied at a great waste of time and strength. The teacher of English literature, who is worthy of his position, can give his students just as efficient help as the teacher of calculus can give his. Indeed, the services of the former are the more valuable, since from the nature of the subject taught his influence over the student is more potent and far-reaching.

From these and other considerations, I hold that it pays—and pays immensely—to teach English literature in colleges.

T. W. COWGILL.

Reno, Nevada, September 28.

Notes.

The "Reminiscences" of W. M. Rossetti have just been issued in London, and will no doubt soon be on the New York market. The two volumes are said to contain a full account of the Rossetti family and of the Pre-Raphaelite movement.

Doubleday, Page & Co. will soon publish "Fighting the Polar Ice," by Anthony Fiala; "Old New England Churches," by Mrs. Dolores Bacon; and "Glimpses of Italian Court Life," by Mrs. Tryphosa Bates Batcheller.

Bertram Dobell is about to complete his "Catalogue of Privately Printed Books," of which the first part was issued in 1891, and the second and third parts in the two following years. About 2,500 books will be described in the completed catalogue.

The Neale Publishing Co. has about ready "A History of Southern Literature," by Carl Holliday, Instructor in English in the University of Virginia. This book, which extends to nearly 500 pages, discusses the literature of the South as divided into six periods, the first from 1607 to 1676, the last from 1875 to 1905. Other books on the list of the Neale Co. are "Richard Hickman Menefee," by J. W. Townsend; "The Life of Doctor Samuel A. Mudd," edited by his daughter; "The Life of General Hugh Mercer," by Judge J. T. Goodrick, and "Morgan's Cavalry," by Gen. Basil W. Duke.

Yamanaka & Co. are preparing a volume by Kumasaku Tometa and G. Ambrose Lee to be called "Japanese Treasure Tales." It is to be a selection of Japanese stories which have been used frequently for illustration by Eastern artists and will be illustrated by reproductions from sword-guards.

James T. White & Co. are about to publish "A Conspectus of American History," which is described as "an exhaustive analysis of the entire subject of American biography."

Mitchell Kennerley is a late-comer in the publishing field, but he has already turned out several volumes of a distinctly pleasing character. His latest book, which we announced some time ago, is "Anactoria and Other Lyrical Poems" of Swinburne. Harper & Bros. also have a volume of Swinburne's "Selected Lyrical Poems," which includes his "Laus Veneris."

An illustrated edition of Edmund Gosse's "A Short History of English Literature" will be published by the Frederick A. Stokes Company.

To Crowell's Handy Volume Classics are now added Longfellow's "Tales of a Wayside Inn," with an Introduction by Nathan Haskell Dole; Lowell's "Fireside Travels," with Introduction by William P. Trent; Swinburne's "Poems," selected and edited by Arthur Beaty; Thoreau's "Maine Woods," with Introduction by Annie R. Marble, and Thoreau's "Excursions."

The Macmillan Co. has a new edition of the late George Birkbeck Hill's "Harvard College by an Oxonian."

Dr. C. T. Stockwell's "Evolution of Immortality" is issued in a fourth edition, revised and extended, by the James H. West Company of Boston.

The third volume of Putnam's excellent Knutsford edition of Mrs. Gaskell's works contains "Ruth." Dr. A. W. Ward furnishes the Introduction to this as to the other volumes.

A delightful little toy book is Houghton, Mifflin & Company's edition of "The Diverting History of John Gilpin," embellished with woodcuts by Robert Seaver. The pictures are quite in the vein of the poem.

A biography of Mrs. Craigie is to be published by T. Fisher Unwin. Any letters or other material relating to her life will be of service in preparing the work.

The last half-volume of the *Journal of the American Oriental Society* contains the translation, by Dr. L. H. Gray, of a Sanskrit drama (hitherto unpublished), and among other special papers a timely one embodying the recent decrees of the Chinese emperor, a translation of these in full being given by Dr. J. C. Ferguson. The vexed question of temple libraries in Babylon receives fresh treatment at the hands of Prof. Morris Jastrow, and Prof. D. C. Lyon contributes a study of the origin of the Hammurabi code.

Prof. Albert Schinz of Bryn Mawr contributes to the April-June number of the *Revue d'Histoire Littéraire de la France* a notable paper on the MS. of the first draft of Rousseau's "Confessions," preserved in the library of Neuchâtel. The writer's main endeavor, in which he appears to us to have been as successful as he is candid, is to show that the "Confessions," originally prompted by Rousseau's publisher, Rey, before "Émile" had seen the light and ushered in the height of persecution for its author, was begun in a spirit of scientific psychologizing, with a view to the frank revelation of the spiritual development of one man in connection with his career; and that when the early portion was taken up for revision at Wootton, the idea of an apologia entered in, and more or less definitely and consciously shaped the remainder. Professor Schinz's discussion embraces a careful comparison of the first and final drafts, with typical illustrations, and is rendered highly valuable by the textual reproduction of the original passage relating to the corporal punishment inflicted by Mlle. Lambertier on the lad of nine; of that regarding the famous ribbon theft; and, especially, of the discarded Introduction to the first draft. This feature makes the article one needful to be within reach of every student of Rousseau.

The second volume of the Report on American Manuscripts in the Royal Institution of Great Britain covers the period from August, 1779, to June, 1782. The last pages deal with Rodney's victory over De Grasse, but the fate of the War of Independence had already been decided. Among the interesting matters in this volume are papers relating to Capt. Spry and his accounts for works constructed on St. John's Island. There are also communications from Sir Henry Clinton to Washington in regard to Major André. When Sir Henry failed to save André's life, he did his best for André's memory, as we see from an account presented by James Rivington, of which the details are given in this volume. This account included £75 for the printing of 1,000 copies of a book entitled "Observa-

tions Upon the Trial and Execution of Major André, with the Whole Trial at Large," for distribution without the lines.

An edition of Edward Rowland Sill's Poems in a single inexpensive volume has long been a desideratum, and this want Houghton, Mifflin & Co. have now supplied. The compiler, William Belmont Parker, has arranged the poems as nearly as possible in their chronological order, and has enlarged the collection so as to include all of Sill's writings it is thought desirable to preserve. There may be some question about the additions, for in the case of a minor poet the half is commonly better than the whole; there certainly can be no intelligent question about the illustrations, which were far better omitted. However, the book is here, a thing to be properly grateful for, and he who wishes may enjoy the true and sweet poetic vein of one who in many ways may be regarded as a New England Lanier. There is in the work of both the same incompleteness, at times amateurishness, the same feeling of five powers never quite brought to maturity. Lanier now and then struck a higher, more piercing note than Sill, and he has the advantage of standing first in his own school, whereas Sill is dwarfed by insistent comparison with Emerson, Longfellow, and the others to whom he forms a kind of pendant. Sill's best-known poem is "The Fool's Prayer," which Professor Royce years ago started on the way to fame by quoting it in "The Spirit of Modern Philosophy." And the mood of that ballad shows Sill at his best. A few of his seriously planned poems—"The Venus of Milo" and "In Memory of a Musician," to name two that occur to the mind—are successful, but more often they seem but an echo of what we have already heard elsewhere. He is more himself and more satisfactory when, as in "The Fool's Prayer," we find a touch of easy *insouciance*. In his later years he began to indulge in what might be called a cross between transcendentalism and the humorous irony of *vers de société*. The result, quite charming in its way, may be seen at a glance by comparing "His Lost Day" and "Living" with Emerson's "Days."

It may not be possible to place Thomas Traherne quite so high among the religious poets of the seventeenth century as his discoverer and publisher, Bertram Dobell, would wish. Something, no doubt, must be allowed to the ardor of a literary explorer who suddenly comes upon a long-forgotten treasure. But for all that, these poetical works, which Mr. Dobell now offers in more accessible form, have a real interest of their own apart from their historical value as illustrative of the tradition which formed Vaughan, Crashaw, and Wither. One at least of Traherne's poems, "On News," has found a place in Mr. Quiller-Couch's "Oxford Book of English Verse," and it by no means stands above the general average of his excellence. But we confess that what interests us most in the present edition is the announcement in the Introduction that Mr. Dobell intends soon to bring out Traherne's "Centuries of Meditation." From the specimens given of these autobiographic and reflective paragraphs it would appear that Traherne was more accomplished in prose than in verse. Nor does Mr. Dobell's claim for him seem ex-

travagant, that in many ways he was in his ideas a curious forerunner of Blake and Wordsworth. It is most earnestly to be desired that the "Centuries" will receive such a welcome as to induce Mr. Dobell to add to his benefactions a reprint of Traherne's "Christian Ethicks." We confess never to have seen that rare book, but Mr. Dobell's generous quotations are sufficient to prove that "it is a work full of eloquence, persuasiveness, sagacity, and piety."

The inclusion of the Apostles' Creed in the "Book of Common Worship" prepared recently for use in Presbyterian churches is doubtless responsible for the brief in favor of the liturgical use of that symbol, entitled "The Apostles' Creed in Modern Worship," by the Rev. Dr. William R. Richards, pastor of the Brick Presbyterian Church of this city (New York: Charles Scribner's Sons). Dr. Richards says that he was led to favor the creed through the "wish that there might be some great hymn of the church (to be said, not sung, for not all can sing), a hymn hallowed by age, and still the vehicle of man's present and living convictions, through which we all, adding our voices to the countless hosts of those who have gone before, might gratefully speak out our confessions to the world." He finds such a hymn in the briefest and most ancient of the Christian creeds, and remarks that it has grown in popular favor while other more weighty symbols, despite the authority of great communions, have passed into disuse. The reasons for this popularity he discovers in its definite historic and personal quality, its emphasis on devotion to the founder of the Christian religion. Some of the objections to the general use of the symbol are declared to be due to misunderstandings, which Dr. Richards endeavors to clear away; other considerations against its adoption in worship are said to be so slight as to be negligible. The author himself, though sympathetic with the doubting frame of mind, has no difficulty with any article of the creed, for he finds comfort in the assurance that Christ "descended into hell," and declares of the Virgin Birth, "This dear faith of the Church about the birth of Jesus seems to me most rational as a statement of historic fact." The book may be considered to represent the best that can be said in favor of the adoption of the creed by non-liturgical communions, though it by no means answers the objections raised against its use in the controversies over it in England and Germany.

One of the intellectual signs of the times in Mexico is the interest in Mexican history, shown by the great number of recent publications, particularly publications dealing with the history of the last century. A series of documents hitherto unpublished or rare, an enterprise sustained by subscription, has in two years reached its eighth small octavo volume. Some of these volumes are of direct value to the historian of the United States, as well as to the student of the history of Mexico proper. Such are the reminiscences of Gen. Santa Anna ("Mi historia militar y política, 1810-1874." By Antonio Lopez de Santa-Anna. Mexico. Librería de la Vda. de Ch. Bouret.) The volume is taken from a copy of the autographic memoirs concluded by Santa Anna while he was at Nassau in 1874, accompanied by the manifestos

and some correspondence of Santa Anna in 1864 and 1865, during the French intervention and government of Maximilian. Santa Anna gives his own account of his campaign in Texas and his capture at San Jacinto, as also of the political intrigues at Mexico City during the war with the United States. In a personal sense the most interesting parts of the memoirs are the concluding chapters, wherein Santa Anna tells of Secretary Seward's visit to St. Thomas and call upon him in 1865, of the schemers who beguiled him into a visit to the United States in 1866, and of his seizure by Juarez's orders at Vera Cruz. For a proper understanding of the internal state of Mexico during the war with the United States, much more, and vastly more accurate, information is to be obtained from another volume of this series, comprising letters written during 1845-1847 by José Fernando Ramirez, one of the moderates in politics at that time, who served for a short time as Secretary of Foreign Affairs at the beginning of 1847 ("México durante su guerra con los Estados Unidos": Mexico. Librería de la Vda. de Ch. Bouret). The comments passed in these confidential letters upon the Mexican politicians of the time, upon the state of society, and upon the evidences that representative government in Mexico was up to that time a failure, are those of a keen if pessimistic observer. The most interesting letter in the book is a frank one addressed to Gen. Santa Anna in June, 1846, setting forth the impossibility of reconquering Texas from the Texans, and likewise of resisting the United States if that nation should absorb Texas.

"Die Stadt des Lebens," written by one of the most gifted and popular of German authors, Isolde Kurz, and published by Cotta in Stuttgart, contains authentic and vivid descriptions of prominent persons and events in Florence during the period of the renaissance, extending from the middle of the fifteenth to the end of the sixteenth century. The volume begins with Lorenzo de' Medici, and closes with the romantic career of Bianca Cappello, giving a just appreciation of the brilliant traits as well as the less admirable qualities of this remarkable woman. Equally frank and fascinating is the story of the Bella Simonetta, whose loveliness was celebrated by famous contemporary poets and painters and even inspired Lorenzo the Magnificent to indite sonnets. The book gives an excellent historical survey of the revival and development of the arts and intellectual culture in which Florence took the leading part. The illustrations are fifteen portraits of the principal characters.

Fragments of documents of the highest importance for the history of the Athenian drama, preserved on pieces of Greek inscriptions of which some were cut about the middle of the fourth century, B. C., and some in later centuries, have recently been published with careful revision by Prof. Adolf Wilhelm of Vienna, the most brilliant and learned of living epigraphists ("Urkunden dramatischer Aufführungen in Athen," Vienna, 1906). These documents consist chiefly of lists of victors in the lyric and dramatic contests. In one set of records, further information is given, and the first preserved fragment testifies that in

472 B. C., Pericles acted as *choregus*, i. e., undertook the expense of providing the chorus for the "Persians" of Æschylus—the one great historical play which has come down from antiquity, and a play of special interest since its subject is the battle of Salamis, in which the poet himself had taken part less than eight years previously. While the name of Æschylus is on the first preserved fragment, an ingenious combination of arguments proves that eight poets at Athens had won victories in the tragic contests before him. This agrees fairly well with the traditional statement that tragedy was introduced formally and officially, at Athens, in 535 B. C., and that the first victory of Æschylus was in 484 B. C. When these inscriptions with regard to the dramatic contests at Athens were first published, scholars were inclined to suppose that they were the original records, from which Aristotle derived his information for his works on the presentation of dramas and on dramatic victories, but now the truth seems to be that two of these lists were based on his researches, while another was independent. Wilhelm's book contains many notable examples of certain information secured from but a few letters on a fragment of stone. The volume contains also elucidations of the lists of victors by the lamented Kaibel. Perhaps no other scholar is named in the work more frequently and courteously than Professor Capps of Chicago, who has done more than any other American for the exploration of this field. Scholars will be glad to have so authoritative a presentation of the subject, and will welcome the new light which Wilhelm throws upon a complicated and difficult matter. The book is not intended for beginners. The latest (October) number of *Classical Philology* contains an interesting article on one part of the subject by Professor Körte of Giessen.

"In these chambers died Oliver Goldsmith," is an inscription which the Benchers of the Middle Temple have placed on the wall of the room in Brick Court in which Goldsmith breathed his last. This memorial—of red granite and bronze—designed by Percy Fitzgerald, contains also the poet's likeness.

Prof. Oscar Levertin, who died in Stockholm on the 22d of September after only a few days' illness, at the age of forty-four years, was one of the notable figures in Swedish literature. He began his literary career in the early eighties, while still a student at the University of Upsala, and took a prominent part in the work of the young realistic school that grew up round August Strindberg. Beginning as a novelist, he soon abandoned temporarily prose for poetry, in which he rose to eminence; his latest poetical production, "Salomo and Morolf," a passionate and sombre epic, published a year ago, is already spoken of as a classic. As an essayist, Levertin was easily the first among contemporary Swedish writers, and as literary and art historian he occupies a very prominent place. Connected with the University of Stockholm since 1893, the last seven years as full professor, he drew large audiences to his lectures. His publisher, K. O. Bonnier, is quoted to the effect that he left material for six or seven volumes of belles-lettres and criticism, besides the large work on Linné, on which he was at work at the time of his death.

The annual report of Dr. John Shaw Billings, the director of the New York Public Library, is a document of more than local interest. Dr. Billings makes this summary of the work for the year ending June 30, 1906:

In the reference branches, readers and visitors numbered 216,428; 173,223 desk applicants consulted 778,652 volumes (corresponding figures for 1904-5 being 159,695 desk applicants and 615,454 volumes); 58,887 volumes and 121,332 pamphlets were received; 26,966 volumes and 8,913 pamphlets were accessioned, making the total number available for readers 684,512 volumes and 265,461 pamphlets, a total of 949,973 pieces in the reference department, which, with the 565,482 volumes in the circulation department, give a total of 1,515,455 pieces in the whole library. The print department now contains 56,835 prints; there has been little increase in the music, map, or manuscript departments. There were catalogued 33,865 volumes and 36,062 pamphlets; the number of cards written was 106,124, of slips for the copying machine, 33,161; the public catalogues in the Astor and Lenox reading-rooms contain now 1,321,600 cards; the official catalogues at these two buildings contain 936,419 cards; 1,664 periodicals are indexed number by number, for which 15,832 cards or printer's slips were written. Periodicals currently received amount to 6,053; readers of periodicals at the Astor branch number 30,551, and these readers called for 234,612 single numbers or pieces.

In the circulation department, the number of branches has increased from 31 to 35, volumes in the department from 476,597 to 565,482, circulation for home use from 3,691,500 to 4,752,628; 7 Carnegie branches have been opened (a total of 18); 1 is ready for opening, 5 have buildings under way, 3 have plans preparing; 3 new sites have been secured, making a total of 27 sites available for, or occupied by, Carnegie branches.

The library of the late Richard B. Sinton of Richmond will be offered at auction by the Merwin-Clayton Sales Company of this city October 24-26. It contains many books on Virginia, including some rare items.

The forty-fourth annual convocation of the University of the State of New York will be held in the Capitol at Albany, October 25, 26, and 27. The principal speakers are: Elmer E. Brown, recently appointed commissioner of education for the United States; Nicholas Murray Butler, president of Columbia University; the Right Rev. Monsignor Lavelle of New York city; George E. Merrill, president of Colgate University; George K. Hawkins, principal of the Plattsburgh Normal School; James J. Sheppard, principal of the High School of Commerce, New York city; Charles D. Larkins, principal of the Manual Training High School, New York city. On Friday morning Andrew S. Draper, the commissioner of Education, will address the convocation on the subject of examinations and academic funds. There will be a dinner on Friday evening, October 26, in conjunction with the annual dinner of the Hudson River Schoolmasters' Club.

The German Government expends the handsome sum of half a million marks per annum for the support of 970 German schools on the five continents of the globe. In non-German countries of Europe there are 96 of these schools, with a teaching force of 535 German instructors and 10,290 pupils; of the latter 64 per cent. are Germans. These schools are found scattered over all Europe, only Austria and Switzerland being exceptions. The United States also has no schools of this charac-

ter, but Central America has 3, with 18 teachers and 330 pupils; while South America has no fewer than 738 schools, with 1,090 teachers and 30,440 pupils. Here the percentage of German pupils is 87. Africa, although the seat of the German colonies, has only 43 establishments, with 127 teachers and 2,725 pupils; Asia, 18, 100 teachers, and 1,105 pupils; while Australia has 77 schools, 89 teachers, and 2,620 pupils.

We have before us the composition of a kindergarten schoolgirl of nine, consisting of sixty-seven words. There are nine instances of misspelling, two being "tale" for "tail" and "hare" for "hair," and one "biles" for "bells." On the other hand, the writer successfully coped with "thought" (as much in need of "simplification" as the proscribed "though" of the reformers), "children" and "fingers." These longer words must have been visualized or memorized; the monosyllabic failures were phonetic, as was "bonot" for "bonnet." This demonstrates what is a fact of common observation, that children and illiterate adults spell with incalculable indifference to the seeming "hardness" of our English orthography, and hit the mark with the eye where they miss it with the ear. An analogous state of things is to be remarked in the spoken vocabulary of the unlearned, which is full of surprises.

LITERARY BIOGRAPHY.

George Herbert and His Times. By A. G. Hyde. New York: G. P. Putnam's Sons. \$2.75.

Thanks to the beautiful life by Izaak Walton, and to the self-revelations in his own verse and prose, George Herbert is one of the most distinct and attractive personalities of the seventeenth century. Shorthouse, who wrote an Introduction for "The Temple," was much drawn to Herbert, and undoubtedly had him definitely in mind when forming the character of John Inglesant. The finely wrought description of the life of the Ferrars at Little Gidding in the same book has not only stamped on the general memory a picture of one of the main influences that shaped Herbert's career, but has also thrown an atmosphere of reality about the whole religious movement in which our poet played a part—such is the power of fiction. In coming to this theme Mr. Hyde has nothing new to add to our knowledge of Herbert's life or surroundings. But he has a cultivated style, is well read in the general field, and from common sources has put together a thoroughly entertaining volume.

It is proper to add, however, that in the matter of style his work is not free from the epithetic padding which almost always mars these books in which the purpose to be entertaining and "literary" openly predominates. Why, for example, after the work has already been alluded to several times, is it necessary to say "Grosart's large edition of Herbert's writings"? Or why, when Quarles is named, must he be characterized as "the well-known author, etc."? This *soft style* is the mark of a whole group of modern books to which Mr. Hyde's biography belongs. And, again, in the matter of reading it is evident that

Mr. Hyde is unacquainted with Professor Palmer's recent edition of Herbert's English Works. With those volumes before him he would have been spared from quoting, "At first thou gave" for *gav'st*; and he would surely have added certain essential considerations to his critical chapters. He does not seem aware of the fact that the date when Herbert became deacon, July 5, 1626, has been finally determined, and he misdates Herbert's ordination as priest.

There is, too, as is to be expected in the *genre*, a certain amount of beating about to find material which may excusably be called illustrative. But in the present case the result has been somewhat happier than usual. In particular, the account of life at Westminster School is acceptable, and shows from what stern discipline the best flowers of literature spring. The later experience of Coleridge and Lamb is a better known example, but the requirements at Christ's Hospital in the eighteenth century were mild in comparison with the rigor at old Westminster. Mr. Hyde has at his service also a chapter on Little Gidding, which ought to be read in connection with the corresponding chapter in "John Inglesant." Nor is a sketch of Donne's life entirely superfluous, in consideration of the great influence of Donne's poetry on the work of the younger man. On the whole, the narrative is entertainingly put together, and in summing up Herbert's character Mr. Hyde takes a middle ground between Professor Palmer's unjustifiable denial to Herbert of the epithet "holy" and the contrary view of him as a man totally withdrawn from the world. No better specimen of the book could be chosen than this paragraph from the "Conclusion":

His character, as presented by his more intimate writings, is that of a man of strong intellect and high ambitions, by no means unworldly or without human passions, perfected and humanised by disappointment, suffering, and self-subjection. With him the note of conflict, of perpetual warfare against natural bias and inclination, is everywhere present; he is the most militant, if not the most combative, of saints. And herein lies the seeming paradox of the association of his name with things of beauty, rest, and peace—with the quiet of country churchyards, the freshness of summer skies and mornings, the solemn stillness of the chancel and the altar. It is, however, the familiar paradox of the natural world. We do not perceive or understand the price paid for the apparent repose of Nature; that what seems to us an inert, effortless calm, is really the resultant of a thousand active forces; that our dreaming planet moves in a very whirlpool of dust and broken fragments of the cosmos; and that the peace of our fields, in more senses than one, is the outcome of "battles long ago."

The weakest part of the book, as in most books of the class, is that which pretends to deal with criticism. Donne's life is given at length, but the relation of Donne's poetry to Herbert's is left in the vague. There is no attempt to analyze Herbert's transference of the Elizabethan amorous style to religious use. There is no adequate comparison of Herbert with Crashaw, Vaughan, and the other religious poets of the day. There is, in short, practically no criticism except of the most amateurish sort. Mr. Hyde quotes at length the "Sweet Day, so cool, so calm, so bright," and comments thus: "It is, of course, an imperfect poem: some of the conceits are distinctly

unpoetical, and some of the words and phrases now out of date; but of its kind it is an imperishable gem, alike above criticism and praise." Where are the flaws? and why, one asks, is an imperfect and partly unpoetical poem above criticism? A little less condescension and a little more precision would be becoming in one who undertakes to criticise.

The Life of Alfred de Musset. By Arvède Barine. Done into English by Charles Connor Hayden. Printed for Subscribers Only by Edwin C. Hill Co.

What a volume of the plain and business-like *Grands Écrivains Français* is doing in this sumptuous and unrecognizable disguise—large paper, wide margins, uncut edges, and the like—is a mystery. The original is some thirteen years old by this time; and the curiosity which has produced the translation, seems as tardy as dilettante. Perhaps the solution of the puzzle is to be found in the reputation and character of the poet; for the biography is by no means one of the best of the series. The account of the liaison with George Sand, on which his life turns and which might prove an attraction for the desultory reader, is anything but satisfactory from any point of view. It is written in a semi-metaphysical, a sort of erotico-psychological vein, which serves but to muddle a set of facts that have to gain only by plain statement or complete oblivion. Nor is the translation itself, though well enough in general, such a masterpiece of English as to merit a setting quite so luxurious. In particular, it seems a decided mistake for the ordinary hand to try to render a poet in verse.

"Of hope I cannot sing,
Nor glory nor of bliss,
Nor yet of suffering.
The mouth a silent thing
To hear the heart, I wis."

This is what becomes of "La Nuit de Mai." But de Musset himself is the kind of writer who has a very particular attraction for the amateur of life and letters. His own literary nonchalance, his devotion to pleasure, his airs of gentility and knowingness, his brilliant youth, his absorption in an illusory and impossible passion, his final disenchantment and collapse—these features of his brief spasmodic being are naturally fitted to arrest the curious; while to the young and romantic—and the amateur is incurably a little of both—he is as good a subject for a cult as he ever was.

BOOKS ABOUT SHAKSPERE.

Dr. Harold de Wolf Fuller's monograph on "Romeo and Juliette," reprinted from *Modern Philology*, is one of the most notable of recent contributions to Shaksperian scholarship. It is based upon an examination of an obscure Dutch play written by Jacob Struijs about 1630. From a comparison of this drama with Shakspeare's tragedy and the earlier versions of the story Dr. Fuller finds (1) that large portions of the Dutch play go back to Boaistuau, or some translator of his French version; (2) that one significant incident finds its counterpart only in Brooke's English poem; (3) that Struijs and Shakspeare

have many points of agreement not found in any other author. Recalling Brooke's statement that he had seen the story on the stage, Dr. Fuller concludes that the Dutch version is derived from this lost English play, and that the agreements between Struijs and Shakspeare are due to Shakspeare having used the same source. By making allowances for the characteristically Dutch elements in Struijs and subtracting these, he presents the residue of the Dutch play as a plausible approximation to Shakspeare's immediate source. The argument is worked out with ingenuity and moderation, and though the conclusion hardly admits of mathematical demonstration, the author has brought it to a degree of probability which gives it a right to be regarded as the most likely hypothesis so far advanced.

The Poet Lore Company of Boston has issued a volume by Dr. F. W. Kilbourne on "Alterations and Adaptations of Shakspeare." The book consists of a series of descriptions of the various acting and operatic versions of Shakspeare's plays, from the Restoration to the beginning of the nineteenth century, with a general discussion of the literary tendencies displayed in these adaptations. The list includes nearly ninety different alterations, all of them bad, in the opinion of the critic. Of the thirty-seven plays of Shakspeare, only three—"I. Henry VI.," "Henry VIII.," and "Othello"—seem to have escaped the presumptuous attempts at improvement of the theatrical hacks of the seventeenth and eighteenth centuries. The only cheerful element in this necessarily somewhat dismal treatise is the indication of the growth of reverence for the text of Shakspeare in more modern times.

Sidney Lee has reprinted through the Oxford University Press his article in the *Library*, "Notes and Additions to the Census of Copies of the Shakspeare First Folio." He takes occasion to make a few corrections of the Census compiled by him for the Oxford facsimile of the First Folio, and describes fourteen copies which have come under his notice since 1902. The total of known extant copies now stands at 172. Some interesting statistics are given as to the geographical distribution of these copies, the most significant fact being the steady migration to America. At present there are known to be on this side of the Atlantic sixty-two copies, as against one hundred and five in England; and Mr. Lee estimates that by the end of the next twenty-five years this ratio may be reversed. Last year saw the highest price yet reached in the history of Shakspeare Folio collecting, when Marsden J. Perry of Providence paid ten thousand pounds for a set of the four Folios. Of this sum Mr. Lee reckons that the copy of the First Folio must be assigned about three-fifths, or \$30,000. The largest number of copies known to have been owned by a single collector is now in the possession of H. C. Folger, jr., of Brooklyn, who has so far accumulated eight.

"Where Shakspeare Set his Stage," by Elise Lathrop (James Pott & Co.), is a pretty picture book. It is difficult to find justification for further commendation. The text professes to describe for twelve plays the localities in which Shakspeare laid his scenes, and the personal appear-

ance and general characteristics of the chief personages, to determine the exact period of the actions, and to mention the sources of the plots. The work is based upon personal visits to the supposed scenes, and upon what appear to be second and third-hand authorities. The statements as to sources are singularly untrustworthy, and the places described have often no real relation even to the nominal scene at the time of the action, and were rarely such as were pictured either by Shakspeare or by his audience. No harm will be done to readers who confine themselves to the illustrations, but the letterpress is capable of conveying many misleading ideas to uninformed youth.

STUDIES IN HISTORY.

In Olde Connecticut. Being a record of quaint, curious and romantic Happenings there in Colonie Times and later. By Charles Burr Todd. (The Grafton Historical Series, edited by Henry B. Stiles.) New York: The Grafton Press. \$1.25 net.

Historical Towns of the Connecticut River Valley. By George S. Roberts. Illustrated. Schenectady, N. Y.: Robson & Adeed.

The Connecticut River and the Valley of the Connecticut. Three hundred and Fifty Miles from Mountain to Sea. Historical and descriptive. By Edwin M. Bacon. Illustrated. New York: G. P. Putnam's Sons. \$3.50 net.

Amid the many recent books devoted to the history and descriptive topography of New England, Connecticut and the river and valley bearing its name have no reason to feel neglected. Fast on the heels of Adams's portly two-volume history of Wethersfield, come three more books, all of interest—two of them covering identical ground, but so unlike in treatment that they call for somewhat careful examination.

Although Mr. Todd's volume is the first of a series, the purpose of which as stated by the general editor is "to collect and combine into a coherent whole these varied historical data," the impression grows, in looking over his pages, that the number of books producible through such methods might easily become illimitable. An easy and unconcerned stroll through several Connecticut towns, where traditions are richest, a few admirable anecdotes and historical reminiscences, with quotations from not unfamiliar sources—such is the spirit of these two hundred and fifty readable pages. An effect of incongruity and amiable purposelessness is heightened by the fact that several of these papers—all of which were originally contributed in a disconnected way to various journals—were written some years ago. The chapter, for instance, on the beginnings of a great railroad (the New York, New Haven and Hartford) dwells insistently on the circumstance that the year 1832, when opposition to the charter of the new enterprise began, was only fifty years ago. Severe self-editing would have removed this and several other like obstructions to the generally even course of some agreeable wanderings through Fairfield, Saybrook, Killingworth, New London, Groton, Lebanon, Litchfield, East Grauby, and other places, all of them

flavored with an excellent antiquity. Some of the chapters are distinctly padded with matter presenting no fresh historical suggestions, and offering no especial reason for their presentation. Such a chapter is "Connecticut's Declaration of Independence." Mr. Todd allows his passion for romantic appreciation to carry him back too far. All old books are to him ponderous and worn-eaten tomes, the early writers all ancient chroniclers, and the settlers are stern-browed.

Good stuff is the paper on the Whaleboat Privateersmen on the Sound, which has the promise of a volume in its few pages. Although "Mining in Connecticut" has some of the familiar phraseology of a twentieth century copper prospectus, there is not a page too much of the excellent description of the old revolutionary Newgate at Simsbury (near East Granby), converted from an abandoned copper mine into a prison, and long ago forsaken. The mysterious "Moodus noises" at Mt. Tom near East Haddam are more hinted at than described; the subject would have borne a fuller exposition. Mr. Bacon and Mr. Roberts in their books also fail to do justice to the once awesome phenomena of Moodus. Mr. Todd in truth has, not without adroitness, let his readers stop far short of satiety. It is all pleasing to read, but wants the importance of coherent narrative working toward some definite result—a book for the fireside and not for the historian's shelves.

Such a work as Mr. Roberts's "Historical Towns of the Connecticut River Valley" would be more usable, though possibly not so attractive, were it frankly built on more strictly cyclopedic lines. Its wealth consists mostly in the assemblage of anecdotes, and of certain of the vital historical facts appertaining to each of the towns, from Saybrook at the mouth of the river to Windsor, Vt., far from the head. Lancaster and Hanover above Windsor he omits altogether. It is not a book to read through like Mr. Bacon's, for it has only a topographical continuity without historical consistency. The mind does not jump contentedly from town to town, glancing here at a list of the early settlers, there at some local tradition, however charming, but gaining meanwhile no sequential effect of the development, social, political, or historical, of the whole valley. For this reason the cyclopedic or dictionary method would have brought out the distinctive features of this book more clearly. As it is, such a complicated story as the land grant difficulties in New Hampshire and Vermont, has to be distributed among the various towns mentioned by Mr. Roberts, whereas a clear and separate consideration of this important historical phase is given in Mr. Bacon's book. Praise is due the author, however, for what he has done toward preserving a multitude of ancient and passing anecdotes and legends, remembered by few, if at all, and losing accuracy, if not flavor, with each generation. In this respect his contribution to the minutest New England historical lore is richer than that furnished by Mr. Bacon, who evidently has been restrained by the limitation of space, yet is plainly as fond of his anecdote and ancient tale as the other chronicler.

The illustrations furnished by Mr. Rob-

erts are charming, and fortunately do not conflict with the embellishments in the other work, since they reveal more fully the detail of localities—old buildings, trees, monuments, interiors, even gravestones, household ware, and personal effects. All these illustrations are from photographs by W. Earl Weller, who has levelled his camera with the eye of a sympathetic historian.

The index confines itself too closely to names and omits many places and subjects; no references, for instance, are to be found to mines and mining—an essential and important feature of the valley's early history; nor are there any references to ferries, steamboats, railroads, or canals—all contributory factors to the evolving civilization of earlier days on the river, and touched upon incidentally throughout the volume. A more analytic index would have greatly relieved the congestion of the text, and served to reveal its riches.

By far the most important of this trio of books is Edwin M. Bacon's "The Connecticut River and the Valley of the Connecticut," a volume of some magnificence in its broad measures of type and numerous half-tones, illustrating the sweep of the fair stream for three hundred and fifty miles. As fond as Mr. Todd of the ancient tomes, or the owl in the coping, or our stern-browed ancestry—as saturated with local anecdote and tradition as Mr. Roberts, Mr. Bacon puts a masterly restraint upon his predilections. The proportions of the long stretch have been duly considered, and the narrative, not unlike the river which it portrays, runs consistently, though compressed within brimming pages, from cover to cover—a happy concurrence of literary ease and historical severity. Not content with stopping long enough to cover the requirements of each locality, Mr. Bacon has managed to bring these striking autonomies—of the various Connecticut sentiments—into a sort of homogeneity without doing violence to the individuality of each; while all is dominated by the central motive of the "Beautiful River"—President Timothy Dwight's own appellation—itsself. The differing attitude of the two books is well seen in their dealings with such a town as Wethersfield, Conn. Mr. Bacon devotes to it a scant three pages, and Mr. Roberts nineteen, inclusive of some vivid illustrations. Mr. Bacon seizes the two features of the town most salient to his historical perception—its aforesaid reputation for the culture of onions, and the Webb and Deane houses, in both of which Washington had been a guest, and the latter of which was the home of Silas Deane, Wethersfield's best known but not most honored son. Mr. Roberts, ignoring Deane, tells without hesitation of the first setting of a white woman's foot at this place on Connecticut soil, although the story has been held to be apocryphal. Mr. Roberts has also devoted three pages to the suicide, preceded by the murder of his wife and four children, in 1782, of one Beadle—a tragedy wisely forgotten when there are better things to commemorate.

We have dwelt upon the point of view held by each of these well instructed writers, not for the purpose of finding fault with either, but to show how rich and still unexhausted is the historical soil which

they have in diverse manner sought to till. Each book has its place, and was worth the doing. Mr. Roberts will appeal more to those who sprang from one or other of these rare New England spots, and who share his enthusiasm; while Mr. Bacon provides a more liberal feast for those who read fast and widely, and are grateful for so much mental food without danger of surfeit: a painstaking, but rapid survey of the Dutch occupation, the pioneer settlements and forts, the terrible Indian warfares, with their incredible exposures and "captivities," the story of the upper valley land grants, the foundation of Dartmouth College, and strategic formation of Vermont; then the river as a means of transportation and navigation; and lastly, a careful topography of the stream and its natural bounds. It is a notable story, picturesquely and feelingly told.

One observation arising from the perusal of the two larger books, for Mr. Todd's work is of another class, calls for expression. Although the present aspect and development of places like Springfield and Hartford receive some careful attention, yet it is noticeable that both Mr. Bacon and Mr. Roberts have found the past so alluring and have confined themselves so largely to it, that they seem to have ignored the actualities of the life that now is in these river communities. It is a fault to be generously dealt with in historians whose ways are ways of pleasantness.

Le Origini del Risorgimento Italiano (1789-1815). By Francesco Lemmi. Milan: Hoepli. (Lire 6.50.)

This is the latest volume in the excellent *Collezione Storica Villari*—a series which serves as a monument to the influence of Prof. Pasquale Villari, Italy's foremost historian in recent times. It covers important ground in a way which will be, for the general reader, at least, more satisfactory than that of either Cantù or Tivaroni. Signor Lemmi tells a plain tale, without rhetorical embellishment, and without passion. To be able to make such a tale plain is the best proof of his ability.

In an introductory chapter, he gives a description of the reform movement which, about the middle of the eighteenth century, unquestionably improved the condition of the Italians, but he is right in declaring that Joseph II., Leopold, and the other benevolent despots had solely in view the strengthening of their own power. If they stiffly resented the meddling of the Church in matters of state, if they aimed at making their subjects more prosperous and contented, if they furnished a mild and enlightened administration, it was because they hoped thereby to strengthen their own dominion. In politics, as in personal conduct, the motive often counts for more than the act; so these apparently liberal acts of the despots had no liberal motive, and they were not conscious steps on the road to representative government. On the contrary, by making the Italians more contented with their rulers, they tended to prolong the political enervation of Italy.

The great impulse came from outside—from the French Revolution; but even that, if it had remained on the outside,

might have failed to arouse the Peninsula. Fortunately for the Italians, the French were bent on forcing their political principles upon the rest of Europe. Bonaparte crossed the Alps, primarily to oust the Austrians; and, having achieved this end, he proceeded to Gallicize Italy. The human brain is like a pot of earth ready for seeds of any variety. The Italian brain, which had long lain fallow, eagerly received the Gallic Republican seeds, and quickly grew a crop. But when Bonaparte was metamorphosed into Napoleon, and Gallic Republicanism into Imperialism, the Italian Republican crop withered. The Italians perforce submitted to Napoleon's domination. They saw the north made a kingdom for his stepson Beauharnais, the centre set apart as a kingdom for his sister Elise, the south made a kingdom for his brother Joseph, and later for his brother-in-law Murat. And when calamity overtook him and he abdicated, their first impulse was to rejoice, for in his downfall they expected to find the opportunity for their own political hopes.

Signor Lemmi follows this evolution with the sureness of an expert detective. He has unusual ability in discerning essentials, and in condensing much material without desiccating it. He enables you to watch the fluctuations of sentiment in each district. He discloses the cross-currents of local or dynastic aspirations, which interfered with the orderly sweep of the political stream. You understand, for instance, why Genoa and Turin, or Florence and Rome, took their Gallic experience with very different emotions.

In dealing with debated points, which test the historian's judgment and fairness, Signor Lemmi is uniformly satisfactory. He shows up, with dispassionate moderation, Napoleon's perfidy towards the Venetians and Nelson's perfidy towards the Neapolitans. He discriminates between Napoleon's wisdom in abolishing the temporal power of the Pope and his indiscreet truculence (to use no harsher term) towards Pius VII. personally. Thoroughly Italian in his outlook, he sets truth before patriotism so honestly that you cannot doubt that the Italians in the Napoleonic era were hardly fitted to profit by independence, if independence had been granted them. But out of the turmoil of that period, when many of them became soldiers and many more became adepts in modern methods of administration, sprang the forces which were to make Italy independent, free, and united.

The plan of the series in which Signor Lemmi's volume appears does not permit footnotes, references, or bibliography, so that readers may often regret that he cannot give the sources of his statements. They may feel, sometimes, that the style might be livelier without forfeiting accuracy. But on the whole, the work is too sound and able to be seriously affected by minor shortcomings. It is the best in this interesting field, and well worthy of being translated.

RECENT FICTION.

On Newfound River. By Thomas Nelson Page. New York: Charles Scribner's Sons.

The charming colored frontispiece por-

trait by John Edwin Jackson of Mr. Page's heroine puts one into the right mood for the story. A very pretty girl stands pensively by an open window into which Southern bloom is peering. Her flowered gown and the arrangement of her soft hair tell of days before the war, while the graceful hands, the delightful nose, and the fascinating tilt of the upper lip have the perennial attraction that belongs to all well-conducted heroines of whatever time or clime. Thus then in the story we meet what we expect, the Southern life of an earlier day: hot-tempered men and gracious women, trusty slaves, negro-hunting whites, the grocery-store-town-meeting, and the open-air court of justice. The love-story, however, is the thing and is young, Arcadian, rough-running, happily arriving. Mr. Page explains that it is a story enlarged; explicitly not a novel, but "a love story, pure and simple," and such it will be found, a delicate finished specimen of its author's art.

The County Road. By Alice Brown. Boston: Houghton, Mifflin & Co.

The thirteen stories that make this volume are excellent reading. Most of them are set in the kitchens and dooryards of New England houses; nearly all are enveloped in the young green of the spring, and every one deals with a human predicament. If in earlier stories Miss Brown has seemed ensnared in her own subtleties, she has now shaken herself bravely free. The note oftenest sounded is of the narrow inability of some one to understand some one else; and so the farmer's wife has a starved soul sickness, the farmer's son or daughter is held in leash by the mother, the old arithmetician is snubbed by his daughter, the wife wilts under the withholding of praise by her husband. But every instance is treated with a healthfulness which may well be called originality. Some one's common or uncommon sense always comes to the rescue. The balloon soars but comes home. There was once a kind of story classified as pie and piety fiction. Miss Brown's is pie and problem fiction, but the women do not stare at their own souls as closely as once they did, and the pie is well baked. There is no abatement of cleverness and there is an increase of rational motive, which both go to make a heartily agreeable volume.

Prisoners Fast Bound in Misery and Iron. By Mary Cholmondeley. New York: Dodd, Mead & Co.

This novel is first of all interesting. It has a veritable story, full of surprises, climbing steadily to the culminating point. By a chain of incidents, ingenious and original (even though they include a man hiding behind a screen in a lady's boudoir), an innocent man is so involved that he chooses to go to prison to shield the name of a woman with whom he is in love. She, lacking the courage to speak the self-incriminating word which would set him free, allows him to languish in chains for two years, and meantime is wooed successfully by the prisoner's elder brother, who is quite in ignorance of the blameworthy part of her connection with the affair. The complication is worked out with no little skill, and the chief actors, even those wearing a minimum of probability, are made

alive by their consistency with themselves. The weak, self-steeped heroine brings with her every appearance a thrill of dislike, which is itself a tribute to her reality. That her loves are purely circumstantial, and that her conscience operates only under high pressure from without, does not prove her an impossible creation. On the contrary, the most artificial thing about her is that she should be shown at last capable of a large affection. Even when she is regenerate it is hard to take any interest in her putative soul. It is in a way a new version of an old story. The man who loved greatly a small-souled woman, sees her reaching her greatest spiritual height under the influence of a rival incapable of a large love. The truth is that the devotion of Michael, who went to prison, oversteps the bounds of the reader's endurance. We know what happens just beyond the sublime. We want to quarrel with a man who says "I was yours to keep or throw away," in reply to a woman who has said of her later love, "I would not have kept *him* in prison for a day. . . . It's you I betrayed, Michael. I'm so thankful it was you and not *him*" (an equal obliquity in manners and grammar).

If the story, as said, mounts steadily, the reader, at least, is breathless much of the way under the suspense and under the cleverness. The ethical aspects are broad and deep. The prisoner bound in iron and the prisoner bound in misery are set in an austere parallel. The might of the moral law is never belittled nor its penalties made other than costly.

Michael and Magdalen, the pluperfects, are attractive, if of an unselfishness approaching the sin of suicide. The bishop, more touched with humanity, is preëminently engaging. In the delineation of the minors, the black-and-whites, and notably in the sentiments and reflections, are the same brilliant touches that marked "Red Pottage." With sharp characterization is united an almost ghastly cynicism in and among the loftiest counsels and aspirations. Not a bubble goes unpricked. A quite bewildering drench of flying spray from this watery disillusionment sprinkles the gasping reader. In nature, in heaven, in the divine law, the author thoroughly and largely believes. In human weaknesses she luxuriates bitterly. In love as an influence she has great faith, but love as a human relation she sets forth as a very one-sided and at its best a very queer affair. Witness the love scene between Magdalen and Everard. Was ever woman in this humor won?

Don-a-Dreams. By Harvey J. O'Higgins. New York: The Century Co.

Here is the life history of a visionary. He is a little boy in the first chapters, a little Canadian, son of a father who, "living up to that stern ideal of British parents which the race has brought to Canada," thoroughly misunderstands the child's dreamy temperament and treats him with a cold injustice, which the mother's sympathy fails to counteract. So little Don goes his own way, crying when he finds that Santa Claus is a myth, continually "making believe," to his own solace and to the exclusion of all practical education. No companion can equal him in

this game till a little girl comes his way, who thenceforth is the sharer at times, the object always, of his visions. From a boy make-believe he becomes a student day-dreamer; then a man idealist; last of all a visionary. And we leave him happy in his visions.

Half the story lies in Canada. The childhood phases are exquisitely drawn; the student life is an idyl touched with more or less extravagance of sentiment. Then our young hero goes to New York and dreams his adult dreams in the most sordid surroundings. Yet he never lets them go, never ceases, while toiling at the most distasteful work, to keep his spirit nourished on the things of the imagination. He all but starves; he outgrows the narrow faith of his people, he despairs for his girl playmate; like the student of old, "he is in debt, he is in love, he has doubts on the Trinity," yet he never forsakes his spiritual ambitions, or the inner glimpses of a world of unworldliness. What writer has sounded the New York note as well as this? "That immense jocundity, which sparkles in the clean air of Manhattan on such days, . . . all the bustling life of that thronged island which seems to catch from its sea breezes some of the recklessness that makes sailors so irresponsible, so apparently care-free, so good-natured." Don is an individual visionary in that he is no egoist. He does not dream sitting still; he carries his dreams into his efforts and can hardly wake even when he sees happiness coming toward him. He makes the blunders of an idealist, but they are blunders that endear him to his friends, who scold and then take care of him. It is a book of fine fibre in purpose and execution, romantic, touching, amusing.

Baedeker's Palestine and Syria. Fourth Edition, remodelled and augmented. New York: Charles Scribner's Sons. \$3.60 net.

Baedeker's "Palestine and Syria" is much more than a guide-book for tourists and travellers. It is a hand-book of the customs, the religions, the history, and the antiquities of Palestine, an important and necessary part of the library of the Bible student and teacher, and of the Oriental archæologist. The original hand-book, published in 1875, was the work of one of the most prominent German Semitists of that day, Dr. Albert Socin. In the third edition, which appeared in 1898, the Hebrew archæologist, Dr. Emanuel Benzinger, was associated with Dr. Socin. The latter died in 1899, and the present edition is the work of Dr. Benzinger, who now makes his home in Jerusalem. Each succeeding edition has compressed a larger amount of material in a smaller space. The present edition is a marvel of book-making. Although containing almost as many pages as the third edition, it is only about one-half as thick.

One entirely new section has been added to this edition of the guide-book, namely, Route VI, "Mesopotamia and Babylonia." That this region is now for the first time included in a guide-book is an evidence of the increased interest of tourists and travellers in out-of-the-way regions and of the increasing possibilities and conveniences of travel. The routes from Aleppo to Baghdad, by way of Urfa, Diarbekr, Mosul, and the Tigris, and

also by way of the Euphrates valley, are traced in this section, with notes on all points of interest, including the numerous ancient ruins on the way, and the chief ancient sites in Assyria and Babylonia. In the historical sketch prefixed to this section the editor has retained the now discredited date of Sargon, 3800 B. C., and has placed the Hittites in the country of Mitanni on insufficient evidence. But in general, here as elsewhere in this volume, the historical and geographical statements are reliable and up to date. Everywhere the editor has taken advantage of the most recent researches. Only eight years have elapsed since the appearance of the third edition, but it is precisely within those years that a number of the most interesting discoveries have been made in Palestine, Syria, and Babylonia. To specify more exactly in Palestine only, we have from this period the excavations in the Shephelah, at Gezer, Megiddo, and Ta'anach, the discovery of the painted tombs at Marissa, and the mosaic map at Madaba. The author does not seem, however, to have made use of the results of the recent German exploration of synagogues in Galilee, including the excavations at Tell-Hum. His statement (p. 252) that "the identification of Tell-Hum with Capernaum is as good as certain" is altogether too strong, in view of the fact that many of the best authorities to-day place Capernaum at Khan Minyeh.

We note that this edition, like the preceding, places the New Testament Emmaus at Kubeibeh, whereas the original guide-book of Socin inclined, we think more correctly, to Kolonieh. The changes in and about Jerusalem since the issue of the last edition, which have been numerous, are in general correctly noted, but by an oversight, we fancy, on page 67 Birket Isra'in is spoken of as though still in existence. Eight or ten years ago this was a large, dry pool, precisely as described in the text, but within the last few years the pool has been filled with rubbish, so that instead of being a pool "120 yards long and 41 yards wide," lying "69 feet below the Temple plateau," there is now no pool at all. In the notice of Beitin, the ancient Bethel, we read that "a little to the north of the village is a remarkable circle of stones which may possibly have had a religious significance" (p. 213). There is no circle of stones, but a very remarkable field of natural stone columns, 8 to 12 or 15 feet in height, and 100 or so in number, which look like artificial stone heaps, exaggerations of the "pillars of testimony" which abound throughout the country, wherever one first catches sight of a sacred place. On closer examination, however, one finds that these are in reality natural columns, the result of erosion. The editor makes no mention of the fact that Ramallah has now become a sort of summer resort for Jerusalem, with comfortable tent and house hotels, to which Jerusalemites and foreigners residing in Jerusalem repair for rest and refreshment at intervals during the hot season. While mention is made under Sidon of the place of discovery of the basalt sarcophagus of King Eshmunazar, in 1855 (p. 273), there is no notice of the much more remarkable discovery of Greek and Phœnician sarcoph-

agl by Hamdy Bey in 1887, and no indication of the place where they were found. Possibly other criticisms of the same sort might be added; but they are after all minor prints.

This edition maintains the remarkable standard already set, keeping abreast of information and discovery, and exceeding its predecessors in condensation and mechanical execution.

Personal Forces in Modern Literature. By Arthur Rickett. New York: E. P. Dutton & Co. \$1.25.

To expect strict system or consistency in a volume of this kind, composed of a number of more or less independent papers, loosely held together by some abstract or general motive, would be to expect too much; it is enough if it be fairly interesting and suggestive. As a matter of fact, then, Mr. Rickett has included in his frame-work studies of diverse characters in such a way as to represent the several departments of letters in their ethical, or, as he would prefer to say, their psychological gradation—the "Moralist," who "exhibits his temperament as much by what he suppresses as what he expresses of himself," the "Scientist," the "Poet," the "Novelist," and finally the "Vagabond," who "flings himself unreservedly at the reader, whims, peculiarities, and all."

At the same time, however, that Mr. Rickett claims for his classification a merely psychological significance, the work itself seems to imply that literature in the narrower and more exclusive sense, as distinguished from letters or whatever is written, is mainly a matter of temperament; and as writing becomes more and more literary, it becomes at the same time more and more intimate and revelatory of the author. The tendency is to contract the idea of literature, to divorce it from the spontaneous expression of living truth, and to reduce it to the dimensions of an art or craft.

It is in the details of his several subjects, however, that Mr. Rickett is most entertaining. Without being actually profound, he is occasionally shrewd and suggestive, if not always quite accurate or just. Of Newman he remarks with an air of plausibility: "He had a very powerful and subtle intellect, and it alarmed him," though without noticing what must have struck every student of the Oxford Movement, his singular inaccessibility to ideas. Undoubtedly Newman had a very powerful mind, and his intellectual destitution may not impossibly be due to his dread of encouraging it. Of the same author Mr. Rickett remarks again no less paradoxically: "Literature was his enemy, because by literature he meant the anti-dogmatic principle—the principle which would convert religion into a sentiment, and therefore for him a dream, a mockery." Is not this rather what Mr. Rickett himself understands by literature—the poetic or artistic principle, the spirit of appearance and illusion? But at all events it is rather disconcerting, after such an utterance, to find him lost in wonder that "Huxley should have felt so high an admiration for Tennyson's work as a thinker and artist." Any one who remembers Huxley's addresses on the subject of religion, can hardly fail to

recall the part played therein by this same "anti-dogmatic principle," the effort to "convert religion into a sentiment" and the resemblance of this effort to Tennyson's inveterate disposition to poetize dogma, as notably in his "In Memoriam."

Drama.

IRVING AS MAN AND ACTOR.

Personal Reminiscences of Henry Irving.

By Bram Stoker. Two volumes. New York: The Macmillan Company. \$7.50 net.

"For my own part the work which I have undertaken in this book is to show future minds something of Henry Irving, as he was to me." So says Bram Stoker, in his preface to these two bulky volumes of personal reminiscences, and no one, after reading them, can deny that to this extent at least he has fully and ably accomplished his purpose. Of Irving, as man and manager—a personality potent, intellectual, indomitable, ambitious, honorable, tender, imperious, picturesque, and fascinating—he gives a most attractive and vital portrait; a portrait, moreover, whose truthfulness is not attested solely by the manifest sincerity of his own enthusiastic affection and somewhat fervid Celtic oratory, but by the plain record of indisputable facts, the wonderful sum of Irving's labors and accomplishments, the extraordinary position which he won for himself in the highest literary, artistic, and social worlds, the steadfastness with which he pursued high ideals, and the esteem and reverence in which he was held in the hearts of his friends and subordinates. In these respects the book is full, accurate, and interesting almost from the first page to the last, in spite of much matter that is not new or strictly relevant; but it will bring disappointment to all those who try to find in it any illuminating details of Irving's growth and development as an actor, any definition of the methods of the new school of acting which he is said, somewhat arbitrarily, to have originated (*vixere fortes ante Agamemnona*), any reference to his peculiar histrionic limitations, or the notorious defects and mannerisms of his style, or any attempt to discriminate between the comparative excellence of his different impersonations. With Mr. Stoker each new character is but an illustration of a new perfection. So many parts, so many masterpieces.

The attitude of Mr. Stoker, indeed, towards his chief is always that of a worshipper, although never that of a sycophant. A strong and clever man himself, good scholar, and noted athlete, he was dominated by Irving as by an hypnotic spell. He tells how, in the days of their first acquaintance, Irving's recital of Hood's "Eugene Aram"—an interpretation of weird and thrilling power—made him hysterical and demonstrated a bond of emotional sympathy between him and the actor, which ripened quickly into an intimate and lifelong friendship, of which this book is a monument, equally honorable to both. Rarely has a magnanimous chief had more loving or faithful service or any executive officer more justly earned the title of right-hand man.

Unquestionably Irving had genius—if not of the highest order—but he had in much larger measure that quality which is said to be allied to it—the infinite capacity for taking pains. Mr. Stoker's volumes are packed with instances of his indefatigable attention to even the minutest details of his comprehensive art. No labor was too excessive for him, no cost too great, in the execution of his plans. Although he had a large and capable staff, nothing was done without his personal supervision. Before undertaking a classic play he studied the principal authorities bearing upon the subject, and then formulated in his own mind the scene plan which he required. In preparing "Romeo and Juliet," after having employed the best available authority to design the costumes, he rejected them all, and supplied others, which he had himself collected from ancient books and prints. He consulted an army surgeon concerning the proper way of lifting wounded or dead men. He practised various poses at odd moments with personal friends. Days and nights he spent in drilling the supers for the frays between the factions of the Capulets and Montagus. When no satisfactory music could be procured he engaged Sir Julius Benedict to write it for him. All stage groupings were in accordance with his personal directions. In the famous church scene of "Much Ado"—which was never seen in its full perfection in New York—he went for inspiration to the cathedrals of Seville and Burgos, both for architecture and costumes; and in order that all might be correct, and no religious prejudice offended, he asked an eminent Roman Catholic prelate to supervise the accessories. It was during a visit to Morocco and the Levant that he studied effects for his Shylock, saying afterwards that he had never had any clear notion of what the Jew merchant ought to be until he saw him in his own habitat. Long before this he had begun to study from the life. His Digby Grant in "Two Roses," one of his earliest great successes, was a reproduction of that picturesque adventurer, the Chevalier Wikoff, well known in his day on both sides of the Atlantic. The mimetic ability which Irving showed in this impersonation was remarkable.

How comprehensive was his conception of any general effect is shown in an incident which occurred during an early rehearsal of "Macbeth." Sir Arthur Sullivan had written the incidental music and was present to lead the orchestra. In an important scene Irving stopped him. "It is fine as music," he said, "but for our purpose no good at all." Then he proceeded by means of swaying gestures, motions of the hands and arms, and queer vocal sounds to indicate the rhythmical effect that he needed. Sir Arthur, greatly to his credit, caught the idea, and there and then made the needed alterations. Again in preparing his spectacle of "Faust" he thought out the whole color scheme of the wonderful Brocken scene, in reference to the dominant note of his own scarlet costume, before putting the artists to work upon it, and he was the practical inventor of the striking tableau of poised angels in the last act. Another instance of his minute care and almost limitless ingenuity may be found in the devices by which he made his tall, gaunt

figure assume the semblance of the short and stout Napoleon in Sardou's flashy "Madame Sans Gêne." The details are too long to print. Suffice it to say that all kinds of tailor trickery were employed, that the furniture was built out of its proper proportions, and the tallest performers brought into contrast with the Emperor. All this, of course, has nothing to do with acting, but is significant as an illustration of skilful and conscientious stage management.

Without the help of Irving it is exceedingly doubtful whether any of Tennyson's dramatic pieces would ever have reached the footlights. The old poet evidently had the most unbounded faith in the actor, and let him cut and transpose at his own discretion. When "The Cup," a semi-mythical piece, was to be presented the problems of stage management were many. James Knowles constructed the stage temple of Artemis on the ground plan of the great temple of Diana, and Alexander Murray of the British Museum made researches among the oldest Etruscan designs upon which accomplished artists fashioned the costumes. In "Coriolanus" again Irving sought the aid of Alma Tadema. He ransacked London to find suitable stuffs for the costumes which he needed. In some plays he expended \$75,000 before the curtain was raised on the first performance. It is lamentable to think that the almost priceless accumulation of scenery and costumes, representing a quarter of a century of munificent and artistic management, was swept away by fire almost in an instant. This blow was the turning point in Irving's fortunes, and indirectly led to the anxieties and labors which shortened his life.

More than half of Mr. Stoker's work is devoted to the social side of Irving's life, and this part might have been shortened with advantage. A man may be known by his friends, but not necessarily by his acquaintance. But it is a fact that the social position of Irving is unique in the history of the stage. Neither Garrick nor Macready ever stood on such terms with so many leaders in politics, literature, science, and the arts. Neither of them, it need scarcely be said, entertained with such boundless liberality. But to his liberality Irving added the charms of a delightful address, a versatile and well-stocked mind, and most catholic taste. He elevated the stage not only as an art but as a profession. Prime ministers and archbishops, diplomats and professors, princes and potentates, poets, painters, sculptors, and authors of high degree, were proud to be in his company. Mr. Gladstone had his special corner on his stage, Browning loved to discuss Shakspeare with him, Stepiak wrote to him a notable commentary on "King Lear," Tennyson held him in so much reverence that he gave him a free hand in relation to his noble "Becket." Queen Victoria honored him, Lady Burdett Coutts loved him, and Presidents of the United States entertained him. All this and much more may be learned in Mr. Stoker's facile and interesting gossip.

But perhaps, with all his successes and glories, nothing so much became him in life as his manner of leaving it. Mr. Stoker tells, very pathetically, how, when shattered in health and strength and al-

most overborne by cruel mishaps and still more cruel mistakes, he, dying by inches, yet struggled on valiantly to recover fortune, serving the public literally with his last breath. Popularity he never lost, and wealth was pouring in upon him when death took him on the very threshold of honorable retirement and assured ease. Very pretty, too, are the stories of his lifelong love for the comedian Toole and the fraternal friendship between him and Ellen Terry. Mr. Stoker has indeed paid a tribute to his dead friend which is likely to keep him long in remembrance as the greatest manager and one of the most impressive actors of his time, a splendid host, a charming companion, and most virile man, one who not only achieved success, but deserved it.

On October 22 Viola Allen will appear at the Astor Theatre in an elaborate revival of Shakspeare's "Cymbeline," a piece which has not been seen in this city for a good many years. She will, of course, appear as Imogen, a character associated with the fame of some of the greatest actresses of ancient and modern times. Adelaide Neilson and Madame Modjeska both played it successfully. Jefferson Winter is to be her Leonatus Posthumus.

Music.

The list of singers for the coming season at the Metropolitan Opera House includes, in alphabetic order for each group: Bessie Abbott, Bella Alten, Lina Cavalieri, Emma Eames, Geraldine Farrar, Katbarine Flescher-Edel, Olive Fremstad, Berta Morena, Marie Rappold, Marcella Sembrich, Milka Ternina, Luisa Tetrizzini, Marion Weed, Luise Homer, Kirkby-Lunn, Schumann-Heink, Burgstaller, Burrian, Caruso, Dippel, Reiss, Goritz, Scotti, Van Rooy, Blass, Journet, Plançon. The conductors will be Hertz, Vigna, Bovy, Franko. Giacomo Puccini will visit America, in order to supervise the first Italian performance in this country of his "Madame Butterfly" and the first performance at the Metropolitan Opera House of his "Manon Lescaut." During the stay here of Mr. Puccini, his "Tosca" and "La Bohème" will also be interpreted. Another event of the season will be the first American production of "Salome," the much-talked-of work of Richard Strauss. Mr. Gunsbourg will superintend an elaborate production, as an opera, of "La Damnation de Faust," the masterpiece of Hector Berlioz. Mr. Gunsbourg adapted "La Damnation de Faust" for operatic purposes and directed the recent successful performances at Monte Carlo and in Paris. Other operas to be revived are Auber's "Fra Diavolo," Bellini's "I Puritani," Delibes's "Lakmé," Meyerbeer's "L'Africaine," and Wagner's "Flying Dutchman." The season begins on November 26.

At the new Manhattan Opera House, Oscar Hammerstein also promises to produce the Puccini operas, which shared the honors equally with Wagner's at the last season in London. Mr. Hammerstein's stars are Melba, Bonci, and Edouard de Reszke, unequalled as Mephisto and Leporello, which are to be his first rôles. When the

"Damnation de Faust" is produced at the new Manhattan Opera House, it will introduce to the American public M. Renaud, who is reputed to stand alone as a singer and actor of this rôle.

Walter Damrosch has secured Camille Saint-Saëns and Mme. Schumann-Heink as soloists for the first two concerts of the New York Symphony Orchestra. M. Saint-Saëns will make his local début in one of his own concertos—op. 89, which is based on Algerian airs. Mme. Schumann-Heink will sing Schubert's "Erlking" as scored by Berlioz. Other soloists to be heard at the Damrosch concerts are Mme. Gadsby, Mr. Rosenthal, Mr. Lhevinne, M. Barrere, and Mr. Schulz.

The dates for the New York concerts of the Boston Symphony Orchestra are November 8, 10, December 6, 8, January 10, 12, February 21, 23, March 21, 23, the time being Thursday evenings and Saturday afternoons.

Alexander Scriabine, the Russian pianist-composer, will come to America and play at the concert of the Russian Symphony Orchestra in this city on December 20. Born in 1872 at Moscow, he studied at the Conservatory there, under Safonoff and Taneyeff. In 1895 he gave concerts in Switzerland, Holland, Belgium, and in Paris, winning much commendation. Since then he has renewed his successes in other European cities. Pianists know Scriabine as composer of the prelude and nocturne for the left hand alone, which Lhevinne played here last season, and by several sonatas and other serious works. In the larger forms Scriabine has also written a good deal. One of his three symphonies has been played under Arthur Nikisch's direction, in Germany and in Paris. At the Russian Symphony concert of December 20, at Carnegie Hall, Scriabine will play his own pianoforte concerto for the first time in this country.

Another comprehensive biography of Wagner is in sight. It is by Dr. Max Koch, professor at the University of Breslau. The first volume is to appear this month.

Art.

THE MORGAN MANUSCRIPTS.

A selection from J. Pierpont Morgan's illuminated manuscripts is being shown at the Columbia University Library. The exhibition is of very high average quality, and has been attractively arranged and labelled by Dr. Vladimir G. Simkhovitch. Only a very summary enumeration of the forty-odd codexes shown is possible here.

Byzantine influences predominate in a Life of Christ, illuminated in France about 1100; a French Book of Hours of 1200, and the English Huntingfield Psalter, a remarkable work of art, executed about 1170. In the English manuscripts the tendency toward naturalism should be noted. The calligraphy and the decorative initials are full of vigor. One of these manuscripts, a thirteenth-century English Psalter, belonged to William Morris, who wrote an enthusiastic description of it. Of the other English manuscripts should be mentioned a text book of zoölogy and cosmography,

or a hestiar, 1170, with 106 grotesque miniatures; and a hymn book, written in Gloucester, about 1430.

The collection of manuscripts written and illuminated in France is very rich; the earliest being a codex of the Gospels written in the neighborhood of Tours in the eighth century, and the latest a French masterpiece of calligraphy and illumination of the end of the seventeenth century. Among other notable pieces are the Universal Histories of Jehan de Courcy and Orose—large folios, with superb illuminations. Both manuscripts were once the pride of the Ashburnham collection. There are also the enormous book about hucolic works and pleasures by Pierre de Crescences, and the familiar collection called "Les Dits des Philosophes," with forty miniatures of great artistic merit. The Italian manuscripts, chiefly of the fifteenth century, are unusually decorative and resplendent. One of them was probably painted by Attavante, another by Bentivoglio.

Many of the manuscripts belonged to royalty. A Bible, A. D. 1200, with 142 small miniatures, was the property of Philip II., whose arms are impressed upon the covers. A Book of Hours, with excellent miniatures, was the property of King James II. Other Books of Hours belonged to Louis XI., Louis XIII., and Philip Duke of Orléans—the Regent. A sixteenth-century Life of Christ was specially written for Francis I. The first miniature represents the French King accepting the book from the illuminator and presenting the latter with a purse.

Dr. Simkhovitch regards as the finest exhibit a hattered Breviary of Flemish workmanship, which he has identified as the product of the masters of the famous Breviary Grimani at Venice. He feels prepared to substantiate this interesting theory. Another example of one of the Grimani illuminators, Gerard of Ghent, is a small Book of Hours, the quality of which, judging from the exhibited pages, is more exquisite than that of the larger manuscript. In any case, we have to do with very nearly the best product of the Flemish illuminators, and with a work that has distinct and most interesting relations to the possibly overrated Breviary commonly ascribed to Gerard of Ghent, Memling, and other artists of lesser fame.

An exceptionally interesting and comprehensive exhibition of etchings, dry-points, and mezzotints by Sir Seymour Haden, including several proofs finished by the artist in water color, will be on view at Keppel's Gallery in this city until October 27. The hundred and seventy-six numbers of the collection include many rarities, chief among which are some of the artist's later mezzotints, executed within the last five or six years and never before seen in this country. Technically and in spirit these mezzotints are distinct from the artist's earlier work. They are pure mezzotint, without any underlying framework of etched line, such as gives structure to "Harlech Castle" and "The Breaking Up of the Agamemnon." Indeed, the lack of definition amounts at times to an uncertainty that suggests unsteadiness of hand. If there is any loss of the old sureness, however, it is a loss which the artist has accepted in the spirit of choice; he expresses through the general vagueness a deeper poetry of

gloom, a more sumptuous richness of suggested color, than can be found in all his earlier work. The surest and loveliest of these mezzotints is the "Evening Fishing, Longparish," with its repose of composition and mellow twilight.

In a recent number of the *Berliner Philologische Wochenschrift*, Herr Pomtow, who knows more about Delphi than any other scholar except M. Homolle, the conductor of the great French excavations there, gives a summary statement of the results of his studies on that site for several weeks last spring, chiefly involving changes in the identification of minor ruins, as of altars, bases of statues, and "treasuries." Then, with frank recognition and high appreciation of the achievements of M. Homolle, Pomtow proceeds to criticize in detail the work of the French excavators. In particular he makes two serious charges: (1) No competent architect watched the excavations, no satisfactory record seems to have been made of the places in which architectural fragments were found, and the building-stones have been moved from the places in which they were uncovered, so freely that an architect now finds his inferences with regard to them difficult and uncertain; (2) the publication of the results of the excavations is delayed, while many of the remains of antiquity which were uncovered are exposed to change, if not destruction, and the verification by other scholars of the statements of the excavators becomes each year more difficult. The remains of the temple of Athena Pronaia, which had been hidden for centuries, were destroyed a couple of years ago, before the excavators had published their account of the ruins, by a great rock rolling down from a foothill of Mt. Parnassus into the precincts of the same sanctuary into which, according to Herodotus, a great rock rolled at the time of the Persian invasion under Xerxes, in 480 B. C., frightening the Orientals from the seat of the Greek oracle. Other ruins are wasting under the influence of the elements. M. Homolle is now director of the Museums of the Louvre, and even if he were an Atlas his powers would be unequal to the task of giving a suitable publication to the results of the explorations at Delphi, in the intervals of his important and heavy duties at the museum. The situation is the worse because the French, supported by the munificence of an American, the Duc de Louhat, are engaged in excavations on the island of Delos, before giving a full account of their previous work. The tension of archaeological feeling has been rendered more disagreeable, since for several years visitors to Delphi were not allowed to photograph, draw, or measure any object, or even to make memoranda. Inconvenient restrictions are still imposed on most visitors. Never before, perhaps, has the question of the duty of the archaeological excavator to his peers been stated more distinctly than by Pomtow, and the air is likely to be cleared. Certainly many excavators of the old school thought too much of the museum-value of the objects which they obtained, and then scholars were too well satisfied with securing their own publication of what they discovered. Insufficient pains have been taken for the preservation of the ruins which have been brought to light. Archaeologists have obligations to future generations of scholars,

who may not be satisfied with accepting our measurements and estimates, and who surely will be glad of an opportunity to verify their predecessors' statements. Dörpfeld is wise in leaving part of the site of ancient Troy to be uncovered by later generations, who may have better methods and higher standards than the archaeologists of to-day.

Roger E. Fry's article "On a Fourteenth Century Sketchbook" is the most interesting contribution to the October *Burlington Magazine*. This book of thin boxwood tablets, bearing sketches in silver point, was evidently the property of a French miniaturist of the fourteenth century. The drawings include portraits, a Madonna and child, a joust, and a *bal-masque*, with the guests disguised as savages, recalling the tragic festivity that brought on the madness of Charles VI. These drawings are of high artistic merit, and notable for precision of line and considerable force of *chiaroscuro*. Mr. Fry believes them the work of the illuminator André Beauneveu, who is praised by Froissart, and whose works may be seen at the libraries of Brussels and Paris. The little book affords a practically unique commentary upon the preliminary methods of storiator. Other articles are "The Nation's New Raphael," "The Madonna of the Tower," by Herbert Cook, and an interesting survey of old masters in the National Gallery of Ireland. Of American interest, are the fine plate of an early Holbein, possibly the artist's brother Amrosius, bought, but not yet exhibited by the Metropolitan Museum, and a discussion of Pesellino's "Six Triumphs of Petrarch" in Mrs. John L. Gardner's collection, Boston. One may note, also, an editorial plea for a national gallery at Washington to be conducted by the Smithsonian Institute.

Science.

In the near future a new Norwegian expedition will go out for the purpose especially of investigating the little-known inner districts of Spitzbergen. As the *Rundschau für Geographie und Statistik* reports, the inland portions of King James Land are to be studied geologically and geographically. Preparations for this task have been made on an extensive scale by the leader of the expedition, the cavalry officer G. J. Isachsen. He is to be accompanied by eight specialists, who, with the exception of the physician, a Frenchman, are all Norwegians.

At the recent national convention of the German Otological Society, held in Hamburg, Professor Hartmann of Berlin furnished some statistics showing that a new hygienic problem has come to vex the school authorities, in the increasing deafness of the school children. In Stuttgart it was found that fully 32.6 per cent. of the school children had difficulty in hearing, and in Munich the percentage was 25.8, while in Lucerne it attained the maximum of 40.3 per cent. Other reports came from Marburg—the district, not the city merely—where the percentage was 28.4; in Zürich it was 10.8, and in Hagen 23.3. In each case the report was furnished by recognized specialists in otology. The effect of

this trouble on the progress of children is especially clear from the report of Dr. Bezold, in Munich, who showed that children hard of hearing do not accomplish what normal children do, the percentages in their disfavor being from 54 to 67 per cent., according to the degree of the trouble. School journals are beginning to emphasize the idea that the ear as well as the eye of the school population requires close attention.

Questions of heredity, atavism, the transmission of incurable taints, and consequent degeneracy and sterility, especially in their application to royal families, are now favorite topics of discussion, and the number of elaborate dissertations on these and kindred subjects is constantly increasing. Dr. Naegeli-Akerblom of Geneva, Switzerland; has recently published two critical treatises entitled "Willkür und Nachlässigkeit bei der Benützung Genealogischer Tabellen für den Beweis der Theorien der Erblichen Belastung und Entartung von Fürstenfamilien" and "Quelques Résultats de l'Examen des Preuves Historiques Employées par les Auteurs Traitant de l'Hérédité" (Geneva: Kündig & Fils). He examines the works of Paul Jacoby, Déjerine, Goehler, Ribot, Speyer, and many other writers, recognized and quoted as authorities in this province of scientific research, and shows that they are guilty of gross misstatements and historical inaccuracies, and that their conclusions are not warranted by the genealogical tables upon which the deductions are presumably based. He does not deny the existence of this tendency to degeneration, but proves that in many instances the families to which it is said to have been fatal still survive and are comparatively free from it.

The *Geographical Journal* (London) for October contains the second part of the article "Recent Survey and Exploration in Seistan," by Col. Sir Henry McMahon; "The Rivers of Chinese Turkestan and the Desiccation of Asia," by Ellsworth Huntington; "Journeys in Northern Nigeria," by Hans Visscher; and "Twenty-Five Years' Geographical Progress," an address to the Geological Section at the York meeting of the British Association for the advancement of Science. The leading article is "The Indian Ocean," by J. Stanley Gardner," being results largely based on the work of the Percy Slader expedition in H. M. S. Sealark, 1905. This contribution is illustrated by a large map of the Indian Ocean. There are also sketch maps of East Turkestan and Northern Nigeria.

Funk & Wagnalls issue two useful volumes in the little pocket pamphlets called the Standard Nature Series. One is "A Manual of Common American and European Insects," the other "A Manual of Common Butterflies and Moths." The colored plates are clearly printed and make a sufficient guide for the fields.

The latest contribution to the useful "Farm Library" (Doubleday, Page & Co.) is "Farm Animals," by E. V. Wilcox. Another volume in preparation is "Soils," by S. W. Fletcher. Other volumes to complete this library will be "Farm Equipment," "Field Crops," "Special Industries," "Farming as a Business," and "Fruits and Vegetables."

Finance.

THE BANK OF ENGLAND RATE.

Confronted by the almost unprecedented large withdrawal of gold from the London market for New York within the past five weeks, the Bank of England at length, on Thursday last, took strong protective measures. It had already made some move in that direction. There are several things which the Bank can do to stop gold exports. One is to charge a high premium on gold in the form of bars, or of foreign coin, both of which the Bank of England holds in large quantity. A banker, trying to get London's gold for another market, prefers it in those forms. If its destination is New York, United States gold coin, which will pass at face value in this country, is his first choice; next, he will ask for bars, which go by weight, and in which loss by abrasion is relatively small. The least desirable form for his purposes is that which is most desirable to a London banker—British coin. This he can get in London only at face value, and wherever a sovereign is not full-weight, the New York importer loses, for he must melt it up and get what our Assay Office assigns as the bullion value.

The fact that the exporter of gold from London does not want British coin, while the London banker does, fixes the ordinary "selling price" of bars and foreign coin—that is to say, the rate at which they will be exchanged for English bank notes—at a lower price per ounce than that of the sovereign, which is fixed by law. When, however, a foreign market is sweeping up all the available gold in the London market, the Bank puts up its price for foreign coin and bars. This naturally makes the foreigner's operation more expensive. Two or three weeks ago, in pursuance of this obstructive plan, the Bank of England raised its "selling price" for such forms of gold to the highest figure reached in two decades. But the expedient wholly failed. Our bankers were determined to get the gold; they paid the higher price, and when the supply of bar-gold and American coin, even at that price, ran low, they took British sovereigns out of the Bank and shipped them.

Then it was that the Bank of England last Thursday raised its minimum discount rate to 5 per cent. This is an historic recourse, used, as the English say, in "reversing the foreign exchanges." All economic text-books have something to say about it; there will therefore be some interest in following out the nature and practical results of the familiar device on the present occasion. The Bank of England is, of course, one of the largest lenders of money in Lombard Street. What is called its "official discount rate" is the minimum at which it will lend at all. Before last week's meeting of the board of governors, the Bank's official minimum rate was 4 per cent., for short-time loans; other private London banks charged 4½. On Thursday, the governors announced a minimum of 5 per cent. That is to say, all that part of the borrowing community which relied on the Bank of England now had to pay so much more, or go to some one else. But if they went to other lenders, they increased the demand on an unchanged sup-

ply; therefore the open market rate had to follow the bank rate upward.

This open rate does not always follow the bank rate closely; if it does not, and if the situation is thought to require more drastic measures, the Bank does something which would scandalize Wall Street, and which would be tolerated, even in London, from no other institution than one in whose rectitude of purpose the financial community has implicit confidence. What the Bank of England does on such occasions, and what it is believed to be doing this week, is to come into the open London market as a borrower, take up all or most of the money offered at a less rate than its own official minimum, and refuse to re-lend it to regular borrowers, except at the higher rate. This, as the London bankers say, makes the Bank of England rate "effective."

How does the fixing of a high "bank rate" stop gold exports? The classic explanation used to be that the Bank, seeing its reserve, by withdrawal of gold through presentation of notes for redemption, reduced to too low a ratio to liabilities, holds back the notes from circulation, thus depriving outsiders of further power to draw on the gold reserve through note redemption. The protective machinery of to-day is not exactly that; but the same purpose is accomplished through refusing to give out the notes again except at a higher interest rate. This higher rate, effective both at the Bank and in the open market, has two further consequences. First, foreign borrowers, who have been raising capital in London to re-lend it, say in New York, find the operation unprofitable. Before the rate went up last week, American bankers could borrow at 4 per cent. in London and lend at 5 or 6 in Wall Street. But with London's rate at 5 per cent., no such inducement existed. Or, second, London bankers who had been lending at 4½, say in Berlin, money borrowed at 4 in London, would naturally call it home when the London bid went up to 5. As a consequence, the foreign exchanges would advance. Last week's rise in the bank rate caused an instant and violent advance in American, French, and German exchange on London. Each touched a rate at which it was no longer profitable to take gold from Lombard Street.

The Bank has been criticised, these past few weeks, for not taking earlier action in establishing a 5 per cent. rate. For London, however, 5 per cent. is very high; only twice in the past seventeen years has it been reached at this period of the autumn, and those two occasions were panic weeks. When the Bank names such a rate, it raises equivalently the interest charge which every English merchant has to pay; the rate on many mercantile loans is in fact made expressly contingent on the bank rate. This fact causes the bank directors to hesitate. Last week they could hesitate no longer. Forty per cent. reserve against deposit liabilities is the ratio which Walter Bagehot called the "apprehension minimum." He meant that, if it went much lower, public misgiving might result. Two weeks before last Thursday's meeting of the Bank, this ratio had been 42½ per cent.; one week before, it was 38½. Last week it fell to 35½—a ratio never touched at this time of year since the panic of 1890.

It was high time for the Bank to "turn the exchanges in its favor."

BOOKS OF THE WEEK.

- Abbott, Edwin A. Silvanus the Christian. Macmillan Co.
- Acton, Lord. Lectures on Modern History. Macmillan Co.

LONGMANS, GREEN, & CO., New York

Second Edition Now Ready.

Old France in the New World

QUEBEC IN THE 17TH CENTURY

By JAMES DOUGLAS, LL.D.

8vo., printed on special India paper throughout, very fully illustrated. \$2.50 net (postage 13c.). A new edition, with very extensive changes and corrections, and an entirely new chapter, a résumé of the whole work, which is a valuable addition.

This second edition of Dr. Douglas's book has been printed with the view of appealing particularly to tourists. It is made throughout on India paper, the 617 pages being under an inch in thickness, and therefore of a weight to correspond. The illustrations many and beautiful, and to one journeying either in Eastern Canada or Quebec, the volume is indispensable.

The Nation.

NEW YORK, THURSDAY, OCTOBER 25, 1906.

The Week.

Among President Roosevelt's new appointments for the Cabinet, that of Mr. Cortelyou for the Treasury will probably excite the most interest. In that important post Mr. Cortelyou will necessarily be an experiment. That he possesses high executive ability, has been demonstrated in the other Cabinet offices which he has held. Whether he is fitted to grapple with the large questions of fiscal policy or expedient, which confront the head of the Treasury now and will probably be still more urgent and vexatious in the next three years, is another matter. Of financial training, in the sense in which the term is used among business men, he has had none. This lack of experience is not a fatal defect; Gallatin, for example, was one of our ablest ministers of finance. We cannot help feeling regret, however, that, at a time when the question of currency reform is coming to a crisis, and when the relations between the Treasury and the market have been complicated by Secretary Shaw's overstepping of the letter of the law, the new incumbent should not be a man whose experience and matured financial opinions would in themselves command unquestioned respect. As for the other appointments, that of Oscar S. Straus, as head of the Department of Commerce and Labor, is easily the best. Mr. Straus made an admirable Minister to Turkey; through his connection with the Civic Federation he has been brought into contact with labor leaders and labor questions. Of his broad view of commercial questions, there can be no doubt. Moreover, he can be relied upon to deal with immigration questions in a sympathetic spirit. But the best thing is that his appointment places in the Cabinet one of the foremost advocates of peace and arbitration in this or any country. George von L. Meyer will make a diligent Postmaster-General; but it is chiefly to his wealth and social alliances that he owes political prominence. The navy may suffer from the transfer of Mr. Bonaparte, an excellent secretary, to the Attorney-Generalship. Mr. Metcalf served on the Naval Committee of the House, but has otherwise no special qualifications as successor to Mr. Bonaparte.

The proposal to lend Government money on security of cotton—gravely set forth in a speech to the Bankers' Convention at St. Louis—we are inclined to regard as one of the first-fruits of Secre-

tary Shaw's recent policy. A few weeks ago the New York bankers wanted to import gold from London. The rate of exchange being then not quite low enough, if they paid interest on the money involved, to make the operation profitable, the bankers appealed to Mr. Shaw to lend them Government money for nothing. He promptly did so. There was no pretence that the Treasury was in any way benefited by the importation; there was no assertion even that the Government was restoring to circulation money withdrawn by its surplus revenue; for, by the terms of Mr. Shaw's arrangement, the loan of public money was to be repaid at once when the gold arrived. Now comes Charles J. Haden of Atlanta, with his plea to the bankers for loans of Government funds to move the cotton crop. "Why," Mr. Haden asks, "should we not call upon the Government for aid, as do the gambling-stricken banks when pressed by frenzied speculation?" In our own old-fashioned opinions about the use of public moneys, we can discover a dozen reasons why such a call should meet with refusal, the chief reason being that the placing of Government funds at the service of private business enterprises is demoralizing to all parties concerned. But Secretary Shaw is certainly estopped from using that argument.

The conviction of the Standard Oil Company, in an Ohio court, for conspiracy, is virtually a triumph for President Roosevelt, since the United States Attorney-General collected most of the evidence. The Anti-Trust law of Ohio makes every day of continuation in an illegal Trust a separate offence, with a possible fine of \$5,000. Such a penalty rigorously imposed would go far to restore the pretty well shattered hope that the fine is an effectual deterrent to corporate offenders. But the effect of such a verdict cannot be measured in dollars and cents. It represents the triumph of the law over the most dangerous and cynical of industrial corporations. We retain our belief that there is very limited help for present evils in mulcting those fictitious and fabulously wealthy personalities we call Trusts. We note that Jack the Giant Killer struck not at the pockets, but at the necks, of his foes. When we see a few high managers of criminal corporations wearing prison garb we shall be within hailing distance of real reform. We may at least rejoice heartily at the good beginning the law has made with the Standard Oil Company. If it is not difficult to fine its legal entity, there is probably some way also of getting at the real conspirators behind the charter.

"It is not possible to defend a rebate case in the present state of popular opinion." Thus the counsel of the New York Central, at the conclusion of the trial in which the railway was convicted of giving rebates to the Sugar Trust. Plainly, no defence was possible in that case. The offence was too flagrant; the proof too conclusive. The Central deliberately violated the law in the devil-may-care spirit of the sandbagger. Yet railroad officials wonder that there is a strong prejudice against their companies, and that Government ownership plans enlist the support not only of demagogues, but of sober men. We regard the conviction of the Central as one of the most important judicial events in years. It will call a halt on dishonest railroad managers the country over. Naturally, Mr. Hearst was quick to make use of the verdict in his campaign. He modestly appeared on the platform at Plattsburgh and read the dispatch announcing "his" victory. He was entitled to do so, for the Attorney-General has testified that his information and proof came from Mr. Hearst's lawyers. This public service must be written down to Mr. Hearst's credit. The incident shows plainly enough why it is that the cries of the agitator and promises of the demagogue no longer pass as unnoticed as the daily noise of the streets.

At the meeting of the New England Association of Colleges and Preparatory Schools, Professor West of Princeton spoke on "The Tutorial System," which was introduced a year ago in his college. He stated that at first the students regarded the plan with amusement and curiosity, and were rather shy of their new instructors, but that they have since learned to appreciate the advantages of supervision and direction in their work. They are pleased with the arrangement, which "is now becoming a part of the college tradition." During the year the library has been consulted as never before. There has also been improvement in discipline. Professor West's allusion to the previous state of things might give an impression that there has been a change from comparative barbarism to civilization: "No longer are there roving bands of students on the campus in the evening, but quiet reigns, and lights are seen in study windows." Anything which could have this effect in so short a time is amazingly beneficial. The mere introduction into Princeton of fifty young university graduates, most of whom have won distinction in some particular branch of learning, has been a stimulus to both professors and students. But as President Hadley of Yale, who

likes the plan, pointed out not long ago, it is undeniably expensive. The endowment required is \$2,500,000—a large sum to invest in any academic experiment.

Five hundred English teachers, divided into small squads, will begin an invasion of this country next month. They represent all grades, from the kindergarten to the university. This enterprise, like previous ones of the same kind, is engineered by Sir Alfred Mosely. His object is to familiarize English educators with systems which he regards as superior to their own. "The American boy," he has said more than once, "is far better fitted for the battle with the world than is the English youth when he leaves school." Sir Alfred Mosely adds the further explanation that "with Americans education is mostly along practical lines; with the English it is along the classical." Indubitably our educators have been less bound by tradition; they have more freely tried experiments, and naturally with studies that may be immediately useful in business or the trades. Without denying that these commercial courses are of some value, we may doubt whether they always supply a mental discipline equal to that of the classics which they replace. If stimulating the mind rather than directly imparting knowledge be the aim of education, the "practical" studies, with their appeal to the stomach, may easily be overdone. Our English visitors will, we trust, remember that in the eighteenth century and the first two-thirds of the nineteenth, Americans, even under the handicap of the studies which Sir Alfred Mosely distrusts, still managed to get on fairly well. The English observers may also discover that with such opportunities for material success as America offers, boys who are trained in the old classical curriculum, or according to the latest plan of our new schools of commerce, or who have escaped pretty much all formal teaching, still win their victories in the battle of life.

Dr. Pierre Janet of Paris, who is now lecturing to the Harvard medical students, has had a long experience in the wards of Salpêtrière, and is the author of a number of important works on psychology and nervous pathology. "Hysteria" is the subject of the present course—a subject upon which he has already published a formal treatise, as well as clinical reports of much value. It is to be wished that he might resume before American audiences the discussion of hypnotism and of dual personality which awakened intense interest nearly twenty years ago in his "L'Automatisme Psychologique." His explanation of certain obscure cases of "the double self," by supposing a disintegration of consciousness, is obviously open to criticism; but in his hands it furnish-

ed a conception of the real process involved, and in particular gave men of science a working hypothesis with which to approach further investigations.

That there are too many scientific congresses is the complaint of a writer in the *Revue Scientifique*. While isolation is a bad thing for the man of science, and while it is essential to his usefulness and reputation that he should at times compare notes with his colleagues, much time, labor, and money are wasted by the multiplicity of these assemblies. A concrete example of the incidental abuses is furnished by the same periodical, in its report of the Medical Congress at Lisbon. One of the chief evils was the diversity of language. The reports were distributed so tardily that members of the congress had no time in which to prepare themselves to speak. There were too many reports relating to the same subject, which gave rise to tiresome repetitions. Much time was lost in attending *fêtes* and other entertainments. Moreover, a number of eminent men failed to appear personally, and their papers were read for them by others. Yet the desire of attending congresses is keen, and it would be cruel to deprive even modest scientists of opportunities to be heard, or to prevent their hearers from manifesting the Christian graces of patience and long-suffering.

There is need of better education among the light-fingered gentry who cut pictures from their frames. That their taste is backward and their judgment doubtful has been recently shown in several instances. We have small patience with the adventurer who has just risked State's prison for the sake of a Meyer von Bremen in the Cincinnati Museum. To choose such a thing when better was to be had suggests an unhappy interference of sentiment with strict business. Even the successful abductors of the Gainsborough Duchess got, after all, only a more than dubious picture, even if their idea of commercial and advertising values seems to have been excellent. In general, however, picture-stealing can hardly rank as a fine art. Safe-cracking seems fairly an intellectual occupation in comparison. Evidently there are obstacles to conducting picture-stealing on a purely artistic basis. Commercial considerations must rightly rule. Moreover, the finest and most renowned pictures can hardly be stolen to advantage, being difficult to sell. Such considerations must excuse much that may seem crude in an essentially liberal occupation. To astute museum directors, the debased state of the picture-stealing profession affords an unexampled opportunity. Every museum should create at least one gallery

of paintings that can be spared. A deaf mute, preferably blind also, should be chosen as custodian, and upon the door-post might hang conspicuously a pair of shears.

Clemenceau's reorganization of the French Ministry calls for little comment, except for the assignment of the war portfolio to Gen. Picquart. This is one of those rare instances in which practical politics and poetic justice meet. In a sense, the appointment is a defiance not merely to moribund Nationalism, but to the more respectable Moderate and Clerical sentiment that was on the wrong side of the *affaire Dreyfus*. It is a gauge of uncompromising Radicalism, and will be hailed with expectant rejoicing by the Socialists also. Otherwise, the Cabinet remains much what it was. M. Briand retains the portfolio of Education and Worship, which promises that the Separation act will be carried into effect without faltering, and yet without bigotry or unnecessary proscription. No French Cabinet for many years has been complete without a Socialist member, and now M. Viviani accepts the newly created Ministry of Labor. M. Pichon, the new Foreign Minister, is Resident-General in Tunis, and has been associated with the colonial and diplomatic service in the Far East. A former colleague of Clemenceau's on *La Justice*, he presumably represents the progressive colonialism so deeply desired on the boulevards, tempered, however, by humanitarian and socialistic scruples. It may fairly be assumed that the Foreign Office will continue the present policy of conciliation with all and of positive friendship with England and Italy. It is premature to offer a forecast of the Clemenceau régime, but in general it may be said that it usually goes ill with a Warwick promoted to the throne. A man of statesmanlike parts, Clemenceau is evidently relentless towards the Reactionaries and Moderates. Having already shown himself, in the post-office strike, too much of an authoritarian to please the Socialists, his middle course will clearly be a difficult one to steer.

The British Admiralty, by turning out the greatest battleship ever seen, with turbine engines and the phenomenal speed of 23 knots an hour, has completely upset American and Continental theories that the turbines were unsuited to warships. Now the Admiralty announces that the three so-called armored cruisers building on the Clyde are not cruisers at all, but battleships, with as heavy broadside fire as the Dreadnought, and of four knots greater speed. Indeed, these three vessels will actually be seven knots faster than any American, German, or French battleships, as

a speed of 27 knots is confidently expected on their trials. Only one or two of our battleships can make 20 knots; the bulk of them average 17 under service conditions. In other words, the English designers have borne out the prophets who have been looking forward to the day when the distinction between the armored cruiser and the battleship would cease to be. Our Navy Department, which has been for a year planning to outdo the Dreadnought, finds itself compelled to readapt its plans in accordance with the designs of the new English battleships. As a sort of consolation, the American experts are trying to figure out that their twelve-inch guns are about the same as the British in size and ballistic qualities. From that there is but little satisfaction to be obtained, for the truth is that, by the revolutionary speed obtained for her new battleships, England has more than ever emphasized her naval superiority. No matter how much her naval rivals may strive to imitate her, England can always get ahead of them by her ability to build, equip, and send to sea a great battleship fully a year before a vessel started in any other country at the same time.

The United States is not the only country in which protection is steadily making life harder for the laboring man. In Germany the price of meat has gone up so much that thousands of people are no longer able to purchase any. When prices jumped a year ago, there was a great outcry. The only response from the Government was a statement from the Minister of the Interior that the trouble was temporary, due to a bad crop year. Nevertheless, the price of meat has continued to rise, so that there is genuine suffering. A beef steer which cost \$32.45 in Berlin in July, 1904, cost \$34.40 in July, 1905, and \$36.87 in July of this year. On the 29th of September last, the price had risen to \$41.75. The price of pork has gone up correspondingly. The Berlin *Tageblatt* proves conclusively that this is due not merely to the increase of population, as the Government has alleged, but that there has been a marked falling off in the possible supply. It points out that, instead of doing something to help the poor by making it easy to import cattle from abroad, the Government, at the bidding of the Agrarians, is doing everything it can to make importations more difficult. In 1895 the importation of Danish hogs was stopped. This was followed in 1900 by the prohibition of all imports of sausage and canned meats. In 1904, there was the edict against American hogs, and in the same year a ban upon hogs and ruminants from France, Belgium, Holland, and England. In the meanwhile, more stringent health regulations have made

it even more difficult to import cattle on the hoof. This year have come increased tariffs on cattle and meat. It is obvious, therefore, that the situation is getting worse rather than better.

While the Dutch are seriously discussing ways and means of averting ultimate absorption by Germany, now that hope of a direct successor to the throne seems to have been abandoned, the Belgians, too, are growing panicky in face of the Pan-Germanic movement. The French press in Belgium is greatly exercised over a plan recently set on foot by the German part of the population to secure legal recognition of their native tongue. In 1900 the number of German-speaking inhabitants was only 2 per cent. of the total; but the ratio may have increased somewhat since then. The claim is based on the constitutional right enjoyed by every Belgian to make use of his native language in his relations with the educational, administrative, and judicial departments of the Government. Admitting, however, their numerical weakness, the Germans declare that they will be content with an official recognition of their rights without seeking to have them enforced. The Flemish representatives in the Chamber, contrary to common expectation, have come out against the demands of the German-Belgians, possibly because they are convinced of the necessity of offering a check to German aspirations in general.

The head that wears a crown may be a very good head for business. In the attacks upon Leopold II. of Belgium, in his relation to the Congo Free State, fresh revelations continue to be made. Next to the notorious Abir Rubber Company, the most prosperous corporation in the Congo is the Kasai Company, in which the State, that is to say, King Leopold, owns half of the stock. The State exacts its tax from the natives in the form of rods of copper, shaped like a St. Andrew's cross, which the Government receives at a valuation of one and a quarter francs apiece. But these crosses are only to be purchased from the Kasai Company, to which the Government sells them at three and one-half francs apiece, and which in turn makes a handsome profit on the sale to the natives. In other words, the State receives three and a half francs for a cross which it takes back at one and a quarter francs, and in addition, as half-partner in the Kasai Company, shares in the profit on the subsequent sale of the copper. Compared with the King of Belgium, Abdul Hamid II. appears positively beneficent. The Sultan is the controlling spirit of a land company operating in the Mesopotamian valley, where it has been expropriating the richest sections. This is accomplished

ly manipulation of the water supply. The peasant "must make the best terms he can with the man who can at will cut him off from all irrigation. He sells his land for a song." In applying the latest Trust methods to high commerce it is evidently a distinct advantage to be a monarch of some sort. If with the royal functions goes the spiritual headship over faithful millions, so much the better. Thus the Sultan is under no compulsion from anti-Trust laws to vest the ownership of his land in a holding company, say, at Samarcand or Zanzibar.

In a book recently published, Dr. Binet-Sanglé tries to show that the Hebrew prophets from Samuel to Malachi were insane. Since certain critics doubt the historical reality of the patriarchs, it is almost reassuring to be told that the prophets actually lived even if they were mad. Of course, if the Oriental language and imagery of the Hebrew seers are taken literally, there are passages in their writings which are not conformed to the every-day experiences of Americans, or even of Frenchmen. Their visions may be interpreted as hallucinations, their denunciation of their enemies as violence, and their apprehensions of coming disaster as delusions. But upon such a principle, many modern poets might be consigned to the psychopathic ward, while Dante, Milton, and Bunyan would, like Jeremiah and Ezekiel, be put in the class of *aliénés*. In both ancient and mediæval times, genius and insanity were thought to be allied. Dryden expressed that idea in his famous epigram. Of late years such a belief has found support in the writings of Lélut, Moreau, Lombroso, Nesbit, and others, who contend that extraordinary mental ability is an evidence of a diseased brain. But there are strong general reasons for thinking it improbable that what goes by the name of genius is a morbid characteristic. While it has never been asserted that insanity is a mark of genius, it would seem that, if genius is a mark of insanity, there should be signs of high intellectual and moral inspiration among the great numbers confined in asylums. But with the exception of craft and cunning, qualities of an intellectual kind are singularly lacking in those unfortunates. Even the insane who can still reason, but whose premises are the result of delusion, seldom show even a spark of the divine fire. It is natural that all eyes should be directed towards conspicuous defects and aberrations in the character of men who have great intellectual and emotional endowments. But as one of the most eccentric yet most brilliant philosophers has said, such men are like Mont Blanc, which lifts its shining head above the clouds which darken its slopes.

NEW LIGHT ON EUROPEAN DIPLOMACY.

The real importance of the Hohenlohe "Memoirs," it now appears, lies in the exposure of German diplomacy about the time the Franco-Russian alliance was formed. Almost equally important is the explanation of German foreign policy for twenty years past as consistently anti-liberal, monarchical, and pro-Russian. Indubitable testimony bears out surmises in this tenor, and the general belief that France was befooled by Russia, and Austria and Italy ignored by the initiator of the Triple Alliance, receives striking confirmation. Ex-Minister Lockroy, speaking at Rome last Sunday, urged the Italian Francophile party to associate Italy with the Anglo-French *entente*, as a means of assuring "the triumph of democratic principles in Europe." Undoubtedly, the sentiment to which he appealed will be greatly strengthened among French, English, and Italian readers of the Hohenlohe revelations.

The league of three Emperors—Dreikaiserbund—was a favorite dream of William I. It was to be a sort of limited Holy Alliance against democracy, Socialism, and liberalism of all sorts. On November 2, 1884, the old Kaiser, commenting on Joseph Chamberlain's plan to create peers enough to pass the franchise bill, remarked that, if republican tendencies got the upper hand in England, "we shall have hard work keeping our places." It was this feeling that dictated the so-called "reinsurance" with Russia, which is in moral effect to-day. By this secret agreement, Russia was to have a free hand in the Balkans, agreeing to maintain neutrality in case of war between Germany and France. The agreement calmly ignored the claims of Italy and Austria in European Turkey; and, as Caprivi remarked when he refused to renew the treaty, in 1891, "if it had become known, it would have broken up the Triple Alliance." The treaty lapsed, but the spirit which gave it validity persisted till the eve of the Franco-Russian alliance. Indeed, the most interesting, and glaringly indiscreet, portion of the "Memoirs" is the account of Hohenlohe's conversations with the Czar and other high Russian officials, just before Nicholas II.'s spectacular visit to Paris in the fall of 1896.

On an earlier occasion, Lobanoff, the Russian Chancellor, told Hohenlohe that Russia "did Europe a good service by taking up France. God knows what these people might have gone and done if they had not been reined in." Naturally, Nicholas II. never committed himself in quite the cynical terms of his confidential adviser, but he took pains, nevertheless, to explain away the Paris visit. Speaking with Hohenlohe in September, 1896, the Czar "mentioned that

he had not spoken to the Emperor about Paris, and he asked me if I had any objection to his visit to Paris. He was pleased when I replied that the visit to Paris seemed to me to be 'inevitable.' He laid stress upon the fact that he had declined to put up at the Quai d'Orsay, or anywhere else in Paris. He was going to stay at his own embassy, like all his predecessors." In view of the furore created by the Paris visit, this attempt to minimize it is of curious interest. But France wanted an ally, and Russia a banker, and the part the Czar played in this exchange of French money for Russian amiabilities did not require deep conviction on the part of the leading gentleman.

All the remarks of the Czar at this time are of considerable political interest. Discussing tentative overtures from England, he fully agreed with Hohenlohe that "the English Constitution and the account which English ministers have to take of public opinion made it impossible to conclude treaties with England." In view of the Anglo-Japanese alliance and the Anglo-French *entente*, these words are worth recalling; and since the opinion of the Czar can hardly have altered, they throw a certain light, also, on the prospects for an understanding between England and Russia. On the other hand, the Czar discredited the favorite bugbear of the English Russophobes, the advance on India. On Hohenlohe's remarking that the British activity in South Africa was really impelled by the dread of some day losing India, the Czar replied: "Yes, but who is going to take India from them? We are not so stupid as to pursue a design of that sort." These words should be kept standing by every enlightened newspaper in England, for use whenever the periodical Russian ague afflicts the young lions of the press.

Certain remarks of the Czar look forward to the war in Manchuria, if only by implication. He liked the Japanese, i.e. told Hohenlohe. Everything he had seen in Japan had greatly impressed him. He had been struck by the great orderliness, activity, and intelligence of the population. "But this sympathy," he added, "has not kept me from acting against the Japanese when they have gone too far." No doubt of his ability to check them had entered his head: He further declared that Japan was arming at a great rate, but had no resources except the Chinese war indemnity. "When these were exhausted, he could not think how they were going to complete their military preparations. Besides, they would take years to do it, and by that time the Siberian railway would be ready, and then Russia would be in a position *de faire face à toutes éventualités*." Evidently, the financial reckonings of Russia were no better than her military forecasts.

We need not enlarge upon the pathetic interest of these reports of the views of the youthful Czar. They throw light upon the unwritten covenant between Germany and Russia, and explain the dynastic sympathy that found such striking expression during the war in the Far East. When Nicholas II. took leave of Hohenlohe in September, 1896, he used these surprising words: "Tell the Kaiser to continue to write to me personally when he has anything to communicate." Such a message, we venture to think, has rarely been transmitted to a potentate through his Prime Minister. Perhaps the chief value of the memoirs is the revelation of the importance of such dynastic sympathies—an influence which liberal governments are prone to underestimate or even to regard as obsolete. But the spectacle which Prince Hohenlohe affords of the arbiters of Germany and Russia either scorning or deceiving pretty much all the rest of Europe, is certainly calculated to increase the diplomatic isolation of Germany. One can hardly wonder that the Kaiser wants the present Prince Hohenlohe's resignation, or that the Prince plans to spend his remaining years in the salubrious climate of the French Riviera.

THE NEWFOUNDLAND FISHERIES AGREEMENT.

According to our new *modus vivendi* with England respecting the Newfoundland fisheries, the English Government will "not bring into force" (that is, will temporarily disallow) the "Newfoundland Foreign Fishing Vessels Act, 1906," imposing additional restrictions upon American shipmasters. It also consents to the use of purse seines by American fishermen during the coming season, though "due regard" is to be "paid, in the use of such implements, to other modes of fishery." On its part, the American Government undertakes to direct American fishing vessels to conform to the Colonial customs law and harbor regulations, "when physically possible to do so." This will cause the Captains Courageous of Gloucester to take fresh courage; also, we fancy, to indulge in fresh laughter. Further, our Government, while maintaining the right to ship Newfoundlanders, has "assured his Majesty's Government that such shipments, if found necessary, will be made at a sufficient distance beyond the three-mile limit."

These provisions make the wrath of the Newfoundlanders, concerning which we have heard so much in the dispatches from St. John's, wholly intelligible. They regard their entire herring fishery as imperilled. They made in 1905 what they believed to be a perfectly fair convention—the Hay-Bond treaty—to secure reciprocal rights in the fisheries. But this, our Senate refused to ratify,

Lodge taking the lead against that Administration measure. Thereupon, Newfoundland set about defending her interests. As our intensely American shipmasters, in their patriotic efforts to make their fishing fleet a "nursery of American sailors," are in the habit of shipping great numbers of Blue Neses, at low wages, the Newfoundland Legislature passed an act providing that "no British subject shall leave the colony for the purpose of joining a foreign vessel to fish in its waters"; also, more explicitly, that "no British subject shall fish in any foreign fishing vessel in the waters of this colony." The act likewise forbade the selling or leasing of "fishing gear," of any kind, to foreign fishing vessels. Prohibition of purse seines has been the law in Newfoundland for twenty-five years. It is believed to be necessary if the herring are not to be made as scarce as mackerel have been, by the use of purse seines. Indeed, since the announcement of the agreement, the fishermen of both nationalities on the spot have consented to give up this method of fishing. Thus that clause of the *modus* is abandoned by its beneficiaries. With regard to the obligation of American vessels to enter and clear at the colonial custom-houses, and to submit to inspection, it is maintained by the Newfoundland authorities that only by such means can they be assured that the schooners are really American. No others have the treaty right to fish in colonial waters, and the colony asserts that it is in duty bound to board vessels and make sure that they are not smugglers or pirates.

Very naturally, the disallowing of this legislation has caused great excitement and indignation in St. John's. There was talk of the Ministry resigning in a body, as a protest, after the fashion of the Government of Cape Colony. But the final decision was to remain in office and fight the matter through. Every colonial statute enforceable against American vessels will be employed. It was even proposed to repeal the law forbidding colonial fishermen to use purse seines, the idea being that the local fishermen would thus be able to anticipate the Americans, and take practically all the annual catch in the Bay of Islands. But that would only drive Lodge and the other tariff-dodgers into new devices for buying the herring of Newfoundlanders, and then having them entered free of duty at Gloucester as "the product of American fisheries."

All this friction, however, but accentuates the need of following up the *modus vivendi* with a comprehensive treaty, fair to both Newfoundland and New England, thus putting to rest a question that has troubled our diplomacy for many years. Secretary Root has expressed the determination to clear up, if possible, every pending controversy

with England. This fisheries dispute is the most vexing of all. That the English Government has made great temporary concessions, even at the cost of inflaming its own subjects, is an earnest of good will on that side. We can but hope, therefore, that the *modus vivendi* is but the precursor of a treaty which will be broad enough and fair enough to withstand the assaults of Senator Lodge, and to remove forever a cause of ill feeling between natural friends.

WANTED—A NATIONAL GALLERY.

The *Burlington Magazine*, with its customary enthusiasm in museum matters, urges editorially the creation of a national gallery at Washington under the administration of the Smithsonian. Although the scheme is advocated with a somewhat nonchalant hopefulness as to ways and means, it has intrinsically much in its favor. Washington is the natural location for a gallery of American art—a museum that should not merely display the art of the past, but should encourage that of the present, becoming a sort of American Luxembourg. Such a project has been frequently mooted, but no practical steps have been taken, partly because the fine arts have never had influential advocates at Washington, partly, perhaps, because the Corcoran Gallery, a private foundation, seemed to occupy the field. A recent judicial decision, however, has revived interest in the artistic function of the Smithsonian Institution. By its character it is empowered to collect and exhibit objects of art and of curiosity. Before the fire of 1865 it had considerable collections; it now possesses the important print collection of the late G. P. Marsh; has accepted the reversion of C. L. Freer's splendid collection of American and Japanese paintings; and, by the court decision already noted, becomes the keeper of the art collection of the late Harriet Lane Johnston. So far as the organization of an art department goes, the Smithsonian has no conspicuous connoisseur on its staff, but it already represents in an eminent degree the cautious scholarship that should preside over such an enterprise.

On grounds of economy, too, the Smithsonian is the natural body to create a national gallery. In the projected National Museum building, an art department could be accommodated for many years to come. Thus money which on any other basis must be spent upon a separate building, could be devoted to acquisitions. And in the present rapidly rising art market, money in hand has threefold purchasing power. Since the Smithsonian has no funds for such a new departure, the scheme for a national gallery depends entirely upon the generosity of Congress. But one can hardly doubt that a plan at once inexpensive, intrinsically desirable, and

patriotic would make a strong appeal to our law-makers. It is no question here of the enormous endowment that a general museum requires. We believe the estimate of the *Burlington Magazine* to be conservative, when it fixes the current budget for both administration and purchases at \$25,000 annually. It should be recalled that if the museum concentrates upon American art, the usual expensive staff will be unnecessary, a curator-director with proper assistance sufficing. It would be very important, however, that Congress should at the outset make a handsome appropriation of, say, \$100,000, in order to found the historical collection. The prices of old American painting and sculpture are rising, and money spent now will save multiplied expenditure in the future. We can hardly doubt that, if the Smithsonian Institution will magnify its own function and plead its own cause vigorously, Congress will gladly vote the necessary funds.

It might be asked, Why restrict the aims of a national gallery to the exhibition of American art? We answer, frankly, because an American museum is more urgently needed, because it might exert a useful influence upon our art and our standards of taste, and, finally, because the limited and patriotic appeal is far more likely to gain the support of Congress. To rival the Metropolitan Museum without adequate funds would be very foolish. The Corcoran Gallery is an instructive example of the drawbacks of conducting a museum in a capital on an income adapted only to provincial requirements. If Congress would appropriate a matter of a half-million annually to maintain a comprehensive museum, that would be worth while, but the modest plan suggested above seems more likely to be carried out. Of course, a national gallery would by gift acquire many examples of non-American art. We have recalled that the Smithsonian already has a representative collection of European engraving, and is to possess a rare collection of the finest painting of China and Japan. Undoubtedly, the general collections would be similarly enriched as time went on. In fact, the prestige of such a national museum would from the first bring it gifts in abundance. No one, for example, could make a more dignified disposal of heirlooms of painting, while artists and their friends would naturally seek the honor of representation on its walls. The funds would properly be spent in buying the pictures of the younger artists of talent; the veterans—at least the more successful ones—could fairly be counted on to contribute by gift or bequest.

Evidently the director of such a museum should be an enthusiast for American art, but it would be highly unfortunate if he were nothing more than that. He should be familiar also with the best art of all periods. What the

production of our modern studios needs most is to be judged, apart from parochial applause, by something like a universal standard. In fact, the most important function of a national gallery might well be the creation of a sound national taste. Not only would a director at Washington be fortunately remote from the promptings of the artistic cliques, but he would find a body of spectators singularly receptive to any lesson he might choose to address to their eyes. There is no city in America where travellers go so frequently merely "for to see, and for to admire." A collection of the finest works that American artists have produced, or are producing, could from Washington extend an educating and refining influence to the remotest hamlet in the land. The realization of such a dream depends apparently upon the zeal of the regents of the Smithsonian Institution and upon the good will of Congress.

MUTE, INGLORIOUS LITERATURE.

William Butler Yeats returns to a favorite and suggestive theme in his essay on "Literature and the Living Voice" in the *Contemporary Review*. He maintains that the nerveless quality of much modern writing is due to the fact that literature, like the proverbial good child, is seen but not heard. Recalling the days when the minstrel still held his own against the scribe, Mr. Yeats bids Ireland, which still represents "the old world that sang and listened," resist to the last "the world that reads and writes." More practically, he hopes first for a revival of the habit of recitation, especially by authors, and believes that the popular stage, like his own unique enterprise at Dublin, may again become a place where the people hear the best literature, learning the poets not from the inexpressive page, but from the living voice of skilled interpreters.

Mr. Yeats's peculiar theories of cantilating verse have excited considerable comment. The presence of the great *disceuse*, Mme. Yvette Guilbert, among us is evidence enough that there is between singing and recitation an opportunity for great art. That this art is generally communicable, we doubt; and we hardly expect to see even in Ireland poets who habitually practise recitative to the rote or some modern equivalent, or a guild of minstrels who declaim sonorously to the dulcimer. But if Mr. Yeats's remedy for the widespread poverty of style seems fanciful, he has at least done much to explain a prevailing anæmia in modern literature. It may fairly be maintained that only of late years has the eye been the sole medium of literary enjoyment. When books were comparatively few, and the habits of readers leisurely, even silent perusal was undoubtedly accompanied by a sub-

consciousness of the sound of the voice. If there is one quality more marked than another in Elizabethan poetry, it is that it was always a heard thing. It must have rung alluring in the ears of its authors; to-day, it rouses any but the most inert reader to break silence and give voice to its splendid cadences. With the great romantic writers, Byron, Shelley, and Keats in England, Lamartine, Chateaubriand, and Hugo in France, the case was the same. Their periods crave utterance, and can be appreciated only dimly by those who have no consciousness of the sound.

When the change came about and readers lost the use of the inner ear, is matter of simple conjecture. It evidently hangs upon the enormous modern production of books, and the habit of silent reading. The hypothesis that most books of the last fifty years have been written by deaf people for deaf people would explain many things. It would throw some light on the admitted saplessness of current French prose. Possibly the average review article, with all its erudition and keenness, is pale and monotonous simply because it was never heard or meant to be heard. Like a muted instrument, such a style has neither legato nor accent. And that is the prose of the day, whether you look to France, Germany, Italy, or, nearer home, to England and America. Everywhere the same respectable, lifeless, insipid product. Certain scholars in Germany have recommended that school children be taught not to pronounce mentally when reading, because more ground may be covered the other way. The prevalence of such literary deafness would go far to account for the present condition of polite letters beyond the Rhine, though the defect is well-nigh universal.

To recall the exceptional modern writers who are in any sense eloquent, is, we believe, to name those who hear their writings and desire that others should hear them. D'Annunzio, Anatole France, Thomas Hardy, are of this type, whereas one might confidently assert that Fogazzaro, Bourget, and Mrs. Humphry Ward compose without auditory satisfaction of any sort. The distinction is presumably psychological and fundamental. Just as memories are classed as visual or verbal, so minds are auditory or the contrary, tending in the first case to associate sound and sense, in the second to eliminate sound altogether. A reader of an introspective sort tells us that in reading poetry he habitually recites it mentally, whereas he seldom hears prose at all, but occasionally is checked by an instinct that a passage is finely cadenced, in which case he rolls it lovingly under his mental tongue. Eloquent verse will stimulate the inaudible recitation to an actual whisper, or even a croon. This appears to be a case of a good—that is to say, an audi-

tory—reader, forced into the deaf, or merely ocular, class by a large bulk of duty-reading that must be done at high speed. The future of literature depends largely upon writers and readers who are in some fashion obedient to the living voice, and it is one of the most paradoxical instances of the prevailing intellectual confusion that, just as painting is striving to attain to the vagueness of musical expression, literature is disavowing its natural ally, indeed, its proper medium, the human voice.

On natural principle of flux and reflux, one may expect a return to the better way. We may not see again a Virgil and a Cæsar weeping together at a private reading, but may fairly hope for some reaction against the present surdity. Fortunately, the habit of mental audition can be cultivated, and writers will find their practical account in testing their product vocally. Similarly, readers who insist that the ear be satisfied as well as the mind are already in a manner critics. In fact, criticism in the genuine sense can hardly exist on any other basis. The point may seem to some narrowly rhetorical, but it is a case where an improvement in the form must infallibly work an improvement in the substance also. Here Mr. Yeats brings indubitable testimony when he describes the results of rewriting his plays for popular audiences. He says:

Every one who has to interest his audience through the voice discovers that his success depends upon the clear, simple, and varied structure of his thought. I have written a good many plays in verse and prose, and almost all those plays I have rewritten after performance, sometimes again and again, and every change that has succeeded has been an addition to the masculine element, an increase of strength in the bony structure.

It is precisely this access of "bony structure" that modern literature most needs, and while Mr. Yeats has verse chiefly in mind, the doctrine applies with equal validity to prose, where surely the need of reform is more urgent.

AN S. P. C. P.

Some benevolent but misguided person has proposed that a society be formed for the prevention of cruelty to parents. But no such reactionary step will, we hope, be taken. Emancipation of successive classes has been a mark of human progress. The spiritual control of the laity by the clergy has given place to the government of the pulpit by the pew. Kings and emperors hold their sceptres by the favor of their subjects. And fathers and mothers are beginning to be aware that they have no rights which their children are bound to respect. That they should enjoy special immunities or privileges would be absurd. In all progress there is a class which suffers and complains. And if:

parents are suffering now because their children are getting the upper hand, they should not look to any voluntary society for relief.

Unfortunately, children have necessarily to be burdened with what Stevenson called "subsidiary parents." Thus shades of the prison-house begin to close upon the growing boy and girl; they seek greater freedom. Their consequent rise to a place of authority in the family is in many cases the effect of their superior education. Not only have they better advantages at school than their parents had before them; they also make acquaintances who move beyond the narrow parental circle. The fathers soon learn to abdicate to sons who have been educated with social superiors; and no daughter who has been properly "finished" would think of submitting her opinions to those of her mother. Estimable wives of political magnates or of millionaires may be dressed by the best *modistes* of Paris and New York; they may have the art of giving good dinners and "smart" balls; they may do well for fashionable charities, and may even show a halting respect for the rules of grammar. But without the approval of their daughters, it profiteth them nothing.

In former days wayward children could be corrected by rebuke or chastened with a rod; but now the absorbing problem in families is how best to check erring parents and encourage them to persevere on the way to social eminence. Mothers may get endorsements from their children as good housekeepers, convenient chaperons, or faithful nurses; but of the finer social practices they are too often shockingly ignorant. Occasionally, they are trained in the way that they should go by their daughters, but "queer ideas" have a trick of haunting the brains of unruly matrons. Generally, they plod on quietly and peacefully, sometimes to their own social undoing, indeed, but frequently to a pleasant, shopping, dining-out, sitting-out, tiara-wearing, corpulent old age, heedless of a daughter's tears and admonitions. In view of the fact that these shortcomings are often due to congenital defects, it has been contended that children should be more indulgent. But over-indulgence on their part has hurried many parents to their ruin.

As for fathers, they do not so much matter. In developed societies the paternal function has not been highly specialized. The father is a bread-winner, and his kingdom is not of the world in which his children move. It is true that, with obsolete ideas of the *patria potestas*, he has sometimes made a feeble stand as the purveyor of munitions for the social warfare. But by intelligent sons and daughters it has been decided that, however highly he may be esteemed in Wall Street, he is out of place in the rarefied air in which they live and

move and have their being. Fathers take no due interest in the weightier matters of social life. For a brief period during the early childhood of their offspring they manifest a proper spirit by believing in the inspiration of the children, and by quoting their sayings as if they had been uttered at Delphi. But as a social asset, a father is of little importance. Viewed merely as a blood-relative, no indulgence should be shown to him. Even if he should repent his mistakes and senile follies, and declare that he will arise and go unto his son, let there be no minstrelsy or fatted calf provided for him.

In the life of the very rich, some parents still seek to resemble those curfew incarnate in humble life who keep the girls at home and the boys out of the bar-rooms. Middle life and old age, even when money is abundant, are too hidebound to get accustomed to the manners of the new generation of young men who are old and worn before they graduate, and of young women who win or lose large sums at gambling. But whether parents are young or old, children have a right to expect from them implicit obedience. At first this may be difficult, but, as Aristotle says, "Virtue is a habit," and it can be acquired. No one therefore should complain of cruelty to parents. The chastisement which they endure may be grievous, but it will finally yield the peaceable fruits of righteousness. There are surely enough elements of anarchy in modern society without the encouragement of parental revolt. The man who "never shook his mother" was a rude denizen of the uncultured West; he should not be held up as an example for imitation. In these days of progress, theologians well say that all infants are elect, and that the Fifth Commandment is a part of the code of primitive tribes.

A LATINIST AT A SCIENTIFIC SCHOOL.

Prof. Andrew F. West, who is now president-elect of the Massachusetts Institute of Technology, has a high reputation as a Latinist, but is even better known as an administrator. From the beginning of his Princeton professorate, in 1883, he has been a prominent figure both in the various learned societies, and in the intercollegiate committees on entrance requirements, etc. He was the organizing spirit of the Princeton sesquicentennial celebration of 1896. It was he who, as secretary, secured as delegates more famous European scholars than had ever before graced an academic festivity in America. Besides raising the money and arranging these academic pomps, he carried out the happy innovation of having the illustrious delegates of foreign universities deliver lectures, many of which, being of permanent value, were published as a memorial of the event. In 1901 he became dean of the Princeton Graduate School, and has had a large hand in reor-

ganizing a rather rudimentary department upon a genuine university basis. He was also influential in securing the excellent adjustment of the old classical curriculum to the new elective system, which gives Princeton a uniquely conservative position among American universities. He favored also the new preceptorial system of personal instruction, which introduces to America a method long approved at Oxford and Cambridge. In fine, his attitude has been that of a convinced classicist, yet one thoroughly perceptive of the educational claims of the natural sciences and the modern languages. Thus his call to the leadership of a scientific school is less paradoxical than it would seem.

Andrew F. West was born in 1853 at Allegheny, Pa., the son of a Presbyterian clergyman. During his college course at Princeton, from which he was graduated in 1874, he formed that close personal friendship with President McCosh, which nine years later led to the appointment to a professorship of Latin at Princeton. In the meantime, Mr. West travelled, taught school, and pursued his favorite classical studies. Early in the eighties he became principal of the historic Morris Academy, Morristown, N. J., which he soon brought from a languishing to a highly prosperous condition. The enthusiasm which he has since evinced in many fields was there shown in his personal introduction of the then new Rugby football, being the captain of the school team, and in the zest with which he organized the school exhibitions.

His old college gave him the degree of Ph.D. and made him a professor of Latin in 1883. In the intervals of teaching he prepared an edition of the comedies of Terence, published in 1888; and that elaborate edition of the "Philobiblon" of Richard de Bury which the Grollier Club published handsomely in 1889. In this work, which remains Professor West's most congenial and perhaps important achievement, he anticipated the recent revival of interest in mediæval Latin among Latinists even of the severer type. His growing attention to educational problems and to the origins of humanism found expression in the little treatise, "Alcuin and the Rise of the Christian Schools" (1893). A Latin grammar (1902) is his latest contribution to the pedagogics of his subject. A number of articles and addresses on college subjects, especially an able critique of the elective system as conceived by President Eliot of Harvard, attest his interest in academic theory and have increased his influence. It is for these semi-public activities quite as much as for his scholarship that he has received his honorary degrees, LL.D. (Lafayette) and D.Litt. (Oxford).

It is significant that the trustees of the Institute of Technology seek as an administrator not a scientist, but a classicist of the widest general culture. They tacitly accept in this decision a favorite doctrine of the late President Walker, who valiantly maintained that the curriculum of his school should be, and was actually, more humane and liberal than that of the old-style colleges. Professor West's appointment should probably be interpreted in this spirit. If he accepts, he will bring to his new responsibility not merely the scholastic qualifications we have enumerated, but those of a personality at once astute, engaging, and impressive.

BOOK NOTES FROM PARIS.

PARIS, October 9.

Now that French winds blow steadily toward a Culturkampf, books which are more than political pamphlets on the situation are worth noticing. The most important is still the "Anticléricalisme" of Emile Faguet of the French Academy. His book is an attempt at a thorough diagnosis of the case in French society, but it is not written from the clerical point of view. A university professor, Victor Giraud, whose studies on Sainte-Beuve have made him favorably known in criticism, now publishes a short book, "Anticléricalisme et Catholicisme," in which he tries to complete the work from the standpoint of a confirmed Catholic. He reproaches M. Faguet's "national irreligion" with being only one side of the question, and remarks sensibly enough that there must be some religion left in France, if only to explain the violence of the Anticlericals. His main conclusion is in direct opposition with what is commonly taken for granted:

Politically vanquished, tracked and proscribed and persecuted, almost eliminated from public life and official organizations, never since Bossuet and St. Francis de Sales, perhaps not since the thirteenth century, has French Catholicism in reality been stronger, more fruitful, more alive.

Professor Giraud appeals to the present Catholic literary revival, which is as yet unheralded abroad, but which may be studied in another new book, "La Littérature Religieuse d'avant-hier et d'aujourd'hui," by Henri Brémond, the young priest with English experience who has written the notable psychological study of Newman. From the standpoint of a Liberal Catholic layman, Imbart de La Tour, the historian, publishes "The Conditions of Religious and Social Revival in France," comparing the present situation with that of fifty years ago, when Montalembert wrote his "Catholic Interests of the Nineteenth Century." All these writers, like M. Brunetière, deprecate anxiously any formation of a Catholic political party or any connection of Catholics as such with political parties.

Antoine Albalat, who is responsible for curious studies of the ways in which French authors form their style and write their books, publishes a useful work, "Pages Choies," of selections from Louis Veillot. This intensely personal journalist's daily controversy for more than forty stirring years down to his death in 1883 made him feared and detested; and on account of his name being a symbol of the fiercest Clericalism, he never became known abroad as the really great writer which he was. Jules Lemaitre, long before he entered the French Academy, rendered justice to the qualities of Veillot as a writer with a style transforming itself at will from sledge hammer into knife, subtly dissecting soul from spirit, and lancet-puncturing the most promising literary swellings. Little by little the higher journalists at least have come to recognize that Louis Veillot was the master of them all. The very genuine democracy of Veillot, working his way up from poverty in a rich *bourgeois* society which chiefly profited by the Revolution, is perhaps another title to latter-day sympathies. To the French language he contributed the happy word *boulevardier* and the complex term *odours de Paris*.

In a communication made to the Académie des Inscriptions et Belles-Lettres, M. Maspéro narrates the results of the latest excavations in Egypt. Among them is a find of such interest to Greek scholars that it is not safe to estimate its value for the present. At Kom Schgaon, a locality to which M. Maspéro's attention had been attracted several years ago, fifty fine manuscript rolls have been discovered, one of which is more than four yards long. Among them one contains some 1,200 unpublished lines of a comedy by Menander. These will be published shortly, and may help to make known in his own work a classical author hitherto read chiefly through Latin imitations.

Prince Albert of Monaco has undertaken the collective publication of the most ancient manifestations of pictorial art—engravings and paintings on the rock walls of caves dating from the later palæolithic age (cut stone). The first systematic student of this art, Emile Rivière of the Collège de France, presented at a late meeting of the Académie des Inscriptions et Belles-Lettres his own series of reproductions in photogravure and plaster casts of the chief examples found by him in the cave of La Mouthe, Dordogne. With the exception of the figure of a hut, all represent animals life-size or smaller. The bison, antelope, ibex, reindeer, a bearded horse, an ass resembling the wild Siberian *asinus hemionus*, a mammoth, and various felines are easily recognizable. The cave of La Mouthe is about 650 feet long. Besides the pictures on its walls, it has yielded thousands of bones of different species of animals, with flint and bone tools. At another session, Abbé Breuil, whose work is aided by the Academy's subsidies, gave a summary of results obtained in six caves of the province of Santander, Spain. One, adorned with engravings only, shows a tailed anthropoid. Another, having red-dot frescoes, portrays a horse and deer, and yet another in the same style has two canines. The most archaic engraving is found at Molinar, Biscay, representing bisons and cave bears. The primitive drawings are mere outlines, but later on there is an attempt at modeling forms. An elephant in red apparently differs from the mammoth commonly represented. The entire collection of these art representations gives a certain completeness to our knowledge of the environment of the men of the later Old Stone Age in Western Europe. It is almost entirely due to the labors of MM. Rivière, Cartailhac, Capitan, Duleau, and the Abbé Breuil, and, in Spain, to Señor Del Rio and the Reverend Padre Sierra, the discoverers of the new caves.

Correspondence.

RISTORI AND SALVINI.

TO THE EDITOR OF THE NATION:

SIR: In an article on the late Adelaide Ristori in the *Nation* of October 11, the writer, speaking as one of "the older generation of playgoers" who remember Ristori "as she was when she last appeared in this city," says that, "applauded though she was here, she found us cool," and cites a report of her having said to Salvini when

he was leaving Italy for New York, "Give 'em comedy, Tommy. They won't listen to your tragedy." Your writer adds that Salvini accordingly "played the feeble David Garrick, making it seem a masterpiece, and failed dismally."

Now when Salvini first came to this country in the autumn of 1874, Ristori had, of course, appeared here, but only on her first visit of 1866, not on that last American tour which only old playgoers are now supposed to remember. The visit which your critic probably had in mind is one of which I find no mention, either in his article, or in your briefer notice of the death of the great actress, in the same number. My own first and last recollection of her (for I did not happen to see her in 1880) belongs to that visit; and the chill, which I not only noticed but felt, was due, in my case, to the spell, still unbroken, of Salvini's Othello of the year before. My playbills of two performances, "Maria Stuart" and "Medea," given at the Academy of Music in Philadelphia on April 22 and 23, make no mention of the year (why do playbills so often omit this particular?)—but my more precise impression is confirmed by reference to back numbers of the *Nation*, where, under date of March 18, 1875, I find the record of Ristori's presence in New York in an article on her acting. It is evidently from the hand of a brilliant, but now almost forgotten, writer, who was then on your staff as art critic, the late Earl Shinn. In noting the coldness of the public, which he attributed to the remoteness, to our minds, of the classical idea, the critic pointed out her great distinction as an actress, confessed that as compared with the performance of her earlier days the execution dragged a little, but assured young spectators that "in witnessing the last act of 'Mary Stuart' or certain of the great points in 'Medea' they are looking at a supreme exhibition of the grand style of acting."

This spectator was young then, but on that April 22 and 23, was but grudgingly aware of great statuesque beauty and distinction, being heavy with disappointment under the overwhelming memory of those other evenings with Salvini at the Academy; of the large empty house (Ristori's was not so), with a handful of spectators in the front seats, a row or two in the gallery, and those marvelous performances of "Othello" and "La Morte Civile," for the emptiness was not wholly due to "David Garrick." There was that death of Corrado, in which every muscle gave token of the approach of l'Intruse, and the very blood seemed to ebb; that Othello, listening with folded arms, to the insinuations of Iago, silent, while every shade of thought passed over his countenance like the shadows over a field of wheat; then the foot and glance ready to crush the accuser and the change to anguish over the accusation that could not be crushed. They were more perfect performances, as a whole, than those which in after years took place in crowded theatres; the "business" was a little more complete, and, more than that, Piamonti was there, the lovely Piamonti, seeming not so much an efficient actress as one who chanced to have been born Desdemona; or looking as if she had lived for years the sad part of Rosalia in Giacomelli's play, giving by her very artlessness the one note

which Salvini, in his immense tragic gamut, never quite reached—pathos. No, it was not comedy that we demanded of "Tommè"; and I do not agree with the writer in the *Nation* that he made David Garrick "seem a masterpiece." His acting was wanting in the quality kindred to pathos—humor. But though I felt this at once it took me more than a year and a half to discover any flaw in a tragic expression so vast as to seem consummate; and it was not till long afterwards that memory conceded to Ristori a noble and great art, more harmonious, but also more frigid and artificial, than that of her compatriot. S. K.

Rosemont, Pa., October 16.

"THE PRESENT POSITION OF LATIN AND GREEK."

TO THE EDITOR OF THE NATION:

SIR: As one of many who will feel as I do, I venture to enter an emphatic protest against the effect of Prof. Arthur O. Norton's article "The Present Position of Latin and Greek" in your issue of October 4. The writer premises that his purpose is not to present an argument either for or against classical studies; that he is not concerned with their intrinsic merits or defects as instruments of discipline and culture, and not at all with their value in comparison with other studies. How, then, is it that his thesis is really this, that the degree of A.B. is quite as significant of a certain profitable discipline, whether or no it stand warrant for any Greek at all? This thesis receives explicit statement, and involving directly as it does the question of the value of Latin and Greek as compared with their substitutes, the support it receives stultifies, at the expense of either his fairness or his logic, the assertion of the author that he is not concerned with their relative merits. The statement referred to is as follows:

Far-sighted administrators of college affairs have seen for years that the effective preservation of the A.B., and all that goes with it, can be secured only by broadening the terms on which it may be obtained, and on which students may matriculate for it.

That is, a thing may be preserved by making it something different—preserving the tag and the good-will of the old firm and supplying an article seriously modified by substitution of an inferior ingredient within the can. My faculty is not that of classical languages, and I do not mean to presume upon your patience by engaging to set forth the merits of Greek and Latin. I may, however, say that I know I speak for many teachers both of the historic and natural sciences in asserting the belief that in the study of the classical languages an intellectual discipline is obtained, and more than that a culture, which cannot be obtained otherwise, and which invariably and unmistakably declares itself in the subsequent work and life of the student. And if this be true, as it is, an A.B. without the classics is not the same thing as an A.B. which stands for them. So Cambridge thought last year when it threw out the proposition to make Greek optional at the Little Go by 507 votes in a total of 2,611, and recently decided that there should not be a choice between an A.B. in letters and in science (the lat-

ter, indeed, involving a choice between Greek and Latin) by a vote of 747 to 241.

Professor Norton remarks that many colleges still require a small amount of Latin—one or two-fifteenths of the total work for the degree—but even in these the prescription of undergraduate Greek is rare; and he refers to the entrance requirements of six universities, only one, he remarks, demanding Greek for entrance to the A.B. course. Is it accident that he omits at least one university which both demands Greek for entrance and insists that one-tenth of the total work for the A.B. degree shall be devoted to the classics?

Near the close of his article Professor Norton quotes President Eliot by abstract to the effect that it is "not merely ridiculous, but impossible, to uphold a scheme of education which no longer commands the respect of the public." What has this to do with it? The point under argument is whether the A.B. degree should mean Greek and Latin; if the public do not respect these studies and what they afford, the B.S. is open to them. Why should they want the A.B., if not for what it once stood for? And emphatically it is not any lack of respect that is in question, even in the case of that highly desirable element in a university, the idle and ignorant rich. What is in question is really only too much respect for Greek upon the part both of some schoolmasters and of the greater number of boys—for Greek and for the patient, careful, laborious, but character-building work it demands.

The sum of the whole matter is briefly this: Omission of Greek from the requirements for the A.B. degree means a substitute, a cheaper substitute, in entrance requirements and the course that follows. Certainly the substitution is quite legal—there is no doubt of that—the institution that descends to making this substitution undoubtedly holds the copyright of the old label. There is no attempt to deceive; the change is made quite openly; and business, the buying public, demands a less costly article. To be sure, there is the B.S. over there, just what they really want, just what they "respect." But they won't have it—they want this tag—this tag still standing for something they do not "respect."

CLARENCE G. CHILD.

University of Pennsylvania, October 17.

AFRICAN LANGUAGES.

TO THE EDITOR OF THE NATION:

SIR: The importance of language in relation to political and social aspects of the native question in Africa seems liable to be overlooked. The possibility of large groups of tribes, hitherto distinct and mutually antagonistic, becoming rapidly able and eager to understand each other in some common form of speech, has apparently to be taken into account. Twenty-six years' contact with Swahili and various dialects of Eastern and Central Africa so far points to the conclusion that there is a remarkable degree of similarity, amounting in many important respects to substantial identity, in the grammatical structure of language over the whole vast area occupied by the Bantu races of Africa, from the Soudan to the Cape. And the stock of words common to all Bantu tribes, when recognized under their various dialectic

disguises, will probably prove very considerable.

The officials, missionaries, traders, settlers and travellers of various nationalities who are qualified to give help in testing this conclusion by personal and first-hand study of a Bantu dialect are naturally difficult to reach—scattered in remote and often isolated spheres of work. It is therefore perhaps justifiable to ask publicity for the request, that persons so qualified and willing to accept and reply to a brief communication on the subject would send me their addresses at Fort Jameson, North Eastern Rhodesia. A. C. MADAN,

Student of Christ Church, Oxford.

The British South Africa Company, Fort Jameson, Northeastern Rhodesia.

HERBERT SPENCER'S SUPPORTERS.

TO THE EDITOR OF THE NATION:

SIR: In the allusion in your number of the 11th to the authorities who have endorsed Herbert Spencer's work, it is a little strange that you should have omitted Darwin's famous phrase: "We all bow the knee to Spencer."

That perhaps is not as curious, however, as was another circumstance of which it reminds me—that thirty or forty years ago "a very pretty quarrel" was stirred up in your columns, by your having permitted a gentleman whose field was æsthetics, to speak contemptuously of Spencer's reputation, because he was not an authority in each science that he had laid under contribution. It has just occurred to me that a philosopher's work is necessarily what original investigators like to call "second-hand"; for even if life were long enough to make it first-hand, while he would be getting up one department, his knowledge of the other departments would inevitably grow stale. As this very obvious consideration happened to escape the attention of the defence in the conflict in your columns, there is double reason for mentioning it now—unless I am the only man alive who remembers the occasion.

HENRY HOLT.

Burlington, Vt., October 19.

Notes.

Longmans, Green & Co. will soon publish the "Life and Letters of the first Earl of Durham," by Stuart J. Reid. This work is based on the papers at Lambton Castle, and deals with the Grey and Melbourne Cabinets, the Reform Bill, and other matters of that time.

E. P. Dutton & Co. have now ready "From Libau to Tsushima," which relates the voyage of Admiral Rojestvensky's fleet to the East, including an account of the Dogger Bank Incident. The author is Eugene S. Politovsky, chief engineer of the squadron, who was killed at the battle of Tsushima.

Walter L. Fleming, professor of history in West Virginia University, has prepared a "Documentary History of Reconstruction" from unpublished MSS. of all sorts. The work is put out by the Arthur H. Clark Co.

Volumes seven to ten bring to a con-

clusion the Gettysburg edition of the Complete Works of Abraham Lincoln issued by Francis D. Tandy Co. We have already spoken of the quality of this edition, and take this occasion only to compliment the publishers on the completion of this handsome undertaking.

We are asked to state that the Bureau of Statistics and Municipal Library of Chicago has ready a souvenir volume recently published for the League of American Municipalities, which will be sent to all applicants upon receipt of 25 cents, to cover postage.

The two-volume "Memorials of Edward Burne-Jones," by his wife, has been reissued by the Macmillans in a single volume, without other change. One could wish that the process which has been applied to this excellent life might be applied to biographies generally in the first instance.

Two volumes in the handy little series published by A. S. Barnes & Co. contain "The Voyages and Explorations of Samuel de Champlain," translated by Annie Nettleton Bourne, together with "The Voyage of 1603," reprinted from "Purchas his Pilgrimes." An Introduction and Notes are furnished by Prof. E. G. Bourne.

Doughleday, Page & Co. have issued a new edition of Upton Sinclair's "King Midas," and also of "The Journal of Arthur Stirling," which, the author assures us in the newly added Preface, "will always be read."

"Socialism," by Robert Flint (Philadelphia: J. B. Lippincott; London: Isaac Pitman), is a reprint, apparently without material alteration in the plates, of the work which the author brought out in 1894. In its original form the book was read with profit by many persons, and the recent growth of the Socialist movement makes the present volume a timely one. As becomes its author, "Socialism" is a philosophical essay upon cardinal points of doctrine, and does not deal with the history and present position of socialistic speculation or agitation.

B. F. Buck & Co. have published a new edition of "The Italian in America." No addition or change seems to have been made from the original edition except, possibly, mechanical ones, in the arrangement of chapters. This is to be regretted, as in the last two years a great deal of study, research, and experiment, regarding various phases of Italian immigration to this country, has been carried on, which might have well fitted in the present work. Indeed, the entire omission of such items as the investigation of conditions in the South by the Italian ambassador, the creation of the Italian Labor Bureau in New York, the extension of the legal protection of Italian immigrants by their Government, and the results of an aggressive policy against Italian peonage, constitutes a grave defect which renders many parts of the book out of date.

The field of the operations of the Carnegie Institution of Washington is wisely varied, as is seen in the fact that its fifty-third publication deals with questions of technical Oriental archaeology and palæography from the land of the Nile. Dr. W. Max Müller has already made a name for himself as a student of the hieroglyphic

writings, but not as an explorer. The present volume, "Egyptological Researches," embodying the results of a journey made in 1904, shows him in a new relation. The fact that he was working alone, without a corps of assistants, dictated the manner and matter of his activity. His work as here set forth is intensive rather than extensive. He spent his time, in part, in traversing anew some of the ground of previous explorers and correcting their results by rereading the old texts. This is particularly necessary, because reading Egyptian hieroglyphic writing is inherently difficult, and because some of the older publications were made by men whose acquaintance with the language was quite rudimentary as compared with the best knowledge of to-day. Dr. Müller divided his attention between the monuments found in the Museum in Cairo and those still *in situ* at Thebes. As might be expected from the subjects of the author's special previous studies and publications, those texts which have to do with the relations between Egypt and Asia or Europe claimed particular attention; and in this respect he has rendered valuable aid to students of early Biblical and Palestinian history by investigating the local names preserved in the hieroglyphic writing. The book consists of above two dozen monographs or essays on topics suggested by the texts which his tables contain, partly in photograph and partly in the graceful hieroglyphs in which the author is an adept, both as a copyist and an expounder.

The results of many years of patient and sympathetic study of the German peasant is embodied in A. l'Houet's "Zur Psychologie des Bauerntums," published in Tübingen by J. C. B. Mohr. L'Houet is a Protestant pastor who has sunk himself for fifteen years, many miles distant from the railway, in German peasant life, where he could find it at its purest. He would seem to be a man not only of real German capacity of devotion to one end, but also a student of wide learning and thorough mental grasp as well as a writer of unusual literary gifts. His essay is compared with Wilhelm Heinrich Riehl's productions in the history of culture for its largeness of view and firmness of grasp. In l'Houet's description of the German peasant one finds himself placed before a creature of distant ages, preserved as by miracle into the present time. The social and ethical unity of the village rather than of the individual takes one back to the times of David; and the tales of giants and demi-gods, the folklore yet in the making, show that the Middle Ages are not so distant as chronology would imply. L'Houet writes as a lover of the peasant, in whom he sees the German in his fresh, wild youth. Both the country pastor and the school teacher are charged with making a hotch of their tasks, destroying the poetry and romance and deep native piety in the peasant soul under plea of removing relics of heathenism, but bringing in no compensating advantage. The book is likely to lead to more intelligent attention to the problems of the German peasantry.

On Christmas day, the ancient city of Todi will celebrate the six-hundredth anniversary of the death of one who was, per-

haps, her most famous son, Fra Jacopone, "the jongleur of God." A new guide book to Todi is being prepared by Archdeacon Alvi, and, during the next few months, numerous monographs on Jacopone and his city may be expected to see the light. Already Prof. Annihale Tenneroni has published a learned article in the *Nuova Antologia*, of June 16, on "Le Laudi e Jacopone da Todi nel vi. centenario dalla sua morte," which will hereafter reappear as the Introduction to the "Lessico di Laudi e d'altre poesie religiose italiane nel medio evo," now in the press; while an able and exhaustive treatise by Prof. Giuseppe Galli on "Disciplinanti dell' Umhria del 1260 e le loro Laudi" has just been issued in the form of a special supplement to the *Giornale Storico della Letteratura Italiana*. This work is divided into five chapters: "The Religious Movement of 1260, and the Disciplinants of Umhria," "The Codices of the Umhrian Lauds," "The Metre of the Lauds," "The Argument of the Lauds and their Authorship," "The Dramatic Lauds." It is, as far as we are aware, the only hook in which any attempt has been made to give a full and systematic account of the Umhrian flagellants and their hymnology.

James Duff Brown's "Subject Classification" (London: Library Supply Company), a development of his "Adjustable Classification" published some years ago, is a solid and substantial piece of work which ought to be on every classifier's desk. His plan is more logical than the Decimal Classification, and its notation is less formidable than that of the Expansive. Mr. Brown's system has some very decided peculiarities, but contains no such absurdities of arrangement as, *e. g.*, the classes 330 (Political Economy) and 650 (Communication and Commerce) of the Decimal Classification. The class Generalia, containing, among others, such subjects as Education, Logic, Mathematics, and Graphic and Plastic Arts, is certainly open to criticism, and to put Bibliography, Printing, and Library History and Economy in the middle of the system with Language and Literature, is awkward from a practical point of view, no matter what might be its logic. Less objectionable, though more conspicuously contrary to all previous schemes, is the arrangement of the divisions in the class Physical Sciences, where Physics, Engineering, Architecture, Railways, Transport, Naval and Military Science, Electricity, Optics, Heat, Acoustics, Music, Astronomy, etc., are put together in this order. These and similar groupings, the author says in his most interesting and valuable Introduction, "are departures from the convention that there exists a clear difference between theory and practice, pure and applied science, and so on, which renders their amalgamation undesirable." A notable feature of this classification is the notation, which was devised after the system of classification had been worked out, and consequently has been adjusted to the system instead of the system being adjusted to the notation. The notation consists of 24 letters of the alphabet, each subdivided by the numbers 000 to 999, with provision for further subdivision. On the whole, Mr. Brown's classification allows more free scope to the individual classifier than any other system we know of—and his notation is not copyrighted.

Among the more interesting items of library legislation enacted by the different States during the past year are the following: Ohio provides for the establishment and maintenance by taxation of county library systems. The act is an attempt to solve the library problem of the rural community. This State has also created the office of "library organizer," whose duty shall be "to furnish advice and information to persons interested in libraries, to visit the public libraries of the State, and to assist in promoting and starting new libraries." In Virginia a comprehensive system of travelling libraries has been inaugurated, whereby every school district of the State may be supplied. In South Carolina a way has been indicated for the solution of the negro problem as related to the library, in a special act applying to the township of Union. This provides that when the colored people of the township shall have furnished a suitable building and equipment for a library, "a just and suitable amount of money shall be appropriated by the aldermen for its support."

Plans for the next American Library Association meeting, to be held in Asheville, N. C., the latter part of May, are well under way, and the main features of the programme have already been decided upon. The general theme of the conference will be "The Use of Books," and advocates of different classes of literature, such as science, history, art, fiction, will each be given an opportunity to discuss his favorite field.

That the rubbish of one generation becomes the treasures of the next is exemplified in the case of a series of illustrated street directories of New York which were printed, primarily as advertisements, in 1848, 1849, and 1850. The plan was to show in the form of a panorama both sides of the street, the occupants of the buildings being advertised by the signs on the fronts. The most interesting of these was the directory of Broadway entitled "Jones & Newman's Pictorial Directory of New York," which extends as far up as Worth Street. It was issued in four parts, "Price 25 cents each." Other street directories which were issued in a similar form, were Wall, Williams, Fulton, and Maiden Lane. These curious works are now of the greatest rarity and command \$50 to \$75 each. They contain views of New York buildings which are apparently not found in any other form.

C. F. Libbie & Co. of Boston will offer at auction during the coming season another portion of the collection of New England imprints and manuscripts made by James Terry of Hartford. In March, 1889, Mr. Terry sold a few hundred items from his collection, many of which brought record prices.

At the Social Education Congress to be held in Boston Thanksgiving week, the programme includes mass meetings, devoted to the following topics: Friday afternoon, "Education for Citizenship"; Friday evening, "The School as a Social Organism"; Saturday afternoon, "The School and the Family"; Saturday evening, "Industrial Education"; Sunday evening, "The Education of the Conscience." Section meetings will be arranged in the mornings on the following topics: "Uni-

versity and School Extension," "Health Education," "Special Classes for Troublesome Children," "Industrial Education," "Commercial Education," "Self-Organized Group Work in the Schools," "Social Training in Infancy and Early Childhood." Among the speakers thus far announced are Gov. Curtis Guild, jr., Mayor John F. Fitzgerald of Boston, Miss Jane Addams of Hull House, Chicago; Chancellor E. B. Andrews of the University of Nebraska, Mayor Z. R. Brockway of Elmira, Dr. M. G. Brumbaugh, superintendent of the Philadelphia schools; President K. L. Butterfield of the Massachusetts State Agricultural College, President Charles W. Eliot of Harvard, F. P. Fish, president of the American Telephone and Telegraph Company; the Rev. Dr. Washington Gladden, President G. Stanley Hall of Clark University, Dr. J. P. Haney, supervisor of art and manual training, New York city; W. S. Jackman, principal of the School of Education, University of Chicago; Prof. J. W. Jenks of Cornell, President Henry Lefavour of Simmons College, Prof. S. M. Lindsay of the University of Pennsylvania, Sir Alfred Mosely of England, the Most Rev. W. H. O'Connell, archbishop coadjutor of Massachusetts; Miss H. M. Orcutt, president of the New York Kindergarten Association; Herbert Putnam, librarian of Congress; Prof. C. R. Richards of Columbia, Dr. D. A. Sargent of Harvard, Mrs. Frederic Schoff, president of the National Congress of Mothers; President W. O. Thompson of the University of Ohio, F. A. Vanderlip, vice-president of the National City Bank of New York; Dr. W. P. Wilson, director of the Philadelphia Commercial Museum, and Mrs. M. S. Woolman, director of the Manhattan Trade School for Girls.

A notable event in Russian journalism was the recent celebration of its fortieth anniversary by the leading monthly of the country, the *Westnik Jewropy* (the *Messenger of Europe*); at the same time its founder and editor during these decades, Michael Stassulewitz, celebrated his eightieth birthday. The journal has pursued a moderately liberal policy, at all times advocating the necessity of a constitutional government. The editor, who also plays a prominent rôle in public affairs, has been particularly active in school reforms, and has been compelled frequently to suffer on account of his liberal views, although, on account of his high standing in the confidence of the people, the reactionary party has never ventured to treat him with extreme harshness.

Dr. Maitland Thompson, though he will retire from the position of curator in His Majesty's General Register House, Edinburgh, will continue his work in Scottish records. He will be succeeded by the Rev. John Anderson, the assistant curator.

The foreign papers bring news of the death of two European scholars and authors. The first is Karl Emich, aged fifty-one, Graf zu Leiningen-Westerburg, the author of several historical and heraldic works, among them "Die Leiningschen Wappen und Siegel," "Historische Blätter aus dem alten Leininger Land," etc. He was the owner of a large collection of ex-libris, which, according to the *Deutsche Tageszeitung*, he has left to the Germanische Museum of Nuremberg. The

second is Louis Auguste Himly, *doyen honoraire* of the Faculté des Lettres de Paris, where he was for many years professor. He was born at Strasburg in 1823, and educated at the École des Chartes. He was elected to the Académie des Sciences Morales et Politiques in 1884, in succession to Mignet. He was an authority on the Carolingian period, concerning which he published a number of studies. His greatest work was the "Histoire de la Formation territoriale des États de l'Europe Centrale," issued in 1876.

TRAVEL AND TOPOGRAPHY.

At the present rate of appearance of topographical books about England, there will soon be no corner, no brook, no field-path undescribed and painted or photographed. John Henry Garrett's "The Idyllic Avon" (G. P. Putnam's Sons) is one of the most thorough of its kind. A party of three spent a whole summer in a boat on the Avon, navigating that stream from Tewkesbury in Gloucestershire to Stratford-on-Avon, a distance of fifty miles. Something over 250 pages and 89 full-page illustrations are devoted to that stretch of Avon's banks and riverside villages, with which the reader becomes extremely intimate. Stratford is the goal, but those who weary of this well-trodden spot will find the descriptions and pictures of the vale of Evesham and the charming remote villages of Gloucestershire and Worcestershire more to their taste. The text of such a book is usually merely the excuse for stringing together a number of good amateur photographs, but Mr. Garrett knew how to collect antiquarian information, and his tale of an English village is nearly always interesting, though the houses where King Charles hid or slept come with sickening frequency. There are, we regret to say, thirty songs and ballads contributed by Mr. Garrett or one of his party at intervals during the journey. We have a decided feeling that it is not fair to the reader to publish one's verse in this way. There is much welcome information about wild flowers. The book is well got up and the illustrations excellent.

To their charming series of topographical books, illustrated in color, Messrs. A. & C. Black (New York: The Macmillan Co.) have added "Surrey," by A. Hope Moncrieff, painted by Sutton Palmer. Surrey is the most attractive and varied of the "home" counties, the Cockney paradise. But for all its tea-gardens and bungalows and motor-buses, and those innumerable residences of well-to-do citizens, which, even in the days of Pepys, were planted along its sandy ridges, Surrey has still many an "ancient haunt of peace." Its silent pools and winding rivers, the lesser streams of the Wey and the Mole, escape the tripper and breathe the atmosphere of Devon. These enchanting by-ways Mr. Moncrieff explored, following also the course of the too well-known Thames. He takes us along all the main roads, to all the more important country seats, and to the summits of heights, such as Leith Hill, from all of which one may see London lying there like a busy ant-hill, never to be kept out of the scenery. The chief charm of Surrey is her Downs, a little neglected by the

present writer. Mr. Kipling is always at his best when his imagination is stirred by the romance of places that have seen the restless tribes of men come and go. Mr. Moncrieff might have drawn on the poem in which he describes the early Briton who haunted the folds of the Downs before the Roman invasion. All that is essential is unchanged since Tegumai hunted there:

On Merrow Down the cuckoo's cry,
The silence and the sun remain.

Even the suburban settler cannot spoil these great spaces. Mr. Palmer's full-page colored illustrations are fully up to the standard of the series.

"Warwickshire," painted by Fred Whitehead and described by Clive Holland (the Macmillan Co.), is another of A. & C. Black's series with full-page color illustrations. As usual the pictures are charming, though we fail to grasp the significance of the tags of Shaksperian quotation, with which each one is labelled; this strikes one as a superfluous effort to remind the reader that he is in the poet's country. The get-up of the volume is most attractive. Mr. Holland's account of the district is concerned less with Warwickshire's highways and byways than her towns and larger villages, such as Birmingham, Coventry, Stratford, Henley, and the rest. These are described with great detail, and especial attention to their earlier history and the part they played in the successive civil wars. This preoccupation with human interests leaves an opening for a second volume which should be devoted to "leafy Warwickshire's" splendid trees, her lovely lanes and streams, and her preëminently agricultural interests.

One hundred good photographs and an excellent map go far to justify the existence of Henry Wellington Wack's "In Thamesland" (G. P. Putnam's Sons). The author traces the course of the Thames from its source (not undisputed) in Gloucestershire to London. His travelling was done mainly in a canoe, and he has much to say, though little that is flattering, about the quality of the riverside inns. It is curious to remark how in the early stages of his course Mr. Wack, who is an American tourist, regards England as a place to be sorrowed over, "a land of white slaves and blind masters" (p. 70), a land "in which the entire educational system is striving mightily in the wrong direction" (p. 71); while he cannot see a peaceful village without commiserating the population of decaying old men who have had to see their sons and daughters swallowed by the towns or slain in the Boer war. When he nears London, however, his tone changes, and the English are a "virile race," "a people whose glory cannot be adequately acknowledged by word or memorial" (p. 368). It is as though size and crowds were needed to impress Mr. Wack with the greatness of a nation. He has not the style or the point of view necessary for the writer of an interesting topographical book. He is too personal; too much concerned with the way in which he and his companion were treated at inns and elsewhere, too prone to relate rather foolish anecdotes of other American tourists whom he encountered. The book is, in fact, one to make an Englishman shud-

der, and to depress even more the American who has been over the same ground.

Monsignor the Count Vay de Vaya and Luskod, Hungarian by birth and a traveller thoroughly familiar with Europe, journeyed through Asiatic Russia and several countries of the Far East previously to the Russo-Japanese war. He has collected his notes and recollections, some of which had already appeared as magazine articles, under the title "Empires and Emperors of Russia, China, Korea, and Japan" (E. P. Dutton & Co.). As envoy of His Holiness the Pope, he had interviews with the four rulers most talked about a year or two ago. None need, however, seek in this book for penetrating insight or for fresh and exact information. His interviews with the emperors seem to have been of the most perfunctory character. Few of the author's statements go above the level of those of the average hasty traveller, who accepts uncritically any story which is interesting. For one example of many, monsignor does not seem to know that the drum hung in front of the royal palace at Seoul, and struck by petitioners, was common to all countries under Chinese influences or tradition. The fires nightly lighted on the Korean mountains were telegraphic signals from distant points on the coast, and not methods of attracting the king's attention to a petitioner. It is a pity that some expert could not have read the proofs and presented more of the proper names in correct form, even though the book is extraordinarily impersonal. Illustrations are for the most part already familiar. It cannot be said that the postscript in a final chapter throws much light on the situation; the author even thinks that "the peace of Portsmouth does not alter the status quo from what it was after the treaty of Shimonoseki." Yet, despite these criticisms, the style of the author is easy and his text entertaining. The average reader will surely be delighted with these experiences of a gentleman of kindly heart who adds to a pleasing style the graces of a cosmopolitan traveller.

RELIGION AND BIBLICAL CRITICISM.

Prof. William Newton Clarke of Colgate University, author of several theological works of wide circulation and considerable influence, is at work upon a volume to be entitled, "The Christian Doctrine of God," which he has promised for the International Theological Library. Dr. Clarke is one of the most eminent of living American teachers of doctrinal theology. His literary activity began rather late in life, starting with a modest volume of outlines of his lectures to classes of theological students. The unassuming book was privately printed and designed chiefly for the use of his pupils, but it was discovered by outsiders, and, after thorough revision by the author, was issued by Charles Scribner's Sons. It met with immediate success, and has attained greater popularity than any work of its class in recent years. In Great Britain an enthusiastic notice by the late Dr. Marcus Dods brought it into wide favor. The appearance of the "Outline" was very opportune, since treatises handling Christian doctrine in anything like a thorough manner had become altogether out of date, and the

books which were appearing from the newer point of view were fragmentary, partial, and altogether unsatisfactory. Though published in 1898, the "Outline" retains its place as the best systematic exposition of Christian belief of the moderately orthodox school. Since that time Dr. Clarke has issued a volume of lectures which he delivered at Harvard, entitled "Can We Believe in God the Father?" a book on the modern motive for foreign missions, and also a series of Yale lectures on "The Use of the Scriptures in Theology." The latter may be taken to mark the epoch of the definite renunciation of the proof-text method in American systematic theology. Dr. Clarke's present task is the most serious one he has attempted, and if he succeeds in producing a book on the subject of Christian theism of the clearness and force which have characterized his other undertakings, he will have made an important contribution to American theological science.

Prof. George F. Genung's commentary on Leviticus and Numbers (Philadelphia: American Baptist Publication Society) is a clear and practical exposition of those books for laymen. The subject gives little occasion for the display of that paradoxical ingenuity which marks his works on Job and Ecclesiastes. There is a touch of the same spirit, however, in the suggestion that the conception of sin as a substance—the common savage notion—is a more developed idea than the ethical conception, and that the idea of sin as defilement was one of Israel's permanent contributions to the world's thought. Even in a popular commentary, greater familiarity with Jewish ritual tradition on the one side and with the religious notions and practices of other peoples on similar planes of culture would often stand the interpreter in good stead. The Hebrew words scattered through the notes are frequently reproduced in surprising transliteration, such as *qārbān. hiqtīr (qorbān, hiqtīr)*.

In "The Book of Job in the Revised Version," edited with introductions and brief annotations (Oxford: Clarendon Press), Prof. S. R. Driver has provided an admirable aid to the reading of the Book of Job in the Revised Version. The introduction sets forth, briefly and lucidly, the problem of the book and its structure, and adds helpful suggestions on the use of the marginal notes of the revisers. The text is broken into paragraphs; the headings of these sections, in italics, furnish a running synopsis of the contents and analysis of the argument. The notes show a wise parsimony; the author's aim is to enable the reader to understand as he reads, without diverting his attention from the poem to the commentary. It is needless to say that judicious scholarship and mature reflection are manifest in every line.

Bishop Potter of the Protestant Episcopal diocese of New York, in addition to his obvious opportunities for meeting eminent prelates while serving a metropolitan see, also, as secretary of the House of Bishops for many years, had exceptional opportunity to study the Episcopal overseers. Impressed of late with the value of anecdotal material and the personalia of great men as they shed light on character, he has

brought up from the wells of his memory "Reminiscences of Bishops and Archbishops" (G. P. Putnam's Sons), which has an excellent collection of stories. Some studies of character, while not exhaustive, are illuminating; by far the best is one on Bishop Dudley of Kentucky, who was a humanist to the end, never allowing the office to cramp and cabin the man. Bishop Potter has not refrained from disclosures respecting the use of tobacco and liquor by bishops, including himself, which will subject him to still further denunciation by the Women's Christian Temperance Union. The net result of the book is to prove that ecclesiastics are like other men, in having a saving sense of humor, in regard for substance rather than for form in religion, and in emphasis upon character rather than on possessions. The treatment of the men described in some cases is sketchy and thin, and in no case is there any such triumph of character-portrayal as James Bryce has given us of Bishop James Fraser in his "Studies of Contemporary Biography." Principal Fairbairn, when Canon Gore was made Bishop of Worcester, said that he did not think the more of him for being made a bishop, but he did think all the better of bishops now that he was one; and in some such mood even a contemner of bishops may arise from this book, since it discloses persons, a majority of whom were men first and always.

STUDIES IN HISTORY.

A History of the Reformation. By Thomas M. Lindsay, M.A., D.D.—I. The Reformation in Germany from the beginning to the Religious Peace of Augsburg. New York: Charles Scribner's Sons. \$2.50 net.

The first thing to be said about this volume is that it is no mere compilation. Dr. Lindsay is well within bounds when he writes: "My excuse, if excuse be needed, for venturing on the field is that the period is one to which I have devoted special attention for many years, and that I have read and re-read most of the original contemporary sources of information. While full use has been made of the labors of predecessors in the same field, no chapter in the volume, save that on the political condition of Europe, has been written without constant reference to contemporary evidence." In treating the Lutheran Reformation, any one who can read German has before him a vast body of erudite, but uncoordinated monographs. These Dr. Lindsay uses with great effect, but, as indicated above, his chief reliance is upon original documents of essential importance.

The work has many merits, but in our opinion its most distinctive feature is the careful analysis of social and religious life in Germany on the eve of the Protestant revolt. Here Dr. Lindsay accentuates the existence of evangelical piety inside the Latin Church—not confined to saints and mystics, but widely diffused among those of the common people who regarded religion seriously, and not as something which meant pilgrimages, miracle plays, and other ecclesiastical junkets. We shall not multiply details, but the point seems well taken that there were many people in whose eyes Lutheran doctrines when first proclaimed were self-evident truths.

This appears to us the central idea of Dr. Lindsay's book. "The great Reformation had its roots in the simple evangelical piety which had never entirely disappeared in the mediæval church. Luther's teaching was recognized by thousands to be no startling novelty, but something which they had always at heart believed, though they might not have been able to formulate it."

As for Luther himself, Dr. Lindsay's views have already found expression in the article he contributed to the "Cambridge Modern History." Here, again, the nucleus of the discussion is to be found in a single idea. Luther succeeded because the world could see faith incarnate when it regarded him. In the words of Dürer's "Tagebuch," he was "the pious man," "the follower of the Lord and of the true Christian faith," "the man enlightened by the Holy Spirit." Lord Acton has told us how Döllinger, opposed though he was to Luther's *falsche Imputationslehre*, used to defend him against some of the common accusations:

When people said of Luther that he does not come well out of his matrimonial advice to certain potentates, to Henry and to Philip, of his exhortations to exterminate the revolted peasantry, of his passage from a confessor of toleration to a teacher of intolerance, Döllinger would not have the most powerful conductor of religion that Christianity has produced in eighteen centuries condemned for two pages in a hundred volumes.

If one of the most eminent Catholic historians could thus absolve Luther from conscious antinomianism, one need not expect from Dr. Lindsay a lesser degree of willingness to judge the reformer's character by its strongest rather than its weakest features. Philip of Hesse's bigamy is, of course, a test case. No other act so damaged the reputation of Protestant theologians as their refusal to accuse of vice the prince whose aid seemed indispensable to their cause. Dr. Lindsay at once acquits Luther of trimming his sails to suit a friend and ally, and finds the explanation of his conduct in that fondness for tradition, which coexisted with his reverence for the Bible:

The Church had been accustomed to say that it possessed a dispensing power in matrimonial causes of extreme difficulty; and, in spite of his denunciations of the dispensations granted by the Roman Curia, Luther never denied the power. On the contrary, he thought honestly that the Church did possess this power of dispensation even to the length of tampering with a fundamental law of Christian society, provided it did not contradict a *positive* scriptural command to the contrary.

We have touched upon one or two points which seem salient in Dr. Lindsay's view of the Reformation as a religious movement, and of Luther's part in it. The political aspects of the revolt from Rome receive less attention than would be given them by most historians, but we must remember that, being a contribution to the "International Theological Library," this volume is bound to insist upon the theological motive. After sketching the antecedents of Protestantism and its progress to the Peace of Augsburg, the work concludes with an excellent section, entitled "The Religious Principles inspiring the Reformation." The chief topics which Dr. Lindsay considers under this heading are

the universal priesthood of believers, justification by faith, the Bible, the person of Christ, and the Church. Throughout it is Lutheranism that receives the lion's share of attention, but the comparative method is freely used, and, in a complicated tangle of doctrines, no typical opinion is suffered to drop out of sight altogether. On the strength of first-hand knowledge, excellent arrangement, and thoughtfulness, this book deserves the most respectful attention. It is well adapted for use in the senior grades of university teaching.

A Political History of the State of New York. By De Alva Stanwood Alexander.

Two volumes. New York: Henry Holt & Company. \$5.

The author who sets out to solve the problem which James Parton aptly called "that most unfathomable of subjects, the politics of the State of New York," has before him a task requiring at once the perseverance of an antiquarian, the discernment of a political philosopher, the impartiality of a judge, and the sympathetic devotion of an enthusiast. If the author of the present volumes has not all these qualities in sufficient quantity to give his work the title "definitive," he has at any rate given us a very useful history. Indeed, even if it were not as well done as it is, the fact that it covers a practically unoccupied field would give the book a certain value. For Jabez D. Hammond's history bearing the same title was completed in 1848, and Hammond himself was too close to the events which he described and too intimately related to the principal actors to be exactly fair or impartial. Yet despite its long-windedness Hammond's history remains a rich storehouse. Of this wealth of undigested material Mr. Alexander has availed himself.

The two volumes begin with the adoption of John Jay's constitution, and the establishment of the State Government in 1777, and close with the outbreak of the Civil War. In his preface the author tells us that he hopes, in a third volume, to carry the narrative down to 1896. The selection of 1777 as a starting point, although justified by the title, makes the beginning somewhat abrupt. A detailed exposition of existing political forces would have afforded a much better understanding of the course of events during the early years of Statehood. The author has, however, a clearly defined method to which he adheres faithfully. This method is best explained in his preface:

The history of a State or nation is largely the history of a few leading men, and it is of such men only, with some of their more important contemporaries, that the author has attempted to write. It would be hard to find in any commonwealth of the Union a more interesting or picturesque leadership than is presented in the political history of the Empire State. Rarely more than two controlling spirits appear at a time, and as these pass into apogee, younger men of approved capacity are ready to take their places.

A writer who starts with that thesis runs a risk of conjuring up "controlling spirits" where there are none, and this danger Mr. Alexander has not entirely escaped. The mantle of power did not always find shoulders waiting for it. When Jay and Hamilton passed from the stage and the Anti-Federalist leadership de-

scended from George Clinton to his nephew, De Witt, the latter did not for many years find either among the Federalists or the factional leaders of his own party any single man who was anything like his match. At a later period, after Van Buren's forced retirement, when the Democratic party was split over the slavery question, Horatio Seymour was a long time in bringing the warring factions under his control. It is difficult too, to find such an example of a single powerful leader in the Whig and Republican parties during the years of the Weed-Seward-Greeley triumvirate. Nevertheless, it is remarkable how near to the truth Mr. Alexander's picture of the constant warring of two predominant personalities remains.

A history written on such a plan is perforce interesting, if for no other reason than because men are more attractive than institutions. Mr. Alexander has not neglected his opportunity, and his pages are enlivened and enriched by numerous pen-pictures of New York politicians and statesmen, which constitute what are perhaps the most valuable, as well as the most entertaining, portions. The style is terse and clear. The story is well told, and good use is made of anecdotes and reminiscences, which are not, however, allowed to clog the narrative. The author breaks away absolutely from the annalistic form in which so much of our history that is not monographic is still written. His attention is directed to periods rather than years. The apportionment of space depends so much on the point of view that it is difficult to criticize it. The fact that approximately 350 out of 400 pages in Volume I. are devoted to the struggle between the Clintons and their political opponents may be excused on the score that their personalities really dominated politics for a half-century. But that the last eleven chapters of the second volume should be taken up almost entirely with the years 1859-60, when national and not State politics controlled, is less comprehensible.

In his endeavor to get away from all local history in contradistinction to the larger field of State politics, the author has fallen into the error of neglecting to take full account of political events in New York city and their influence on the State. He does scant justice to the growth and development of Tammany, the power of which was already recognized "up-State" in the first quarter of the last century. It may be that the author's theory of the dominant power of personality allows him to minimize the importance of such significant movements as those of the Equal Rights party, the Anti-Renters, and the Anti-Masons, the origin of which could not be traced to some "controlling spirit."

There are some misstatements that show carelessness of detail. In Volume I., pages 45 and 47, the statement is made that Burr had already (1789) served two terms in the Legislature, whereas he had only been a member of the Assembly of 1784-85. Gideon Granger was not a member of the Cabinet, as stated on page 202 of Volume I. The postmaster-general was only made a Cabinet officer in 1829, when President Jackson's needs demanded it. E. D. Morgan was chairman of the Republican national committee from 1856 to 1864, but was never chairman of a Republican na-

tional convention, as the author states, in Volume II., page 248.

What Mr. Alexander has done is to give an interesting, although, perhaps, a too uncritical, account of political leaders and events in a field of American history that was practically unoccupied. To the reader, who has hitherto found it impossible to get anything like a general idea of early New York politics in a single work, the volumes should prove a boon.

RECENT FICTION.

The Dream and the Business. By John Oliver Hobbes. New York: D. Appleton & Co.

This novel was already in press when its brilliant author suddenly died. It may well enough stand as her monument, for it suggests everything characteristic in her substance and manner. It says, perhaps, quite all that the next generation will care to hear of Mrs. Craigie. On this point one cannot affect to speak with certainty, since cleverness is so often merely a veil or a distraction which time may sweep away.

The publishers have given the volume conspicuousness by setting it between exceedingly garish, even lurid, covers, and by securing an introduction from the hand of the Hon. Joseph H. Choate. This is more properly an obituary note than, as the publisher tags it, "an appreciation of Mrs. Craigie as woman and author." Mr. Choate was a personal friend of Mrs. Craigie. He speaks of the freshness and piquancy of her conversation, and proceeds:

The same qualities imparted to what she wrote and what she said a marked lightness and delicacy of touch, which was perhaps the most striking feature of her literary character, and her chaste and fastidious taste so controlled and permeated her thoughts and feelings that one can read all her many books from beginning to end without finding a word or sentiment to offend the most delicate standard.

All, we observe, in the best obituary manner, which is for critical purposes the worst manner possible.

Some score of years ago Mrs. Craigie captivated the world of English novel-readers by her first appearance in fiction. American born, French bred, she found her proper home in England. London seized and held her as it had seized and held Mr. James. And in turn she captured London with her sallies. She flashed, she sparkled, she was knowing and taking, and in all senses smart. She did extremely well what was hardly worth doing. She was, in short, a soubrette whose daring parlor performances won the approbation of the "smartest" people. Mrs. Craigie's standard is the standard of *courtesan*, and much of her charm is due to the grace and skill with which she manoeuvres upon the ragged edge of *inconvenance*. Sex is her absorbing theme, and more especially the perils of matrimony as experienced by the socially elect. In this last novel of hers "the dream" is love, inconsiderate of barriers religious, financial, or social; "the business" is life shorn of illusion, accepting love no longer as a delirium or an inspiration, but as a rather mournful problem. None of the persons in this story, wed or unwed, find lasting happiness in love. But the wed, we are given to under-

stand, have clearly the worse of a bad choice.

Both looked resigned and at the stage in unsatisfactory human relationships when the pair, having exhausted their mutual dislike, were almost attached to each other by a common bond of suffering.

They were seldom in complete sympathy, and they were drifting by degrees into the calm friendship of those who, having no illusion about each other, also never blend.

Tessa dared not tell herself that they were friends who, in marriage, were mismatched; domestic both, they failed to appeal to each other's particular kind of domesticity.

So our various wedded pairs are described; or, by way of generalization, thus: "A set composed of rich, agreeable couples who lived to amuse themselves and each other, without scandal if possible, but at any rate with audacity."

One of these discontented couples is actually restored to some sort of union. This happy consummation is led up to by a long interview, in which varied causes of discontent are thoroughly threshed over. Each of them, incidentally, confesses an inclination for an outsider. It is hard to take these persons seriously; they are not persons, but variously costumed interlocutors. They are all clever, sophisticated, desirous of compunctions and half-shades of feeling; capable of paradox and epigram. There are "good things" of the latter sort to catch the eye on every hand:

One of the most sincere men I know has run away with his neighbor's wife, robbed his best friend, and drinks too much habitually. He would despise a moral person, and think him mad or a hypocrite.

Women like display of feeling, not its depths.

The arts are but drugs for the disappointed imagination.

People who wished to regard divine Providence as an English gentleman of large fortune, perfect morals, an anxiety to frustrate the foreigner, and a wish to feed, rather than to meet, the poor, were disturbed by Firmalden's fear of God, which to some seemed superstition, and to others ill-advised.

Only a few years ago Mrs. Craigie became a convert to the Roman faith; and it is not surprising that this last novel, in its most serious aspect, should be a sort of quiet brief for the Church as the only sure refuge for the heart-weary and worldly-wise. Carnival or Lent—these are the poles of her experience; one perceives something rather middle class about simple human happiness. The smart world deserves to be chronicled, like other worlds; but too much may be made of its artificial complexities. Sophistication, standing in wonder at its own reflected image, is not a theme for song.

Sophy of Kravonia. By Anthony Hope. New York: Harper & Brothers.

Mr. Hawkins cannot be called mute, yet as to the note that he sounded in "The Prisoner of Zenda" his harp mouldering long has hung. His Rupert was hardly more than a spurious claimant to the affectionate interest aroused by the former book. In "Sophy of Kravonia," however, there comes a lawful heir to enthusiasm. In no way connected with its honored forerunner, it pulls at the same heartstrings. By a reversal it is now an English woman whose fortunes knot themselves up with those of a mythi-

cal kingdom, yet there is nothing mythical about Sophy, though everything that is original. She is a genuine and most charming person, with "her masculine mind and her feminine soul"—described by an admirer as being "like a singularly able and energetic sunbeam." The whole eventful story is so well knit that each marvel seems not only possible but almost inevitable, from the childhood of Sophy Grouch, daughter of an Essex farmer, till the time when she sits in the dwellings of kings, and wears the sheepskin tunic of the shepherd subjects of her prince. The conspiracy which thickens the plot is capitally developed, and long before the matter is solved the reader has quite forgotten that at the outset there was a certain sense of oppressiveness in the very serious marshaling of documentary evidence, as if for the history of a nation or the biography of a nation's hero.

Listener's Lure. By E. V. Lucas. New York: The Macmillan Co.

It is pleasant to relax from the strain of romantic or psychological narrative in the presence of a bit of good comedy cast in the despised and almost obsolescent epistolary form. The truth is, our pampered jades of fiction have learned to demand a free rein; without the power to invent their own forms, to describe and to comment and narrate as the spirit moves, they would reckon themselves hardly better off than mere dramatists. The people who write these letters are all delightful and all different; and the story in which they collaborate, while of no essential novelty, is agreeable, and seems true. There is a guardian unconsciously in love with his ward, and a ward unconsciously in love with her guardian. He magnanimously sends her away that she may have a chance to fall undesirably in love with somebody else. She goes so far as to make a false start in that direction, but recovers her footing in time, and everything is as it should be. This might easily be tame, but the central affair is so enlivened by the commentary of several subsidiary persons, both wise and foolish, as to achieve a really fresh savor. Especially invaluable is a garrulous and inconsequent lady of the order of Jane Austen's Mrs. Bates. With her we are loath to part when the customary wedding bells ring down the curtain.

Ridolfo: The Coming of the Dawn. By Egerton R. Williams, jr. Chicago. A. C. McClurg & Co.

This is sub-entitled "A Tale of the Renaissance." The characters are fictitious, but their names and their deeds and their surroundings are borrowed from the histories of "The Magnificent Bagliopi," long the ferocious despots of Perugia. Ridolfo himself is suggested by the greatest of the Bagliopi, Gianpaolo, who to his strength and violence added an element of magnanimity. The book tells of the culmination of Ridolfo's cruelties, the dawning of a conscience, and the triumph of his better self through the love of a saintly wife and the martyrdom of a Franciscan monk. The proper moment to read the tale is when the brain is fagged with books of trivial twentieth-century grievances and perplexities. Crimes and virtues are on a sweeping scale. Oaths broken at

will; a dagger for the annoying meddler, a cup of poison for the interceding wife, have a definiteness that alternates well with the niggling problem of to-day's fiction. The torture chamber may try the nerves, but it was perhaps necessary that the reader should see what Ridolfo saw in order to understand his conversion.

The author has searched well the history of Italy and the fifteenth century, and has his splendors and brutalities drawn up in effective contrast. His Fra Bernardo, based upon that saint Bernardino who came to Perugia in 1425, is a noble type of the followers of the Saint of Assisi, giving his labor and his life for the revival of the spirit of kindness. Gismonda, the compassionate, long-suffering wife of the tyrant, conquering by love and righteousness, is not more than the others a portrait of any one person, but a reflection of the womanly inspiration that was not lacking to even that dark period. The book is a vivid picture where the high color is offset, perhaps mercifully, by the careful, leisurely, sermonizing treatment. While the story never flags, there is time for much description of persons, things and situations, of costumes and armor, in an equal absence of haste and rest. It leaves a strong and even valuable impression of an age which it is well to look back at, not only when modern puzzles seem petty, but when modern civilization seems defective.

Some Reminiscences of William Michael Rossetti. Two volumes. Imported by Charles Scribner's Sons. New York. \$10 net.

It may as well be said explicitly that these memoirs are a disappointment. They contain an unconscionable deal of matter for which even the present fashion of indiscriminate autobiography can furnish no justification—details about the servants in the Rossetti household, the illness of his wife and children, domestic concerns of all sorts. Nor are the omissions any less annoying than the excesses. Only last year Holman Hunt published, under the somewhat presumptuous title of "Pre-Raphaelitism and the Pre-Raphaelite Brotherhood," an autobiography the burden of which was to prove that the writer was the founder and only faithful member of the P. R. B. It was easy to read between the lines that Mr. Hunt was jealous of Dante Gabriel Rossetti and not averse to belittling his fame. Naturally one looked in the present work to see some rejoinder, implied or expressed, to those rather egotistic assumptions. Apparently Mr. Rossetti has not even read that work; we gather, indeed, that his own record was completed in 1903, although the Preface is dated 1906, and includes the mention of the Complete Poetical Works of Christina Rossetti, which he edited in 1904. But the omission of any allusion to Hunt's autobiography or to the "Memorials of Edward Burne-Jones" (1904) is not the most serious fault. The fact is that Mr. Rossetti has in various memoirs and introductions given out all his wheat and that only the chaff is left for this garnering. He is kind enough to give in the Preface a list of his earlier writings, and this is well; but it is annoying, just when we are approach-

ing an interesting topic, to be warned off with a reference to number 16 or 17 of his other writings.

For page after page we have a *catalogue raisonné* of Mr. Rossetti's acquaintance among artists and men of letters, to each of whom he devotes a paragraph of characterization. His opinions are just, and may have some value in this form as a kind of personal "Who's Who," but they make dull reading. Here and there a bit of more entertaining gossip slips in. Thus there is a whole chapter given to the story of Christina Rossetti and Charles Cayley, which is necessary for a proper understanding of Christina's sonnet-sequence named "Monna Innominata," and for the Italian poems "Il Rosseggiar dell' Oriente." In the earlier memoir Mr. Rossetti left this affair somewhat in the vague, saying distinctly: "Of several details in the second case—though important to a close understanding of it—I never was cognizant." He now states more emphatically that the only bar between the lovers was Christina's refusal to bind herself to an unbeliever.

It is a pity that Mr. Rossetti's fire has been thus scattered, for his relation to his brother and sister and to the whole circle of pre-Raphaelites might have furnished him with material for one really valuable and interesting book. As it is, if one wishes to get some notion of the dæmonic quality of Dante Gabriel and of his strange influence on that group of ardent reformers, the best source is not the "Reminiscences" of his brother, but the two volumes in which Mrs. Burne-Jones has published the "Memorials" of her husband.

The most interesting of the characterizations are those of Burne-Jones, who is portrayed as rather effeminate; of Swinburne, and of Trelawny. Perhaps the best anecdote is that which shows the state of canting prudery in England when Swinburne's "Poems and Ballads" came out. The story may be given in Mr. Rossetti's own words:

In 1868, Mr. Legros exhibited in the Royal Academy an excellent picture of some monks or friars at their repast—called The Refectory. There was a tabby cat painted in the picture. In that year was published a pamphlet of Notes on the art of the season. Mr. Swinburne wrote one section of it, and I the other. Swinburne—who is a great lover of cats (a fancy which I share with him), and also (a fancy which I only very faintly share) of serpents—wrote of this painted quadruped as "a splendid cat." The picture was bought—presumably before Swinburne's eulogium had appeared—by a person of some distinction. Many years afterwards, in 1895, I had occasion to look at this painting in the house of the heir of the original purchaser. To my surprise, the cat had disappeared. "Why," said I, "there used to be a cat in that corner of the picture." "Yes," replied the owner, "there was; but my predecessor, on seeing that Swinburne had found a good word to say for the cat, got her obliterated forthwith."

An Introduction to Logic. By Horace William Brindley Joseph. Oxford: The Clarendon Press.

It is surprising in what a variety of ways the different schools of logic of our day endeavor to lay the foundations of their science. One appeals chiefly to mathematics, another to metaphysics, a third to the general notion of a sign, a fourth and fifth to this and that branch of psychology,

a sixth to linguistics, a seventh to the history of science; and still the 11st is incomplete; and there is an equal disagreement as to the business of logic. The school to which Mr. Joseph seems to give his adherence, which is that of the majority of English logicians, is none of those just mentioned; for it troubles itself very little with any questions of method, but just goes its way, scattering opinions upon points of logic, and attaching to this one and to that any reason that may suggest itself. Such promiscuity of method might be expected to issue in great variations among the doctrines of the different members of the school; and it is true that some of its adherents—Miss Constant Jones, for example, and Alfred Sidgwick—have written books of marked originality, which readers who dip into the subject without diving too deep find very suggestive. The greater number, however, among them the author of this volume, are led, by whatever unseen and inscrutable power it may be, to reproduce in the main the divisions and forms of the traditional logic, slightly modified by metaphysical doctrines, partly in most cases those of Mill, mixed not infrequently with those of Mill's philosophical antipodes.

When, however, we say they reproduce the traditional divisions, we only mean that verbally they do so, for the significations some of them attach to the old terms of logic, have only preserved the shell and have cast away the kernel. For instance, Mr. Joseph excludes from the class of universal propositions all those which do not imply the existence of some individuals denoted by their subject, as well as all those which do not predicate by "conceptual necessity," both of which exclusions flatly conflict with the *Dictum de omni* of Aristotle and with all tradition, and which, taken together, make one simple proposition to express at once both existence and necessity, which constitutes a third breach of traditional usage in connection with the use of the single term "universal." In such ways as this he effects a verbal agreement with the traditional doctrine by demolitions of parts of the existing system of nomenclature and using the débris to begin, but only to begin, the erection of a new system in the place of it, like that architectural performance of Charles V. in Granada.

We shall not find fault with any man for any sincere study; and if it gives him any particular pleasure to call his study logic, that word is by this time pretty near past spoiling. Only we would suggest that to define one's object of study in such a way that scarce anything would be excluded—as when Mr. Joseph and others of his school tell us that logic ascertains "how we think"—it seems fair to demand that their conclusions should be based upon inductions correspondingly broad. The reviewer, for example, can have nothing but praise for a logic he dimly remembers reading in the sixties, which carefully analyzed all those phrases of the German language that are equivalent to conjunctions, without any pretence that it covered all the possibilities of thought in this narrow class of conjunctive elements. We might think, however, that before coming to those variations of thought, it would be better to begin by considering all the ways in which

we must think in order to draw all kinds of necessary conclusions; for even if logic be concerned with all modes of thinking, we are inclined to the opinion that it is specially concerned with those forms of thought that have some bearing upon the validity or non-validity of different ways of reasoning. It was fifty-nine years ago that Professor De Morgan called attention to certain forms of inference of great practical importance, which nothing in the logic-books explained or gave any clue to, although it is necessary to sound reasoning to distinguish the cases in which such arguments are valid from the cases in which they are invalid. Yet we do not remember ever having seen any mention of these forms of inference in any treatise of Mr. Joseph's school. Here is an example of one of them:

Every dollar that ever was or will be in the safe was or will have been received as a loan.

For every dollar ever received as a loan a payment of a dollar will be made.

Hence, every dollar that ever was or will be in the safe was or will be paid out.

When De Morgan opened this road to logical inquiry, he opened a road to sempiternal glory for British logic; but unfortunately investigators of any vigor of thought were lacking. De Morgan did much more than that; for he also opened up the logic of relations, which had from the beginning been a well-recognized branch of logic, and which, when American and German logicians developed it, turned out to throw a wonderful new light upon every part of logic, while the logicians of the Oxford school merely advanced little reasons for thinking a logic of relations to be impossible.

The distinguished mathematical genius, George Boole, produced a method of logical inquiry by means of algebra, which was a most brilliant achievement. A few logicians of the most numerous British school have paid attention to the Boolean logic. We mention here, not because they are the best, but because they are the most soundly critical, Venn, Jevons, and Keynes. The great body seem never to have looked into it.

Posterity will say that human intelligence is under vast obligations to the logical work of Alfred Bray Kempe, sometime President of the London Mathematical Society. But one may search in vain for any evidence that logicians of the school we are speaking of, have so much as divined what relevancy his laborious researches have for any real problem of reasoning.

It is a matter of regret to us that the brevity of this notice forces us to confine ourselves to Mr. Joseph's faults, since they are the faults of his school, and it is not quite fair to the individual to judge him exclusively according to the genus to which he belongs. But the truth is that when we have said that this treatise possesses such original merits as the majority of the thousand treatises can claim that have appeared since Michael Scott and the western publication of Aristotle, and perhaps possesses a little more, we have accorded to it all the notice it merits; while its school is of more importance simply on account of its numerical greatness, and because of the evil that it is working to British thought. This school is composed mostly of indolent and often feeble minds

whose interest in logic lies in the professorships, the fellowships, the popularity as tutors, or other sources of bread and butter which they enjoy, and who are therefore sworn obscurantists, bound to oppose any movement of real thought in English logic. When a study fails to develop definite and well-considered methods; when it is not animated by a sufficient passion to find out the truth, whatever the truth may be, to insure the careful study of all the work that earnest students do within its province; and when in place of manifold new discoveries, it does no more than verbally reproduce foregone conclusions, it is idle to boast that is a science.

Mr. Joseph sometimes lays down general propositions without any pretence at making their reasonableness evident; and he justifies this practice by saying that his book is not a complete treatise on logic, but, as its title indicates, is only "an introduction to logic." Now, says he, in the first introduction to any science there must be more or less dogmatism. Is this Oxford pedagogics? Elsewhere, if a man is to write an introduction to any science—say chemistry—he will draw a clear line between information as to what has happened, and dogmatic insistence upon principles and the like, and will take the utmost pains in describing, say, the experiments of Lavoisier upon the oxidation and reduction of mercury, to show the convincingness of the reasoning; so as to remove the idea that there is to be any appeal to authority or other arbitrary determination of principles. If he has to teach botany, he will probably set the beginner at work to dissect a flower with his own eyes and fingers, and to describe what he sees; and will be careful to make him understand that botany is only an orderly description of what can always be seen under favorable conditions. It appears to some of us that the first steps in any science ought to deal with those departments of the science that come most in contact with the life and interests of the students; and we should not approve of an introduction to botany, whose first two hundred pages were occupied with the artificial, though indispensable, technicalities that botanists are compelled to use in order to describe species and other forms. Yet it is the like of that, that Mr. Joseph does in logic; and useful as his book may prove to an advanced logician, it is almost the worst possible for a beginner's introduction to the subject.

The Arbitrator in Council. New York: The Macmillan Co., \$2.50 net.

This anonymous octavo volume of more than 550 pages discusses peace and war. It is in the form of an elaborate symposium, supplemented by various reports in writing by the *dramatis personæ*, among whom are Reginald Case, K. C., a barrister "with a conscience," Martin Truelove, in holy orders, the Rev. Augustine Clarke, an Independent minister, Leopold Meyer, a stock broker, William Browne, a learned Cambridge historian and pupil of Lord Acton, Captain Seymour of the Intelligence Department of the War Office, and Tracy de Vere, a retired admiral. The Arbitrator himself is Mr. Ashworthy, a veteran Liberal, of seventy-

five, and disciple of John Bright. For every day during a week there is a discussion; the subjects discussed are the causes and consequences of war, modern warfare, private war and the duel, cruelty, the federation of the world, arbitration, the political economy of war, Christianity and war.

As a summary of all that is to be said on the subject, thrown into a readable form, the book is well done; nevertheless, after reading it there is left in the mind of the reader the perhaps unavoidable feeling that it is an old story; that after all, we knew before that war does not exist because there is anything to be said for it, but in spite of overwhelming evidence that it is the worst possible calamity. In other words, the book is a demonstration of what nobody can successfully dispute. It is chiefly valuable, therefore, as a storehouse of all the wisdom of the ages on the subject. Fifty years ago, so thoroughly was the world convinced of the disadvantages of war, that we doubt if the author could have found a publisher. In the last fifty years there has been a revival of the old fallacy, transmitted from the pre-industrial predatory period, that one of the objects of national existence is war, and that there is a great deal to be said for war in the abstract. The progress of democracy, too, has thrown political power, which includes that of making war, into the hands of vast masses of men who know little or nothing of history or political economy, and who are prone to the delusion that it is upon successful war that the greatness of nations hinges. So that we are undoubtedly living in a generation which much needs the wisdom contained in this volume. Could it be instilled into the masses who are now pleased with taxes imposed for battleships, and deluded with the notion that "Trade follows the flag," it would do more good than has been done by any one book in the world, unless it be the Bible. Unfortunately, it is unlikely to be read except by those who are in sympathy with its argument. This, at least, is the impression made upon us. If we are wrong, so much the better.

The only argument in favor of war brought forward in recent times that has any novelty in it, is that brought to our attention by the neo-Imperialists and reactionaries here and in England, within the last twenty-five years—that war is a school of fortitude, and heroism. The implication is that you need war to foster those virtues. The answer to this suggestion is, of course, that there are countless ways in times of peace in which fortitude and heroism may be and are fostered. The fireman, the policeman, the sailor, the engineer, are heroically risking their lives every day, without the stimulus of drum or trumpet. But, besides this, it would be the work of a lunatic to introduce calamity and destruction in order to foster the virtues. We do not scuttle ships in order to develop the desire to save the lives of others at the expense of our own, nor set fire to a city for the sake of filling people with zeal to extinguish the flames. The idea that we can defend war by such an argument is preposterous.

It is not in arguments of this sort that actual war finds its support. The fundamental reason for war, the unanswerable rea-

son, before arbitration between nations became recognized as an available substitute, is that it is the *ultima ratio regum*. The last resort of sovereigns, after argument is exhausted, is violence. Hence in any particular case, the question always is, not whether the war was not a good thing in itself, *quâ* war, but whether it was avoidable. We defend the war of the Revolution as having been forced on us. In civil wars both sides usually imagine themselves to have been driven into taking up arms. The great discovery of our age is that most wars are preventable by arbitration. If the world at large ever became persuaded that war itself was a good thing, it would inevitably throw the leading nations back into that stage of civilization from which they have emerged—the military or predatory stage, in which war is recognized as the natural means of a State's growth, in which every man is trained first to be soldier, and peace is regarded as the exception.

It is impossible to make extracts which will give any idea of the book as a whole. In the wide range of the subject, almost no topic is left untouched, from the question of the Early Christian doctrine and practice as regards military service, down to the question whether a general arbitration treaty should include everything, or bar matters affecting national honor. The varied scholarship and reading drawn upon give no clue, as far as we know, to the authorship.

The Spirit of Democracy. By Charles F. Dole. New York: Thomas Y. Crowell & Co. \$1.20 net.

In both its matter and its manner, Mr. Dole's book will undoubtedly please a good many people. It begins with the familiar criticism of history—or, rather, of historical writing—as largely concerned with the wrong sort of thing; it defines the "spirit of democracy" in terms which may mean much or little, according to the notions of those who use them; it passes rapidly in review, with a considerable wealth of stimulating suggestion, a large number of contemporary social conditions and problems; and it leaves the clear impression that, in the opinion of the author, the world is getting on better than ever and is pretty sure to come out all right. That which is saving us from our sins, and fitting us not only for the life that now is, but also for that which is to come, is democracy. With the formal aspects of democracy, as a scheme of government or political organization, Mr. Dole does not, indeed, much concern himself, though he thinks that the President of the United States has quite too much power, especially in the matter of appointments, and that American municipal government is pretty bad. What interests him most is the worldwide development of a social temper distinguished by good-will, neighborliness, regard for the rights of others and the good of all, humanity, justice, and peace. Competition is giving way to coöperation. Economic subjection is a painful anomaly, the exploitation of alien or inferior peoples a relic of barbarism, and war a crime. Of one blood are all the nations of the earth; let us live as such!

Mr. Dole is not, indeed, under the de-

lusion that we have as yet perfectly attained to all this. He frankly admits that we have done those things that we ought not to have done, and have left undone the things we ought to have done. He declines, however, to believe that there is no health in us. On the contrary, his survey of present-day social interests and activities has for its object, apparently, the demonstration that, amid all our lamentable shortcomings, the spirit of true democracy, the atmosphere of social oneness and mutual regard, more and more pervades the world. The American party system, for example, tramples on minorities and strangles real political interest, but the spirit of democracy is disintegrating the parties and favoring the formation of small groups. Crime and pauperism are still with us, but we are attacking the causes of poverty and reforming the criminal. Our policy of imperialism is a sordid affair, unblest of Heaven and reprobated by good men, but we are realizing its error and may in time get rid of it. Our system of taxation is vicious and undemocratic, unrestricted immigration a menace, and divorce a profound evil; but the growing recognition of the situation augurs the eventual discovery of a remedy.

Of remedies, indeed, direct or indirect, Mr. Dole is fairly fertile; and it is at this point that we come upon the fundamental limitation of his book. As an exposition of the spirit of social unity, humanity, and altruism which is abroad in the land, and as a presentation of the weakness and defects, large or small, of modern social organization, the volume contains much that is admirable. The style is nervous and epigrammatic, and the choice of illustrations quite up to date. There is a directness, a downrightness of manner that gives to its statements an air of completeness and finality which to some will be gratifying. When, however, we turn from the specifications of Mr. Dole's indictment—and they are neither few nor slight—and scrutinize his proposed remedies, we are compelled to think them strangely inadequate. Does Mr. Dole really believe that the power of the President is ever likely to undergo wholesale curtailment, or that things would be appreciably better if it did; or that taxation is to be made "popular"—we quote his characterization—by substituting direct for indirect taxes or laying heavier charges on land; or that men will be fined or disfranchised for failure to attend caucuses or vote; or that our great political parties are to be replaced by a régime of political groups? If he does, then we cannot but commend to him, with all deference, the further study of that history for whose incidents he has, apparently, only limited respect.

We need to-day very much, as a great democratic State, two forms of service. We need an accurate, clear, and thoroughgoing description of actual social conditions, and a sound, practical, restrained indication of ways in which we may better ourselves. To the satisfaction of the first of these needs Mr. Dole has made a worthy and suggestive contribution, but we cannot think that his treatment of the second has permanent significance.

Drama.

THE HOUSE OF MIRTH.

The production in the Savoy Theatre, on Monday, of a dramatized version of Mrs. Wharton's "House of Mirth," done by the author and Clyde Fitch, raised more than a ripple of excitement in theatrical circles, but did not prove to be a matter of much literary or dramatic importance. It did, however, afford one more practical demonstration of the enormous difficulties attending the conversion of a book into drama. The hopeless feat would not be attempted, of course, if it were not for the commercial value of a popular title. Mr. Fitch, who doubtless did most of the work of adaptation, has succeeded wonderfully well in preserving the chief incidents and personages, but only at the cost of excluding nearly everything that made the original story worth while. Stripped of all literary accompaniment, all discussion of character, motive, and circumstance, Lily Bart and her associates become stage puppets of a very ordinary type, differing in no important respect from those employed in many a modern melodrama. There is nothing novel or especially entertaining in their silly small talk, their cynicism, selfishness, and immorality. If the play had any fine comic or satiric quality, excited profound sympathy, or was rich in the element of suspense, the case would be altered. But it has nothing that resembles a plot, makes no appeal to the finer human impulses, and practically no attempt to lash or to ridicule the degeneracy which it represents. In the last act, indeed, Lily, having drunk the cup of her own folly to the dregs, has a striking speech, in which she arraigns society for the callous indifference with which it discards disgraced or impoverished wretches, but this is only a personal protest, without general application. Thus the play lacks a valid purpose as well as sympathetic quality. Even those persons who deny that the theatre has any mission to instruct or to preach, admit that it must entertain or perish. In "The House of Mirth" there is nothing that promotes either merriment or edification. It offers more or less veracious exposures of bad habits, but cannot be described as in any sense a comedy of manners. To the original book it bears about the same relation as the skeleton does to the complete man. The redeeming point in it as a play is the opportunity which it offers to Miss Fay Davis for some very clever acting. She illustrates the different phases in Miss Bart's downward career with much subtle perception, executive skill, and emotional power.

The long-promised revival of Shakspeare's "Cymbeline" made this week in the Astor Theatre, by Miss Viola Allen, is an ambitious and expensive but not very satisfactory achievement. The play, it is almost needless to say, presents many problems to the modern producer. In the first place it is so long that cutting is absolutely necessary to bring it within the limits of an evening's performance; and in the second, it has an exceedingly involved plot, so that it is difficult to cut it heavily without rendering it unintelli-

gible. This difficulty is increased when time has to be secured for the manipulation of elaborate scenery, such as Miss Allen has provided. She has, indeed, sacrificed so much to mere spectacle that the part by Shakspeare in the production is often subordinate to the contributions of the scene-painter and costumer. She probably felt that the piece was not likely to win popularity on its merits alone, and it must be confessed that as an acting play, with its clumsy and highly incredible story, it leaves much to be desired. But these defects are emphasized rather than concealed by a gorgeous setting. The essentials to an effective interpretation are a spirited and capable delivery of the text, which contains many fine passages, together with much of inferior character, and a vivid embodiment of the principal personages. Neither of these conditions exists at the Astor Theatre. The Imogen of Miss Allen, an actress of very set methods, possesses womanly charm and intelligence, but is altogether uninspired. In utterance it is very faulty. Cymbeline and his intriguing queen, Pisanio and Iachimo, exhibit scarcely a vestige of the individuality and force which belong to them. The eccentric Cloten of Sidney Herbert, though strange in conception, has at least the merit of vitality and consistent design. The Posthumus, too, is right in conception. The havoc made of the text, including some of the most famous passages, by minor performers was lamentable. Much of it was unintelligible at close range. On the whole the performance is rather dispiriting, as it shows that the art of speaking blank verse is almost extinct upon the stage. But Miss Allen is entitled to credit for her personal endeavor, and it is pleasant to know that she is playing to full houses.

A new play, by a new author, Rudolf Bessier, is to be seen in the London Adelphi Theatre this week. It is called "The Virgin Goddess." The play, written in blank verse, is modelled on the lines of old Greek drama, the action taking place in Artis, an imaginary city of ancient Greece. Three acts are required for the development of the story, while the unities of time and place are strictly observed. A chorus figures in the piece, but its function is to contribute to, rather than merely to comment upon, the action.

The sixtieth birthday of Holger Drachmann was celebrated by the first performance of his latest romantic drama, "Sir Olaf he Rides," at the Theatre Royal, Copenhagen, on October 9, and a banquet the following day.

Music.

It was no doubt a desire to exploit her comic vein that induced the greatest living contralto, Mme. Schumann-Heink, to abandon the concert stage and grand opera two years ago and devote herself to operetta. Her admirers shook their heads over this procedure, and there was great joy among them when it was announced that she would return to the Metropolitan Opera House this season as well as to the concert hall, deserting a specialty which was suited neither to her matronly appearance nor to

her big voice. On Saturday afternoon last Carnegie Hall was filled by an audience eager to welcome her back to her legitimate sphere. Although reports had come from Germany of her great triumphs last summer at Bayreuth and Munich, there was still some anxiety as to the possible harm that might have come to her voice from the wear and tear of the operetta stage; but this was soon dispelled. While there were traces of damage, and while the singer has acquired a habit of injudicious breathing, these things seemed hardly worth mentioning in view of all the noble qualities of her art—her clear enunciation, her refined phrasing, her great command of tone colors, and above all her splendid dramatic temperament, which enables her to seize the real gist of a song and present it to the delighted audience in a stirring climax.

An interesting novelty is to be produced at the first concert of the New York Oratorio Society—"The Children's Crusade." It is a musical legend in four parts adapted from the poem by Marcel Schwob, with music by Gabriel Pierné, who won a prize with this work, which also saw an impression in Paris. The vocal score with English text by Henry Grafton Chapman has just been issued by G. Schirmer. The Oratorio Society will also sing "The Messiah," as usual, and Elgar's "Apostles," as well as the newly added Part III., entitled "The Kingdom."

Boston is not yet certain of an opera season, Mr. Conried, manager of the Metropolitan Opera House, having promised a week or two only on condition that a sufficient guarantee fund is raised. But an interesting operatic novelty will be presented by the Cecilia Society, which announces a performance, in concert form, of the late Prof. J. K. Paine's "Azara."

One of the treats in store for the music-lovers of London is a performance, under Hans Richter, of Liszt's "Dante Symphony," a composition which, because of its great difficulties, is seldom given. Wagner called it "an eternal work," "a creation equally inspired and masterly." Even Michael Angelo, he wrote, did not succeed in infusing the soul of Dante into another art so thoroughly as Liszt did in this score, which could not have been written until after Bach and Beethoven had done their work.

While Liszt was the most cosmopolitan of all musicians and spent but a fraction of his life in his native country, many Hungarians think that his remains should, at any rate, be buried near where he was born, Raiding. In that district, a large Catholic church is being built, and it is proposed to erect in it a monument to Liszt on the hundredth anniversary of his birth, 1911. The local authorities are also making an effort to secure his remains, and the plan is to have them transferred next September, when a Liszt statue is to be unveiled in the new Academy of Music at Budapest. It seems doubtful, however, whether it will be possible to carry out this idea. Liszt died in Bayreuth and was buried in the cemetery there. An effort was made at the time to make Weimar his last resting place; but even with the aid of the Grand Duke Carl Alexander, the project failed. Liszt belonged to the order of Franciscans, and one of the rules of this

order is that members must be buried in the place where they die. The *Allgemeine Musik-Zeitung* also calls attention to the fact that Liszt's last will of the date of 1867, contained these directions: "My body is to be buried not in a church, but in a public cemetery, and let no one undertake to remove it thence to another place." Three years later, he said in a private letter: "I protest most emphatically against the dragging about of my corpse." Finally, it is not likely that Frau Wagner would consent to the removal of her father's remains.

The unprecedented price of 44,000 marks is demanded by a Leipzig bookseller for the manuscript of Beethoven's "Waldstein" sonata, and the German newspapers express the fear that, because of this high price, the sonata will, like so many other precious documents, go to America.

Art.

THE HOLMAN HUNT EXHIBITION.

LONDON, October 10.

Whatever were the merits of the Pre-Raphaelites and their friends, business capacity was not the least. There had been movements in art of far more importance long before their day, there have been movements as amusing since. But there has hardly ever been one so well advertised, so well talked about. Indeed, since Ruskin first constituted himself their champion, the Pre-Raphaelites have figured much more effectively on the written page than on the painted canvas. Their influence on art has been simply *nil*. For a while they had their followers, who threatened to monopolize the Grosvenor Gallery and then the New Gallery in its early days; and even until some ten years or so ago, critics had still much to say of the neo-Gothic School. But all this has completely passed. Anything less neo-Gothic than the New Gallery now in its spring exhibitions can scarcely be imagined. And, if you except Byam Shaw and Miss Brickdale, who still dabble in the old motives and methods, not a trace of Pre-Raphaelitism is left, and yet books about it continue to appear.

The opening of an exhibition of the life work of Mr. Holman Hunt comes as a useful reminder of what Pre-Raphaelitism really means. It is easier to judge it dispassionately, now that more than fifty years have passed since the first rumors of it startled a mid-Victorian world, too decorous to be in sympathy with movements of any kind. If we are to believe him, Mr. Holman Hunt is, and always has been, its only true exponent. In his work, therefore, if anywhere, the movement may be studied profitably. Fortunately, a thoroughly representative collection has been got together. The exhibition is held in the Leicester Galleries, whose managers have done everything possible to arrange pictures and drawings to the best advantage. Mr. Holman Hunt has never, even in 1886, been so well seen. Very few important pictures are missing. One looks in vain for the "Christians Escaping from Druid Persecution" and the "Rienzi"—his first declarations of faith, they might be

called—for the "Awakened Conscience" and the two larger versions of the "Light of the World." But otherwise, the series is fairly complete. From the "Hireling Shepherd" and the "Strayed Sheep" to the first Eastern pictures; from the "Finding of the Saviour in the Temple," the "Scapegoat," and the "Shadow of the Cross" to the "Isabella and the Pot of Basil" and the record of the second journey to the East; from the "Triumph of the Innocents" and the "Distribution of the Holy Fire in the Church of the Sepulchre, Jerusalem," to the "May Morning on Magdalen Tower" and the "Lady of Shalott," finished only yesterday—they are all here. And there are the portraits from various periods: of himself, his wife, Sir Richard Owen, the most conspicuous. And there are also many of the water-colors and drawings, these last including several of the preliminary studies for the illustrations to Moxon's Tennyson and other of the most famous publications of the sixties.

To be honest, the first glance round the galleries gives one something of a shock. The distressing discord of color everywhere, the hard, graceless forms that seem to jump at you from the canvas, the exaggerations, the lack of repose, and decorative feeling—these things are an offence to the eye. Yet you cannot pass Holman Hunt by as you would the painter who plays his antics on canvas, who flaunts his eccentricities, for the sake of a day's sensation or scandal. There is no mistaking the seriousness of his work to him, the grim determination to see things for himself as they are, and then to show them as he sees them for the edification of the world. You need not plod through those two ponderous volumes of his autobiography—for an autobiography, despite its name, the book really is—to understand the toil which has ever been his one definition of art. And that is just the tragedy of it—to have labored, to have evolved theories, to have made their practical application a long martyrdom, only to see things like that! One of the fundamental dogmas—or perhaps I might say *the* fundamental dogma—of Pre-Raphaelitism, was that the artist should work directly from nature. At the moment, it was a dogma that there was reason enough to cry aloud from English housetops. The mid-Victorian tendency was all for anecdote neatly constructed in the studio. But to go direct to nature is a very different thing from knowing how to use what you see when you get there. The Realists in France, too, were all for going to nature; Courbet was making his disturbing manifesto in Paris about very much the same time as the Pre-Raphaelites were electrifying London. But it was not so many years after Courbet had held the exhibition of his Salon-rejected pictures that one of his admirers, Whistler, was writing to another, Fantin-Latour, that to work entirely from nature was disturbing, misleading; that it was impossible to do more than to *sketch* from her anyway, as effects *en plein air* changed constantly, and that to use what nature had to give was possible only in the studio. What came of the young Whistler's decision we know. What came of the Pre-Raphaelite's, when he stuck uncompromisingly to Pre-Raphaelitism, is revealed by Holman Hunt.

In his earliest pictures, when he was

not yet overpowered by a sense of duty and responsibility, before his theory of art had become more important to him than art itself, he did manage to see a little beauty in the world about him, and to suggest it to a certain extent. The landscape background to the "Hireling Shepherd" is full of the charm and loveliness of the English country, and the sun shines brilliantly and tenderly on the green hillside of the "Strayed Sheep." To me, these two are by far the finest pictures he ever painted. And yet, even at these you cannot look without the consciousness of how much he lost by pushing his theory to illogical extremes. In the "Hireling Shepherd" the two figures that fill the foreground do not belong to the landscape they are not in it—they have the effect of figures cut out and pasted on. For the curious part of the Pre-Raphaelites' respect for detail was their indifference as to the relation of this detail to the picture. The most glaring instance of what I mean is the "Huguenot Lovers" by Millais, who painted with infinite pains the walls against which the lovers stand, long before he had the slightest idea of the subject for which it was to be the background. In the "Strayed Sheep" the elaborate detail is annoying, as one realizes how much better, with how much more absolute truth to nature, the effect might have been got without it. The Pre-Raphaelites might paint a hillside with such minuteness that the blades of grass could be counted, but they did not render the one thing more important than all other in suggesting its character and beauty—that is, the atmosphere enveloping it. Millais, who, of all the Brotherhood, painted, in his "Ophelia" and "Marianna," the most perfect Pre-Raphaelite pictures according to Pre-Raphaelite rules, who seemed to have something of the old Flemings' power of recording details in the most precise fashion without forgetting that the picture to be built up with them was the main thing—Millais was not long in realizing that he and his enthusiastic young fellow reformers were somehow on the wrong track, though, it must be added, in his case Pre-Raphaelitism was deserted only for the more commonplace paths he had been so vigorous in denouncing. Rossetti, with his head full of dreams of rich, sensuous beauty, soon tired of a drudgery that did little to help him embody them. Holman Hunt alone was faithful.

As time went on, his eyes were conscientiously developed into magnifying glasses; he peered more closely into Nature for her detail, he insisted upon it more relentlessly. And what was worse for his art, he began to fancy that this pursuit of detail lent some special spiritual force to his work. His story of himself as painter is one of struggles that have nothing whatsoever to do with the quality of his painting. The fact that he journeyed to the East, that he faced hardship, was the recommendation of his paintings when he returned to London. The public heard of the dangers he braved, of the way he had to go armed to the teeth in order to paint the "Scapegoat" on the actual shores of the Dead Sea. And the public, trained by Ruskin to look for morality, or religion, or anything but

what should be looked for in art, did not fail to be appropriately awed. Only a few people were flippant with Millais, who suggested that before the painter undertook to paint a scapegoat, he should be sure of being able to paint a goat at all. I can still remember the first exhibition in London of the "Triumph of the Innocents," the darkened room in which one sat, and the hushed voices offering praise, and the whisper that went around of the indomitable perseverance of the painter. So it is now with all Holman Hunt's pictures. We are bidden to admire them because the making of them has been so laborious and because of their moral beauty, although beauty itself, the great essential, evaded him in his pursuit of unnecessary fact and irrelevant detail.

How much his judgment was warped by the entire misconception of the business of the painter to which his theory hastened him, he reveals in the pages of his book, with its ungenerous treatment of his old friends, his egotistical determination to take all the credit for Pre-Raphaelitism. He would probably be horrified to find himself accused of egotism and want of generosity—no one could be less conscious, less desirous of being either the one or the other. It is simply that his theory has taken possession of him until he seems unable to believe in anything else, to countenance anything not in accord with it. As in his religious pictures he has overcrowded the canvas with details and symbols, so in his portraits he searches so diligently for the exact anatomical modelling, the bony construction of the face, that he gives you something that is neither flesh nor paint, while there are pictures in which, as in the "Miss Flamborough," he endeavors so arduously to express the innocence of childhood, that he tumbles headlong into worse banality than he ever could have found in the Academy to protest against. In the beginning he could not see nature for the detail; his latest work shows him to have reached a point where he cannot see detail for his theory about it.

To admit this is not to complain of any want of interest in the exhibition at the Leicester Galleries. On the contrary, it is exceedingly interesting, in the first place historically, and in the second because the very seriousness of intention cannot fail to be recognized. Ability Mr. Holman Hunt undoubtedly possesses. It may be too soon as yet to decide what his place really is in the art of the last half century. But it is safe to say that he can never be forgotten altogether. His personality, the picturesqueness of the famous Brotherhood, will save him. But when you consider his early drawings for illustration, when you look at the beautiful painting of much of the detail, when you realize the knowledge, the technical mastery devoted to his sermons in paint, you can only wish he had been spared the virtue upon which he most prides himself—that he had not been faithful, but, with Millais and Rossetti, had escaped from Pre-Raphaelitism before it made him the slave of its fallacies.

N. N.

"Engraving and Etching," by the late Dr. Fr. Lippmann, translated by Martin Hardie (Scribners), is a well-printed version in English of the best concise treatise ever written about the history of intaglio prints.

There are 131 illustrations on the scale of the original engravings, and while these impressions from relief blocks inevitably lack the quality of fine engravings, they suffice to study the technic of the artists. The record is carried only to the beginning of the nineteenth century, since it was Dr. Lippmann's belief that the revival of painter-etching in the last century would require a separate volume. It is a matter of deep regret that he was not spared to finish his work, for no writer on the subject has so perfectly combined minute historical accuracy with a sober and just taste. In the present volume we could wish a more detailed account of printing processes—wiping, retroussage, etc., and could wish away only the unhappy characterization of the always reserved Nanteuil as "straining after effect." But these are hardly blemishes in a well-nigh perfect handbook. For a volume that the collector and student must handle constantly, the binding with its white back, will be a trial. The publishers should not thus encourage the making of relief impressions upon a work devoted to the other branch of engraving.

Dictionaries of technical terms are always in demand, and rightly; but hard it is to find one which is both inexpensive and thoroughgoing. Technical terms are difficult to explain in precise language; if any one doubts, let him try to translate some of them from one language into another, even allowing himself excellent knowledge of both languages and long practice, or utilizing to the full the knowledge and the practice of others. As he will not find any one term which can be translated into a single term in another tongue, accurate in every case, so he will not find an obvious form of words in which to express the full significance of even the simplest terms of building. That fact is what Thomas Dinham Atkinson, who has compiled a "Glossary of English Architecture" (London: Methuen & Co.), must have found by this time. That is what persons who use the book will find too frequently. Opening the volume at a venture one finds "Respond" defined as "a half-column terminating an arcade"; but a "respond" may be a half-column or a pilaster, or a corbel, or that wall-pier for which no precise technical term is in use—a projecting mass showing perhaps five faces of an octagonal pillar or the like. And then instead of "terminating an arcade" the respond may be the pilaster behind a free column, or at the end of a row of such columns, even when no arches appear in the structure. The reader may amuse himself with the task of fitting a brief sentence to the varied requirements of that term. The greater number of the definitions in Mr. Atkinson's volume are, however, intelligible, and such terms as ironwork, Greek architecture, and plaster work give excuse for articles two or three pages long, which are really intelligent and are likely to be of use.

"The Gem-Cutter's Craft," by Leopold Claremont, is announced by Messrs. Bell (London) as the first book upon precious stones to be written by a practical gem-cutter. In it every kind of gem is described, and the difficulties of discriminating precious stones are discussed.

The archæologist Wilhelm Volgraff has recently brought to light at Argos the remains of a fortified city which appears to

antedate the Mycenaean period. He found a large number of pieces of ceramic ware, among which was a type of "bucchero nero," whose manufacture recalls that of the period of the first city of Troy, with the difference that the Trojan bucchero is fashioned by hand, whereas this discovery shows traces of the wheel. He has also come upon fragments of vases, painted with a fine black, with a sober decorative design of a geometric character. At the foot of the excavated hill some tombs of Mycenaean chiefs were opened, in which were found fragments of vases painted with geometric designs, some gold jewelry, ivory tablets, and objects of bronze, stone, and glass.

The Italian Government is trying to find a way of suitably rewarding the Norwegian sculptor, Christen Dan Magelsen, for a remarkable achievement—the discovery, apparently, of the material used by the ancient Greeks in modelling. Italian experts agree with G. Körte, director of the German Archæological Institute in Rome, as well as with the director of the Greco-Roman antiquity section of the British Museum, that Magelsen has found a clay which presents great advantages over the material now in use. Director Körte specifies two of its advantages: it facilitates the production of hollowed objects of any form and size, and it makes possible the use of iron supports without running any risks when the iron is heated, or contracts again. Björnstjerne Björnson writes enthusiastically about Magelsen in the *Christiania Verdens Gang*. This man, he says, who has discovered a secret lost for two thousand years, was originally a mariner, and it was not till after he had reached ripe manhood that he took up sculpture, although it had been his dream since childhood. He labored under great disadvantages. He was poor, he had a large family. Yet, though he was an adept in neither physics nor chemistry, he learned to experiment with his material till he had what he wanted.

The National Society of French Architects has opened in Paris the public exposition of its fifteenth annual competition. The subject proposed for the competitors was essentially modern: A railway station, designed for a city of eight or ten thousand inhabitants.

Science.

The Birds of the Cambridge Region of Massachusetts. By William Brewster. With four plates and three maps. Cambridge, Mass.: Memoirs of the Nuttall Ornithological Club, No. IV.

Contained in a thick quarto volume of 426 broad-margined pages and handsomely illustrated with plates and maps, Mr. Brewster's contribution must rank, in attractiveness of presentation and in wealth of information, as the most sumptuous local list that has ever been published in this country. The territory covered is not a large one—some fifty square miles of country adjacent to Boston—but, to quote the introduction, "The birds of the Cambridge region have been studied longer and more continuously, as well as perhaps more carefully, than those of any other

locality of similar extent in all America." For upwards of seventy years attention has been focussed on this region. Indeed, Mr. Brewster quotes freely writers of the seventeenth century, Wood, Morton, Josselyn; but it was not until 1832, when Nuttall, then living in Cambridge, published his "Manual" that the birds there began to be systematically studied. Samuel and J. Elliot Cabot, Henry M. Bryant, Thomas M. Brewer, Wilson Flagg, and others of a generation passed away were the pioneers, and then followed William Brewster himself, and a host of contemporaries, who have contributed their mite. Mr. Brewster's own personal observations extend over forty years. With this backing and equipment he has produced a record unsurpassed in details of distribution and of migration. Moreover, we may search in vain for any other list wherein facts essentially dry are more agreeably presented.

Introductory sections, descriptive, historical, and analytical, occupy eighty-four pages, the rest of the volume being given to a carefully annotated list of the 248 species and subspecies found in the region. As a frontispiece a fine portrait of Thomas Nuttall is aptly chosen; and besides several maps and views of country nooks, there is a colored plate of Brewster's Linnet—a bird of which the type has remained unique. Whether it is a species, a hybrid, a mutant, or a color-phase, nobody as yet knows.

Wherever we turn, we find much that is of general, as well as of local interest to ornithologists. For example, under the section "Faunal Changes" there is a brief presentation of facts concerning bird population, with a new and plausible theory to explain its fluctuations—the theory being that "sexual jealousy" renders the male, during the breeding season, intolerant of the near presence of rival males, and by driving them away thus checks overpopulation of a given area. Then, too, we find the descriptions of different localities very fascinating, especially to anybody who has floundered contentedly through the mud-holes of the Fresh Pond marshes or paused to listen to the bubbling melody of the house wrens that spend their summers in the Wren Orchard.

Valuable as this contribution is to ornithological literature, we could wish its limits had been extended; for it is a little too small for a complete ornithology, and a little too large for a local list. In avian parlance, it is an "intergrade," marking, nevertheless, a distinct epoch in the evolution of the local list. There are no radical flaws, although a missing table of contents may be found in *Bird-Lore* for September-October. We think, too, that uncut pages are out of place in a scientific book of this kind.

"The Loose Leaf System of Laboratory Notes," by Theo. H. Scheffer (P. Blakiston & Co.) is a laboratory manual for elementary students in zoölogy. Recent years have been prolific in laboratory directions of this kind, and experience has taught that each laboratory will probably have its own requirements that are met by a "loose-leaf system." Instead of binding the directions in conventional book form the author's system is to tie the sheets together with a shoe-string between de-

tachable covers. The booklet will prove useful in high school and elementary college courses. Whether it is best to introduce the student into the mysteries of science by making him learn the names of all the parts and organs of a number of selected types is perhaps a matter of opinion. The method has been found generally acceptable to students and teachers alike, for it involves the least amount of thinking, and keeps the student interested and busy in the laboratory. In such matters practical advantages outweigh theoretical considerations.

A serious and thoroughly documentary history of the practice of medicine in Geneva before 1800, "La Médecine à Genève jusqu'à la fin du XVIIIe Siècle," by Dr. Léon Gautier, has many pages both of scientific and general interest. Worth noting are those parts of the book which deal with the advent, progress, and disappearance of leprosy (A. D. 700-1600), with the leper colonies—*maladreries*—and other measures taken to guard against a disease which is now again an actuality. Of yet more absorbing interest are the accounts of the judicial trials (probably monstrous errors) of the "plague-sowers" (1530 and 1545), where "Monsieur Calvin ministre" is noted as interceding for the poisoners condemned to death, that they should not be tortured too long, but be put speedily out of their misery.

The recent fire at the University of Groningen completely destroyed the exceptionally rich collection in the Institute of Natural History, which was the monument of the indefatigable collecting zeal of Professor van Ankum, extending over many years.

Finance.

THE AMERICAN MARKET AND LONDON.

Since the article in this column on the Bank of England rate was published last week, the Bank has further advanced its rate to 6 per cent. It did this, ostensibly because New York exchange on London, which had moved sharply in England's favor when the 5 per cent. bank rate was established, October 11, had fallen back, in the ensuing week, to a level where New York could again draw on London's gold. The incident is likely to stand as a landmark, because a 6 per cent. rate has been fixed by the Bank only five times in the last thirty-two years, and because four of those occasions have been disastrous. The dates are 1899, when the Boer war broke out; 1890, when the London house of Baring failed; 1882, when a "bank crash" and panic raged in Paris; and 1878, when the Glasgow Bank suspended payments. The one exception was 1889, when there was no trouble, but, in a world-wide "boom" of trade, London was losing gold too rapidly.

The present case is seemingly analogous to the last mentioned. There is no sign of calamity on the financial horizon, and the 6 per cent. rate, as in 1889, is intended to draw back to England the capital taken from it, and to stop the export of gold. In the few days since the Bank took action

both these ends have been partly achieved. Exchange on London, at Paris and Berlin, has approached the point where both must send gold to England. Our own gold imports have abruptly ceased; sterling exchange has risen, and London, withdrawing capital from the American loans in which such quantities had been invested, is shifting those loans back to the New York banks. Within a fortnight, loans at these banks have increased \$30,000,000—an increase ascribed almost exclusively to the taking over of such obligations from London.

A highly interesting question remains—a question which concerns not only our market, but all others which have been drawing on England: How will such markets be affected by this sudden recall of resources on which they had depended? The answer must be sought in the uses to which that capital had been put. If England's money had been borrowed, for instance, to help move crops to market, and had been borrowed solely because it was cheaper than money in New York, the recall would simply mean that a larger demand would converge on New York, and that rates would be somewhat higher. But if Berlin, for example, having strained its own resources in providing for normal commercial needs, had built up an extravagant speculation in new company shares, and had sustained that speculation wholly through London money, something must happen when London called the money home. This is exactly what did occur at Berlin in 1899. Germany's excited "industrial speculation" of that year was financed through London borrowings. War broke out in South Africa; the Witwatersrand, which had sent \$80,000,000 gold to England the year before, suddenly ceased production; the London bank rate rose to 6 per cent., and England recalled its capital from Berlin. The result was, that the whole structure of Germany's "industrial boom" came to earth.

Germany at that juncture was far from being as rich in real capital and wealth as America is to-day; our own predicament from the loss of English capital is proportionately less awkward. In a short time that part of our own capital which has been engaged in "moving the crops" and financing the active autumn business season, will be released, and will take the place of the capital withdrawn by England. The interesting present problem is the manner in which the temporary void will be filled. Sometimes advance in money rates is the only consequence; sometimes prices have to come down on the Stock Exchange, to reduce the loans which have sustained them. The first and, under the circumstances, the most natural step, was this week's relief by the Treasury.

BOOKS OF THE WEEK.

**Timely
 Interesting
 Valuable
 Alexander's
 Political History of
 The State of New York
 1774-1861**

2 Vols. \$5.00 net. Carriage extra.
Circular with sample pages on application.
 After devoting ten columns to reviews of this book, the Sun said: "It would be impossible in a dozen notices to render any sort of justice to the extensive scope of this work and to the multiplicity of its interesting details."

HENRY HOLT & CO 23 W. 25th St. NEW YORK

Second Edition Now Ready.
**Old France in the
 New World**
QUEBEC IN THE 17TH CENTURY
 By JAMES DOUGLAS, LL.D.

Svo., printed on special India paper throughout, very fully illustrated. \$2.50 net (postage 13c.).
 A new edition, with very extensive changes and corrections, and an entirely new chapter, a résumé of the whole work, which is a valuable addition.
This second edition of Dr. Douglas's book has been printed with the view of appealing particularly to tourists. It is made throughout on India paper, the 617 pages being under an inch in thickness, and therefore of a weight to correspond. The illustrations many and beautiful, and to one journeying either in Eastern Canada or Quebec, the volume is indispensable.

From your bookseller or
THE BURROWS BROS. CO.,
 CLEVELAND, OHIO.

**THE HEART
 THAT KNOWS**

The Library of Literary Criticism
 Of English and American Authors
 From 680 to 1905. Eight Volumes. Compiled
 Studies of 1,150 Authors, in chronological arrange-
 ment. Most accurate and authentic Reference
 Work on all phases of English Literature. High-
 est praise from Scholars throughout the English-
 speaking world. Sample pages, etc., free by mail.
MOULTON PUBLISHING CO., Buffalo, New York

JUST OUT. PROF. HYSLOP'S NEW BOOK.
**BORDERLAND of
 PSYCHICAL RESEARCH**
 Treats of Normal and Abnormal Psychology.
 Price \$1.50 net, 12c. postage.
HERBERT B. TURNER & CO., Boston, Mass

LIBRARIAN.—Old and Rare Books put
 in order and catalogued. Americana a specialty.
 A. P. SANFORD, 443 La Salle Ave., Chicago.

BOOKS OF PERMANENT WORTH

A HEART GARDEN
 By J. R. MILLER, author of "Upper
 Currents," etc.
 16mo. plain, 65 cents net. Cloth, gilt top,
 85 cents net. (Postage, 8 cents.)
 More than a million and a half of
 Dr. Miller's popular devotional books
 have been sold, and his fame is
 world-wide. The keynote of this
 latest book from his pen is found in
 its opening lines: "A good woman
 said, 'My heart is a little garden, and
 God is planting flowers there.' Ev-
 ery heart should be a little garden,
 full of sweet and beautiful plants
 and flowers."

**PRESCOTT'S
 COMPLETE WORKS**
 IN TWELVE VOLUMES
 60 Illustrations, 12mo. Per set,
 \$12 to \$36.
 The demand for a complete authentic
 text of this great historian's works, at a
 popular price, has at last been met in
 the present edition. It is new through-
 out, in large type, on good paper, and
 with choice illustrations and binding.
 No American library is complete with-
 out these great books: "Ferdinand and
 Isabella," "Conquest of Mexico," "Con-
 quest of Peru," "Philip the Second,"
 "Charles the Fifth." A final volume of
 Miscellaneous Essays is also added, as
 well as the standard Life of Prescott,
 by George Ticknor.

THE WORLD'S CHRISTMAS TREE
 By CHAS. E. JEFFERSON, author of "Doctrine and Deed."
 Special type, 12mo, cloth, 75 cents net. Limp leather, \$1.50 net. (Postage, 8 cents.)

One of the foremost of metropolitan ministers and writers here makes a powerful plea for the true spirit of Christmas. This attractive gift-book contains much food for thought.

THIN PAPER, TWO-VOLUME SETS

Printed from large type on opaque Bible paper, making books 4½ x 7, and about half an inch thick. Some of the largest books are thus got into remarkably small and convenient compass. The binding is full limp leather.

Price, \$2.50 per set.

FIVE SETS:

- Count of Monte Cristo. Dumas
- Don Quixote. Cervantes
- Les Miserables. Hugo
- Life of Johnson. Boswell
- French Revolution. Carlyle

THOMAS Y. CROWELL & CO., 426-8 West Broadway, New York

The Nation.

NEW YORK, THURSDAY, NOVEMBER 1, 1906.

The Week.

Advocates of Government ownership of "the means of production and transportation" are getting excellent object-lessons these days. The failure of the Government at its Brooklyn navy yard to build the battleship Connecticut as rapidly as her sister ship, the Louisiana, was constructed in private yards—despite most unusual exertions—has been widely commented on. Now, after fourteen years of experimenting, the Government has awarded to a private concern the contract for printing postage stamps. This has been done at the Bureau of Engraving and Printing, whose bids were regularly below cost. This fact led many people to believe that the work was being done far more cheaply by the Government than it could be by a private concern. But these people failed to note that every year Congress made up the difference by a special deficiency appropriation. As soon as Congress compelled the Bureau of Engraving to compete with private firms on a fair basis, the American Banknote Company walked off with the business. Some day this country may decide to own all its railroads. If so, it will only be because the evils of private ownership it seeks to alleviate are less endurable than an inferior and a costlier service, to say nothing of the political danger of placing a million or more employees on the Government payroll.

A bill taxing educational institutions is pending before the Massachusetts Legislature. President Eliot, G. Stanley Hall, and other prominent university men, have appeared before the Committee on Taxation to oppose it. Dr. Eliot showed that in Cambridge the tax rate was lower than in places where there was no university. The town has \$25,000,000 of exempted property, with a tax-rate last year of \$19, whereas Lowell, with only \$3,000,000 of exempted property, has a tax rate of \$20.20. President Hall said that Clark University had no income from the students, and if the bill were passed would have to curtail its work. Those Western States which support their own universities seem ignorant of the great discovery of Massachusetts statesmen, that the way to foster education is to tax it.

An example of the efficiency of agricultural colleges is afforded at Fort Collins, Colorado, where \$4,000 was paid out last year to the students for working at

the school itself. The entire class of 1907 has already been engaged by the president of a Chicago iron company to work on his plantation in Mexico, upon which there are 1,000 cows, a dairy farm, and 1,000 hogs to be looked after, 40,000 acres of land to be irrigated, and 130,000 acres to be cultivated. Thomas Jefferson was the first American to urge the importance of such schools. Writing in 1803, he deplored the overcrowding of the trades and of the learned professions. He recommended that a professorship of agriculture should be established in every college. "The same artificial means," he wrote, "which have been used to produce a competition in learning may be equally successful in restoring agriculture to its primary dignity in the eyes of men. It is a science of the very first order." In hoping that the subject would one day have an honored place in the curriculum, he thought that more men might be induced to undertake the "labors of the field." He would have been confirmed in this opinion if he could have foreseen the vast expansion of the West.

If the project for consolidating the art collections of John G. Johnson, William M. Elkins, and P. A. B. Widener is carried out, Philadelphia will possess a museum superior to anything in America, and inferior only to those of the European capitals. Since the contents of the proposed museum are already amply provided, and there is lacking merely a proper site and building, we cannot doubt that these will be promptly furnished. The quality of these great collections should make an irresistible appeal to public spirit. One can hardly imagine such a gift being declined. If it were, as many American cities would strive for this great gallery of paintings as Grecian towns for the honor of claiming Homer as son. Since there is no published catalogue of the Johnson collection, the largest of the three, and the catalogues of Mr. Widener's and Mr. Elkins's pictures are some years out of date, any numerical estimate of the gift must be of the roughest sort. Reckoning the pictures at twenty-five hundred, about half of which were painted before the year 1800, we shall be on the conservative side. But numbers give very little impression of the value of the gift. In the Early Flemish school there will be such a notable series as the two Van Eycks, Van der Weyden, Memling, Gerard David, Old Breughel, Teniers, Rubens, and Van Dyck. In northern Italian painting will be represented the Vivarini, Mantegna, Crivelli, Giovanni Bellini, Moroni, Morretto of Brescia—all by fine examples.

English painting is exemplified by important canvases of Reynolds, Romney, Gainsborough, Turner, and Constable. Dutch painting will afford the most remarkable display. One may mention several portraits of Frans Hals's best, the landscapists Ruysdael and Hobbema, a long series of the little masters, including the rarest, Vermeer of Delft, and, finally, something like a dozen Rembrandts, all fine, and representing him in nearly every phase of activity. We must pass over the excellent Renaissance sculpture owned by Mr. Widener, and the very important pictures of the modern schools in all three collections. Suffice it to say that the suggested museum will have several of Puviss's small studies for his best mural paintings, and will not ignore Böcklin. In short, from an art-historical standpoint, there will be no serious gaps, except in the Early French school and in American painting. This mere outline of the new gallery suffices to show how fortunate Philadelphia is in a benevolent triple alliance of enlightened art collectors.

The newest Concert of Europe, so the dispatches affirm, is to be an alliance to prevent the exportation of its best art to America. The Kaiser is given as the unofficial patron; Dr. Bode of the Berlin Museum, who in times past has not a little aided in the exportation of fine pictures from Europe, is said to be actively enlisted in the movement. What will be the practical method of embargo, is not stated. One can hardly imagine the Pacca edict extended to all Europe. Even the plan mooted in England of listing all important works of art, and in case of sale giving the Government a right of purchase at an official appraisal, seems hardly likely to prevail. As a matter of fact, we judge that the movement will simmer down to an organized expression of defiance to the American millionaire collector—a personage who hardly deserves such rough treatment. He has bought thousands of putative old masters at top prices, for every genuine example he has snapped up with the aid of his moneybags. For his few triumphs he has paid dearly. On the whole topic much nonsense is talked. If we have had collectors of the grade of H. O. Havemeyer of this city, John G. Johnson of Philadelphia, and Mrs. John L. Gardner of Boston, no American collector has had the same fortunate combination of money, taste, and opportunity that has gone to make the galleries of Dr. Ludwig Mond in London or of the late Rodolphe Kann in Paris. Moreover, if many fine pictures have come over here, so have

many returned to Europe. The late W. C. Whitney's Raphael is in the hands of a London dealer; Joseph Jefferson's fine early Rembrandt went back to Holland; many other good canvases—one recalls particularly a Van Dyck of the Genoese period—have been resold abroad. In short, a kind of equilibrium is establishing itself, and American collectors have sufficient cause for self-congratulation without accepting themselves quite at the valuation of European alarmists.

That a tax on art should be rejected in France is less surprising than that it should be proposed. When M. Poincaré suggested a rate of 20 per cent. on importations of art objects produced before the nineteenth century, he was undoubtedly driven to such an expedient by the difficulty of balancing the budget. It is noteworthy that there was no thought of protection in the plan. The French collector was to be allowed to prefer Zorn, Mancini, or Zuloaga to the painters of Paris, without being mulcted for his taste. But even as a revenue measure the scheme has evidently seemed abhorrent, for the budget committee has rejected it. If the French Ministry is unwilling to profit by a tax on education, which is justifiable on fiscal grounds, what shall be said of ourselves who retain the mediæval schedule, although it is relatively unproductive and the surplus grows apace?

The unfavorable vote in the House of Lords, Monday, on a section of the Education Bill is the beginning of the struggle between the Liberal Ministry and that body. It is upon the Peers that the Conservatives rely to block the measures of the Campbell-Bannerman Government, and it will take all the skill and patience of the Prime Minister to overcome the obstacles in his path without resorting to vigorous coercive measures, such as the creation of a large number of Liberal Peers for the express purpose of putting through the legislation for which the House of Commons has voted. Besides the Education Bill, four others are awaiting the action of the Lords. They are of comparatively small importance, since they relate to the sale of intoxicating liquors in Ireland, marriage with foreigners, marine insurance, and notices of accidents in mines, factories, and workshops. A very important measure that has passed the second reading in the House is the Trades Disputes bill, which makes trades-unions a favored class in the eyes of the law. It is causing so much resentment among certain Liberals that they are as eager for the opposition of the Peers to its progress as they are zealous for the passage of the Education Bill. But that the Ministry will have its way in the end seems certain; meanwhile, outsiders will be interested

to see just how far the agitation against the House of Lords, led by such radical Liberals as Lloyd George, will go. That gentleman persists in irreverently calling the Lords "old iron that ought to be scrapped."

The woman suffragists, whose rowdiness was the scandal of the opening of the English Parliament, are doing their cause a vast amount of harm. To appeal for the power to participate in the government of the country is eminently within their right, but the appeal should at least be accompanied by some proof that the petitioners set store by that law and order which is the basis of every government. Every such outbreak—and there have been far too many—covers with chagrin those leaders who deprecate the resort to violence. Yet even this disturbance illustrates clearly how great is the desire for the extension of the suffrage. Every London newspaper contains news of the campaign now being carried on with extraordinary fertility of resource and determination. Not a week goes by without its important meetings. Indeed, were there one-half the enthusiasm and vigor displayed by the advocates of woman's suffrage in this country, the issue would be so pressing that politicians could not afford to dodge it. The latest triumph of the English agitators is to obtain an audience for a deputation with the Chancellor of the Exchequer, Mr. Asquith, who, next to Mr. Bryce, is the strongest Cabinet opponent of woman's suffrage.

The question whether men or women have the higher sense of honor has been under discussion in the National Union of Woman Workers in England. One of the speakers—men were not allowed in the debate—accused her sex of a tendency to cheat at cards, to make false boasts concerning their home affairs, to eavesdrop, and to read other people's letters. A representative of Newnham College held that the public expected a lower sense of honor in women than in men. But psychologists say that it is not the sense of honor which is lacking in women, in comparison with men. It is, rather, emotional equilibrium and self-restraint. This is illustrated by the fact that hysteria is far more common among women than among men. It has been recently shown that this nervous affection is analogous in its expression to the imaginative games of children, being a morbid form of playfulness with no deliberate intention to deceive. Doubtless, in the past, so little responsibility has been put upon women—if we except that early incident in Eden—that it is difficult for them to keep their feelings out of matters where feeling is out of place.

The problem of dealing with the unemployed has been solved at a stroke by two borough councillors of Lambeth. Let the borough laborers work, instead of eight hours, four; pay them the same wages as before; thus twice as many hands will be employed without reducing any one's comfort. Evidently, the process can be carried out indefinitely, until the Borough of Lambeth hires all the labor and pays pretty much all the wages in the United Kingdom. No one has yet raised the sordid consideration of merely supplying the money. Indeed, the thought is sacrilege. The city fathers of Lambeth are absolutely single-minded. They will take care of the unemployed, and somebody else must provide the means. The principle of the right of employment at a living wage has seldom been advocated with such simplicity.

Edmund Gosse's inaugural address before the London Library Assistants' Association contained much good sense. After a word of caution respecting the danger lest the librarian become a merely mechanical classifier and arranger, he spoke of the dignity of books, and the care of them which was demanded. During the Middle Ages strict library rules were enforced to prevent injury and defilement of paper and binding. It was forbidden to cut pages with knives which had been used at the table, and also to "eat fruit and cheese" over the book itself. It is inexpedient, he continued, to be too magisterial in the choice of library literature. Bad books will not prove to be attractive; as a rule they are "false, dull, sentimental, and claptrap." But the managers of libraries should not flatter readers too much, especially by giving out statistics as to authors most in demand, and books most often asked for. Thus bad taste is disseminated. It still seems hard to determine what shall be done with apparently useless books. Mr. Gosse thinks with the late Sir Leslie Stephen, that they should be destroyed or that special libraries should be instituted for them. It is, however, difficult to make a just discrimination. What is called "the general reader" is a capricious animal, and "the special reader" is one whose habits and eccentricities no librarian can fathom or be sure of meeting.

The slight excitement caused by the retirement of a veteran Foreign Minister like Count Goluchowski is a fine testimonial to the stability of Austrian foreign policy. Baron Aehrenthal will presumably continue along the traditional lines. In many respects it is strange that there should be comparatively so little interest in the politics of the pivotal state of Europe. For this in-

difference one may account partly by the fact that the internal dissensions of the Dual Monarchy have been absorbing, at the expense of international concerns. In any case, the only substantial contribution of Austria-Hungary to internationalism, since the striking pacification of Herzegovina, has been the alliance with Russia for preservation of stability in the Balkans. As judged by its practical effects in Macedonia, this *contente* cannot be called a brilliant success. It is, however, at least a more responsible guarantor of future peace than that concatenation of inactivities mis-called the European Concert. One may assume that Count Aehrenthal will, like his predecessor, maintain a pacific and rather negative attitude towards Western Europe, while reasserting, as occasion offers, the ulterior claims of Austria in the Balkan Peninsula.

The Spanish Ministry has introduced a bill providing for "cult associations" after the much-discussed French type. This is the beginning of an attempt to revise the present treaty with the Vatican, and the movement, subject to the uncertainties of politics, is to include religious education, the marriage and burial questions, and the control of the religious orders—in fine, a general subordination of the Church to the State. The attempt is of especial interest, because its reception by the Vatican will reveal the true attitude of the Pope towards the similar movement in France. The Spanish Government and the Vatican are in continuous diplomatic relations, and presumably each stage in the revision of the laws concerning the Church will be thoroughly discussed. If the Pope, then, should countenance the Spanish cult associations, it would show that his opposition to similar bodies in France was due not to any canonical principle, but to a sense that his ecclesiastical dignity had been slighted. The Encyclical of August was vague, and if the deadlock between France and the Vatican is of a personal sort, there may yet be hope of an adjustment. M. Clemenceau should be able to find ways of soothing the offended sensibilities. Meantime, the success of anti-clerical legislation in ultra-Catholic Spain must remain in doubt.

The anti-militarist agitation in France finds an echo in Germany, at a time when the accession of Clemenceau is regarded as rendering relations between the two countries more difficult. A writer in the Berlin *Vorwärts* has calculated that of the three million men comprising the German army on a war footing the Socialists may claim one million. The truth of this assertion has been challenged by a good part of the German press. These newspapers draw a distinction between mere weak sympa-

thizers with Socialism, whose numbers are admittedly large, and actual adherents of collectivist principles, fanatic to the extent of braving military law and trial for high treason. No doubt, so runs the argument, at the call to arms, such new-fangled ideas as "internationalism" will be swept away by the old spirit of soldierly obedience, that *Treuheit* which is the pride of the Teutonic race. Isolated cases of disloyalty may occur, but the authorities will undoubtedly be prepared to deal with them as they arise, or, rather, true to the traditions of the German General Staff, a little before they arise. It is not impossible that the proper cells and jailers have already been designated for Messrs. Bebel, Singer, and Kautsky. But though the press may be right in holding that the claims of Socialists as to influence in the army are exaggerated, their power for harm cannot be denied, once the possibility of even partial disloyalty is admitted. The strength of the German army is in its mechanically perfect organization and discipline. If doubt of the absolute coherence of its parts do but enter, that splendid engine must lose, if not in actual effectiveness, certainly something in prestige.

The course of reform in Russia, as observers have noted, is thwarted by a too vivid consciousness of the French Revolution. Recalling Mirabeau, Danton, and Robespierre, the leaders of the Duma feared to achieve less than their illustrious exemplars; while the Czar, we are told, refuses to make the obviously necessary concessions because he has before his eyes the fate of Louis XVI. But modern politics hark back even to the classical examples. Tyrannicide is recrudescing in Russia, and Harmodius and Brutus are its avowed patrons. The feeling is illustrated by an incident which fell under the eye of a special correspondent of the London *Times*. Having occasion to examine the albums of many students, he found them usually made up of portraits of assassins. Here is the "Pantheon" of a young girl of seventeen:

On the first page was a photograph of a painting which was entitled "Prove thyself worthy," and which represented a girl thrusting into the hands of her lover a revolver with which he was to go forth and—assassinate. The second page was adorned with a sketch of a Roman in whom I was supposed to recognize—Brutus! Then followed photographs of Kalayeff, who assassinated the Grand Duke Serge; of Sozonoff, who assassinated Plehve, and of many others—assassins all—"of whom the time would fail me to tell"; and the *pièce de résistance* was the photograph of a modest maiden—Marie Spiridonova. On the fly-leaf of the album was written in English:

Lives of great ones all remind me
I can make my life sublime.

Evidently this girl is ready for tyrannicide of the classical type as an exalted public duty.

Writing on "Exchanges in Social Life," M. Paulhan in the *Revue Philosophique*, considers sentiment and its expression as commodities. He discusses the question whether a material value can be put definitely upon emotions, so that they may be compared in terms of money. It is plain that sensations have a real value, as may be seen by the prices charged in restaurants. Aesthetic emotions also have a money equivalent, for we pay to hear music or to see pictures. To a certain extent, higher emotions than those caused by a satisfied appetite are thought to be worth paying for. Good health, which makes life easy and prosperous, may depend not only on the advice of a doctor, but on his interest and sentimental earnestness in the case. The pecuniary worth of certain friendships is also easily estimated. Even the ordinary courtesies observed in trade and other kinds of business have an appreciable value, although a shifting scale of charges for such things would have to be made, if they were included in the bill. An excellent example of emotional exchange is furnished by the arrangements of married life. Compromises, arrangements, plans of agreement, even quarrels, lead up to an adjustment not unlike a trade-bargain. Many of these "affective" exchanges are subordinated to social interest in general, as, for example, in patriotism, where services are rendered in return for the benefit which is derived from belonging to a certain nation. There is, however, danger in this kind of nice calculation, lest good-will, good words, and good acts come to be regarded as marketable commodities.

The old complaint that Americans abroad are indifferent linguists is echoed by our consul at Venice. Even the college graduate who knows the literatures of European nations is seldom able to speak their languages. The consul calls attention to the Royal School of Commerce in Venice, where, after a year's study, the pupils are able to understand English and to speak it fairly well. Among American graduates there are, we believe, more who could give a list of Goethe's plays, or explain the origin of the French language, than there are who could read with ease the German and French newspapers, or carry on a simple conversation in a foreign tongue. Yet for one man who needs a knowledge of philology and the history of literature, there are hundreds who would be the better for acquaintance with colloquial French and German. It was Charles V. of Spain who said that to know an additional language was to be a new man.

THE JAPANESE PROTEST.

The irritation of the Japanese over the exclusion of children of that race from the schools of San Francisco has become a serious matter—so serious that President Roosevelt has thought it worth while to dispatch a member of his Cabinet, Victor H. Metcalf, to the Pacific Coast to investigate the trouble. Yet to those irresponsible agitators who have endeavored to induce the United States to treat the Japanese as it has the Chinese, Japan's official protest against discrimination in the schools will smack only of impudence. For a nation of yellow people to arrogate unto itself the methods of civilized Powers in protecting its citizens against wrongs suffered abroad is the purest insolence. Why talk of treaties and treaty rights? Is not the Japanese an Asiatic; is he not accustomed to living on six cents a day at home? Are not his morals open to criticism, and is not his honesty questioned? As for our national pledges—we had a treaty with China, but the Supreme Court held that Congress could violate it at pleasure.

The Chinese, however, have not until recently been in a position to show effective resentment. Last winter, they started a boycott on American goods, and a different tone was assumed by the representative of the Chinese Government; and a more vigorous policy in future is the inevitable result of the Chinese awakening. The Japanese, flushed by success in one of the world's notable wars, conscious of extraordinary development as a nation, cannot be expected to sit by calmly and see their subjects treated with contumely. With a civilization in some ways superior to our own, they can hardly be blamed if they cry out against what the Japanese minister called the subjection to indignities of "poor, innocent, little Japanese children."

The Japanese Minister was quick to say he is aware that the San Francisco discrimination is purely local, but that fact, he added, can hardly be understood by his countrymen. Particularly, we fancy, in view of the formation of an association in California to bring about the exclusion of all Japanese. He cannot readily explain that, the Chinese issue no longer being available as a stepping-stone to office, an unscrupulous California editor began an anti-Japanese campaign a couple of years ago, for the purpose of winning a seat in the United States Senate. Were the mass of the Japanese people familiar with our internal affairs, they would realize that this aspiring statesman was merely imitating numerous Southern politicians who, in default of any other issue, raise a hullabaloo about negro domination. Down with the Japanese! is not quite so effective a cry as Denis Kearney's shrieks against the Chinese

used to be, because there are not yet one hundred thousand Japanese in all the United States; still, it may serve the purpose with professional labor agitators and ignorant voters.

The common arguments—if so they may be dignified—were summed up by Representative E. A. Hayes of California, who in Congress last March made a long attack upon the Japanese. Mr. Hayes explained that, while there are some good and pure Japanese men and women—a "small minority"—the nation is really far gone in licentiousness; that concubinage is rife in Japan; that all Japanese are native-born liars and quite untrustworthy in business; and that their new civilization is merely a veneer. Of course, Mr. Hayes made much of the complaint about cheap labor. In his view, the landing of 76,000 Japanese since 1900 constitutes a "most real and impending danger to the material and moral welfare" of the people of California. He told of 2,000 Japanese picking fruit in Santa Cruz County, where white girls used to pluck the berries before. Convinced that 2,750,000 Japanese are now plotting to descend upon us and "sweep the entire country west of the Rocky Mountains clean of white laborers," Mr. Hayes was naturally urgent that the bill before the last Congress to extend the provisions of the Chinese exclusion act to all Japanese and Koreans should be passed. He indulged in this kind of claptrap in spite of the fact that the whole Pacific Coast is suffering for lack of labor. The development of all its industries is retarded for want of hands. An immediate influx of from fifty to one hundred thousand Chinese and Japanese would be a great blessing.

That the protest of the Japanese is in accordance with their treaty rights is indisputable. Were the boot on the other foot, we know how quickly an indignant State Department would rise up on behalf of injured Americans. Unfortunately, Mr. Roosevelt cannot promise Viscount Aoki the discontinuance of the San Francisco discrimination. In like manner the United States Government was helpless after the New Orleans massacre of Italians in 1891. Unless Congress passes a statute in execution of the treaty with Japan, all that Mr. Roosevelt can do is to beseech California to mend her ways.

That State will do well to heed the warning, and allow no temporary exigencies, such as the plea that fire has destroyed schoolhouses, to alienate Japan. Trade with that country is one of its and the nation's great assets, an asset that ought to increase in value. Viewed from a broader aspect, the friendship of Japan is something the United States cannot afford to throw away. Count Okuma has just said that the United States and Japan "are the

two great powers in the new world of the future." There should be no misunderstandings between them.

MUSEUM EXTENSION IN SCHOOLS.

H. G. Wells, the Socialist critic of things American, tells how, attending the meeting of a Boston literary club, he was obsessed by the conviction that the mind of the world was dead, and he sought relief by tramping the streets for an hour or so. We do not know whether his evening walk took him past the Museum of Fine Arts, or as far as Simmons College or Harvard University. In any case, the sight of any of these institutions ought to have reassured him as to the mind of Boston, if not of the world. These three bodies are associated in a novel and interesting alliance, descriptively but rather cumbrously entitled a Committee for the Utilization of Museums of Art by Schools and Colleges. President Eliot of Harvard is chairman of the committee, President Lefavour of Simmons College, vice-chairman. M. S. Prichard has resigned the acting directorship of the Museum of Fine Arts to accept the secretaryship. The work surely could be under no better personal or official auspices.

Before noting what is peculiar in this new step, we should recall briefly other forms of art propaganda in the schools. For many years public-spirited committees and individuals have sought to place in the public schools fine reproductions of the best works of art. This practice is very common in the cities. Free lectures, such as are conducted by Columbia University and by university extension committees generally, have given much attention to the criticism and history of art. Something of the sort is done incidentally by the schools of painting. Loan exhibitions are a customary and successful feature of settlement work among the poor. In all these activities the museums have played a passive part. They have, however, very generally made it easy for bodies of school children to see the collections. Such visitations are frequent, the cicerone being a volunteer enthusiast, a public-school teacher, or, more frequently, perhaps, a preceptress in a fashionable girls' school. It is this relation already established that the Boston committee desires to improve and extend.

A little observation of parties of school children, in the Metropolitan Museum, for example, will show that these visits are often discouragingly unprofitable. Museum gazing is fatiguing at best, and when youngsters are solemnly marched about by one who has little more knowledge than they, and no means of expressing the collective feeling, the performance, however well-meaning, is not very useful. What children, and for that matter most grown-

ups, need in art museums is intelligent and eager guidance. This it is that the Boston committee hopes to provide; accordingly, it will for the present concentrate its efforts upon educating and stimulating school teachers in matters of art. It is felt, and rightly, that the culture of the teacher is the measure of the pupil's appreciation: hence the true objective of art propaganda through the schools. For the coming season the committee has provided two sets of lectures primarily for teachers, one dealing with general and æsthetic considerations in the main branches of the arts, the second with limited fields in art history. The six lectures in the general course will be of a distinguished sort. America could afford no better trio than W. P. P. Longfellow, to treat architecture; Prof. George Santayana, sculpture; John La Farge, painting and the minor arts; while the more specific purposes of the course are represented by two educators, Prof. H. Langford Warren of Harvard, who will speak on "What May the Schools Do to Advance the Understanding of Art?" and Walter Sargent of the State Board of Education, who will discuss "Museums of Art and the Public Schools."

We have given this entire list because it is a gauge of the seriousness of the movement. The bane of similar attempts in the past has been the half-baked lecturer and the pushing amateur. Evidently, the Boston people are on their guard against both, and hold by the true democratic principle that only the best instruction is good enough for the people. This ideal is worthy of imitation, for there is such a prodigious deal of mere vamping in matters artistic as to produce a veritable disgust with the word and the thing. We trust that the affiliation between Columbia University, the National Academy, and the Metropolitan Museum—a compact primarily for academic purposes—will also result in increasing the amount of popular instruction in art, and in materially raising its quality.

For those who are more immediately concerned with the museums than with the schools, the implications of the Boston movement are very interesting. It is no secret that either through its curators or through its accredited representatives the Boston Museum of Fine Arts is planning to undertake direct instruction in the history and appreciation of art. Such *viva-voce* teaching, in the presence of the very objects of study, is surely the ideal, whether for the professional student or for the casual enthusiast. To have been a *Peripatetiker* in the Berlin Museum with Ernst Curtius, or to have heard August Mau descend on Greco-Roman painting at Naples, is one of the rare privileges that stick in the memory. Difficult as it is for such lecturers to find the middle course between pedantry and dilettanteism, the method is

surely the humane and fruitful one. Some such undertaking, on the more modest scale suitable to youth, seems to be the logical next step at Boston—the goal, indeed, wherever lovers of art are trying to make our art museums more directly serviceable to the people through the schools.

HOW TO GROW OLD.

Almost as much advice is given indirectly to the aged as is given directly to the young. The question is asked openly, "What shall we do with our boys?" But a question, as pressing in many cases, though never put above a whisper, is, "What can we do with old men and old women?" Possibly, the objects of the latter inquiry, conscious of their sclerotic vessels and rheumatic joints, may themselves have misgivings about their function in the social economy. To them it may seem as if there were danger that the term "tristis senectus" of the Roman poet might be adopted now. In the mere matter of prolonging life, those who are getting old have a fair idea of their duty in avoiding draughts, unwholesome diet, and undue excitement. Growing old, however, would not be so serious a business if one could only do it usefully, comfortably, and gracefully.

In the *Revue Scientifique*, Dr. Bridou makes some suggestions about the mode in which men may avoid the evils of degeneracy, when the body begins to fail, and the sun is in the west. There is a correspondence between each step in the advancing years and certain habits and processes of mind and body. For example, the child is naturally restless, turbulent, and playful; these are signs of good health. But the gestures and acts of children, if observed in old men, are symptoms of sickly excitement, physical disorder, and disintegration. When the practices of youth are adopted or retained by age, we recognize that there is retrogression, which means relaxation of one's hold on life. But if, with advancing years, emotions are concentrated on higher things and infantile diffusions are avoided, there will be self-control and moral health. Men who like Bismarck are active in the affairs of state, or who like Lord Kelvin have their attention engaged upon new discoveries in science, feel chiefly the physical disadvantages of advancing years, but their minds have the vigor of youth.

This is a fact which few old people recognize, and so they must expect *une fin maussade et rancunière*. It is really not by the affectation of youth that old age is to preserve itself from degeneracy and senile imbecility. The sprightly old lady who dyes her hair, paints her face, smiles away the downward droop of her mouth, and dresses like a *débutante*; the old *viveur* who believes that by keeping his youthful vices he conceals his ad-

vancing years, who, being no longer gratified by the return of passion, seeks to escape the horror of disenchantment by reverting to the indulgences but not to the joys of youth—these people are unconsciously out of step with the music. The imitation of the *élan* and impulse of youth seems at the moment sane and healthy, but it indicates a growing moral incapacity.

In America, the aged are at a peculiar disadvantage. They have to leave the course long before the stretch is in sight. Churches are seldom offered to clergymen, retainers to lawyers, surgical operations to doctors, after they have passed the grand climacteric. Their advice is sought because of their experience, but their active days are almost done. In the Old World they have a better chance. The septuagenarian may be seen mounted in Rotten Row; here he is fortunate to be pushed by the elbow into a cab. There are many white-haired men sitting in Parliament as in the Reichstag, still active in the service of an empire—in striking contrast to certain Senators here who retain their seats, but seem too old or too feeble-minded to resign. Their experience, which is their one precious possession, is useless because of the atrophy of their faculties.

Plato, in a fine passage in "The Republic," anticipates the theory of Dr. Bridou. In reply to Socrates, who asks whether life grows harder as the end approaches, the aged Cephalus says: "Old men assemble, . . . and at our meetings, my friends tell me, 'I cannot eat, I cannot drink, the pleasures of youth and love are gone.'" Yet he concludes that in old age there is a feeling of calm and freedom when the passions relax their hold. For it is then, as Sophocles says, that there has been escape from the control, not of one mad master, but of many. Regrets and futile desires lie in the characters and tempers of men, "for he who is of a calm and happy nature will hardly feel the pressure of age." With the development of this same idea in Browning's "Rabbi Ben Ezra" all our readers are familiar—

Young, all lay in dispute; I shall know, being old.

We must admit, however, that such advice to the old is very apt to meet the fate of that offered to the young. Indeed, any moralist exhorting the aged ought to do so in the spirit of the philosopher who said that he never gave advice except when he knew it would not be taken.

NEW LIGHT ON CARDINAL NEWMAN.

A great gathering of ecclesiastics was present on October 9 at the consecration of the church which has been erected at The Oratory, Birmingham, in

honor of Cardinal Newman. The Archbishop of Westminster said in his sermon that it had been but right for Catholics to "appeal to the whole English-speaking world" to help in erecting this memorial to Newman. It might well be that Protestants would be glad to unite in a tribute to a man who was a religious genius and a master of style. Indeed, Newman the writer seems destined to live longer than Newman the ecclesiastic. Many who cannot follow his reasoning, yet feel the spell of his English in printed sermons which still have power to make the hearts of readers burn within them, as did his spoken words the hearts of the Oxford undergraduates in St. Mary's in the early days of the Tractarians. Men whole diameters away from Newman's theological position turn often to his "Apologia" to taste again of its simple eloquence.

Estimates of Newman the man have varied with the personal or ecclesiastical point of view. Carlyle's rough contempt for his intellect was one of the things that startled or shocked the world on Froude's publication of the "Reminiscences." Kingsley's attack on Newman's personal sincerity was terribly punished, yet there were those who had their doubts. Newman's "Grammar of Assent" did not tend to lay them; since that book could be popularly described as an attempt to show that you could believe anything if only you tried hard enough. Yet the Cardinal himself disclaimed being a controversialist. Once when a Protestant champion challenged him to a public debate, he quietly replied: "I have really no taste or aptitude for controversy, but my friends are good enough to say that I have some little skill on the violin."

It was left, however, for a co-religionist to reveal Newman in new aspects of his character. Lord Acton, the great scholar and stout Catholic, was thrown much into Newman's society, and in some of the letters just published in "Lord Acton and His Circle," there are many liftings of the curtain on Newman's private life. Acton was backing the *Rambler* and often consulted Newman about that and other Catholic periodicals. Here is a report of a conversation in 1858, when the *Rambler* was in trouble:

I had a three hours' talk with the venerable Newman, who came out at last with his real sentiments to an extent which startled me with respect both to things and persons, as Ward, Dalgairns, etc., etc.; natural inclination of men in power to tyrannize; ignorance and presumption of would-be theologians. I did not think he would ever cast aside his diplomacy and buttonment so entirely, and was quite surprised at the intense interest he displayed in the *Rambler*. He was quite miserable when I told him the news and moaned for a long time, rocking himself backwards and

forwards over the fire, like an old woman with a toothache. He thinks the move provoked both by the hope of breaking down the *R.* and by jealousy of Döllinger. He asked whether we suspected any one. He has no present advice, being ignorant of the course of such affairs in Rome, except that we should declare that we do not treat theology in our pages. He wants us to have rather more levity and profaneness, less theology and learning. A good story, he thinks, would turn away wrath, and he enjoys particularly your friendly encounters with Bentham, Combe, Buckle, and the like.

Lord Acton, to be sure, held a racy pen, yet his picture of Newman as acting like "an old woman with a toothache" suggests that all was not perfect serenity in The Oratory, after Newman's submission to Rome. On another occasion, in 1860, Acton found him a victim of the blue devils:

I never saw Newman so much out of spirits, so distributively angry. . . . I have never heard him speak openly on affairs as in the bitterness of his spirit he spoke during the half-hour I was with him.

We are not told the objects of "Newman's wrath"; "he wished me not to repeat"; but the hint that his "vehement language" was reported to be "in substance the same that I have been hearing these nine years from Döllinger," leaves little doubt that it was the Ultramontanes with whom Newman was "distributively angry." This inference is borne out by another letter of Lord Acton's, this one written to R. H. Hutton in 1891, and only now made public by the latter's son. In it, Lord Acton said that his own impressions of Newman were based "chiefly on the years 1858 to 1864." He added:

It happened that those were precisely the years in which a semblance came over him of what he would certainly not have called Liberalism, but which showed itself in his dubious attitude towards the temporal power, and even in the Oxford scheme and the treatment of Liguori, and which was backed by much personal aversion for Wiseman, Manning, Faber, and even Ward.

These revelations are mainly of interest as showing that a spirit like Newman's had much to brook even after he had gone over to the Roman Communion. But the dread of Liberalism which, as there is good evidence to show, first pushed him and Pusey into the Oxford Movement, was always powerful with him, and sufficed to make him acquiesce in measures to combat it, even though he disliked them. Where Acton and Döllinger openly protested against the excesses of Ultramontanism, Newman's rule was to submit. Yet Lord Acton's intimate disclosures give us fresh knowledge of how often Newman's proud soul had to lay to itself the command of "Faust"—*souist entbehren*.

A REAL LINGUISTIC REFORM.

Critics of the simplified spelling movement have justly noted that its champions demand either too much or too little. If it is a serious question of reforming the language, a little clipping of vowels and consonants here and there produces no real effect—is, in fact, like undertaking to clean up the Augean stables with an oyster fork. Better to let things comfortably alone than to stir them up to so little effect. We share this way of thinking, and feel that there are many reforms more worth the attention of orthographic ironmasters than that of spelling. To speak candidly, we have a little reform of our own, only awaiting its subsidy, namely, the consolidation of the many disguised compounds in the English language. In the natural course of things linguistic, everybody knows, set combinations of words come to express a single idea. The process is represented on the printed page by the hyphen, the finished product by the true compound word. All this is in the interest of simplicity. We gain when a hat-rack becomes singly and indivisibly a hatrack.

But this useful tendency has halted half-way; the printed page to-day is clogged by superfluous hyphens and by phrases that are no phrases, but true compound words. Since the vocabulary of literature and the press knows no unsuccessful persons in commerce, why not write at once and plainly successfulbusinessman, conservativebanker, and the like? Similarly, since the chronicles of the bucket-shops are infra-literary and ignored, when speaking of a Wallstreetmagnate one should mention him as a greatoperator, financialpower, or moneyking. The same principle applies geographically also. A lethargic Westerner has never yet been mentioned in the newspapers; accordingly, one may dub the class generically breezywesterners. By the same token pulchritude being universal south of Mason and Dixon's line, all females between the ages of ten and seventy resident in that locality should be described as South-einbeauties, or, specifically, as Kentuckybelles. Girls generally may be sufficiently denoted as perfectgibsontypes, or, more elaborately, as thefinestproductofourwesterncivilization.

It is a striking fact that many of the phrases which need fusing into a single word apply to women. To a cynic this might suggest that the sex receives more than its share of lip-service. There is room for reflection in the fact that the well-to-do world is peopled with delightfulhostesses, who marry, however, below them, for their husbands are merely genialhosts. Except upon the funereal samplers wrought by our grandmothers, widows are, as a rule, eminently consolable, hence we need the word, dashingwidow, or the still more

alluring compound, dashing equestrienne. Popular sportsmen usually choose their mates from this class, but sometimes are unlucky enough to marry notorious adventuresses. In the literary world these disguised compounds are even more persistent, and need more urgently to be set forth in their true unity. Passionate poetess and talented authoress, soulful novelist, daring realist, fearless analyst, will immediately occur to every frequenter of literary teas. Why should the types keep asunder what the lips invariably put together?

In politics, too, we need a unifying process. Let us call our practical politicians, logical candidates, and favorites by their real names. These terms are actually as compact and single in intention as, for example, spellbinder or stump speaker. Professional life will afford many instances of these compounds which lie *perdus*, waiting only for the consolidating hand. Let one recall only the millions of prominent elegymen in the land, not to mention the brilliant lawyers, grave professors, famous artists, renowned physicians, and, in all modesty, able journalists.

We have shown that this settling together of invariable combinations of words is in the good traditions of the language. One might recall Homeric precedent also. Would the coiner of "rosy-fingered" as an epithet for dawn, have been content to speak of a fair maid? Since all are so by courtesy, fairmaid is as inevitable as Goodman or goodwife. Again, the economic argument is not to be disregarded. An eminent statistician who prefers to remain unknown has estimated that if all these disguised compounds were printed as the true compounds they are, the saving in white paper in the average American daily would amount to 5 per cent., in typesetting to as much, and the grand-total of these combined economies would be annually, in the civilized world, a sufficient sum to pay all the debts of the South American republics. Nor should the dear children of our schools be forgotten. If these words were properly printed, the pupils of tender age would learn that these are not real adjectives and substantives, with the usual content of meaning, but simple decorations with which we festoon our shopworn nouns. To learn this early in life would save many a disillusionment later on. The noted scientist quoted above has calculated that the saving of the average child would amount to no less than a fortnight during its school course, in which time the easier complexities of simplified spelling might readily be mastered. In short, so many and cogent are the arguments for this reform that we anticipate serious opposition only from the incorrigibly conservative class of New England old maids.

THE DANGERS OF THE SMALL COLLEGE.

"Whether the college, placed between the efficient high school and the powerful university can continue to hold its own, and still offer an education worth rewarding with a degree, is a question whose serious consideration cannot long be evaded." Thus the *Nation*, in an editorial of December 7, 1899, expressed a common doubt, and implied that the gravest danger of the small college was "the inevitable tendency of the largest institutions to grow the fastest." Two years later, President Harris of Amherst College, writing in the *Outlook*, seemed to regard that danger as the heart of the matter, when he said:

The question of the future of the small college is whether the universities are to grow at the expense of the colleges. At present the number of men in the detached colleges of New England, upwards of 3,000, is about the same as the number of men in the two universities. Will the proportion continue the same or will it change?

Whether the small college has continued to hold its own; whether the tendency of the largest institutions to grow the fastest is inevitable; whether the proportion of the university and the college enrolment has changed—these are questions which can now be answered with something more than opinions. And here are the facts.

Lack of uniformity in college catalogues makes the task of extensive comparisons difficult. The figures here given represent the enrolment in the academic departments of the largest universities as furnished by their respective registrars to Columbia University. The figures for the small colleges are taken from the catalogues. Although, for the reason mentioned, it is difficult to be exact, these tables are substantially correct for December of each year. Table I. gives the enrolment for the past four years in seven small colleges of New England, with four colleges outside New England added for comparison. Table II. gives the enrolment of men students in the College of Arts of thirteen of the largest universities, except that Wisconsin is omitted, because in 1903 the A.B. degree there was suddenly made much more accessible.

*Mainly in the scientific departments. †Men and women.

Now, we can answer the questions asked by President Harris four years ago. The answer is that in the past four years Harvard and Yale in their academic departments show a net loss of 91; while these seven small colleges for the same period show a net gain of 561. Or, if we regard Dartmouth as neither large nor small, the growth of the remaining six small colleges of the highest rank appears 372 better than that of the two universities. To add Bates, Colby, Clark, and Maine to Table I. would make the showing even more favorable to the small college. "The gravest danger of the small college," therefore, appears to be no danger at all.

It has been said that the loss in the academic department of the largest college of all is due rather to the growth of universities in the West than to any increasing preference of New Englanders for the small college. But two facts show the falsity of this assertion: first, the colleges of arts in the West have not grown so rapidly as the New England small colleges; second, Harvard College has suffered a decrease in the enrolment of students from New England and from Massachusetts herself. The report of the president says that at Harvard, in the undergraduate work, "there has been no durable gain in the number of students from New England or from Massachusetts, by itself, for five years past." In fact, there were 1,235 New England students at Harvard in 1900-1901, whereas in 1904-1905 the number had fallen to 1,162. In 1900-1901 there were 1,113 Massachusetts men at Harvard; in 1904-1905 there were but 1,050. It is evident that "no durable gain" is a conservative expression for actual loss. And, since, during these same years the prestige and enrolment of the graduate schools of New England universities, especially of Harvard, have measurably increased, and since the total college population and that of every small college in New England has increased, there is strong ground for concluding that, in the choice between the New England small college and the college of arts of the large university, the country is showing a stronger preference than ever before for the small college.

Two reasons which have hitherto induced men to choose the larger and older institutions have been prestige and educational advantage. But there can be no continued monopoly of either. The difference in prestige—due to age and to the fame of alumni—has been growing less with the years. Time will take care of that. It is not surprising that the great men of one hundred years ago, if they went to college at all, went to the thirty colleges then founded. William and Mary College had her Jefferson and Monroe; Harvard had her Emerson and Holmes; Bowdoin had her Hawthorne and Longfellow. But now that there are some 450 colleges in the United States, the influence of prestige in determining the choice of a college is not so conspicuously in favor of a few institutions. On the contrary, of the six universi-

ties which have shown the greatest net gain in the college of arts during the last four years (Wisconsin, Syracuse, Michigan, Chicago, Northwestern, and Minnesota), only two (Wisconsin and Michigan) are over fifty years old, and neither is seventy years old. Of the six which have shown the greatest net loss (Indiana, Harvard, Pennsylvania, Princeton, Cornell, Nebraska), all but two are over eighty years old. Three of the heaviest losers (Harvard, 267; Pennsylvania, 166; Princeton, 129) are among the first six colleges founded in the United States. Evidently stronger motives than age and prestige are to-day governing the choice of a college.

The other motive which has been strongest in leading men to prefer the large college to the small, namely, educational advantage, is a less and less potent factor in the choice of a college. On this point it is enough to note, without elaboration, the common arguments in behalf of the small college: that within the university under the elective system the multiplication of courses soon reaches a point beyond which the value of any considerable extension, to ninety undergraduates out of a hundred, is more apparent than real; that in the small college the instruction may be of the highest quality; and that there is a manifest gain from the smallness of the classes. These arguments, which are familiar to all readers of the *Nation*, are obviously appealing to many fathers and sons.

Not even the above comparisons, however, justify the conclusion that the small college is best for all. On the contrary, there will always be exceptional men who in a small college might so easily lead in scholarship, athletics, music, debating, and other student activities that they would need the stimulus of the keener competition with larger numbers. There will always be students whose maturity and strength of purpose are safeguards against the dangers of great numbers. There will always be a few who really want and can profit by certain courses of study which the small colleges ought not to attempt to offer. Still others there will always be whose exceptional business ability enables them to make more money during their college courses at a large institution than they could make at a small institution. But let not every boy who has found leadership easy in his preparatory school imagine that he is one of those exceptional cases. Even the small college represents the survival of the fittest in many schools.

Dangers the small college has, but not, as we have seen, in the failure to attract numbers or in the greater growth of universities. Rather the dangers lie in attracting too many students and in abortive attempts to become universities.

A first danger—attracting too many students. That college, which, for the sake of numbers, falls below the entrance standard of the colleges with which it competes, is in danger. That college which suffers its entrance requirements to become lower in fact than they are on paper, is in danger. That college which refuses to join such movements for uniform standards as the college Certificate Boards, is in danger. Such a course means temporarily to increase the enrolment, but it means permanently to lower the college standard.

A second danger—abortive attempts to become a university. The college should be fundamentally a maker of men. Its greatest source of strength lies in doing well precisely that kind of work which university conditions render more difficult. In its desire to keep up with the times and to thicken its catalogue it should not encroach on the work which is the distinctive province of the university. To provide technical training for undergraduates is to misconceive the purpose of the college. To offer such subjects to the few who wish to remain for graduate work is beyond the means of most colleges and beyond the proper scope of all. The college owes the time and highest service of its faculty to the undergraduates.

A third danger—intercollegiate athletics. In the degradation of scholarship standards for the whole college, this is a factor which all but the blind can see. Not that the athletes as a whole stand conspicuously lower in scholarship than the other students as a whole. In fact, I have just discovered from the tabulating of 18,750 ranks attained by all students in Bowdoin College for five years that the average rank of athletes and non-athletes, 77.57 and 80.37, shows less than 3 per cent. difference. A similar result I found for six other institutions. The danger lies in the influence of excessive interest in intercollegiate games on the whole student body; and in the influence on the minimum entrance and college requirements of the desire to win at any cost. I know of a New England college which admitted, without examination, and retained a man unfit for any college, in spite of the written protest of his fitting school that he was unprepared. The reason was that he was the brother of the football captain, whom the faculty dared not offend. A new graven image is set on the altar of the college. Of late the bold have been venturing protests; but until recently the still, small voice of scholarship has had but a sorry chance against the yelling of thirty thousand voices at a college game. Intense rivalry in athletics, the all-absorbing interest of the whole student body, particularly of those who can least afford the time and the interest, the almost fanatic enthusiasm of the public, the timidity of school and college authorities—all this makes intercollegiate athletics as they are now conducted dangerous to the small colleges. They persist in competing with universities which draw their teams from ten times the number of men, and they are constantly under pressure, from their "friends" and their own mistaken notions, to admit and retain men whose only qualification is proficiency on the diamond or gridiron.

The small college, which refuses to lower its standard from any notion of the importance of mere numbers; which devotes its energies to its own mission as the maker of men and leaves to the university its own distinct work of making specialists; which guards against the evil and employs the good in athletics; which resists the temptation to shift any considerable part of its teaching upon inexperienced, underpaid, and temporary assistants; which sees the extravagance of spending large sums for fine buildings and small sums for strong teachers; which

avoids the large college tendency to substitute mechanism for personality in administration; such a college, open to the accredited graduates of every approved high school, offering a few elective courses in the most important branches of strictly college study, taught to small groups by scholars who are first men, has a place so secure and so important that all the tendencies to-day in large colleges and in professional schools are serving only to strengthen the small college against its real and supposed dangers.

WILLIAM TRUFANT FOSTER.

Bowdoin College, Brunswick, Maine.

Correspondence.

SPENSER'S DATING OF "COLIN CLOUT."

TO THE EDITOR OF THE NATION:

SIR: The date of "Colin Clout's Come Home Again" is important in Spenser's biography as the sole proof that he returned to his estate at Kilcolman in Ireland in 1591. At the head of the poem appears a signed letter from the author to Sir Walter Raleigh, in which he speaks of "my late being in England." The letter is dated: "From my house at Kilcolman, the 27. of December, 1591." This apparently indisputable evidence is, however, confronted by the date of the "Daphnaïda." It will be remembered that, according to the old style, then in use, January was the eleventh and not the first month of the year. Spenser dates his dedicatory letter prefixed to the "Daphnaïda," "London, this first of January, 1591"—five days later than the date of "Colin Clout."

No one imagines that Spenser returned to London immediately after sending "Colin Clout," and composed the "Daphnaïda" en route. The time limits forbid even Pegasus such a feat. Therefore, since there is no reason to suspect either text, editors such as Grosart and Lord Hales have taken refuge in an assumption that Spenser in the latter instance is using the new style. Surely a desperate assumption, that Spenser in a single instance, without apparent cause, has violated the usage of his contemporaries! The only circumstance adduced to support this solution is the date of Lady Howard's death in 1590, as if it were proof that the elegy in her honor must have been finished in the same year. This leaves still unexplained the reason for Spenser's anomalous alteration of the calendar.

As a literary device, it is true, Spenser did just this thing in the "Shepherd's Calendar"; but he devotes his "General Argument" chiefly to a defence of the innovation, acknowledging that: "To some he [the author] may seeme fowly to have faulted, in that he erroneously beginneth with that moneth, which beginneth not the year." Spenser begins with January, as he explains, to conform to pastoral decorum: "Wening it perhaps no decorum that Shepherds shoulde be seene in a matter of so deepe insight." In the case of his own dedicatory letter addressed to a marquess, no such excuse can be pleaded.

A simpler explanation of the incongruity has been passed by. The make-up of "Colin Clout" reveals a reason. Here

Spenser takes occasion to describe, under pastoral names, Queen Elizabeth, her courtiers, poets, and court ladies, bestowing upon each in turn a proportionate meed of praise. Very prettily he frames these encomia in an account of his visit to England, which feignedly he renders to a group of his "shepherd" friends in Ireland. No doubt these friends were interested in the Elizabethan court; but so were the court folk themselves. It is for London readers primarily that the poem was written. But how delicately Spenser couches this flattery in a recital feignedly made far away at his homecoming! So appropriately and with such a consistent sense of decorum that he feignedly dates the poem from his Irish home at Kilcolman, being in reality—where? Where his poem would be fully appreciated, in London, where he was five days later, when he dedicated the "Daphnaida."

PERCY W. LONG, Ph.D. (Harvard).

Bryn Mawr College, Pa., October 26.

THE PRESENT POSITION OF LATIN AND GREEK.

TO THE EDITOR OF THE NATION:

SIR: I am sure that others, as well as myself, noted with surprise the remarks of Prof. A. O. Norton of Harvard in your issue of October 4 (p. 280) in regard to the decline in the number of students of Greek in school and college. "The abandonment of prescribed Greek for college entrance," says Mr. Norton, "has probably not greatly influenced the decline"; and, again, "Greek is still protected, and well protected, at most colleges by being given more credit for a given amount of work than any other subject." The latter statement will undoubtedly hold true in the case of the colleges which he names; but the context shows that his argument is of general, not local, application, and I am unable to see by what considerations he would justify his conclusion in respect to the colleges of the United States as a whole. In this connection the statistics of enrolment of Greek students in the secondary schools of the different groups of States are instructive when confronted with the entrance requirements of the colleges and of the arts departments of universities in the same States. Thus, for example, the decline in the enrolment of Greek students in the schools of the North Central States from 5,030 in 1897-98 to 2,767 in 1903-04 is synchronous with the adoption of an "omnibus" bachelor's degree by several prominent colleges in the same region; how broad are the entrance requirements of these institutions at the present time may be seen in the tables published by Principal F. L. Bliss in the Proceedings of the North Central Association of Colleges and Secondary Schools for 1905.

If he had not been hampered by limitations of space Professor Norton would probably have pointed out the fact that the statistics for the study of Greek in college, which he cites (16,218 students of Greek in 1900-01, and 14,729 in 1904), are of interest only as indicating a general trend; they are too inaccurate to be of value in estimating the proportion of college students enrolled in Greek, which is suggested by the citation of the figures showing "the total college population" in the

same years. Not to speak of other omissions, the totals given contain no report of the enrolment of Greek students in Harvard, Yale, the University of Michigan and the University of Chicago.

It is to be regretted that by a slip of the pen Mr. Norton has presented in respect to the study of Latin some figures which are misleading. He says (p. 281):

Latin flourishes in the secondary schools almost beyond belief. In 1894 there were roughly 480,000 secondary students in the United States, of whom 43.59 per cent. were studying Latin; in 1904 the numbers were 822,000 and 49.96 per cent. respectively.

In the report of the commissioner of education for 1903-04 the number, 822,235, represents the whole attendance of second-grade students who were enrolled in "public high schools, public normal schools, public universities and colleges," "private" institutions of like grade, "private colleges for women," and "manual training schools." "While the number of secondary students in the preparatory departments of colleges and other institutions is given," says the report, "it has been found impracticable to collect complete statistics of such departments." Consequently the statistics for the enrolment in Latin are limited to public and private high schools and academies. In 1903-04 the enrolment in Latin in the public high schools was reported as 323,028, in private high schools and academies as 46,301, making a total of 369,329; this is approximately 49.96 per cent. of the total enrolment of students in these classes of institutions, which is given as 739,215. Had account been taken of the enrolment of students of Latin in the preparatory departments of the colleges, particularly the denominational colleges, and in all other institutions having students of secondary rank, the number must have been considerably augmented; but whether the students enrolled in Latin formed a greater or smaller proportion of the whole 822,235 secondary students in attendance at all classes of institutions it is impossible to tell. One may hazard a guess that the percentage, if known, would fall below 49.96.

FRANCIS W. KELSEY.

Ann Arbor, Mich., October 20.

A BETTER POSTAL CARD.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of April 5, 1900, I wrote as follows:

Can any one explain to me why this splendid big nation, which gives itself every conceivable form of luxury, cannot manage to provide for its inhabitants a white postal card? In England a lady or a gentleman can write a short note on a post-card and not feel that one has done anything derogatory to one's dignity; but here one must make use of an unpleasant yellow thing, of inartistic proportions, or else go through the fatiguing and expensive work of writing a note, putting it into an envelope, and affixing to it a two-cent stamp.

Last year, being a public-spirited person, I wrote myself to the postmaster-general and begged him to provide a white and tidy card, even if it had to cost two cents; he replied that it was impossible at that time, but that it should be done another year. Another year has come, and there is still nothing of the sort to be seen. Now what I wish to know is this: Why should a luxurious nation think it worth while to practise this particular form of penury?

Six years have come and gone, and a

white postal card, of good writing surface and of good proportions, must still be numbered, in this country, among non-existences. Could not President Roosevelt, strenuous in all good movements, be persuaded to take an interest in this much-needed reform?

C. L. F.

Baltimore, October 27.

Notes.

E. P. Dutton & Co. have the following books on their autumn list now ready: "Time and Clocks," a description of ancient and modern methods of measuring time, by H. H. Cunyngname; "Holiday and Other Poems," by John Davidson, with an essay on poetry; "The Heart of England," by Edward Thomas, with illustrations in color by H. L. Richardson; "William Blake: A Critical Essay," by Swinburne (a new edition); "Artillery and Explosives," by Sir Andrew Noble, with diagrams and illustrations; and "Social Silhouettes," by George W. E. Russell, author of "Collections and Recollections."

At its annual meeting in December, 1902, the American Historical Association approved the plan of publishing a series of volumes to contain the classical narratives on which the early history of the United States is founded, anterior to 1700. The general editor chosen for this scheme was J. Franklin Jameson. The first volume, just issued by Charles Scribner's Sons, is called "The Northmen, Columbus, and Cabot: 985-1503." The voyages of the Northmen are edited by Prof. Julius E. Olson, those of Columbus and John Cabot by Prof. E. G. Bourne.

The great Cambridge "History of English Literature," in fourteen volumes, which has already been announced in these columns, will be published in this country by G. P. Putnam's Sons as the regular agents of the Cambridge University Press. Other books soon to be brought out in the series of English Classics are "The Plays of Beaumont and Fletcher," vol. iv.; Bunyan's "Grace Abounding" and "Pilgrim's Progress," edited by Dr. John Brown; "The Essays and English Plays of Abraham Cowley," edited by A. R. Waller; "The Works of Giles and Phineas Fletcher," edited by F. S. Boas; "The Poems of George Gascoigne," edited by Prof. J. W. Cunliffe; "The Poems of George Crabbe," vol. iii.

"The Life of Sir Leslie Stephen, K.C.B.," by Frederick William Maitland, is announced among the November publications of G. P. Putnam's Sons. Dr. Maitland, a close friend of Sir Leslie and his family, is Downing professor of law at Cambridge University.

The Macmillan Company will soon have ready an English edition of the now famous Memoirs of Prince Von Hohenlohe.

Thomas Whittaker is bringing out "The King and His Kingdom," by the Rev. C. J. Ridgeway, dean of Carlisle, and "Religion and Experience," by the Rev. J. Brierley of England ("J. B."), editor of the *Christian World*.

In mentioning, last week, "The Complete Works of Abraham Lincoln," issued by the Francis D. Tandy Company, we spoke

of the tenth volume as completing the set. We are informed that two more volumes are to appear, containing an appendix of material that came to hand too late for inclusion in its proper place; a Bibliography of Lincolniana, prepared by Judge Daniel Fish of Minneapolis; an anthology of Lincoln's sayings and epigrams; a chronological index, and an exhaustive analytical index.

Anatole France, who for many years has been a special student of the story of Joan of Arc, and who for ten years has been engaged in writing a book on the subject, is at last about to publish his work through Calmann-Lévy.

Thomas McKie's "Summer Rambles" (Edinburgh: David Douglas) covers a good deal of ground and includes Ireland, Wales, England, Scotland, and Germany. The first essay happens to describe Dublin, and is so curiously unlike that capital, though with certain hints of resemblance, like a bad photograph, that we are not surprised to find that the picture was taken some fifty years ago. All Mr. McKie's chapters on Ireland, the gayeries and thronging population of Limerick, or Cork, or Queenstown, remind the reader that half a century has depopulated that distressful country. But Mr. McKie has not the talent for topography, and his sketches lack life and color. He falls into the sin that so often besets the descriptive writer: his private philosophy is dearer to him than the ambition to transport his reader's imagination to the place described.

F. Berkeley Smith's "In London Town" (New York: Funk & Wagnalls Co.) is written by one whose spirit's home is Paris. When he has gathered in the gaudier charms of London with a superficial hand and looked on her many-sided face with a superficial eye, he hurries back to the Restaurant Weber quite unimpressed by all that has made London dear to so many a cosmopolitan. Mr. Smith offers his reader what he would call the gayer side of London, the life of the music-hall artiste, the heavy efforts at Bohemianism, the backstairs life of the Gaiety and the Empire. Imagine Charles Lamb confronted with these French illustrations of rouged women and gilded youths, this complete lack of the historical feeling, this amazing ignorance of what London stands for in the minds of men. The description of a Sunday at Brighton in the society of a gay little Parisienne picked up en route is the most depressing chapter we have read for a long time. As for "my simple highly-titled friend" whose pedigree harks back to the eleventh century, we fear he is only too true to life and that no one could be more simple. The total effect of the book is flashy and un-English.

The Clarendon Press has put out attractively bound editions of Palgrave's "Treasury of Sacred Song" and Kinglake's "Eothen." It is curious to read in the Introduction to the latter work, by D. G. Hogarth, that this superb book of Oriental travel belongs to the long list of rejected manuscripts. It was refused by several publishers before it was issued, in 1844, by Oliver of Pall Mall, partly at the author's own expense and risk.

Number 60 of the Philosophical Classics, published by the Open Court Company, contains Fichte's "Vocation of Man," translat-

ed by Dr. William Smith. The series now embraces an excellent selection of the great philosophical treatises, sold at commendably low prices.

"The Economy of Happiness," by James Mackay (Boston: Little, Brown & Co.), is a treatise on logic, ethics, and economics in three books. In his Introduction the author advises those who are not interested in the first or the second book to read the third. It would have been better if he had condensed some and omitted other parts of the earlier chapters, which are unnecessarily long and discursive. The way to happiness, he tells us, lies in the application of common sense to social and economical conditions, with "utility" as the standard. Mr. Mackay calls his theory "Pantocracy," which is founded on "the socialism of Marx and his co-workers." Among the "eight different features" of this scheme are: public ownership, retention of the wage system, and abolition of profit, with organizations to adjust supply to demand, and to deal with all the principal problems of economics. The author has a fancy, apparently, for coining words which obscure his meaning. The theoretical part of his work is partly elucidated by mathematical formulas and by diagrams which some people may find interesting, if not instructive.

Specialists have known that the best hook by an Occidental scholar on Hindu religion is the second volume (or section, or part; the division of these German books is inextricable) of Professor Deussen's "Allgemeine Geschichte der Philosophie." This has been translated by A. S. Geden as "The Philosophy of the Upanishads" (imported by Scribners). It is a work to be heartily recommended, although the reader must be advised that a certain note of intellectualism, bound to appear in the treatise of any German metaphysician, somewhat distorts the primitive character of those ancient books. Some time about the year 800 A. D. a great Hindu metaphysician, Shankara (or Çankara, as the name is more commonly transliterated) developed the Vedānta, as it lay in germ in the Upanishads, into a system of stupendous intricacy. He was the Doctor Angelicus of India. In 1883 Professor Deussen published a compendium of this philosophy, under the title of "Das System des Vedānta," to which he added at the end a brief summary of the doctrine. This summary, "The Outline of the Vedānta System of Philosophy, according to Shankara, by Paul Deussen," has been translated by J. H. Woods and C. B. Runkle, and published in a slender volume by the Grafton Press. It is the best exposition of the chief school of Hindu metaphysics obtainable in brief compass.

A pathetic interest attaches to the Rev. Dr. George Matheson's "Rests by the River" (New York: A. C. Armstrong & Son) since the blind minister of St. Bernard's, Edinburgh, closed his useful and devoted life only a few months ago. The present volume resembles several of the author's previous books, in that it consists of a large number of devotional meditations, of three or four pages each. The brief homilies are based on original, sometimes fanciful, interpretations of a Scripture text, and have a flavor of true piety. Dr. Matheson was more at home than most men of these times in the region of religious mys-

teries. His death removes the seer from the company of Scotch theologians, but the present volume will conspire well with his former writings to preserve his beautiful spirit and to exhibit to the many who need the lesson that it is possible to be pious without being foolish.

Two considerable volumes of "Spiritual Studies in St. Luke's Gospel," by the Rev. Arthur Ritchie, Rector of St. Ignatius Church of this city (Milwaukee: The Young Churchman Co.), manifest both the merits and defects of High Anglican churchmanship. Sincerity and enthusiasm and a religious spirit are evident. The author has devoted much study to the Church fathers, and under every important text he marshals passages from Augustine and Chrysostom, Cyril, Amrose, and Jerome. Unfortunately preference is shown for fanciful patristic exegesis. Stier and Isaac Williams, whose cabalistic style of interpretation is well known, are the modern commentators he cites most frequently. To recent critical works, even of the thorough scholars of the author's own communion, he pays no attention. Dr. Ritchie has arranged his commentary in short sections, and divided each "study" into an exposition and a series of three "thoughts," thus adapting his work to quick reference and ready comprehension.

Lewis A. Hart, author of "A Jewish Reply to Christian Evangelists" (New York: Bloch Publishing Co.), is a Jewish notary in Montreal and a former lecturer in the faculty of law at McGill University. He is greatly outraged by Protestant endeavors at the conversion of Jews, especially by the efforts of the Jewish Mission in his home city. It seems that a member of the Protestant Ministerial Association of Montreal wrote to the *Jewish Times* of that city in extenuation and explanation of the proselytizing endeavors, and Mr. Hart made the series of vigorous replies now published in book form. The essays are naturally polemic, and from their point of view, able. The special object of attack is the doctrine of the Trinity, which is understood as tritheism, "a triumvirate of gods." He has, of course, no difficulty in overthrowing the arguments by which it is sought to establish this doctrine from Old Testament texts, from the word "Elohim" as plural, from the *trisagion* of Isaiah vi., etc. His philippic against this sort of exegesis and the doctrine founded on it, takes one back to the days of Channing. But, unfortunately, when he seeks to define and vindicate his position as a Jew, he sinks to the same literal interpretation that he condemns in his opponents. This method may have lent force and effectiveness to his papers as tracts for a particular situation, but essays of this quality are of no value in exhibiting the peculiar strength and weaknesses of the religions with which they deal.

In "The Poetry of Chaucer, a Guide to its Study and Appreciation" (Houghton, Mifflin & Co.), Dr. R. K. Root of Princeton has given us an agreeably written book of a popular character, which in accuracy of statement and fulness of information satisfies all scientific requirements. To be sure, for professional students the work contains too much that is elementary—at least, for consecutive reading—and on the other hand, being purely expository and critical and not biographical, it may prove

too long perhaps for the taste of the general public. Nevertheless, both classes of readers may consult it with profit. The author has utilized all Chaucer investigations up to the present year, including the important recent discussions of the Prologue to the "Legend of Good Women." One does not look, of course, for new discoveries with regard to Chaucer or his works in a book of this character, but in setting forth the present state of knowledge of his subject the author exhibits independence and good judgment in his attitude towards the work of others. Especially to be commended is his conservatism in rejecting the ingenious speculations which have recently aimed at revolutionizing the generally accepted chronology of Chaucer's poems. On the side of literary criticism Dr. Root shows the same qualities of conservatism and good judgment. Like most books that issue from American universities, it is perhaps too didactic in aim, and the shadow of orthodoxy at times hangs a little heavily over its pages. Yet the book is written so evidently *con amore* that the sympathy of the writer can hardly help becoming infectious. The discussions of the characters in "Troilus and Criseyde" and of the 'litel clergeon' in the "Prioress's Tale" furnish, perhaps, the best examples of our author's work from this point of view. Among errata we may remark that Dr. W. E. Mead's edition of "The Squyr of Lowe Degre" appeared in the Albion Series, not the Athenæum Press Series. Finally, it seems to us that in any enumeration of authors (p. 12) who illustrate the intellectual activity of England about the close of the fourteenth century, it is a mistake not to mention the author of the plays in the nine-line stanza in the Towneley collection.

The large number of students in our universities who occupy themselves with Anglo-Saxon subjects will be pleased to have a handy and easily obtainable translation of Asser's "Life of King Alfred," such as Prof. Alvert S. Cook has supplied (Ginn & Co.). The present is an opportune time for a translation of Asser's work, inasmuch as the authenticity of the book, so long in dispute, has been pretty well vindicated in recent years by Plummer and Stevenson. Indeed, the advantages which Professor Cook's translation enjoys over previous ones is due mainly to the fact that he has been able to use the results of the investigations of these two scholars, especially the latter, whose edition (1904) of Asser's "Life" in its original form has superseded all others. Professor Cook has appropriately added two appendices—one consisting of Alfred's well-known preface to his translation of Gregory's "Pastoral Care," in which the state of learning in England in his day is described, the other of the letter of Fulco, primate of the Franks, in reply to Alfred's request for the services of the priest Grimhald.

Three volumes in the dumpy but attractive World's Classics now issued by the Oxford University Press, contain "The Works of Edmund Burke," vol. ii., with an Introduction by F. W. Raffety; "The Professor," by Charlotte Brontë, with the Brontë Poems, and Defoe's "Adventures of Captain Singleton." Mr. Watts-Dunton contributes the Introductions to the Brontë and Defoe volumes, and in the latter gives

some rather interesting information about the relation of his friend Borrow's style to that of Defoe. The influence of the older author on the younger was, he says, beyond all gauging. "Often and often has he [Borrow] said to me that Defoe was the only 'professional' author who could 'tell a plain story on paper.'" Mr. Watts-Dunton thinks it a curious subject of speculation whether the recent revival of interest in Borrow will cause a revival in the master himself. And what, he asks, will be the effect of Defoe's simple, lucid, direct style of narrative upon the style of the prose fiction of the twentieth century? Mr. Watts-Dunton seems to regard Defoe as a participator in his favorite and much-noised "renaissance of wonder." To bring the "wonder" of "Robinson Crusoe" under the same category as that of "Aylwin" is a bit of critical legerdemain.

Another expensive two-volume memoir now published in a single volume at a cheaper price. This time it is "Mrs. Brookfield and Her Circle," imported by Scribners. The custom of issuing a cheap reprint from the same plates doubtless has its justification from the publisher's point of view, but seems almost an imposition upon the early purchasers of the more expensive edition.

Professor Howard of Leland Stanford publishes through Macmillan a careful study of the German Constitution, under the title of "the German Empire." After a brief introductory chapter he takes the Constitution of the new empire and proceeds to analyze its component parts. Thus we have chapters on the Kaiser, the Reichstag, citizenship, judicial organization, military service, finance, and kindred subjects. The text of the Constitution is given in an appendix, and the book, as a whole, will prove a convenient manual of the subject viewed in its strictly constitutional aspect.

Paul Leland Haworth has chosen as subject for a thesis "The Hayes-Tilden Disputed Presidential Election of 1876" (Burrows Bros.). The author sets forth with care and in a judicial spirit the facts as he finds them in the contemporary newspapers, and in the proceedings of congressional committees. He does not, however, put forward new evidence of any importance, nor does his verdict vary from that which is commonly accepted. It is possible that Tilden should, technically, have been elected; but it is quite certain that the balance of malpractice told against the Republican vote in the South.

Those who like to have history interpreted for them in terms of "Folk-Soul," "Historic Process," "World-Spirit," and "the Self of the Universe," will doubtless find much to please them in Mr. Denton J. Snider's "American Ten Years' War, 1855-1865" (St. Louis: Sigma Publishing Company). The array of incident is, indeed, respectable, and the comments of the author are sometimes keen and suggestive; but as a contribution to the history of the Kansas struggle and the Civil War, it is negligible. It is the kind of book that we fancy a historian would prefer to relinquish to a philosopher, and that a philosopher would gladly pass on to a historian.

That historians of mediæval Italy have

hitherto turned their attention too exclusively to the study of the Communes is a statement which can hardly fail to obtain the assent of every thoughtful reader. We have numerous learned treatises on the private and public life of the cities, their guilds, their magistracies, and their statutes; and, although much yet remains to be done before we can fully appreciate the peculiar characteristics of each separate Commune, we are already able to form a tolerably clear idea of the institutions and customs of the Communes as a whole. When, however, we pass outside the walls of the cities, we are in a country which is practically unexplored. Of the *castelli* and the *ville*, of the serf and the *colonus*, we know hardly anything. Feudalism is treated as dead before it was even moribund, and we lose our way in trackless forests where we expected to find cornfields and vineyards. Our idea of mediæval Italy is like a picture without a background. The foreground is clear, but behind it is well-nigh impenetrable mist. Here and there, it is true, a faint light is shed by monographs on individual villages—monographs such as that of Professor Zdekauer on the *Carta Libertatis* of the Rocca di Tintinano, or the recent pamphlet of Dr. Paolo Piccolomini on the *Statuto del Castello della Triana*, in Monte Amiata (Siena: Tip. Lazzeri); but for many years no serious attempt has, we believe, been made to treat the subject as a whole. It is for this reason that the learned work of Dr. Francesco Briganti, "Città Dominanti e Comuni Minori nel Medio Evo con speciale riguardo alla Repubblica Perugina" (Perugia: Unione Tip. Coöperativa), is especially welcome; for it is the "minor communes," the villages of the Perugian *contado*, which are here studied, and we are thus enabled to understand how the villagers, the tillers of the soil, the *coloni*, the *manentes*, the *vignari*, the *bifulci*, lived after they had exchanged the yoke of the feudal seignior for the lighter yoke of the "Dominant City." As one of the librarians in the Biblioteca Comunale of Perugia, Dr. Briganti has had exceptional advantages, and he has used them well. We may not always agree with his conclusions; but his conclusions are of secondary importance, since he has laid all his evidence before us. Almost half of his pages are made up of notes in which the documents upon which he relies are textually reported. Such a hook on such a subject is invaluable to the student of mediæval Italy. It enables him to obtain a new point of view, to fill in a background to his picture, and to perceive how groundless are many of those generalizations which he has heretofore been taught to regard as axiomatic. An admirable work, which may be profitably studied in connection with Dr. Briganti's volume, is "I Codici delle Sommissioni al Comune di Perugia," edited by Count V. Ansidei and Dr. L. Giannantoni. It was commenced in 1895 and has been published in successive numbers of the *Bollettino della Società Umbra di Storia Patria*. It will, we understand, be completed in the forthcoming issue of that periodical.

A breath of the South American prairies permeates the pages of Rudolf Schmied's "Carlos und Nicolas: Kinderjahre in Argentinien" (Munich: R. Piper & Co.), and

brings us something quite different from the conventional atmosphere in even the best of our own descriptive works on that far-off country. That the author has been there and knows the life whereof he speaks is very apparent, and so is the fact that he is the typical German, possessing the land in advance of his Yankee neighbor, notwithstanding the Monroe Doctrine and its terrifying paragraphs. Carlos and Nicolas are the lusty "young ones" of a wealthy German ranchman, far away from the city and civilization; and on their splendid mounts they wildly course the prairies. Stretched out on their backs on the boundless pampas, these boys dream dreams, and draw on their imagination until Nicolas swaps his *boleadoras* or iron-weighted lasso, for a prospective ship Carlos pretends to possess. Aside from the naïve narrative of the boys, the volume conveys an impression of national life such as one might expect to be given the traveller in Argentina, and is, all in all, refreshing reading.

Another copy of that rare pamphlet, "The Prose Romances of Edgar Allan Poe," Number 1, containing "The Murders in the Rue Morgue" and "The Man That Was Used Up," has been discovered. It was literally "picked up" in the country, and sold to Frank Maier of this city, whose collection of first editions of American authors is now one of the finest in existence. The book is so rare that there is doubt whether in the ordinary sense of the word it was ever published at all. The cover (there is no title-page) reads, "Uniform Serial Edition. Each Number Complete in Itself. No. 1," but no second number is known. The price as printed on the cover was twelve and one-half cents. The only other copy which can be definitely placed was purchased by the late Frederick W. French, about 1896, for about \$90. It had then already been in the hands of three booksellers. A New England bookseller (who may be called No. 1) found the book, and, thinking it to be, probably, only an odd part of Poe's works, sold it to bookseller No. 2 for sixty-five cents. He, knowing what a good item he had acquired, sold it for \$60 to bookseller No. 3, who in turn sold it to Mr. French. After his death, at the sale of his library at auction in 1901, \$1,000 was paid for the little book. It is now in the collection of F. R. Halsey, whose library is famous for containing two of the three known copies of Poe's first book, "Tamerlane, and Minor Poems."

The Librarian of Congress has instituted a search for a volume of the original manuscript Journals of the Continental Congress, which has been missing for many years. It is not known when or how it disappeared. Possibly it is now in the possession of some library or collector who is ignorant of its nature. In hope of recovering the volume Herbert Putnam has issued the following description of it:

The writing should be that of Charles Thomson. It should begin with the entries for March 19, 1778, and end with the entries of May 1, 1778. It may be bound in thin boards, of a bluish color, and if any label is on the front it should be merely "No. 1." The volume immediately preceding it is written on folio paper with the water mark of Britannia seated with shield and spear, in a circle surmounted

by a crown, on one sheet, and the letters "J. W." on the other. The volume immediately succeeding is written on paper bearing the same figure of Britannia on one sheet, and the full name "J. Whatman" on the other. They were evidently made up of quires of the paper, by Charles Thomson, and not by any binder.

The collection of Bibles which Prof. Walter Arthur Copinger of the University of Manchester made for the purpose of writing his book, "The Bible and Its Transmission," has passed into the hands of E. Hartland of Hardwick Court, Chepstow, England. This collection is one of the finest of the kind. It consists of nearly 1,500 editions, in about 350 different languages and dialects. Of the Greek Testament there are over 300 editions.

The committee of the Cambridge Historical Society, which has undertaken to celebrate on February 27 the hundredth anniversary of the birth of Longfellow, has sent out a circular announcing its plans. The occasion will be observed as "Longfellow Day" in all the schools of Cambridge. In the evening in Saunders Theatre, there will be public exercises, at which William Dean Howells, as we noted in our issue of October 11, will be the principal speaker, and President Charles W. Eliot, Col. Thomas Wentworth Higginson, and Prof. Charles Eliot Norton also will give addresses. An exhibition will be held of early, rare, and beautiful editions of Longfellow's works, together with memorabilia. As a memorial of the event, a special bronze medal will be struck, to be designed by Bela L. Pratt, who designed the similar medal commemorating the twenty-fifth anniversary of the accession of Charles W. Eliot to the presidency of Harvard. Of the Longfellow medal only 200 copies will be issued at \$10 each, and the subscription list has been opened to libraries, museums, and individual collectors. Subscriptions may be sent to Oscar F. Allen, No. 15 Dunster Street, Cambridge.

The celebration of the quatercentenary of George Buchanan began yesterday at Glasgow with an exhibition of books, portraits, relics, and other memorials in the library of the University. To-day Principal J. M. Lindsay gives a public address on Buchanan.

The name of Elizabeth Barrett Browning will, by permission of the Dean of Westminster, appear in the Poets' Corner of the Abbey. When Robert Browning died, the honor of burial was, according to the London *Athenæum*, offered to the remains of his wife, which rest at Florence; but the offer was refused. Now, on the centenary of her birth, her name is to be inscribed at the foot of her husband's grave in the Abbey.

From Paris news comes that the Librairie Nouvelle has ceased to exist. It was founded in 1849 and passed into the hands of Michel Lévy. Under this publisher the place became in the fifties and sixties the haunt of literary men and politicians. Alexandre Dumas père was a regular customer, and Augier, Jules Verne, Flaubert, Gambetta, Maupassant, and the Duc de Rivoli were frequenters of the shop.

Some months ago the German Kaiser, at the suggestion of his representative in Abyssinia, Dr. Rosen, sent out an expedition to that country, the first report from which has just been made to the Academy

of Sciences in Berlin. The members of the expedition have been at work in the old city of Aksum, have prepared a plan of the city, have examined the rich ruins there found, have reexamined the old inscriptions, and have discovered a number of large new inscriptions, which have been copied and are now in a shape to be studied. These latter take the history of Abyssinia back to the fourth and fifth centuries before Christ.

THE HISTORY OF ENGLAND, 1801-1837.

The Political History of England. 12 vols.

XI.—The History of England from Ad-
dington's Administration to the close of
William IV.'s Reign. 1801-1837. By the
Hon. George C. Brodrick. New York:
Longmans, Green & Co. \$2.60 net.

Wherein does the political England of 1906 differ from the political England of 1837? This is an inquiry inevitably suggested and partly answered by the dry yet accurate summary of events contained in the book before us. To sum up the answer in one formula is scarcely possible. Whoever wants to realize the character of an immense change which every one recognizes but no one can easily define, had best note, after studying the work of the late Mr. Brodrick, a few definite contrasts between the England of to-day and the England of well-nigh seventy years ago.

In 1837 the leading politicians had all been bred under a system which the Reform Act had destroyed. They, however, governed by ideas of a bygone age, hardly perceived the true nature of the revolution which had taken place. Nor is this wonderful. The alteration in the constitution of Parliament was not large. Modern critics are surprised at the limited increase in the electorate worked by the Reform Act. A fundamental innovation had moreover been carried through, much to the amazement of Tories, and even of Whigs, in a strictly legal manner, and with slight and indirect appeal to force. A reform achieved without revolutionary violence seemed, after a year or two, no revolution at all. Yet the Reform Act in fact worked a revolution in the whole scheme of government. The disfranchisement of absolutely rotten boroughs and the moral certainty that as time went on all close or nomination boroughs would be disfranchised, had extraordinary effects. It deprived the Crown and a limited number of wealthy and aristocratic landowners, of whom the King might be considered the head, of the means for exercising that "influence" which at one time was almost a technical term, and which (as ardent Whigs not fifty years before the Reform Act had declared) "had increased, was increasing, and ought to be diminished." A King or Queen of England has never been without genuine authority, but since 1832, or at any rate since 1837, this authority has never been a power which any man feared. George III. prolonged the war with the American colonies after it had ceased to be popular. He forbade the concession of political rights to Roman Catholics when advocated by the most powerful of his ministers. His unbending will strengthened the national resistance to the attacks of France. George IV. was a contemptible voluptuary; he was

reputed, whether truly or not, to be deficient in the personal courage which had distinguished his race; but George IV., according to the belief of the time, could of his own will, if he had so wished, have brought the Whigs into power against the determination of the country to support the policy of the Tories. To the well meaning, though feeble, patriotism of William IV. was due in great measure the peaceful passing of the Reform Act. The will of the King could, even in 1832, have put the possibility of parliamentary reform to the issue of civil war. Such exhibitions of power have been impossible to Queen Victoria or to her son. Note, however, that this assertion does not preclude the possibility that in circumstances utterly different from those of 1837 the authority of the Crown may again increase. It is for the future to show whether King or House of Commons will become the moral representative of the empire.

The act, again, which struck at the roots of royal influence had another curious, though less noticed, effect, to which attention has been called by the acuteness of Walter Bagehot. Parliamentary life was, up till 1832, a profession, a pursuit in which a man might obtain not only honor, but wealth. The game, it is true, was one in which prizes were few and blanks many. Still it had its prizes, and, though they too frequently fell to a low type of politician, they might be attained by such men as Pitt or Burke. Hence the appearance on the political stage of that singular character, the patriotic adventurer. He has vanished, and his disappearance marks a fundamental change in English public life.

Up till 1829-1832 the unreformed Parliament was, if not in theory, yet in truth, an English Parliament. The Scottish members were few. They followed principles which sound purely selfish, but promoted the interests of Scotland; they acted as one body; they supported as a rule the Government of the day; they obtained personal rewards for their services. This was the policy of Dundas, the most skilful of all Scottish managers, but it was also the policy of all his predecessors. It was not ideal; it might be termed by Whigs, who were always, except when in office, patterns of virtue, a system of corruption. But it rested on principles sound enough in themselves. Scotsmen were to stand apart from the party controversies which divided Englishmen. They were sedulously to support the Executive, that thereby the Treaty of Union should become a bargain favorable to the private interest of Scottish members and to the material welfare of Scotland. Various causes made it impossible for the representatives of Ireland to pursue this scheme of enlightened selfishness. But Irish members were exclusively Protestants, members of the United Church of England and Ireland. They were landlords, in full sympathy with the landlords of England. They, too, in the main, adopted on all Imperial questions ideas which commended themselves to the English governing class. But the reform of Parliament, which seemed to introduce nothing but certain modifications of the electoral system, produced one effect of immense importance which was hardly recognized by Englishmen even in

1837. The Parliament which met at Westminster had ceased to be an English Parliament.

Turn, lastly, from domestic affairs and note a singular transformation in the foreign policy of England. From 1689 to 1837 England had been profoundly interested in Continental politics. The "glorious Revolution" had been the work of a Dutch army led by a Dutch King. The accession to the throne of the Hanoverian dynasty linked England, most unfortunately for both countries, with Hanover; the intrigues of German courts interested the first two Georges far more keenly than did the expansion of England's colonial empire. And the Continent, to Englishmen, down to 1837, had practically meant France. The great war which terminated with the battle of Waterloo seemed, though it really bore a different character, a mere prolongation of the secular conflict between Englishmen and Frenchmen. From 1837 onwards, the whole aspect of English foreign policy and of English ways of looking upon foreign affairs has changed. The accession of Queen Victoria broke the ill-starred Hanoverian connection. This meant much; it freed English policy from all the complications with a German State belonging to a political system in which England had no real concern. But the fact that Queen Victoria was not the ruler of Hanover facilitated a far more essential change in relation to Continental Powers. Contests which keenly interested the rest of Europe ceased to be of immediate importance to England. If Englishmen intervened in such contests at all, the grounds of interference were henceforth to be either sympathy with the ideas of some foreign party, *e. g.*, with the aspirations of foreign Constitutionalists, or the determination of England to preserve her Eastern Empire. As a matter of fact, political sympathy has, during the last seventy years, hardly ever of itself involved England in Continental conflicts. The feeling which rightly or wrongly has brought England near to war, has been the fear of attack upon India.

The circumstances which have diminished English interest in Continental conflicts have had a further effect. They have preserved peace with France. It is now over ninety years since France and England have met in battle either on land or on sea. Are we to attribute this happy condition mainly to the growth of pacific sentiment? An optimist may answer yes, but an unbiased observer will reply that amicable sentiment is the sign rather than the cause of peace. The secular warfare between two progressive countries has come to an end, because every man of common sense perceives that the conflict between their real or apparent interests has ceased to exist. France does not menace either the colonial or the Eastern empire of England. Most Englishmen would rejoice could some pacific arrangement restore to France the possessions lost in 1870. Englishmen no longer dread either the revolutionary propaganda of French Democrats or invasion by a French Emperor. French Jacobinism or French Imperialism is to Englishmen as dead as the Jacobitism of the eighteenth century. We need not pursue this matter further. The sentiment which even in 1837 kept England in constant fear of a French inva-

sion is hardly comprehensible to the Englishmen of to-day. In the foreign relations no less than in the Constitution of England the lapse of sixty-nine years has produced a fundamental revolution, and a revolution of which the immensity can be realized only when we try to trace it out in different departments of national policy.

MEMOIRS OF THE VENDEE.

Memoirs of the Count de Cartrie. A record of the extraordinary events in the life of a French royalist during the war in La Vendée and of his flight to Southampton, where he followed the humble occupation of gardener; with an introduction by Frédéric Masson; appendices and notes by Pierre Amédée Pichot and other hands. New York: John Lane Company. \$4.

Enormous as is the literature on the Vendean insurrection, there is no mention of a Count de Cartrie in any of the narratives and documents of the period, or in the subsequent histories based upon them. This seems somewhat strange, for that he existed, that he played an important part in the struggle as a leader, although a subordinate one, and that he was a most curious and attractive figure, can hardly be disputed. Indeed, the result of the prolonged and painstaking investigations of M. Pierre Amédée Pichot, one of the most skilful unravelers of historical problems connected with the Revolution in France, establishes the genuineness of these memoirs and their substantial accuracy beyond reasonable doubt. It is not, however, due to M. Pichot that De Cartrie's name has cropped up nearly a century after his death. The *sacer vates* who has rescued the Vendean chief from undeserved oblivion is a publisher! Surely even Lord Byron would not have praised Napoleon for shooting such a publisher as Mr. Lane, whose feeling for De Cartrie and his "Memoirs" is so purely literary and disinterested. His account of the discovery of the manuscript is one of the romances of publishing. It is an English translation, apparently dictated by the author to an English friend who only caught the sounds of the words and often caught them wrong; and, naturally, the proper names of persons and towns were outrageously spelled throughout. Notwithstanding this, Mr. Lane came to the conclusion that it was genuine, and entered into communication on the subject with M. Pichot. The latter's high social position helped him as much as his erudition in solving every difficulty. He tracked every noble family in France in any way connected with the De Cartries or mentioned in the "Memoirs," restored the true proper names, gave the correct genealogies of the author and of his family, verified the mysteries of adventures so romantic as to appear incredible, found every trail and followed it with the patience and sagacity of a sleuth-hound, explored parish records and army service lists, and forced his way into the most jealously guarded family muniment rooms. All this is told in what Mr. Lane modestly styles "The Publisher's Advertisement," but which really forms a chapter almost as fascinating as any in the volume—being the correspondence between himself and M. Pichot.

In one case, however, or rather in two, M. Pichot is on the wrong track. Madame

Bulkeley, her husband, and Count Walsh de Serrant are about the three most interesting friends of De Cartrie in the book. Madame Bulkeley was his sister. She is well-known to every one acquainted with the history of the Vendean troubles. She was one of the Amazons we meet with so frequently during this period. According to her brother:

My sister, brave as a heroine, never abandoned her husband, by whose side she fought in every action in which he was concerned; and though her clothes were on several occasions pierced by balls, yet she fortunately escaped without a wound. . . . [After the death of Robespierre and her release from prison] she put herself at the head of the remnant of these [her husband's] troops, which, with some new levies, constituted a body of upwards of six thousand men. With this little army she for eighteen months fought an incredible number of battles, sometimes alone, and at others in support of Charette. But in the last she received two wounds, which threw her from her horse.

He then eulogizes her virtues. Other writers give her a different character. She is described by the republican historians of La Vendée as a fierce and cruel leader, fond of torturing her Republican women prisoners, burning their houses, and plundering their property. In any case, she was a decidedly interesting character, and it was natural that M. Pichot should try to get all the information possible about her and her almost equally interesting husband. De Cartrie says of him: "At this time Monsieur Bulkeley, born of a good Irish family, . . . was an elegant young man, in height about 5 feet 10 inches, of a fine figure and most amiable character, and served in the regiment of Walsh-Serrant." Yet M. Pichot writes to Mr. Lane asking him to search in *England* for portraits of Bulkeley and Walsh: "There must still be in England some members of the Walsh and Serrant families." This is the more surprising, as he says in the same letter: "I greatly regret not finding a portrait of Madame Bulkeley; I have an idea that if it is to be found at all, it should be searched for in England. Her husband, William Bulkeley, was born at Clonmel, in Ireland, on December 7, 1766." This sounds something like an Irish bull: William Bulkeley was born and lived in Ireland until he lived and died in France; therefore, if you want to learn anything about him, search for it in England. In fact, the Bulkeleys were established in Tipperary for nearly two centuries before the French Revolution. Some of them may be there still. At least they are more likely to be there than in Yorkshire. Can M. Pichot have been misled by the report of the Mayor of Angers to the Mayor of Paris some time after Bulkeley's execution? "Our holy mother Guillotine," says that vivacious official, "is actively engaged in her work. Within the last three days she has shaved eleven priests, one ex-nun, one general, and a handsome Englishman, six foot high, whose head was in the way! It is now bagged!" As Walsh was hereditary colonel of his regiment in the Irish Brigade, he could scarcely have been an Englishman. In fact, he belonged to a family that for more than four or five centuries was as much hanged, forfeited, and banished as any in the green island. It is therefore the more remarkable that members of it still possess large estates

in several Irish counties. Such families have always been especially eager for the preservation of records of their distinguished relatives on the Continent. So that, if M. Pichot, instead of sending Mr. Lane on a wild-goose chase through England, had written, say, to "Hussey Walsh of Cranagh and Mulhussey, Roscommon," or to "Walsh of Carrickmines, Kings County," or to "Hussey of Rathkenny, Meath," he would probably have learned a good deal about their distinguished kinsman, Count Walsh de Serrant.

The interest of these memoirs is very great, great everywhere, and they have considerable historic value, although the author may not have played a preponderant rôle in the military events he describes. His romantic adventures in his Odyssey across France in company with his son, their hairbreadth escapes, his subsequent travels through Germany and Holland, and his life in England, are even more fascinating than his military exploits in La Vendée. This is altogether an enjoyable volume, and superbly illustrated. A map of the wars in La Vendée would have enabled the reader to follow some of his adventures with more ease and pleasure.

RECENT FICTION.

The Mirror of the Sea. By Joseph Conrad. New York: Harper & Bros.

On the surface, this book is very much like A. H. Bullen's "Idyls of the Sea," a series of impressions and memories which are the fruit of a real and long sea experience. Whether in fore-cabin or captain's cabin, these men earned a knowledge of the sea to which no lubberly amateur may hope to attain. Long exercise of their stern trade has not drained them of their enthusiasm for it, or failed to qualify them for the expression of that enthusiasm. Mr. Bullen, to be sure, is concerned with the fascination of the sea itself and its inhabitants, while Mr. Conrad is absorbed in the ships that go upon the waters. Mr. Conrad does not hesitate to challenge the convention of sea-worship:

. . . Its immensity has never been loved as the mountains, the plains, the desert itself, have been loved. Indeed, I suspect that, leaving aside the protestations and tributes of writers who, one is safe in saying, care for little else in the world than the rhythm of their lines and the cadence of their phrase, the love of the sea, to which some men and nations confess so readily, is a complex sentiment wherein pride enters for much, necessity for not a little, and the love of ships—the untiring servants of our hopes and our self-esteem—for the best and most genuine part. For the hundreds who have reviled the sea, . . . down to the last obscure sea-dog of the "old model," having but few words and still fewer thoughts, there could not be found, I believe, one sailor who has ever coupled a curse with the good or bad name of a ship. If ever his profanity, provoked by the hardships of the sea, went so far as to touch his ship, it would be lightly, as a hand may, without sin, be laid in the way of kindness on a woman.

Pathetic fallacy or not, ships are persons to Mr. Conrad, and not a limb or feature of them lies beyond his way of kindness. He will not have them misunderstood or miscalled; the last detail of seamanly terminology is of importance to him. Such misconceptions of sea-phrase as "casting the anchor" inspire in him a

mournful commiseration bordering upon contempt. On the other hand, his speech is as remote as possible from the lingo of the sea captain of fable. He has no wish to force sea talk upon the landsman as something picturesque and to be desired for its own sake, but wishes us to understand its esoteric value as a perfect vehicle, possessing "all the force and precision and imagery of a technical language that, created by simple men with keen eyes for the real aspect of the things they see in their trade, achieves the just expression, seizing upon the essential, which is the ambition of the artist in words."

The prevailing note in these sketches is elegiac: *ehu!* the fading glories of that old sea life upon the sailing ship, the "ship of yesterday." There indeed the miracle of good seamanship might be developed.

Not for it the unerring precision of steel moved by white steam and living by red fire and fed by black coal. The other seems to draw its strength from the very soul of the world, its formidable ally, held to obedience by the frailest bonds, like a fierce ghost captured in a snare of something even finer than spun silk. For what is the array of the strongest ropes, the tallest spars, the stoutest canvas against the mighty breath of the infinite but thistle-stalks, cobwebs, and gossamer.

Mr. Conrad, of Polish birth, is quite as much French as English in his literary instinct and manner. He often gains, that is, through the medium of a pure and vigorous English, effects which recall Maupassant, or, far oftener, Pierre Loti. For example: "The lulling cadence of the rise and fall, the invariable gentleness of this irresistible force, the great charm of the deep waters, warmed my breast deliciously, like the subtle poison of a love-potion." However he may hate the enchantress, this man is subject to her glamour, and able to impart the sense of it as few men have been.

The Plow-Woman. By Eleanor Gates. New York: McClure, Phillips & Co.

This is the story of the Lancaster family, father and two daughters, who, coming up from Texas into Dakota after the war, moored their prairie-schooner on a bend of the Missouri, built a shack, and tilled the ground. All opens peacefully and agriculturally. Dallas picturesquely ploughs with her two mules, and with the tame family bull, Simon, always in attendance. Marylyn, the younger sister, stays within doors and cooks the meals. The crippled father, Evan Lancaster, ex-section-boss, narrow-minded, jealous, suspicious, holds his girls in a tight leash, hating all men, more especially all soldiers, most especially any one who has so much as lifted a finger for the North during the war. How necessary men and soldiers became to him and his daughters in the enmities of rival land-claimants and the uprisings of Indians, is developed in the story.

It is a book where the reader is made to see what it must be to "get the West," as one of the characters phrases it. Dangers and horrors serve only to stimulate enterprise and courage. For him who has the West "in his blood," the open air, the flowery prairie, the springing corn are hardly dearer than the blizzard, the outwitting of the landshark, the fight with the Indian. To young Lounsbury from

"the States" the perils were part of the fascination.

Ingenuity is one of the author's conspicuous endowments. Situation after situation keeps interest expectant up to the last. No less is her skill in definition of character, although here and there a bit may be judged out of drawing. A girl like Dallas, for example, ready as she might be to sacrifice herself, would hardly urge a man to make unwilling love to her sister. This act of Dallas's apart, she is a fine figure of girlhood developed by responsibility and bardship into something like a composite man and woman, with woman dominating. The feeble Marylyn serves chiefly to give Dallas an object for her maternal instinct. The tyrannical father is excellently drawn in all his infirmities. The hero is made attractive and not too omnipresent. Each actor is as real as the principals. In characterization this is a virtue, although it should constrain the author to use not too many actors—fewer we think than this novel includes. But the same fidelity is carried into scenery, descriptions, and narrative to the point of faultiness. It results in a lack of perspective which is lifelike, perhaps, but like life seen with the eye and not with the selecting and omitting faculty which makes for art. And of a very high order of art Miss Gates's pen seems capable, *mutato mutando*.

The Belovéd Vagabond. By William J. Locke. New York: John Lane.

With the publication, last year, of "The Morals of Marcus Ordeyne," Mr. Locke became a novelist of international interest. He had deserved American success long before with such stories as "Derelicts" and "Where Love Is," but had not been able to command it. What books of his had appeared until then in cis-Atlantic covers had been received with quiet appreciation by the critics, but had been buried, so far as the general reading public is concerned, under what Mr. Howells has called the "annual rubbish-fall" of our "best sellers." In "The Morals of Marcus Ordeyne" Mr. Locke grafted romance upon realism with ironic as well as humorous intent. In his new novel he reverses the process with no felicitous result. Here is a twig of realism grafted upon present-day romance, the romance of the open road and the free life. The realism of the vagabond's personal habits spoils the romance of his nobility of character. If ever a well-born vagabond justified the narrowness of English Philistinism, it is this rover of generous impulses, who, when he emerges for a moment from the pothouse to claim the place that is still his, must, through force of habit, take the manners of the pothouse with him into the drawing-room. The knight-errant, while he occasionally interests us mildly, neither attracts nor convinces us; and the sunny roads of France, her farms, villages, and inns have found more eloquent pens than Mr. Locke's ere now to praise their charms. Mr. Locke should not be judged by his "Belovéd Vagabond" alone.

Letters to Women in Love. By Mrs. John Van Vorst. New York: D Appleton & Co.

The letters are numerous; the women to

whom they are written, four. Three of them have names and addresses likely to attract the curiosity and respectful interest of the feminine readers of so-called "society" fiction: Miss Beatrice Tbayer, Fifth Avenue, New York; Mrs. Elizabeth Aiken, Tuxedo, New York; and Mrs. Cairesbrooke, Dupont Circle, Washington. But for all that, the case of the fourth one—bumble, average Mrs. Jack Burnside, wife of a New York bank clerk with a "home" in Newark—is the most interesting after the not very interesting fashion of the whole book.

An elderly woman of wide experience and deep and ready sympathies is supposed to be the writer of these epistles, which reveal amazing confidence in her own wisdom, incredible readiness to give advice in delicate matters, and staggering absence of hesitation about asking leading questions. The plan on which the book has been constructed makes these blemishes unavoidable, and is therefore fundamentally faulty, but this defect is unlikely to disturb the readers for whom the volume is chiefly intended. The elderly woman gives treatment by correspondence, so to speak, for the cure of all kinds of afflictions of the affections, ranging from a young girl's doubt about an "offer" she has received, to all the jealousies, regrets, disillusiones, material worries, and disappointments of married life.

There was abundant material here for the making of an interesting book. Mrs. Van Vorst has done little with it beyond discovering its possibilities. The cases she presents are not lacking in human interest, but the deeper note is lacking.

The Bible as English Literature. By J. H. Gardiner. New York: Charles Scribner's Sons. \$1.50 net.

For years we have been hearing the complaint that the generation which now is, nay, that which is passing, reads and knows its Bible scarcely at all in comparison with the men and women of half a century ago. This complaint, which is probably not exaggerated, has generally been accompanied by a suggested remedy—to wit, the study of the Bible as literature. As aids in the application of this remedy, numerous books have been prepared; none, we think, better than this of Professor Gardiner's, which is the outcome of the courses he has been giving at Harvard and at the Lowell Institute. Good as the book is, however, we must in fairness warn teachers at least that the possession of an excellent text-book will not smooth away the difficulties which confront the advocates of Bible-study in our schools; nor have we great hopes that this or any other book will set a large portion of our adult population to reading and studying what was truly the Word of Life to their fathers and grandfathers. The Bible, which was for so long, and still is, a great force in our civilization, has latterly found itself buffeted by opposing forces which seem unamenable to literary control. Hence, while we welcome Professor Gardiner's book as a valuable aid in a good cause, we can hardly feel that the hopes and convictions that enabled him to attain success are as solid as the learning he has utilized and the expository skill he has displayed.

His general attitude toward what most persons would regard as the crucial difficulty confronting him is well described in a paragraph in his preface:

In all my discussion I have assumed the fact of inspiration, but without attempting to define it or to distinguish between religious and literary inspiration. The two come together in a broad region, where every one who cares for a delimitation must run his line for himself. It is obvious, however, that no literary criticism of the Bible could hope for success which was not reverent in tone. A critic who should approach it superciliously or arrogantly would miss all that has given the book its power as literature and its lasting and universal appeal.

Waiving the point that no good critic would approach any book superciliously or arrogantly, we may ask the question whether the fact that the writer of such a book as this feels at liberty to forbear running a line between religious and literary inspiration is not symptomatic of the spiritual and mental state which is responsible in the main for that neglect of the Bible which he is striving to counteract. Hearers and readers who complacently allow their teacher to refrain from showing his skill in spiritual engineering—Professor Gardiner's metaphor is responsible for the phrase—will presumably not object to a discussion of the prophetic books which contains practically not a word as to the fulfilment of any specific prediction. As we read the chapter, we recalled instinctively an old divine long since gathered to his fathers, who felt it his duty at least once a year to preach a series of sermons designed to prove the truth of Christianity from the fulfilment of a chain of prophecies. That dear old man was of the salt of the earth. What would he have thought, could he have read Professor Gardiner's chapter on "The Prophecy"? Will those who read it without feeling that a necessary element has been omitted ever be quite the same sort of salt as that good preacher? We shall not attempt to answer our own questions, preferring to say that we expected to find Professor Gardiner's book lacking on the one hand the enthusiasm of unction and on the other the piquant force that usually accompanies earnest destructive criticism. In a certain sense, our expectation was realized, but we found so much sincerity of high feeling, so much sound literary appreciation, and so much helpful elucidation of the perplexities that attend the layman's reading of the Bible, that our initial questions and misgivings were laid to rest.

The volume of four hundred pages is divided into nine chapters, of which the first is introductory and deals with the Bible as a single book. Chapters ii.-vii. treat the several *genres* to be found in the Scriptures—the narratives of various types, the poetry, the wisdom books, the epistles, the prophecy, and the Apocalypse. They are specially successful in utilizing the results of the so-called Higher Criticism to furnish a historical background with the result that the documents stand out clearly as embodiments of the life of Israel at the crucial periods of the nation's evolution. On the other hand, Professor Gardiner has succeeded less conspicuously in his endeavors to make us both realize and comprehend the present literary value of the prose and poetry which have so deeply appealed to our race. His il-

lustrative citations are excellent, but he sometimes overworks his epithets (*cf.*, the use of "vivid" on page 37), frequently seems to miss the inevitable phrase, and occasionally appears to have overlooked a chance to retrench the wordiness and to cut out repetitions that were permissible enough in a course of lectures. Yet it must be owned that his criticism is often felicitous, and that it ought to send not a few readers to the great book that used to be read in one's "closet," when "closets" were practicable luxuries.

The two concluding chapters are entitled "The Translation" and "The King James Bible." They form a compendious and most interesting narrative of the labors of Tindale and his successors, and will doubtless prove as useful to teachers as they will be novel and instructive to most readers. Perhaps a few statements in the closing pages, which deal with "The English Bible as a standard for the literature," may be a trifle extravagant and may introduce comparisons between forms of literature that scarcely have a common measure; but in the main one feels on putting down the book that Professor Gardiner, in summing up the position of the Authorized Version in our literature, has been adequate to his important and far from easy task.

Persia: Past and Present. A Book of Travel and Research, with more than 200 illustrations and a map. By A. V. Williams Jackson. New York: The Macmillan Co. \$4 net.

The traveller in Iran must love travel for itself—the raw article, not the Twentieth Century Limited variety. He must be content with the shadow of a rock or mud wall at burning noontide, and be proof at night against the bitter winds which sweep the passes over the mountain ranges that traverse the great Iranian plateau like the edges of gigantic saws. Only within the last decade has the Russian road from the Caspian to Teheran been opened. Other roads, in the ordinary sense, there are none, though one may journey from Teheran to Kum and Kasvin by carriage. The traveller's steed follows the shifting track of caravans across the plains, or steps cautiously in the deep holes which countless pack-animals from the time of Darius have worn in the rocky slopes. Railways do not exist, if we except the nondescript affair which conveys pilgrims over the few miles separating Shah 'Abdu'l-Azi'm from the capital, a "line" whose only interest for the traveller is that of curiosity. A so-called English hotel is to be found at Teheran, whose comforts are of a strictly relative character; and a pretentious caravanserai which, when the writer last visited it, provided a well-worn tooth-brush for its guests, blocks the wide avenue which gives a sense of space and dignity to decayed Kasvin. Elsewhere one must arrive early at the end of the last *farsakh* to find room for one's animals in the crowded court of the *chaparkhanah* or decent shelter for one's own camp-bed within its bare walls. But whoever is willing to pay a literal pound of flesh for exhilarating out-of-door life in the saddle, who is not too sensitive to dirt and insects, and who loves the freedom of wide horizons and regions un-

contaminated by his native civilization, will find in Persia one of the last strongholds of the unadulterated Orient.

The ordinary approach through the Caucasus by rail, either from Batum on the Black Sea, or Moscow and Vladikavkas, to Baku, on the Caspian, and thence by steamer to Enzeli and Resht, was left by our author at Tiflis for the overland route to Tabriz. In either case Tiflis is the jumping-off place of Western civilization. Whether one proceeds overland or by way of the Caspian, one encounters at once the Oriental disdain for sanitary plumbing. Professor Jackson's reason for entering Persia by way of Azarbaijan was that that province, as he believes, was the birthplace of Zoroaster, and the purpose of his journey was antiquarian study and scholarly research, especially with regard to this great prophet of Iran. It would seem as if this fact ought to have been embodied in some form in the title. "Persia: Past and Present" is misleading, in that it conveys no intimation of the real *motif* of the book. Indeed, except for information scattered through the text, a single chapter of eight pages covers the whole range of Persian history, religion, architecture, and language, and as to Persia Present, one searches in vain for any connected account, statistical or otherwise, of its political, economic, religious, or social life. The reader soon discovers, however, that the Zoroastrian, not the Persian, is the author's real game.

Professor Jackson's chapters fall naturally under the two heads indicated in the preface: those of a descriptive and narrative character, likely to interest the general reader, and those in which "certain technical matters are discussed." As to the former, the author cannot be said to possess the happy gift of making the reader see what he sees and share his experiences. The incidents and accidents of his journey are related pleasantly enough, but the narrative is too academic, not to say pedantic, to convey the rude charm of Persian life and manners. Some of his less ambitious predecessors, who were not over-concerned about a reputation for learning, as Miss Sykes, Browne, Mrs. Bishop, or Lady Durand, have caught more of the Persian atmosphere in their pictures. The step which separates a languid interest from the fascination that makes one eager to get into the saddle and follow the author's track is a long one, and we imagine Professor Jackson's work will be more successful in interesting those who know Persia than in stirring the imagination of those who do not.

But, after all, it is Persia as the birthplace of Zoroaster and the home of his religion with which Professor Jackson is concerned, and we know of no volume containing so complete an account of the present condition and religious rites of the fire-worshippers, combined with so much information on the history and traditions of this sect. The study of this subject on the spot is greatly facilitated by the fondness of the Persian for metaphysical speculation, a source of information of which the author avails himself at every opportunity. It is doubtful whether in any other country philosophical discussion plays so important a rôle in ordinary social intercourse. Sects of every description have

flourished in Persia from the earliest times down to the Babis and Sheykhis of to-day. Professor Jackson, who assigns the appearance of Zoroaster to the early half of the seventh century B. C., regards him as beyond doubt an actual historic personage, and seeks to identify various localities historically or traditionally associated with his name. Thus he considers it "reasonably probable" that the tract of reeds on the southern border of Lake Urumiah is the district where he made his first convert as told in the Pahlavi writings; and that Mount Savalan, near Ardabil, is the mountain on which the prophet communed with Ormuzd and received divine revelations. To the present reviewer these and similar identifications seem to rest too largely on the author's evident enthusiasm for his subject. Far more important and tangible are the results of Professor Jackson's investigation of the probable site of ancient Ecbatana, which he places at Hamadan instead of Takht-i-Suleiman. His reasons for differing from the conclusions of Rawlinson are forcibly stated in a wholly scientific spirit, a remark which applies to all his discussions of questions resting on historic as distinguished from mythical data.

But the most important chapter of Professor Jackson's book is that which treats of the great rock sculptures of Behistan and the readings of the cuneiform inscriptions of Darius. Since the days when Rawlinson first copied these almost inaccessible records, no attempt to verify his transcription has proved successful. The immense space of nearly 500 by 100 feet covered by the inscriptions is some 300 feet above the base of the ravine on the precipitous rock, and, as stated by Rawlinson, "the climbing of the rock . . . is a feat . . . which an antiquary alone could be expected to undertake." Professor Jackson succeeded in examining most of the doubtful passages, and in verifying in general the remarkable transcript of Rawlinson made over sixty years ago; and the account both of his perilous climb and its results are given with noteworthy modesty.

The book is not very fully indexed, but is profusely and well illustrated, and provided with an excellent map. Some slight errors, perhaps inseparable from so short a sojourn, are observable, as for example the statement that the American legation at Teheran has occupied the same grounds since its establishment in 1883. Unfortunately, in Teheran, as in most other capitals, the American legation is a literal nomad.

Emma, Lady Hamilton. By Walter Sichel. New York: Dodd, Mead & Co. \$5 net.

Deep violet-gray eyes and tresses of auburn tipped with gold are designed by nature to play an active part in the affairs of mankind. From Horatio Nelson to Walter Sichel the victims of Lady Hamilton's charms are innumerable, and, curiously enough, even her enemies are to be numbered in the category. For few writers have approached this extraordinary woman and retained their balance; those who have seen her bright side have become apologists, those who have seen the reverse only

have defamed her; one of our own historians, Capt. Mahan, is nearly alone in maintaining his composure when dealing with her disconcerting memory.

Every beauty will meet with detractors; the Venus de Medici finds critics. And, moreover, age must tell. Travellers, whom Mr. Sichel does not quote, have asserted that Emma Hamilton was fat and vulgar. Doubtless there were persons to whom, and times at which, that aspect predominated. But, on the whole, such opinions may be disregarded, and there can be not the vestige of a doubt that from her youth until at least the close of her career as ambassadress, she was gloriously beautiful. And more than beautiful, for she was by nature an actress, every expression, every gesture, a skilled heightening of her fascination. She learned to play on the emotions, and so it was that when, after the dismal experiences of youth, after passing through the hands of the calculating Greville and of the uninspiring Hamilton, she met Nelson, a spark was touched that fired both their natures into a mutual blaze.

The compatibility of the temperaments of the two was so great as to make their linked destinies something that now appears inevitable, almost excusable. Nelson was weakest and strongest at once in his high-wrought emotional temperament, driving him at times into folly of speech and action, and at others to a pitch of heroism that gave his country the empire of the seas. To meet such a man at the moment when the struggle for the Mediterranean between France and England was at its supreme crisis, at the moment when she had just risen from the basest rank a woman may hold, to be ambassadress at the court of Naples, the centre of the storm, was decisive of Emma Hamilton's future. Her adoration, like England's, was flung at the feet of the lion-hearted admiral, who was struggling to achieve the destruction of Bonaparte. What more natural? What more deserving of sympathy?

But, and it is here that we must abandon Mr. Sichel, it is possible to see all this and yet go no further. Nelson may have been the greatest of admirals, Emma Hamilton the most beautiful of women, their amours the finest possible frenzy of high-wrought emotion, without disarranging all the facts of history to strengthen these perfectly arguable propositions. But this is, in effect, what Mr. Sichel does. He has undeniable talent, but it clearly is not of the historical variety. His pages continuously shock the reader acquainted with the period, not by gross lapses, but by constant petty distortions that are too minute to criticise, and that may best be summed up as indicating a complete lack of the historical sense. It is essentially this that robs the book of value; and the largest example of the fault is to be found in the treatment of the controversial point concerning the alleged secret order of Queen Mary Caroline for the provisioning of Nelson's ships in 1793. The matter is far too lengthy to be set out adequately here. Suffice it to say that the chief cause of Mr. Sichel's floundering in this question is that he does not grasp the essential fact that King Ferdinand and Acton ruled Naples, while the Queen had no authority whatever, only influence. Another bad instance of his judgment is the contempt with

which he treats the policy of the King, Acton, and Gallo, which, but for the pressure of Nelson and the Queen, would undoubtedly have saved Naples from the French invasion and the horrors of 1799. Mr. Sichel makes a great show of manuscript, the importance of which he altogether overrates, but is very imperfectly acquainted with the printed authorities; his book only adds one more controversial landmark to this much debated topic. The illustrations are, however, most interesting.

Drama.

Garrick and His Circle. By Mrs. Clement Parsons. New York: G. P. Putnam's Sons.

This is a work of vastly superior quality to the great majority of books, especially those of recent date, relating to the stage and its associations. It is really a study of a period, showing extraordinary industry in research, rare discrimination in the selection of material, a keen sense of what is vital in characterization, a most commendable desire for accuracy, and a judgment at once sane, acute, and humorous. Of course, it has nothing new in the way of fact to offer, being, in effect, simply a compendious extract from the great body of printed stuff, good, bad, or indifferent, about Garrick and his intimates, but Mrs. Parsons has been so indefatigable that her single volume may be said to contain the essence of a good-sized library. It will be invaluable to all who may desire to acquaint themselves with theatrical and social conditions during the latter half of the eighteenth century in England, but are unable to go to the original sources of information. Her style, moreover, is so vivacious and her comment so keen and witty, so completely free from any appearance of labor or learning, that the casual reader, absorbed in the sprightly gossip, might easily be unmindful of the store of information behind it. The long list of quoted authorities which she furnishes reveals only a part of her ubiquitous inquiries.

Perhaps the clearest idea of the scope of her work may be obtained from a glance at the different sections into which it is subdivided. Each of them, it may be noted, is a finished little essay in itself. As a whole, they tell a continuous story, and although of necessity they overlap to a certain extent, they never repeat. The introduction is a sketch of life in the Lichfield of the eighteenth century, with amusing anecdotes of the social prejudices of the period. Then follows a paper on Garrick's early days in London and the Woffington episode. Next he is exhibited at the zenith of his fame and popularity as the dictator of Old Drury. Later on, after chapters on old theatrical ways, Kitty Clive and others, and Mrs. Garrick, there is a picture of Garrick in his green-room. Then come brief sketches of the contemporary dramatists, an account of the famous "Club," a review of Garrick's literary output, a lively picture of the ways of the beaux and belles of the day, a description of the provincial theatres in England and Ireland, etc. Last of all is the story of Garrick's social triumphs on the Continent, of the pleasant days of his re-

tirement, of his death and his burial in Westminster Abbey. All these are well and compactly done.

Garrick's every peculiarity, physical and mental, has been catalogued with a precision and amplitude which prove how constantly he made himself the centre of observation. Even without the canvases, which represent him in his habit as he lived, it would be comparatively easy to form a mental picture of him. His graceful, well-proportioned figure, his mobility of feature, his lustrous eyes and eloquent mouth, his expressive hands and orchestral voice, his incessant vivacity, his ready wit, his Protean gifts, his vanity, his fascination, his kindness, have been enlarged upon, over and over again, with copious illustration. Mrs. Parsons is unable, nor does she try, to add to the mass of accumulated detail, but she rejects much that is legendary. Thus she works up a highly finished portrait, for the veracity of which such men as Johnson, Burke, Boswell, Goldsmith, and Garrick himself—in his correspondence—stand sponsors. In one respect, at least, she does good service to his memory by showing how little foundation there is for the charge of habitual parsimony which it was once the fashion to bring against him. Some recent biographers have touched upon this point, but she offers indisputable proof that he was not only charitable, but often largely generous, though prudent in minor expenditures, as behooved a man who had heavy financial responsibilities and was subject to innumerable claims upon his private purse. Over his petty vanity she does not attempt to throw any veil. The great genius, who could hold a little world in thrall with his Lear or Macbeth, could descend to the most lamentable buffooneries to get the laugh which he craved. What gross violence he did to the Shakspeare whom he professed to hold—and doubtless did hold after a fashion—in such veneration, is a matter of melancholy notoriety, and Mrs. Parsons remorselessly sets down some of his worst offences in this kind. Doubtless there was more than a grain of truth in Johnson's surly dictum that he was deficient in lofty and serious purpose. The centre of the stage and a full treasury were among his highest ambitions and the character of the play—some of the trash which he put upon the stage is amazing—was of less account in his eyes than the opportunity for personal display.

Mrs. Parsons has an interesting chapter, too, on the theatrical reforms which Garrick effected, but this, of course, to the expert is all ancient history. Some of her most interesting pages are devoted to the admirable domestic life of Garrick and to the virtues of his wife, to whom he gave such life-long devotion, and who was such an invaluable helpmate to him, both in his social and business career. There was a romance which never ended until his dead body was borne from her side to Westminster Abbey. If space permitted it would be pleasant to quote freely from the incident and anecdote which crowd the pages. It may be said, however, in conclusion that the sketches of Garrick's most famous or notorious contemporaries, Kitty Clive, Woffington, Quin, Foote, Sheridan, Burke, Goldsmith, Johnson, Fanny Burney, Reynolds, and count-

less others, are etched with a bold, free, and skilful hand.

In the November *Atlantic*, Prof. George P. Baker prints a number of hitherto unpublished letters of Garrick, taken from the collection of J. H. Leigh. Others are to follow. In the present batch, there is none that sheds additional light upon any statement in Mrs. Parsons's Book. Certain references which she makes, seem, indeed, to indicate that some at least of these Leigh letters passed under her inspection.

The "Cæsar and Cleopatra" of Bernard Shaw, which was played for the first time in this country in the New Amsterdam Theatre, on Tuesday night, cannot be taken very seriously as drama, but merits attention as something new in the way of light entertainment for intelligent persons. It is really a superior form of historical extravaganza, with a semi-serious passage introduced here and there to give it appearance of solidity. As usual, Mr. Shaw has made his characters the mouthpieces of his own opinions upon affairs of the universe, but his views are so wittily expressed, and are productive of so much amusement, that it would be churlish to object to them as inappropriate to either person or period. Really humorous dialogue is too rare upon the stage, nowadays, not to be precious even when it is stuffed with strange heresies; and much of Mr. Shaw's dialogue is comparable with that of W. S. Gilbert. In Forbes Robertson, for whom he wrote the part, Mr. Shaw has found an almost ideal Julius Cæsar. The actor not only looks the character, but plays it the right way, without a trace of exaggeration even in the most fantastic scenes, and in the occasional serious interludes with great intellectual dignity and force. His elocution was admirable. It was a delight to hear the English language spoken with such clearness and crispness and nicety of emphasis. The speech of his whole company, indeed, was uncommonly good, and the general performance of notable excellence. Mr. Robertson's artistic taste asserted itself in the remarkable beauty of the scenery, costumes, and groupings. The representation was warmly received.

Miss Lena Ashwell, accounted one of the most powerful emotional actresses on the London stage, formerly a member of Henry Irving's Lyceum Company, made her first appearance in this city on Monday evening, in the Lyric Theatre, and achieved an emphatic personal success. Her face is highly intelligent; in the quieter passages she acts with close attention to the finer points of suggestive detail, and in more passionate scenes with large and varied control of vocal and facial expression. Beyond question she is a performer of much more than common ability, but no conclusive estimate of her powers can be formed from her one performance in "The Shulamite," which is a gloomy, painful, and rather crude play. It is an adaptation from the novel of that name by Claude Askew and Edward Knoblauch. In it she appears as the lovely drudge of a bigoted and brutal South African Boer. Miss Ashwell, however, dignified the performance by an impersonation which was consistent, and marked with much skill the progressive development, through the inspiration of love, of an ab-

ject, spiritless, and hopeless woman into a resolute and devoted creature, capable of any sacrifice or audacity. It was in the delicate suggestion of hidden suffering that she was most successful, but there was no lack of eloquence or vehemence in her more tempestuous moments. It should be noted that she created her effects without much aid from her associate actors, who were mostly incapable. Artistically, the weakest point in her performance was her elocution, which is often very bad.

H. B. Irving closed his first New York engagement Saturday evening with a performance of "King Charles I." He has achieved an artistic, if not an overwhelming commercial, success. At present his father's fame is rather a handicap than a help, for he has to endure the test of comparisons, which are sometimes founded on prejudice, and are in themselves misleading and unjust. It would be absurd to pretend that he now possesses the extraordinary personal force, the almost mesmeric charm, which made the impersonations of his father—even when most eccentric—so thrilling and authoritative; but his father did not have this power in any marked degree until he was approaching the meridian of his career. Judged solely on his own merits, the young Irving must be assigned to a place in the first rank of living romantic actors. The full extent of his capacities, or his limitations, will not be known until he has been seen in such rôles as Shylock, Hamlet, and Macbeth; but much may be expected of a man capable of playing such diverse parts as Malatesta, Charles I., Dautran, and Markheim.

The Ben Greet Players are again in this country. They will devote the first few weeks of the season to the South; beginning with "Everyman" at the University of Virginia. All the plays included in last year's repertory will be reproduced. About Easter a series of performances will be given at one of the Broadway theatres. "All's Well That Ends Well," the whole of "Hamlet," and possibly both parts of "Henry IV." will be this year's addition to the repertory.

A Malone Society has been formed in England, for the purpose of making accessible material for the study of the early English drama. The society will publish reprints of old plays, chiefly in the Tudor period, and documents illustrative of the history of the stage. The plan is to print the following plays early in the new year: "Wealth and Health," "St. John the Evangelist," Peele's "Battle of Alcazar," 1594; and Greene's "Orlando Furioso," 1594. The first two plays were long thought to be lost, but they have recently been recovered. The extent of the society's activity will depend upon the number of members, at a guinea a subscription. The society hopes to issue each year one play or other such publication for every twenty-five members. The committee in charge of organization consists of F. S. Boas, E. K. Chambers, R. B. McKerrow, A. W. Pollard, and W. W. Greg. The address of Mr. Greg, the secretary, is Park Lodge, Wimbledon, S. W.

Gabriele d'Annunzio's play, "More Than Love," which was presented at Rome for the first time Monday night, is reported to be a complete failure.

Music.

THE COMING MUSICAL SEASON.

The arrival from Europe of Camille Saint-Saëns, the leading composer of France, calls attention to one of the striking features of the musical season now opening. It was inaugurated, three weeks before the usual date, by Signor Leoncavallo, one of the three most prominent composers Italy has produced since Verdi, the other two being Mascagni and Puccini. Mascagni we had with us a few years ago, and Puccini, as we have noted, is to be here later for the production of his latest opera, "Madama Butterfly," at the Metropolitan Opera House. Paderewski also had planned to come here in order to accompany the Boston Orchestra when it plays his new symphony, but his coming is now regarded as extremely doubtful, for the symphony is not yet finished. From Russia we shall get Scriabine. Prominent composers have visited us heretofore—among them Rubinstein, Dvorák, Tchaikovsky, Weingartner, Humperdinck, Elgar, Johann and Richard Strauss; but never have so many been here in one year. Among the few whom we have not had an opportunity to welcome are Grieg, Massenet, Goldmark, and Sibelius.

The only new conductor we shall be called upon to judge is Dr. Muck, the leader, for a year, of the Boston Orchestra. Though one of the "Parsifal" pilots at Bayreuth for a number of years, Dr. Muck is understood to be rather conservative and unemotional. He will thus serve as a foil to the fiery Safonoff, who is to conduct the Philharmonic Society for three years. Mr. Safonoff, however, is by no means always ablaze, or suggestive of the impetuous Cossack; he knows when calmness is called for.

While the Philharmonic Society has not yet issued its prospectus, one gets the impression, from a glance at the general situation, that orchestral novelties will be few. This is not a reason for special regret, since few contemporary composers are distinguishing themselves. But, apart from Paderewski, whose works are not heard as often as they deserve to be, there are at least two European composers who have heretofore been neglected here—the Finnish Sibelius and the Austrian Bruckner. Maud Powell is enthusiastic over the violin concerto of Sibelius, which she is to introduce to us, and Walter Damrosch has on his list for the New York Symphony Orchestra a Bruckner scherzo; but these are only samples. Nor is there any indication that the leading orchestral organizations will devote considerable attention to American composers. In this respect English composers are much more fortunate.

Opera-goers, as a rule, are not clamoring for novelties. If they can hear "Faust," "Carmen," "Lohengrin," and a dozen other favorite works given by the best singers, they are satisfied. Yet it is in the opera houses that the principal novelties of the year are to be looked for. Competition has already had its effect at the Metropolitan Opera House. Richard Strauss's sensational "Salome" is promised as the chief attraction. There will also be six more novelties: Cilea's "Adriana Lecouvreur," Giordano's "Andrea Chenier" and "Fe-

dora," Puccini's "Manon Lescaut" and "Madama Butterfly," and a stage version of Berlioz's "La Damnation de Faust." The Manhattan Opera House is also staging this work. For the rest, the Manhattan relies on the familiar repertory, with a few revivals, like "Norma," "La Juive," "Mignon," and, above all, Auber's masterwork, known here as "Masaniello." In the lists of both managers there is an unusually large proportion of Italian operas. This is due less to a revival of interest than to the fact that the managers place more reliance on their chief tenors—Italians both—than on even their lists of famous prima donnas.

Whether New York can support two grand opera houses at the highest prices for four months, when other American cities find it difficult to support one for a week, is yet to be seen. In 1833-1834, the attempt to run two companies in this city, with a repertory chiefly Italian, resulted in disaster to both. But that was nearly a quarter of a century ago, and in this period New York has not only grown much bigger, but has become more and more the winter resort of wealthy families. Whatever the outcome, we shall have about 150 operatic performances, and perhaps twice that number of concerts. To be sure, we are still far behind the German cities, which have opera ten months a year, or London, which now boasts of having music from the first of January to the 31st of December. But if we do not have 800 concerts a year, like Berlin, or fifty in one week, as sometimes in London, we have all we need.

The death of Germany's most eminent teacher of singing, Julius Stockhausen, has revived the question as to his relations with Richard Wagner. It is certain that Wagner greatly admired Stockhausen, for he invited him, in 1864, to become the head of the vocal department of the projected Academy of Music in Munich. Stockhausen could not accept this offer, because a contract tied him to Hamburg. Some of the German newspapers have tried to convey the impression that Stockhausen did not admire Wagner, and thought that Wagner's music ruined the voice. Stockhausen himself defined his attitude, not long before his death, in these words:

Contrary to the prevalent opinion, I am firmly convinced that Wagner's music absolutely does not ruin the voice or shorten a singer's career. . . . If voices are ruined by Wagner singing, this is not the fault of Wagner, but of the singer who tries, before his voice is properly trained, to make it attempt the most difficult task that can be set—that of mastering the Wagnerian style of song (*Sprachgesang*).

Madame Nordica will give her first concert in this city in seven years at Carnegie Hall, Tuesday evening, January 8. On this occasion she will be assisted by Walter Damrosch and his orchestra.

Art.

American Silver. By R. T. H. Halsey. Boston: Published by the Museum of Fine Arts.

"American Silver," dealing with the work of seventeenth and eighteenth century silversmiths, is a most creditable catalogue of a loan exhibition held during

the past six months at the Boston Museum of Fine Arts. The text, which includes an introduction with lives of the chief Boston makers, has been prepared by R. T. H. Halsey, and represents original research in a virtually untrodden field. The press-work is that of the Gillis Press, and is fastidiously elegant, most attractive perhaps in the catalogue proper, with its combination of rubricated numbers, Caslon type, and copies of the inscriptions on the pieces in a cursive character. Thirty-eight half-tone plates illustrate practically the entire collection. How rich is the material here studied in pioneer fashion may be realized from the fact that besides the ninety silversmiths represented by these 332 pieces, Mr. Halsey adds in an appendix the names of 329 other artisans of the period whose work is scarcely known.

To many this handsome catalogue will appeal most strongly as a bit of painstaking antiquarianism. But the silver itself is of considerable artistic merit. The Colonial craftsmen stood by their English models. Their part was not to invent striking designs, but to present accepted forms in admirable workmanship. They appealed to a sober but correct taste. These bowls, flacons, porringers, beakers, urns, teapots, etc., that stood on Colonial sideboards were in preëstablished harmony with the excellent Georgian dwellings they adorned, as with the scraps of Horace and Virgil that furnished the inside of the proprietors' heads. We do well to remind ourselves of a time when American taste, if uninventive, was at least unvulgarized. This silver, with its obvious limitations, is better worth the while of an art museum than any subsequently produced among us.

By providing a loan exhibition catalogue that is really a hand-book of the subject, the Boston Museum of Fine Arts has established a valuable precedent. How many similar exhibitions in the past have gone by with nothing but a flimsy hand-list to commemorate them! This authoritative catalogue gives promise of a time when experts will as readily lend their learning to such a cause as collectors have always lent their more tangible treasures.

The constantly renewed demand for inexpensive houses in the suburbs of the great cities and on the village street causes the publication of "Palliser's Up-to-Date House Plans" (J. S. Ogilvie Publishing Co.). It presents on the front cover a half-tone print of a very effective house in old colonial style, the plan of which will be found inside. That house is grandiose enough, and is assumed to cost \$18,000 when built of "Philadelphia pressed brick with white marble trimmings," and if those trimmings include the tetrastyle portico and the pilasters which serve as responds to the four columns (for one must be technical in describing so stately a front), that would seem to be a low price for the work. Few of the houses presented are as elegant as that, although there is one which in cost exceeds it largely, and several more require about the same outlay. The material is generally undetermined, though stone is mentioned in one case and brick veneer in another. The others are all shown as presumably built of frame with clapboard sheathing, and the cost reaches \$9,000 in some cases, and again

falls as low as \$1,000. The little cuts of the exteriors are all from drawings made in perspective in the regulation way, according to the office rules, and they are not attractive; but to the person who is pleased by one of the plans given, such a view of the house shows at least what may be made of it. It would be a good idea to state on the cover or in another prominent place that any one of these plans is susceptible of an exterior in some respects different from the one offered.

In spite of the discouragement Dr. C. Waldstein received from the Italian Government two years ago, he has by no means given up his scheme of excavating Herculaneum. Recent numbers of the *Neue Freie Presse* and the *Corriere della Sera* give accounts of interviews with him, in which he expounds his great project with as much enthusiasm as before. He still believes in making it an international undertaking. Italy—or, indeed, any country—is too poor to sustain the enormous expenses required for the purpose single-handed. Accordingly, Dr. Waldstein proposes that there shall be formed committees composed of eminent men for the purpose of raising subscriptions. These committees are to be connected with an international committee sitting in Rome, of which the head shall be the King of Italy. To this committee each nation shall send two representatives, but Italy shall have four—the minister of public instruction, the sindaco of Naples, and two others. The excavations shall be carried on by the most capable and experienced archæologists of the various nations, under the direction of Italy. All objects found shall remain in Italy. Whatever our opinions on the feasibility of this particular scheme, there is no doubt that the excavation of this place, if ever it comes to pass, will be a matter of great public interest. Herculaneum, buried during the famous outbreak of Vesuvius in 79 A. D., was a richer and more artistic city than Pompeii, its fellow victim. While the latter was a mere provincial town, Herculaneum was a favorite summer residence of fashionable Romans. Moreover, the catastrophe happened before the inhabitants could take refuge in great numbers, as was the case in Pompeii, and they could not, therefore, in this case, return and carry away their most precious possessions. The great objection hitherto raised against the excavations, that Herculaneum is covered with hard lava, is, according to Dr. Waldstein, no longer valid. The strata of lava are due to the eruptions of the last centuries; the city itself was covered with burning mud, a substance comparatively easy to remove.

Excavations on the site of ancient Numantia are to be continued. After last year's successful campaign the Spanish minister of public instruction declares that he will do his utmost to further the work, and if difficulties should arise from exaggerated demands of the present owners of the property, the land will be expropriated. A museum for future finds is to be erected. It will be remembered that, underneath the remains of the Roman city of Numantia, was found the Iberian city which the Roman General Scipio burned in 133 B. C. Still lower were discovered remains of an early pre-

historic settlement, which in some ways resembles the second city of Troy. The pottery is at first quite rude, but later is decorated with geometrical designs. It would seem that during the eighth century B. C. this settlement was in active communication with the eastern part of the Mediterranean. Further excavations should produce interesting results.

The Pennsylvania Academy of the Fine Arts and the T Square Club of Philadelphia announce a joint exhibition to be held in the galleries of the academy from the 1st to the 30th of December. The exhibition will cover the field of architecture in its broadest sense, and will include all the arts to which it is related. As in the twelve previous annual T Square Club exhibitions, the department of architectural design will predominate. The department of mural painting will be conducted with the cooperation of the National Society of Mural Painters.

An exhibition of paintings by Norwegian and Scandinavian artists will be held in Boston by the Copley Society some time during the winter.

An interesting exhibition of Russian art has been opened in Paris, in some dozen halls annexed to the Salon d'Automne. Among the most remarkable works are five portraits by Dmitri Levitsky; a superb bust of the Emperor Paul the First, by Theodore Stchedrine; a bust of Catherine the Second, by Rokotow; several busts by Schoubine, and portraits by Borovikovsky.

Henri Bouchot, recently deceased, in his fifty-seventh year, was an extraordinary combination of bibliophile and art connoisseur such as only France produces. A prolific writer on many topics, he arranged and enumerated the Exposition of French Primitives, 1904, in a monumental work that won him general recognition. He was director of the Print Department of the Bibliothèque Nationale and a member of the Academy of Fine Arts. His latest and perhaps most congenial work was the Exposition of Eighteenth Century French Art at the Bibliothèque. His contributions to the history of early French painting, to the history of engraving, and the typographical art are too numerous to mention here.

Science.

REMARKABLE HUMAN BONES IN A NEBRASKA MOUND.

LINCOLN, Neb., October 26.

In a mound near Omaha, Neb., have been exhumed some human remains which seem likely to attract more than passing attention. The finder, R. F. Gilder, has been interested in the archaeology of the Missouri valley and the region beyond, and has previously unearthed at various points numerous objects of interest and value. In this case the remains were found in a mound located on a conspicuous hill crest, and are unusually well preserved. Mr. Gilder reports that in a cleared area some thirty-five feet in diameter, the skeletons had been arranged so that two were in a sitting posture and the others recumbent with heads to the centre and bodies radiating therefrom. From the positions of the

bones it appeared that the flesh had been stripped off before the skeletons were placed on the area, although no marks of a tool have yet been found on the bones. Once placed, these bones were covered over with clay to a depth of eighteen to twenty-four inches, and a fire was built upon the top. The layer of ashes was later covered by earth which had been scraped up with shells, and the fragments of the shells are still demonstrable in the earth mass. The latter now measures some four feet in thickness. It is, of course, apparent that the half-baked clay would serve as an admirable protection from the destructive elements, especially in view of the naturally perfect drainage of this location. A small triangular flint knife and a number of fine pink quartzite spalls are the only other objects found in the area excavated.

None of the skeletons is complete, and many of the bones are imperfect, yet some peculiar features are apparent on first examination. Most striking of all is undoubtedly the lateral aspect of the cranium. The supra-orbital ridges are massive and prominent, while the frontal bone slopes almost directly backward in a way which forcibly recalls the most primitive human crania yet discovered. The lower jaw is abnormally developed, its muscle attachments are prominent, and the teeth, even the usually unused third molar, are worn down to the gum. The bones are heavy, and their muscle attachments strongly developed, while both femur and ulna display a marked and peculiar curvature forward. In fact almost every part of the skeleton departs from the type of the human skeleton to-day in some particular, and in general these differences indicate a more primitive type. The exact bearing of these peculiarities will be clearer after the completion of the detailed study of the bones already begun by Profs. Erwin H. Barbour and Henry B. Ward of the University of Nebraska, to whom the specimens have been entrusted for exact measurement and comparison with recorded data.

Of the importance of this discovery there can be no doubt, even though its significance is not clear at this moment. The remains are not readily referable to any known aboriginal race of this continent, but before the completion of exact comparative studies all speculation as to the age of the remains, the character and habits of the people they represent, or their relation to later known tribes, appears somewhat premature. This find, together with others important but less widely known, and with some yet unpublished discoveries regarding the remains of prehistoric man in Iowa, Nebraska, and westward, indicate clearly that the thorough examination of this region will add much to our knowledge of early races on this continent.

The Principles of Botany. By Joseph Y. Bergen and Bradley M. Davis. Boston: Ginn & Co. \$1.50.

There are now so many text-books of botany that nearly all of the available titles have been appropriated, and therefore some of the older titles are being used over again. It is now about sixty years since Dr. Lankester published his excellent trans-

lation of Schleiden's "Principles of Botany," a work which with its polemic had much to do with the stimulation of research at the beginning of one of the most important epochs in the science. It was the point of time when the subject of plant-fertilization was being assiduously studied with imperfect lenses and with more imperfect methods. Protoplasm, the formless creator of form, was just revealing itself, and, under the rude chemistry of that day, appeared to be marvellously simple in its structure. It is extremely interesting to compare such a work as Schleiden's in the forties, with this work by Bergen and Davis, standing as a sane exposition of the views held at the first decade of our new century. We have space for only a few points of contrast. At the outset, it is seen that a good deal of the older foundation-work still stands unmoved by recent investigation, but upon this secure foundation nearly all of the superstructure has been reconstructed. Old partitions, such as that between the flowerless and the flowering plants, have been broken through or taken down, and the whole edifice has been rebuilt symmetrically throughout.

The earlier work did not have the advantage of being prepared in the strong light which theories of evolution have cast over the whole field of affinities; the dawn was then just beginning. Consequently we find, as we should expect to find, totally new views expressed in the newer book, as to relationships between plants, and we may further say, between plants and their environment. Now these subjects are difficult of presentation in a text-book. Even advanced students find some of the matters hard to understand. The evidence of relationship between the lower and some of the higher plants is based for the most part upon examination with the microscope, and in some instances the work of investigation is extremely technical. It is simply impossible to have the average student obtain the evidence of some of these relationships at first hand; he is obliged to take much of it on trust. Here, then, is a perplexing question in pedagogics. The authors are well fitted to meet it, and in our opinion they have met it well. Mr. Bergen is a teacher with large experience, who possesses a certain sympathy with the pupil which goes a long way towards bridging over serious difficulties. Professor Davis is an investigator who has achieved distinction in many portions of the field of morphology, and he has presented his suggestions and statements clearly. The two have been in close touch throughout the preparation of the book, and team-work is always best.

The Harvard Observatory is mounting a sixty-inch reflector which will materially increase the efficiency of the astronomical equipment. The reflector, which is one of the three largest in existence, will be used to make observations on faint stars and nebulae.

The Royal Scottish Museum at Edinburgh has been given the collection of shells of British mollusca, about 5,600 specimens, belonging to the late Richard Rinmer.

The Oxford University Press is publishing Dr. Koenigsberger's "Life of Hermann von Helmholtz," translated by Francis A. Welby. Lord Kelvin furnishes a Preface,

in which he points out Helmholtz's unique position as a master and leader in mathematics, and in biology and physics.

A Political History of the State of New York
 By D. S. ALEXANDER. 2 vols., 800 pp., \$5.00 net, carriage 40 cents

THE NATION says: "A very useful history. . . . If it were not as well done a it is, the fact that it covers a practically unoccupied field would give the book a certain value. . . . Enlivened and enriched by numerous pen-pictures of New York politicians and statesmen, which constitute what are perhaps the most valuable, as well as the most entertaining portions. The style is terse and clear. Good use is made of anecdotes and reminiscences . . . breaks away absolutely from the annalistic form."

HENRY HOLT AND COMPANY 29 W. 23^d St. NEW YORK

Lord Acton and His Circle
 Edited by Abbot GASQUET, O.S.B. Large 8vo. With Photogravure Portrait. 460 pages. \$4.50 net.

*The volume contains nearly two hundred letters of ACTON's, mostly on literature and religion. Abbot GASQUET as editor supplies a sympathetic monograph on the periodicals ACTON and his friends conducted between the years 1858 and 1875. Alike for learning, for industry, and for conscience, ACTON must rank among foremost editors—this, at least, is the opinion expressed by the Abbot. Some important Newman correspondence also is published for the first time.

BOOKS FOR THE BOOKISH

JUST PUBLISHED

Christopher Columbus

AND THE NEW WORLD OF HIS DISCOVERY

By FILSON YOUNG

Two Volumes. Octavo. Cloth, gilt tops. \$6.50 net, per set.

In this important and exhaustive work, upon which Mr. Young has been engaged for some time, the object has been to disentangle the somewhat unfamiliar figure of Columbus from the net of controversy and historical argument which has surrounded him and to present the man himself in a narrative of strong, human and picturesque interest.

The volumes contain maps and illustrations; a photogravure portrait of Columbus; and a picture in colors of a caraval, such as Columbus must have sailed in, from a painting by Norman Wilkinson. Earl of Dunraven has also contributed a note on the navigation of Columbus's first voyage.

READY SHORTLY A NEW VOLUME

French Men of Letters Series

Edited by ALEXANDER JESSUP, Litt.D.

Each volume contains a frontispiece portrait of its subject, and an adequate index

12mo, cloth, paper label, \$1.50 net, per volume,
postpaid, \$1.60.

Honoré de Balzac. This latest addition to Balzac critical literature is a very exhaustive study by M. Ferdinand Brunetière, commonly recognized as the ablest living critic of French literature.

A SPLENDID VOLUME

THE

Drawings of Jean Francois Millet

Fifty Facsimile Reproductions of The Master's Work. With an Introductory Essay.

The edition is numbered and limited to One Hundred and Forty Copies, Imperial Quarto, for the United States. One Hundred and Twenty Copies, numbered, and bound in buckram, \$20.00 net, each. Twenty copies, printed on hand-made paper and bound in vellum, gilt, forming an *edition de luxe*, will be sold at \$25.00 net, each.

THE NEW VARIORUM EDITION OF

SHAKESPEARE

Edited by HORACE HOWARD FURNESS

THIS edition, prepared by one of the foremost living Shakespearian scholars, is the result of more than thirty-five years of careful preparation. It represents the life-work of an American scholar of the highest type, whose learning, painstaking labor, and critical judgment are lauded throughout the literary world—not only by American and English Shakespearian scholars, but by those of the countries of continental Europe as well.

The new Variorum Edition is without question the most complete in existence, as it is an edition in which the various textual readings and editorial observations of the editions that have preceded it are recorded.

"These monumental volumes are the admiration of every true student of Shakespeare," says Dr. William Aldis Wright

THE FOURTEEN VOLUMES WHICH HAVE THUS FAR APPEARED ARE

J. B. LIPPINCOTT COMPANY, Publishers, Philadelphia

The Nation.

NEW YORK, THURSDAY, NOVEMBER 8, 1906.

The Week.

The election of Charles E. Hughes as Governor of New York by a majority of merely 55,000 cannot afford Republicans much ground for elation. Hearst was personally detested by tens of thousands of respectable Democrats who, like Mayor McClellan, scratched the ticket so that Hearst ran far behind his colleagues. He had secured his nomination by pandering to the lowest element in the Democratic party, and by a shameless bargain with Charles F. Murphy, whom he had denounced as a criminal. But he had not captured all the machine politicians; for he was opposed by McCarren in Brooklyn and by Croker's old guard in Manhattan. On the other hand, Charles E. Hughes had an impeccable record in character and attainments. His private and professional life had been irreproachable; he had performed distinguished public service in the legislative investigation of the gas monopoly and the insurance companies. He was brought forward as the candidate, not of the Republican bosses, but of the very best men, like Herbert Parsons, who wished to rehabilitate the party. Business conditions seemed favorable to Republican success. Wages were high, the demand for labor keen. The country was floating on a high tide of prosperity, for which the Republicans have loudly claimed credit. Under such circumstances and on the face of this contrast between a reckless demagogue and a man of ability and conscience, detached observers might suppose that Hearst would suffer an overwhelming defeat; that he would, as some sanguine opponents predicted, be buried under a landslide of 200,000 votes.

What, then, is the meaning of this comparatively narrow escape from Hearst? It means but one thing: the people of New York are tired of oppression and dishonesty in the management of our huge corporations, and tired of the corrupt alliance between corporations and machine politicians. This was the issue which Hearst has been urging for years. This is the issue on which he has secured such a formidable following. Indeed, the result proves that had not Hughes himself won such repute as a scourge of thieving insurance officials, his candidacy would have been hopeless. Had the nerveless Higgins been renominated, he would have hardly been in the race at all; but thousands of conservative men, who are eager for the purification of our public life, turned to Hughes as the man who is more like-

ly than Hearst to help us in this time of need. For his agitation against corporation abuses Hearst could have had abundant material without resorting to exaggeration and misstatement. The cases of the insurance companies, of the Standard Oil Company and its rebates, as exposed by Government investigators, of the rebates to the Sugar Trust, for which the New York Central has been convicted, the stock-jobbing and stock-watering by public utility corporations in New York, Brooklyn, and other cities of this State, the extortions of the anthracite monopoly and the Ice Trust, and the control of political machines by these combinations of capital—all these modern instances have strengthened the popular conviction that plain people are not being dealt with fairly. Hearst promised redress; and to Hearst people turned, not because he was an ideal candidate, but because he seemed to be the weapon at hand.

The warning is unmistakable. If Mr. Hughes fails to do his utmost to check abuses and redress grievances, if in this effort he is thwarted by the hirelings of the machine, Hearst or one of his kind will surely have his innings. The corporations have rights which must be respected as scrupulously as those of the individual; but our common carriers cannot be allowed to use their immensely valuable franchises from the public as instruments of discrimination; our traction and lighting companies are not licensed to loot our cities; our anti-monopoly laws must not be violated with impunity. Such men as John D. Rockefeller and Henry H. Rogers of the Standard Oil; Thomas F. Ryan and Anthony N. Brady, the manipulators of traction stocks; President Charles A. Peabody of the Mutual Life and other life insurance officials who are trying to prevent a free vote by policyholders; such buccaneers in high finance as E. H. Harriman, have heretofore shown little appreciation of popular sentiment. They have acted as if no power on earth had right or might to check the greed of their corporations. To them also the vote of Tuesday should carry its lesson. The faith of thousands in Hearst as a saviour has its pathetic side. In casting their ballots for him they have blindly cried for justice. They will not be denied.

No commentator of Professor Burgess's Berlin remarks on the Monroe Doctrine has struck the real infelicity involved—namely, that these observations meant one thing to Dr. Burgess and quite another to his German hearers and readers. To him the issue was

academic—a mere weighing of a case in international morals and diplomatic propriety; to Germany generally, it is to be feared, it seemed to indicate a revolutionary change in American sentiment and policy. For the view that morally the Monroe Doctrine is obsolete, much may be said. The conditions that gave it dignity have ceased to exist. We no longer fear that any monarchy will snuff out republican government in the Western Hemisphere. Moreover, our former aloofness from European and Asiatic politics, which gave force to the demand that Europe should equally abstain from interfering in the Americas, has been utterly abandoned. When this nation is in world politics from Algeciras to Peking, it is logically absurd to deny the commercial and quasi-colonial interests of Italy and Germany in South America. But logic has unhappily rather little to do with the matter. As a sentiment, devotion to the Monroe Doctrine has become stronger as its moral basis has become more flimsy. For many years to come resentment of European interference in this hemisphere will move our Presidents, and, at a pinch, our armies and navies. In short, the "Doctrine" has passed from the rational to the instinctive stage, and is, if anything, more formidable than before. That such opinions as Professor Purgess's will ultimately prevail, we make no doubt; meanwhile, it is premature to give the impression to any European Power, most of all to Germany, that, because certain of our diplomatic syllogisms have been proved fallacious by events, our traditional conclusions are held less passionately than before.

Since the report of the Eleventh Census upon "Wealth, Debt, and Taxation," in 1892, no comprehensive statistics of Federal, State, and local finance have been published in the United States. We had begun to despair of ever seeing the finance statistics of the Twelfth Census. Recently, however, the first advance sheets have come to hand. The following table of the net indebtedness (*i. e.*, total indebtedness less sinking funds) presents the essential data, stated in millions of dollars:

	1870.	1890.	1890.	1902.
Federal debt	2,331	1,919	890	925
State debt	353	275	212	234
County debt	187	124	145	196
Municipal and other local debt	328	724	781	1,434
Total	3,199	3,042	2,028	2,789
Per capita debt ..	\$82.99	\$60.66	\$32.39	\$35.49

Since 1870 the aggregate net indebtedness has decreased; since 1890 it has increased. Meanwhile, the per capita debt has fallen very materially, but since

1890 has manifested a slight upward tendency. If we separate Federal and State from county and municipal indebtedness, the table will stand as follows:

	1870.	1880.	1890.	1902.
Federal and State debt	2,684	2,194	1,102	1,159
County and municipal debt	515	848	926	1,630
Total	3,199	3,042	2,028	2,789

It is clear that two opposing forces have been at work. Both Federal and State debts were swollen to abnormal proportions in 1870 on account of the civil war; and the subsequent decrease, amounting by 1902 to \$1,525,000,000, was but natural—at least, according to American theory and practice. Upon the other hand, local indebtedness has risen since 1870 by not less than \$1,115,000,000, and, what is more, the rate of increase was never so rapid as at the present time. We find also that, of the aggregate local debts of \$1,630,000,000, not less than 48 per cent. belong to New York, Massachusetts, Pennsylvania, and New Jersey, which contain but 24 per cent. of the population. In the country at large, the heaviest local debts are in the industrial States having large centres of population. Earlier census reports upon "Wealth, Debt, and Taxation" contained instructive tables showing the purposes for which all debts were contracted. The data thus far published do not give such information for 1902; but we may hope that, since a beginning has at last been made, the rest of the results may be speedily forthcoming.

Gov. Magoon, by dismissing Cuban officials wholesale, has laid his hand seriously to the reform most needed, but he is also in danger of exciting unhappy animosities. The Latin races are a unit in regarding officeholding as the most desirable career, and the lack of a post as something like an ignominy. At many points, Secretary Taft's military emissaries found the chief difficulty of the situation to be that the insurgents expected to take up office as fast as they laid down their antiquated firearms. In fact, the trouble that has to be dealt with in Cuba is the innate propensity of the outs to shoot their way in. It may be said that such sentiments do little credit to our wards; their sensibilities have to be considered all the same. We do not doubt that Gov. Magoon's clean sweep is justified on all practical grounds. We hope, however, that his zeal will be tempered by the recollection that life in the bush is a delightful recreation in Cuba, while the Cuban insurgent is a much more formidable antagonist than his colleague, with whom Mr. Magoon is more familiar, the revolutionist of the Isthmus.

A steady increase in the number of college men entering politics in New York city is evident from the "Voters' Directory" published by the *Evening Post* a few days before election. This Directory contains the names and a brief characterization of all the candidates to be balloted for in Greater New York. This autumn 123, or more than a third of the whole number, were trained either in college or law school. The significance of these figures appears from a comparison with figures for four years. The following table shows both the totals and the distribution of candidates among the several colleges:

	1903.	1904.	1905.	1906.
Yale	4	5	5	6
Harvard	3	3	..	7
Princeton	6	5	5	5
Cornell	1	5	3	4
New York University	4	7	9	5
City College	11	15	14	17
Columbia	10	8	11	6
Amherst	2	3	4
Hamilton	1	..	2	2
Williams	1	1	..	3
Other colleges	10	15	20	31
Law School only	29	21	30	33
	80	87	102	123

The preponderance of men from the free College of the City of New York is, of course, to be expected. The interest of college men in politics is a gratifying sign: it means among our office-holders greater intelligence. We believe it also means higher character. So far as our own observation goes, however, the defect of our office-holding class to-day is moral, not mental; the members of the New York Legislature, for example, suffer less from ignorance than from instability. They are clever enough, but they are afraid to resist the machine politician; they compromise too easily with conscience.

Andover Theological Seminary's low estate is again brought to public notice by the figures of this year's enrolment. There are, it seems, but eleven students, all told—actually fewer than the professors. This is a sorrowful pass for the ancient seminary, once regarded as head of all the theological schools of the country. The alumni and trustees have made great efforts to keep the institution going, but discussion will now be renewed, we presume, of the project to settle, like the Episcopal Theological School, under the wing of Harvard at Cambridge. It is commonly supposed that the decayed prestige of Andover is due to doctrinal reasons. The "Andover controversy" is ordinarily referred to as the cause of the marked falling off in the number of students. That acrimonious theological struggle, no doubt, had something to do with the seminary's decline, but it probably did little more than accelerate the working of a larger cause. The "drift of the cities" has strongly affected theological education. To be directly in touch with

organized Christianity and charity, on a large scale, has become the great desire of theological students. They "pine for their slums," as Professor Park of Andover once sarcastically put it. At any rate, New Haven and Chicago and Hartford have grown at the expense of Andover. Union Seminary in this city had its own theological hatreds, and was at one time almost taboo by the Presbyterian Church; but the pull of the city brought it students as before. The old conception of a theological seminary as a quiet place where a man could do athletic reading and needle's-point thinking, is giving way. These are the days when the theologian, too, has to "hustle" and "do things."

Christian Science and mental healing were the topics to which Dr. Pierre Janet of Paris, chiefly devoted himself in a recent lecture at the Lowell Institute on "Psychotherapeutics." In some cases he admitted that healers had accomplished good results; but he complained of the absence of precise data in the reports of "cures." A recovery of 80, 90, and even of 98 per cent. had been claimed, but no diagnosis of the cases was made, and the statistics were scientifically inconclusive. This neglect of diagnosis and contempt for the medical profession has been characteristic of all healers since P. Quimby's labors in 1840. Cure by faith resembles the old mediæval "theriac," a mixture of drugs, some one of which might prove to be a good shot, and hit the bull's-eye. Dr. Janet thinks that the miracles of Christian Science are on a higher plane than those of Lourdes, but he puts hypnotism above the method of either. Every educated Frenchman is surprised that faith-healing should be with us a religious process. But in demanding of the Christian Science advocates a diagnosis of the cases cured, and authoritative statistics, Dr. Janet is surely addressing deaf ears.

The virtual abolition of the Mathematical Tripos at Cambridge University was briefly announced in the dispatches a few days ago. The reasons for this step now appear more fully in the English papers. In a letter published on October 22, eleven of the Cambridge professors and lecturers in mathematics, including Robert S. Ball, G. H. Darwin, A. R. Forsyth, and J. J. Thomson, set forth their arguments in support of the change, then pending. They felt that the old system involved "too great a sacrifice of the educational interests of many students, the character of whose work during their course at Cambridge is dominated by the requirements of the final examination." Men spend "far too much time in elaborating the details of the general mathematical course." One of the chief ob-

jects of the new scheme is "to provide for the needs of the important class of men who ought to spend part, but not the whole, of their time at Cambridge in studying mathematics." The problem at Cambridge is in one point the reverse of that which American universities, with the elective system, are forced to consider. Here the difficulty is to keep too many students—especially those who have no definite career in view—from dissipating their efforts over too wide a field. The attempt to counteract this tendency toward diffusion is met in some institutions by the offering of "honors" and other prizes for excellence in one line. In no American university, however, have we an honor which carries the distinction accorded to the leader of the Mathematical Tripos at Cambridge, the senior wrangler, and consequently there is not such a general temptation to concentration along one line. Yet our prizes, such as they are, together with a desire to hasten preparation for professional work, indubitably encourage the ambitious in the tendency deplored at Cambridge—immature and excessive specialization.

Premier Clemenceau has received the extraordinary vote of confidence of 395 to 96. The programme that elicited so unprecedented an expression may be briefly characterized as radical. The Premier engages to enforce the Separation Act, though the method is not specified; to vote old-age pensions, a progressive income tax, and increased privileges to labor unions. "Democratic" was the word chosen to describe the Government projects. In a general way, the Clemenceau prospectus is merely a continuation of the policy of several Ministries past. Evidently, the keeping of these promises depends mainly on money in hand, and the large deficit in the current budget pretty well reduces the more costly plans to pious wishes. As regards European policy, also, M. Clemenceau will apparently continue in the footsteps of Rouvier and Bourgeois, confirming the new friendships with Italy and England, while abiding by the Dual Alliance. We have already pointed out that the actual sincerity of that compact was in doubt from the very beginning. Its value to-day is largely factitious. But it seems as if, beside the more genuine understandings which are gradually forming, there must be maintained a solemn equilibrium of paper alliances—if only to please an international Mrs. Grundy who still dominates the chancelleries. M. Clemenceau's tenure, finally, is by no means as comfortable as his great majority indicates. He has ahead the thorny problem of applying the Separation Act and of financing his humanitarian projects. His course is perilous and will require a skilful pilot.

A possible solution of the deadlock between the French Government and the Church over the Separation Law is suggested in the *Revue Politique*, by M. Esmein, an eminent authority on public law. M. Esmein finds the crux of the difficulty in the failure of the law to make specific mention of the Catholic Church. But if it is impossible for the bishops to accept the associations of public worship prescribed in the law, why may not the laity proceed with the formation of such associations, taking care to insert in their by-laws the fullest guarantees that the bishops may demand? If the bishops will not accept religious associations organized under an obnoxious law, it is within their power to bring about the formation of associations *before* the law comes into effect. Up to that date (December 11) they would retain power over the Church property and be the only judges whether any association formed is in conformity with the general organization of the Church. Such an association can make itself, in fact, the instrument of the bishop's will. If the faithful are wise and anticipate the enforcement of the law, they have nothing to fear. "The orthodox association will be in possession and *beati possidentes*."

Which is worse—to be blind or to be deaf and dumb? Kant discussed that question in his "Anthropologie," and concluded that the blind were less to be pitied than the deaf-mutes, whom he found, as a rule, more morose. The eminent Berlin oculist, Dr. Ludwig Cohn, considers the same problem in the *Berlin Tageblatt*, apropos of the one-hundredth anniversary of the opening of the first asylum for the blind in Germany. All the blind persons whom he has questioned hold their affliction to be more endurable than that of the deaf-mutes. Yet at social gatherings, and in the theatre, not to speak of the opera, the eye makes amends for the lack of hearing to a much greater degree than the ear does for the absence of sight. But "if we ask a deaf-mute if he would change places with a blind person, he always answers, No." The latest published figures, for 1900, show that there were at that time in the German Empire 48,750 deaf-mutes, as against 34,334 blind. Much more has been done for the deaf-mutes than for the blind in enabling them to earn their own living; and Dr. Cohn regards it as one of the main problems of the future to devise means of making the blind self-supporting. To that problem humane people in this country have applied themselves with much success.

If certain practices now common among small tradesmen and domestic

servants continue much longer, there will be little need of agitating for a graduated income tax, or for a limitation of great fortunes. The wealth of the unhappy employers will be distributed in commissions. In his famous advice to servants, Dean Swift observes:

Take all tradesmen's parts against your master, and when sent to buy anything, never offer to cheapen it, but generously pay the full demand. This is highly to your master's honor, and may be some shillings in your pocket; and you are to consider, if your master has paid too much, he can better afford the loss than the poor tradesman.

The custom of giving and taking commissions on all articles bought for household use has grown until many cooks receive more from the purveyors than they do from their employers. Some marketmen will pay as much as 10 per cent. to a cook to keep the patronage of a large family. No one maintains that competent domestic servants are greatly overpaid. Often they render services which no wages could secure. But if a large percentage on the cost of provisions is to go into the servant's pocket, then employers will no doubt seek some way of self-protection. The commission system, which is bad enough in the kitchen, is even worse in the stable. No doubt the blacksmiths and harness dealers would themselves welcome a remedy for the present state of things, when the employer's purchasing power is too often regulated by the coachman's greed.

A struggle of twenty-five years in the Colonial Parliament of the Bermudas has ended in the appropriation of £70,000 for the deepening of the channel of St. George's Harbor. This is a landlocked body of water within a mile of the open sea. By this project the Bermudians hope to create such harbor facilities as will make their islands a great coaling station for steamships plying the North Atlantic. As Bermuda lies in the trade routes from the Continent to the Gulf of Mexico and the Caribbean Sea, her position as a port of call is singularly advantageous. At present, she cannot boast of one safe or convenient anchorage for coaling. The advocates of the St. George's channel scheme met with strong local opposition. Even the Imperial authorities frowned on the project. But after the Spanish-American war the Home Government withdrew all objection. To-day, public opinion in Bermuda is unanimously in favor of the improvement. The change of feeling is largely due to financial depression. As the winter tourist trade will not make up to the colony for its other losses, the Bermudians have concluded to make a bid for the Atlantic coaling trade.

PEARY'S ARCTIC WORK.

In the short dispatch of Saturday announcing the return of Commander Peary, we have the bare record of what must for many years be regarded as one of the most remarkable pieces of exploration ever accomplished. Whether able to justify itself in the light of a contribution to science or not, whether it is to act as a stimulus or a deterrent to further exploration in the same field, the journey itself proves a courage and an ability on the part of individual man to battle with the forces of nature, which are but rarely found illumining even the brightest pages in the annals of discovery. Indeed, Mr. Peary, in his numerous Arctic ventures, entirely apart from the importance or significance of his discoveries, has set a standard for exploration which few will have the daring to emulate, and still fewer the physical capacity to carry through. Starting systematically on his great work in 1891, he has since that time devoted all his energies to the accomplishment of the one end in view—the clearing up of the mysteries of the Far North. Ten years and more—virtually all of the period between 1891 and 1906 that was not taken up in preparations for his several expeditions—have been passed in the Arctic desert of ice and snow.

The chief results of Mr. Peary's explorations are to be found in the determination of the insularity of Greenland (1892); the fixation of the Arctic boundaries of what is seemingly the most northerly land-mass of our planet (Cape Morris Jesup, latitude 83° 39' north) (1900); and the tracing (1906) east and westward of the Arctic shore-line through 80° of longitude; that is, from the northeastern extremity of Greenland to nearly 20° of longitude beyond the furthest point that, in Grant Land, was reached in 1876 by Aldrich. Aldrich, it will be remembered, was one of the lieutenants of the British national expedition under command of Capt. (Sir) George Nares. To this major work of Mr. Peary must be added the close charting of the inner waters of a large section of Northwestern Greenland, and the most complete study that has ever been made of that small band of true Greenlanders, hardly 250 to 300 in number, who inhabit the region lying northward of Melville Bay, and who appear in the early explorations of Sir John Ross under the name of Arctic Highlanders. Many of the more strictly scientific details of the explorations have not been elaborated, or at least have not yet been published. Our knowledge of the great ice-cap of Greenland—the physical conditions prevailing over it and its relation to the uncovered or ice-free land that lies northward of it—which was initiated by the late Baron Nordenskjöld in 1883, and furthered by the "first crossing" of Nansen,

we owe in the main to Mr. Peary. We likewise owe to him the presentation of a number of interesting problems in the domain of zoögeography. Among the latter is the occurrence in the land beyond the ice-cap of Greenland of the musk-ox. The presence of this animal, which the explorers have used as food, has alone on two occasions made it possible for Mr. Peary to escape starvation.

The record of the "farthest north" that is now made (87° 6') surpasses by thirty-eight statute miles the earlier brilliant achievement, northward of Franz Josef Land, of Capt. Cagni, the long arm of the "Stella Polare" expedition of the singularly successful Duke of the Abruzzi. It also eclipses by 196 statute miles Mr. Peary's own best previous record of 84° 17', northward of Cape Hecla, on Grant Land, in 1902. In the final days of the heroic struggle of Captain (now Admiral) Markham, one of the lieutenants of the British expedition of 1876, the advance over the hummocky pack-ice in the same field which was traversed this year, was made at the rate of not more than one-quarter or half of a mile a day. This distance is considerably less than the retrograde movement of the ice that carried the explorers southward. This experience affords an insight into the labor which has permitted Mr. Peary to pass Markham's furthest point by 250 statute miles. Two hundred miles still intervene between the furthest of this year and the Pole, while the area of the regions in the extreme north that remain unknown, or at best vaguely known, is still reckoned in millions of square miles.

One of the most important lessons to be drawn from the various Peary expeditions—one, unfortunately, that has not yet been able to break through the barrier of accepted notions—is the value of a critical study of clothing and food. In a knowledge of these all-important adjuncts to travel, Mr. Peary is *facile princeps*. The almost complete absence of every form of illness from the Peary camps through so many years of severe trial and exposure, the absolute elimination of that plague of Polar exploration, scurvy, is a triumph which points to success in future ventures of this kind. And yet one reads with regret that the otherwise brilliant achievements of the British National Antarctic Expedition of 1902-1904 were shorn of probably their best results through the breaking out of scurvy and the death of the dogs, as a consequence of improper food. And, seemingly, it was chiefly a matter of clothing which prevented Nansen from making a higher northing at the time that he abandoned the Fram to its famous drift. Troubles of this class never beset the Peary expeditions. Nature's elements are still the force that

baffles the best efforts put forth to conquer them.

THE CASE OF MUNICIPAL OWNERSHIP.

It is not surprising that the League of American Municipalities declined to adopt a general resolution favoring municipal ownership. Its adoption would at best be premature. There is no present agreement among economists either for or against the further extension of the functions of American municipalities. There was a period when municipal enterprises were advocated and, in some cases, taken up in this country on more or less vague reports of similar experiments in Great Britain and elsewhere. This time has passed, and has been followed by one of inquiry, the results of which have not yet been fully ascertained. The evidence is not yet all in; obviously, the time has not arrived finally to decide the case.

The facts, to date, are that municipal functions both in Europe and America have greatly expanded within the last few years. Great Britain leads the way, with Germany close upon her heels, and America following more slowly. Great Britain numbers among the enterprises undertaken by her cities, not only the familiar water works, gas and electric lighting plants, and tramways, but also municipal markets, baths, dwelling houses, telephones, theatres, warehouses, hotels, lodging-houses, abattoirs, golf links, savings banks, crematories and cemeteries, oyster fisheries, rabbit warrens, sheep farms, hop farms, coke and tar factories, and brick yards. Germany has gone extensively into municipal lighting and street-car service. American cities have thus far generally confined themselves to municipal water works, gas works, and electric lighting plants. No American city has yet undertaken to operate street cars, though there are several instances, as in New York and Boston, where the city owns the right of way and leases to an operating company which supplies the equipment.

Have the results thus far been favorable or unfavorable? Here the conflict begins. Dr. E. W. Bemis and Professor Howe have one opinion; Prof. L. S. Rowe and Prof. Hugo R. Meyer hold another. The report of the Bureau of Labor, based on three separate investigations of the results of municipal trading in Great Britain, admits a principal charge against the system—that it increases municipal debt and raises the tax rate—but, on the whole, is mildly favorable. The most complete presentation by a single economist, "Municipal Ownership in Great Britain," by Professor Meyer, is strongly against the substitution of municipal management for private enterprise. The Civic Federa-

tion, which promises an elaborate report, is yet to be heard from.

Of the results in this country, no complete summary is available. It seems to be generally agreed that American municipalities can satisfactorily maintain and operate their water works, but opponents of municipalization urge, with some force, that the case of water is exceptional, not only because the supply is in most cases wholly natural and the means of distribution simple, but also because water is required by all, while gas, electricity, and street cars are used by only a portion of the community. Apart from water, the reports from American cities are as confusing as the conflicting testimony from Great Britain. Toledo, Ohio, pays interest annually on a million-dollar debt for which the city has absolutely nothing to show, having sold for a tenth of its cost the natural gas enterprise embarked upon a dozen years ago. Richmond, Virginia, has waked up to the fact that her supposed profit from a municipal gas enterprise was a matter of bookkeeping, and that instead of a profit there is a serious loss, which must now be made up in cash—renovating a worn-out plant—or the business abandoned. Alexandria, Virginia, has within a few months sold for \$3,000 an electric plant costing \$17,000. Current news dispatches tell of four Indiana cities which are preparing to wind up their lighting ventures as soon as they can find purchasers for the plants. Many American cities, on the other hand, point with great pride to their municipal electric plants. This may mean that their experience is to be counted on the affirmative side—or it may mean that they have not yet called in an expert accountant.

One might gather from the tenderness with which the subject is treated by the politicians that all the voters are in favor of municipal ownership and operation, but there happens to be proof that this is not true. Chicago, it will be remembered, voted for municipal ownership but not for municipal operation; and if the street cars of Chicago are to be run by the city, specific authorization for it must still be secured at the polls. San Francisco was forced to take over a street car line, where the franchise had expired, but refused, on submission to the voters, to authorize municipal operation of the cars. Cleveland, Ohio, being urged by Mayor Johnson in 1903 to undertake the construction and operation of a municipal lighting plant, and the question being submitted to the electors, declined by a substantial majority. The city of Seattle, which in March of this year elected the mayoralty candidate of the municipal ownership party, thought better of it, and on September 12, by a majority of more than 1,500 out of a total of 14,000 votes cast at a special election, refused to authorize a bond issue for municipal street car lines.

Certainly, there is nothing now in the record which calls for a generalization in favor of the wide extension of municipal functions, commonly implied within the term "municipal ownership." For the present, at least, each proposal should be compelled to prove its own case, and the closer the scrutiny the better.

UNIVERSITY TEACHING OF ENGLISH.

One who marks current discussion of college English will be reminded of an ungrammatical but expressive catchword of twenty-five years ago: "Hit him again; he's Irish, and he han't no friends." The latest castigator of these studies, Prof. George Rice Carpenter, deals the faithful wounds of a friend, being himself the incumbent of a chair of English in Columbia University. His criticism, as contained in the *Columbia Quarterly*, affects English as taught in the universities. He notes that many Ph.D.'s in English have received a training wholly scrappy, and quite apart from the subjects they are to teach in the colleges. Thus we fill our chairs with erudite scholars, to be sure, but myopic teachers, disqualified from taking comprehensive views even of their specialty. Naturally, such men are poor leaders of youth, having merely vague conceptions both of literary values and of pedagogical possibilities.

A little acquaintance with college faculties will show that professors of this limited sort are by no means rare. We venture further, and assert that most of the good teachers of English have become so through a combination of native ability and vitality sufficient to overcome the defects of their university education. Many a faithful teacher, reviewing his own university career, would say, not that it was bad in itself or wasted, but that it had been grossly un-systematic and relatively unprofitable as regards the actual service of teaching. In similar fashion, many a Grecian who has gloriously "settled *hoti's* business," is compelled, tardily and ingloriously, to acquire some familiarity with Greek literature. In fine, the university often not merely neglects the more valuable studies, but so urgently puts forward the less valuable, that the student has no leisure for repairing individually the gaps in a haphazard curriculum. Nothing is more common than to find a doctor of philosophy whose mental acquisition, after all, consists of uncoördinated snippets of literary history and philology—a dash of Chaucer, and the Chester Plays; a smattering of Gothic, and a sample of the Minnesänger; a semester of Gower, and one of Dr. Donne; a *souçon* of Anglo-Saxon metre, and Aristotelian critiques of poetry—such is the ragout that is frequently served up in the name of uni-

versity education. Evidently a student who escapes such a course with his associative faculties unimpaired is a monument to his own mental equipoise, not to the intelligence of the university that made him a doctor.

The cause of this confusion is largely false ideals of research inherited from Germany, but even more the absence of clear thinking in university administrators and teachers. From Germany we have imported the notion that the process of investigation is everything; the materials quite indifferent. In this view there is a plausible disinterestedness, and just enough truth to obscure the fundamental error. We would not minimize the value of any sort of truth, nor the desirability of research, however minute and remote from contemporary importance; but there is a world-wide difference between such self-effacing investigation pursued by a trained scholar as part of a large and well-reasoned plan, and similar studies pursued by a novice in the name of education. The distinction is fundamental; what in the first case may seem necessary and heroic, becomes in the second merely casual and foolish.

If Germany has thus imposed upon us an eminently unphilosophical notion of the relation of research to university education and college teaching, she has unconsciously done us a deeper harm by confounding in the one word "philology" a great variety of linguistic and literary studies, of differing importance and availability. The ignorant sort of dilettanteism we have already had; we have added a more insidious because a learned and plausible sort. The gushing person who imagines that he can teach English literature by plenary inspiration, without any knowledge of the history of the language, or even without first-hand study of the history of the literature, is, after all, becoming rapidly discredited; the philologist who, on the basis of inarticulate enthusiasms and incommunicable tastes, fixes himself in a chair of literature is far more detrimental to sound studies. He is learned, and he gives to college presidents the impression of being also wise, which too often he is not. The quarrel here is not with philology, as such, but with those who, without comprehensive views or noteworthy attainment even in that subject, dabble languidly in both philology and literature; whose vaunted investigations frequently consist merely of marginalia; whose teaching is regulated not by any plan either philological or literary, but by the passing curiosity of the year or by the casual pressure of publisher or editor. Men of this type, however vast their merely cumulative attainments, are dilettantes—true successors of the Alexandrian scholiasts and the Della-Cruscans.

Without exaggeration, this is the tem-

per that our university education tends to produce, and this is the reason why both our college teaching and our productive scholarship are of a scrappy and ineffective order. Of course, the remedy for impressionism is principle, and for intellectual disorder, logic. What we need in the present instance is a clear perception of ends. When the conditions of a rationalized education and the practical qualifications for college teaching are fairly considered, it will seem absurd to equip all college teachers of English as investigators in the German sense; it will seem culpable to impose merely random philological studies, and still worse to prescribe them for the student of literary history. It will seem indispensable to observe a certain sequence, and preposterous to omit the most rewarding authors and periods simply because these do not afford likely topics for doctoral dissertations. The real reform will come when university authorities gain some conception of the distinctions between linguistic and literary study; realize that the scholar's conscience may be produced without ignoring the finer enthusiasms; and insist that no subject shall be taught without some recognition of its educational values and its relations to the whole field of the humanities. And this implies a generation of university professors more forceful as personalities and better oriented as intellects, than the average of to-day.

CODES OF PROFESSIONAL ETHICS.

Writing on "The Ideal Lawyer" in the current *Atlantic*, Justice David J. Brewer of the Supreme Court cites with approval the action of the committee of the American Bar Association in advising the adoption of a code of professional ethics. This committee was appointed in 1905 to report upon the advisability and practicability of such a code, and its recent report is worthy of wider attention than it has thus far received. In Justice Brewer's opinion, it is plain proof that the profession as a whole recognizes that there is an ideal lawyer, and intends that "no one shall be tolerated who does not possess one at least of the elements of such a lawyer, to wit: a high moral character."

The committee, denouncing the conduct of certain lawyers, declared:

Members of the bar, like judges, are officers of the courts, and, like judges, should hold office only during good behavior. "Good behavior" should not be a vague, meaningless, or shadowy term, devoid of practical application save in flagrant cases. It should be defined and measured by such ethical standards, however high, as are necessary to keep the administration of justice pure and unsullied. Such standards may be crystallized into a written code of professional organizations, local or national, formed . . . to promote the administration of justice and

uphold the honor of the profession. Such a code in time will doubtless become of very great practical value by leading to action through the judiciary; for the courts may, as conditions warrant, require all candidates for the bar to subscribe a suitable and reasonable canon of ethics as a condition precedent to admission. . . . Indeed, eventually the people, for the welfare of the community and to further the administration of justice, may, either by constitutional provisions or legislative enactments, demand that all, before being granted by the State the valuable franchise to practise, shall take an oath to support not only the Constitution, but such canons of ethics as may be established by law.

With this plan lawyers of the type of Edward M. Shepard and Joseph H. Choate will be in hearty accord. They realize that the rush for wealth, as Mr. Shepard recently pointed out, has in many cases undermined old-fashioned standards of professional ethics. They have seen an ever-increasing number of men enter the profession solely as a means of obtaining political office or of getting into some lucrative business by means of their legal knowledge. These birds of passage naturally care little or nothing for the calling which they make merely a means to an end.

If the increase in the number of law schools of high standing has done much to instil a respect for the profession, there still are, as every one knows, far too many men who prostitute their abilities by using them only to show people how to avoid the penalties of the law while committing acts contrary to its spirit. We gravely doubt whether there has been an actual multiplication of shysters out of proportion to the general growth of the profession. There were blacklegs in the law centuries ago, as well as in the time of Marshall and Webster. But the increase in the number of lawyers has made the corps too unwieldy to act quickly, and thus the process of punishing by disbarment is long and difficult, except in clear-cut cases; and many a rascal escapes because his wronged client either does not know how to press for punishment or would rather avoid further notoriety and unpleasantness. Plainly, the best way to tone up the profession, besides contriving some machinery to make disbarment speedier and more frequent, is to fix a standard at the beginning, and make sure that candidates for admission have a clear understanding that, in accordance with a written code, as honorable conduct is expected of them as is traditionally demanded of officers of the army and navy.

If it is gratifying to see one of the oldest of the learned professions seeking to keep itself pure, it is even more encouraging to find a new one striving to establish an ethical code by which its members shall be bound. At the twenty-third annual convention of the Ameri-

can Institute of Electrical Engineers, held in Milwaukee this year, the president, Schuyler Skaats Wheeler, devoted his address to the question of engineering honor, and cited as his text these words from Francis Bacon's "Maxims of Law":

I hold every man a debtor to his profession; from the which as men of course do seek to receive contenance and profit, so ought they of duty to endeavor themselves by way of amends to be a help and ornament thereto.

Besides expounding the ordinary reasons for a code of ethics which apply to all professions, Mr. Wheeler dwelt at some length upon the duty the electrical engineer owes to the public, if only to protect it from the charlatan and the impostor. As a result of the president's address the Institute decided that, in imitation of such examples as the rules governing the relation of physician to patient and architect to client, a committee should be appointed to draft a code of electrical engineering ethics. This committee is now at work, on the understanding that the result of its labors will be submitted at the next annual meeting.

It is with such voluntary acts as these that the defender of American business and professional life can best reply to the critic, whether native or foreign, who would have it that our ideals are perishing in an age of materialism. Just as ethical standards are higher and ethical teachings more insistent and systematic than at any time in our history, so there is in every profession a growing desire to oust the quacks and the immoral. Even in the dental profession, debased as it is by countless frauds and fakirs, there is a stirring which bodes well for the future. Indeed, if this striving after ideals continues, we may yet see a professional code among newspaper men. Miracles have happened, and we may yet see such a portent. The time may come when journalists who pander to the basest passions, who deliberately incite to crime and immorality, or who sell their opinions for gain, will be professional outcasts.

THOREAU AND GERMAN ROMANTICISM.

After forty-four years of waiting, the *Journal of Thoreau* has been published in practically complete form, filling fourteen out of the twenty volumes that make the attractive new Walden Edition (Houghton, Mifflin, & Co.). Of the value of the *Journal* itself in this extended form, there may well be at first some doubt. Most of the memorable reflections and descriptive passages had already been transferred by the author to "Walden" and his other regular works. What remains is made up largely of trivial daily memoranda, often written down in the field and then copied out at home for more convenient reference. There are, of course, recompenses for the wary reader who has learned the gentle art of

skipping—new fragments of magic⁶ description, shrewd bookish criticisms, glimpses of serene vision, the old familiar thoughts struck out in fresh language. And apart from any question of immediate interest, this simple record of a life in nature offers a real profit to the student of the larger intellectual currents. From Thoreau's comparative poverty in original ideas and from the practical independence of his character we can see, better than in the case of Emerson or any other of the group, wherein the transcendentalism of Concord was an echo of the German school, and wherein it differed.

No one has yet traced the exact channels by which the formulæ of Romanticism migrated from Germany to New England, although it is known in a general way that the direct influence through translations in the American magazines and elsewhere was considerable. Moreover, most of the Concord scholars dabbled at one time or another in the German language. The strongest impulse, no doubt, came indirectly through Coleridge, Carlyle, and the other British Teutonizers, but once here it found a far more suitable soil than in England. Something in the mental constitution of our people fitted them to absorb the nebulous ideas that were in the air, and something in their spiritual antecedents drew them particularly close to Germany. They had just thrown off the strait-jacket of Puritan religion and were revelling in the always perilous consciousness of spiritual liberty. The situation in Germany at the time of the Romantic School was not altogether dissimilar. Lessing and the Titans of the *Sturm und Drang* had wrestled against the deadening tyranny of the Lutheran Church; they had discarded the formalism of French literary law, and with it pretty much all sense of form whatever; they had, with the help of Kant, broken down the official philosophy of Leibniz and Wolff. On all sides resounded the watchword of *Freiheit*, liberty—except in politics, where neither then nor now have the Germans, as a people, reached any notion of individual liberty submitting to the discipline of self-imposed restraint, without need of the strong hand of Government or the bonds of socialistic regulation. So far as the aim of the Storm and Stress can be described, it might be called a rejection of the eighteenth-century principle of selection for that of universality. The whole of human nature should be embraced and developed, and this development was to come through a setting loose of every impulse and passion of the breast to run its full unhampered course. What that career meant, the *Geniesucht*, the *Unendlichkeitsstreben*, the *ringende Titanenthum*, the *Emanzipation des Fleisches*, the *Seelenpriapismus*—may all be seen, by whoever cares to read it, in such a work as Wilhelm Heine's "Ardinghello." Out of this blind ferment of freedom came at last the spirit of a new and more compact school, the cultus of the *Ich*, the romantic I, as formulated by Fichte, the Schlegels, Schleiermacher, and Schelling, and as practised by Tieck, Novalis, and a small band of contemporaries.

German romanticism is often defined as a return to mediæval ideals, and for the decline of the movement such a definition is fairly exact. And even in the beginning,

although such a master of the school as Friedrich Schlegel preferred to call himself a Grecian, his interest in that land was mainly a sentimental nostalgia for some imagined home of happiness in the past, and his kinship, vague at first, and entirely unconscious, was rather with the mediæval Church. Through all the years after the Renaissance, the memory and habit of the Middle Ages had run beneath civilization like one of those underground rivers, sending up its fountains here and there, even in the disciplined years of the eighteenth century. And when at last the depths had been broken up by the wild license of the Storm and Stress, it reappeared at the surface, its old name forgotten and its current charged with many deposits from its hidden pilgrimage. We are accustomed to find the relationship between Romanticism and the Middle Ages chiefly in a common feeling of infinity, in their *Unendlichkeitsstreben*, and this in a way is true. But we must restrict the meaning of the word closely. In the narrower acceptance, the Middle Ages had less of the feeling than the centuries either preceding or immediately following. There is more of the infinite in Virgil's *loca nocte tacentia late* than in Dante's vision of petrified eternity; there is more of the infinite in Shakspeare than in all the mediæval poets put together, more in Plato and Spinoza than in all the intervening schoolmen. What the Middle Ages really strove for was to combine the ideas of personality and limitlessness; the human personality was to be protracted unchanged through unending periods of time, the deity was to be at once human in nature and unbounded in power—a conception of the world which could have arisen only when the feeling for the infinite as something positive in itself and different from a mere quantitative limitlessness had been lost. Necessarily such an effort to contain the infinite within the vessel of the finite brought its penalty—to some minds an unwholesome exaltation and relaxing reverie, to others, as to St. Augustine, the anguish of mortal self-contradiction. This was the burden of the Confessions: "How shall I call upon my God, God and my Lord? For I call him into myself when I call upon him (*quoniam utique in meipsum cum vocabo, cum invocabo eum*). And what room is there in me, where my God may enter in, where God may enter in, God who made heaven and earth?" And this combat between the thought of a limited and an unlimited personality passed through the Middle Ages, disappeared for a time, and then returned to be absorbed and modified in the writings of the Romantic school.

Only so can we understand the *Ich* which Fichte erected into that tortured system of philosophy, whose chief value is that it gave a backbone of rigid articulate logic to a body of otherwise flabby sentiment. The spirit of revolt is the beginning of the movement. Not only in art does the will or whim (*willkür*) of the poet suffer no law over itself, as Friedrich Schlegel avers, but, more mystically, this liberty is necessary for the expansion of the I into the desired state of limitless self-satisfaction. Here is no true sense of infinity, nor yet much talk of God and the soul—these had withered away under the *Aufklärung*—but

an attempt to account for the world by some juggling with the personal I and the not-I. In place of the mediæval contrast of a divine Person and a world created out of nothing by His fiat, Fichte substitutes a formula begotten of logic on lyricism. Bring together the logical law of identity ($A = A$, and not-A is not = A) and the craving of unrestrained egotism, and you get the romantic equivalent for mediævalism: God is replaced by the human personality, lifted as the transcendental I above the ordinary I of commerce and society, and the world is the not-I called into being as a field for its exercise and enjoyment.

Here is room for endless reverie, for unbounded exaltations, for insatiable self-tormentings. This I has in practice no concern with the reason, which is the faculty of defining and delimiting; it has no kinship with the will which means self-restraint; it is the child of the feelings which are essentially rebellious to limitations. So in religion there was a general repudiation of Luther and the Reformation, as the source of "a dry rational emptiness which leaves the heart to pine away." To Schleiermacher, the great preacher of the band, religion was neither reason nor morality, neither thought nor action, but an emotional contemplation of the universe by which the soul is thrown into a state of indistinguishing reverie, and the I and the not-I swoon together into one. The religious feeling, he thought, should "accompany all the doings of a man as it were a holy music; he should do all *with* religion, nothing *through* religion." And the aim of poetry was the same. It, too, should avoid all that is sharply defined, and should blend all the *genres* into a kind of ineffable music, appealing neither to the thought nor the will. "Poems which sound melodiously and are full of beautiful words, but without any sense or connection"—that, according to Novalis, is the consummation of art.

From the same source spring those peculiar accompaniments of the movement—the so-called romantic irony, the aloofness from society, the sacred idleness. Given this outreaching egotism, together with this contempt of limitations, and inevitably there arises an inner state which is the modern counterpart of St. Augustine's wrestling with the personality of God. Fichte might argue calmly about the world as not-I, but to the inflamed imagination of a Schlegel this division of nature was a disruption of self from self; it became the everlasting, uncompromising discord between the ideal and the real. The only escape from this anguish of dissatisfaction was to ascend into those towers of indifference from which the transcendental I might survey the life of mankind, even its own activities, with unconcerned irony. In art this is the quality by which the artist "appears to smile down upon his own masterpiece from the heights of his spirit"; in life it is the feeling which leads a man to move about in society as in an alien world whose concerns are to him nothing—a mere piece of "transcendental buffoonery." Hence the contempt of business and of the Philistines follows as a kind of seal set upon the romantic soul which is conscious of itself. It cultivates a divine idleness; the summons to loaf and invite one's

soul came from over the sea long before the scandalous outbreak of Walt Whitman.

And the theatre of this vagrant aloofness was nature. To the wanderer in the field and on the mountain side, with his spirit bathed in the shifting glamour of color and form, with no troublesome call upon his reason or his will, this visible music of nature might seem now to be spun like a dream from the depths of his own being and now to be absorbed in silence back into himself. Schelling had modified this mystic reverie into a vast metaphysical parallelism. "The system of nature," he said, "is at the same time the system of our spirit"; and again, "Nature is the visible spirit, the spirit is invisible nature." And Novalis, to whom thought was "only a dream of the feelings," held that by a kind of transcendental "magic," to use his famous word, a man might juggle or shuffle spirit and nature together. In his "Lehrlinge zu Sais" romanticism received perhaps its purest expression. "At the well of freedom," says one in that book, "we sit and spy; it is the great magic-mirror wherein serene and clear the whole creation reveals itself; herein bathe the tender spirits and images of all natures, and here we behold all chambers laid open. . . . And when we wander from this view into nature herself, all is to us well known and without error we recognize every form. . . . It is all a great scroll, to which we have the key." Whereto another prophet in the book replies in the language of Fichte, telling how a man is lord of the world, and how his I, brooding mightily over the abyss of mutable forms, reduces them slowly to the eternal order of its own law of being, *der Veste seiues Ichs*.

Now, of the systematic romanticism of Fichte and Schelling there is little or nothing in the writings of our New England transcendentalists. Many of their ideas may be found in Emerson, but divested of their logical coherence; and as for Thoreau, "metaphysics was his aversion," says William Ellery Channing; "speculation on the special faculties of the mind, or whether the Not Me comes out of the 'I' or the All out of the infinite Nothing, he could not entertain." Nevertheless, in its more superficial aspects, almost the whole body of romanticism may be found reflected, explicitly or implicitly, in his Journal and formal works. He, too, had sat spying in the well of freedom, and the whole art and practice of his life were a pæan of liberty: "For a man to act himself he must be perfectly free." And this was his mission, to act himself, and to point to others the path of freedom. Calvinism had been discarded in Concord as Lutheranism had been by the romanticists at Berlin. There is little talk in Thoreau of God and the soul, but in its place a sense of individualism, of sublime egotism, reaching out to embrace the world in ecstatic communion. His religion was on the surface not dissimilar to Schleiermacher's mystical contemplation of the universe; "vast films of thought floated through my brain," he says on one occasion; and the true harvest of his daily life he pronounced "a little star-dust caught, a segment of the rainbow which I have clutched." This reverie, or contemplation that spurned at limitations, passed easily into the romantic ideal of music—and that in a very literal, some-

times ludicrous, sense. A music box was sufficient to console him for the loss of his brother; a hand-organ was an instrument of the gods; and the humming wires on a cold day—his telegraph harp he called it—seemed to him to convey to his soul some secret harmony of the universe. "The wire is my redeemer; it always brings a special message to me from the Highest." This is the thought that occurs over and over again in the Journal. More particularly in one passage dated September 3, 1851, and given by Channing in fuller form than by the present editor, he expatiates on this modern harmony of the spheres:

As I went under the new telegraph wire, I heard it vibrating like a harp high overhead; it was as the sound of a far-off glorious life; a supernal life which came down to us and vibrated the lattice work of this life of ours—an Aeolian harp. It reminded me, I say, with a certain pathetic moderation, of what finer and deeper stirrings I was susceptible, which grandly set all argument and dispute aside, a triumphant though transient exhibition of the truth.

There is something bordering on the grotesque in this rhapsodical homage to a humming telegraph wire, but it might be paralleled by many a like enthusiasm of the German brotherhood. Nor was Thoreau unaware of this intrusion of humor into his ecstasy. Like Friedrich Schlegel, he indulges in the romantic irony of smiling down upon himself and walking through life as a *doppelgänger*:

I only know myself as a human entity; the scene, so to speak, of thoughts and affections; and am sensible of a certain doubleness by which I can stand remote from myself as from another. However intense my experience, I am conscious of the presence and criticism of a part of me, which, as it were, is not a part of me, but spectator, sharing no experience, but taking note of it; and that is no more I than it is you. When the play, it may be the tragedy, of life is over, the spectator goes his way. It is a kind of fiction, a work of the imagination only, so far as he was concerned.

How far this irony carried him in his hatred of Philistinism and his aloofness from society, no reader of his books need be told. The life of the business man he compared to the tortures of an ascetic, and the California gold-fever threw him into a rage of disgust:—"going to California. It is only three thousand miles nearer to hell. . . . The gold of California is a touchstone which has betrayed the rottenness, the baseness, of mankind."

Nor did the daily commerce of man with man come off much better. He was not one who would "feebly fabulate and paddle in the social slush." "I live," he says, "in the angle of a leaden wall, into whose alloy was poured a little bell-metal. Sometimes in the repose of my mid-day there reaches my ears a confused tintinnabulum from without. It is the noise of my contemporaries."—Could an image be more sublimely impertinent?

Often a passage in the Journal bears the stamp of German romanticism so plainly upon it, that we stop to trace it back in memory to Tieck or Novalis or one of the followers of the earlier Storm and Stress. Such are his scattered observations on childhood, on sleep, and the all-enveloping sacrament of silence; such is his constant thought of a new mythology which is to be the end of our study and our art—"all the phenomena of nature need to be seen from the point of view of wonder and awe. . . .

Men are probably nearer to the essential truth in their superstitions than in their science." These, I take it, are not cases of translation or plagiarism, but rather of that larger and vaguer migration of thought from one land to another. They show how thoroughly the transcendental philosophy of New England had absorbed the language and ideas of German romanticism, if not its inmost spirit.

REAL SIMPLIFIED SPELLING.

TO THE EDITOR OF THE NATION:

SIR: As one who has come into perhaps exceptionally close touch with the orthography exhibited by the graduates of our secondary schools, will you permit me to add a word to the current discussion of the "simplified" spelling? During the last fourteen years, the instructors in the department of English at Northwestern University have tested the spelling of somewhat more than three thousand freshmen, coming to us from more than two hundred reputable preparatory schools, and representing nearly every State in the Union. In order to be sure that we were using, in these annual tests, only such words as belong to the ordinary vocabulary of freshmen, we have taken our lists, regularly, from themes written by freshmen of the previous year in the course of their college work. Now, in comparing the words misspelled in these annual tests, and in thousands of college themes, with the three hundred words in the so-called "simplified" list, we find that only two or three words in that list have been generally misspelled by freshmen. Such words as the possessive form "their" and the common verb "lose" are misspelled with vastly greater frequency than any word in the three hundred arbitrarily selected by the simplifying committee. If, then, it be admitted that our data from over three thousand graduates of over two hundred schools are sufficiently wide to form a fair basis for generalization, one conclusion is obvious, namely: if all our secondary school graduates were fully to adopt the "simplified" spelling, it would not reduce their errors in orthography to any perceptible degree.

One or two other deductions from our long direct observation may be mentioned as bearing on the discussion. We have uniformly given, in the tests, one hundred and fifty words, and have marked "passed" all who misspelled not more than twenty out of the hundred and fifty. Yet, although great pains were taken, uniformly, to pronounce every word distinctly, and to define it both directly and by giving a sentence containing it, nearly 60 per cent. of the freshmen, on an average, have failed to pass the test from year to year. For many years we have required all who thus failed to enter a sub-freshman class, one hour a week, and to continue there until they either materially improved their spelling or demonstrated to us that they positively could not learn to spell. The work of this sub-freshman class, significantly dubbed by our students "the pity sakes class," has, of course, not count-

ed among the required number of hours in the college curriculum. Although most of the young people who have gravitated into this class have been vehement in declaring that they positively never could learn to spell, we have found, from year to year, less than one per cent. of incorrigibly bad spellers among them. We have not pretended to perform miracles or to render carefully observant, during the rest of their lives, young people who came to us habitually careless and non-observant. But we have found that a very few hours of drill have been sufficient to cause practically all the members of each successive class to pass readily tests quite as severe as those in which they failed on entering college.

Our methods have been extremely simple. In the first place, we have drilled the delinquents on those well-established rules for doubling consonants, dropping final letters, etc., which should have been, but were not, made very familiar to these students in their grammar school and high school days. In the second place, we have called particular attention to the etymology of English words derived from the Latin, so far as such a relation bears upon English orthography. For example, the student who has spelled "amatory" "amitory" is not likely to repeat such a blunder after he realizes that this word retains the connecting vowel of the first conjugation. But nearly all the improvement that we have been able to secure in the spelling of our students in this sub-freshman class has been obtained simply by requiring them to spell by syllables analytically. In other words, we have insisted that they learn to observe carefully the successive construction of polysyllables.

After this somewhat wide experience and observation, I am convinced that much of the talk about the difficulty of learning to spell English is not founded on fact. I am also convinced that most of the bad orthography exhibited by our secondary school graduates is due to the unwise, unscientific, and unpsychological method of teaching orthography to young pupils in our grammar and high schools, generally known as "the word method." Invaluable as this method is in teaching the young child to read, it certainly teaches him *not* to spell. I am informed by specialists in experimental psychology that it is impossible for the ordinary person to perceive intelligently at one volition more than four letters of a polysyllable. The consequence is that when even such a common and "easy" polysyllable as "multiplication" is placed before a child and then erased, the child, when asked to reproduce, is quite as likely to begin "m-u-p" as in any other way. He has gained simply a confused jumble instead of a clear analysis of the word. Another deduction, then, is obvious, namely: if the time, money, and energy that are now being expended to secure the "simplified" spelling were used toward securing, in our high schools and grammar schools, a wiser method of teaching orthography than that which generally prevails—if our schools would cease teaching pupils *not* to spell and would begin scientifically to teach them to spell, the results would be vastly more valuable and more easily attainable than any that can possibly be obtained by Mr. Carnegie's committee; and they would be

secured without doing violence to the history and the genealogy of our mother tongue.

Northwestern University, Evanston, Ill., October 31.

SHALL THE ALHAMBRA BE SAVED?

TO THE EDITOR OF THE NATION:

SIR: I have been surprised to see in our papers no reference, except your own incidental allusion of some weeks ago, to the reported dangerous condition of the Alhambra. When in Granada, a year ago (or later, while in Spain), the writer heard disquieting rumors as to the insecurity of the precious building and the possibility of its falling. Besides the peril arising from the decay and obstruction of the ancient aqueducts which pervade the palace in all parts, it was said that the corrosive action of the river Darro, which encircles the hill which the Alhambra crowns, had so far proceeded as to threaten to undermine the structure.

The mere contemplation of such a catastrophe as the fall, even in part, of such an edifice fills with dismay whoever has any regard for art or history or romance. As need not be said, the Alhambra is unique both in its aesthetic charm and in its associations. It is a world-treasure and belongs to civilization. That the Hall of the Ambassadors or that of the Two Sisters should fall would deeply impoverish the world of art forever.

The only question, if the alleged facts of its condition are authentic, is how to save it? While current repairs are at present judiciously provided for, it may well be that the Spanish Government, through its poverty, would not be justified in making the large expenditures involved in the radical measures needed for security of the structure. What can be done, before it is too late? Could there be organized an international commission as in certain other cases even now before the public, which should inquire into the subject and obtain the means which may be required? Your own modestly offered suggestion is the finest, if it could find a response. When one thinks of the Aladdin-power of the mighty private fortunes of to-day, one can but long that it should sometimes be directed to magnanimous aims like this of rescuing an incomparable world-monument and preserving it to dazzle and delight men for eight more centuries. Is there not among us some large-minded possessor of great wealth, some man or woman, who shall be touched by the contemplation of such a possible loss to the world and be prompted individually to avert it? If a miscreant still survives in memory as the destroyer of the great fane of Ephesus, how long and well shall he or she be remembered who shall invert the ambition of Herostratus and come forward to save the Alhambra?

IRVING.

Philadelphia, November 5.

A PURE MENTAL FOOD LAW.

TO THE EDITOR OF THE NATION:

SIR: I take it that I am an older man than the correspondent in your issue of October 25, Prof. Clarence G. Child of the University of Pennsylvania; hence it will not be presumptuous in me to say that for a generation I have held and cham-

pioned the position he defends. It seems to me the position is logical and impregnable. For centuries the degree of A.B. has stood for more or less Greek and Latin—that it may often have been less rather than more has nothing to do with the question. Let those who think that an education without the ancient classics is "just as good" label it B.S. or B.Ph. or whatever they choose. We who think differently have no quarrel with their decision; we simply object to placing an old label on new goods. Perhaps the recently enacted Pure Food law can be made to apply to mental as well as to bodily pabulum. That a man will thrive just as well on oatmeal as on wheat flour does not justify a dealer in selling the former under the latter name.

C. W. SUPER.

Athens, O., October 29.

Notes.

The Merrymount Press of Boston has sent out a prospectus of what promises to be a delightful series of books, to be called The Humanists' Library. The first four volumes announced are: Leonardo da Vinci's "Thoughts on Art and Life," edited by Lewis Einstein (general editor of the series); Erasmus "Against War," edited by J. W. Mackail; Pierre de Nolhac's "Petrarch and the Ancient World"; Sidney's "The Defense of Poesie," edited by George E. Woodberry. A considerable number of other volumes are promised. The character of the bookmaking is guaranteed by the name of the printer.

The second volume of Saintsbury's "Minor Poets of the Caroline Period" is soon to be issued by the Oxford University Press. Some of the poems have never before been printed and some are now reprinted for the first time. Altogether, we regard this as the most useful of Professor Saintsbury's literary works.

A number of years ago T. Fisher Unwin published "Napoleon's Last Voyages," which contained the diaries of Admiral Sir Thomas Usher (of the Undaunted) and of John R. Glover, secretary to Rear-Admiral Cockburn (of the Northumberland). Dr. Holland Rose is now editing a new edition of this book and writing an introduction for it.

The late Henry George, who dealt in the romance of economics, is now made the hero of a novel, "The Romance of John Bainbridge" (The Macmillan Co.), by Henry George, jr. It is the story of a young lawyer who enters politics from a sense of duty.

Cuba is the main topic of the *National Geographic Magazine* for October. A valuable summary of facts concerning the island, its people, resources, and industries, is accompanied by a large map and numerous full-page reproductions of photographs. From an interesting account of ostrich farming we learn that there are now 2,500 birds on farms in the United States, more than half of which are the progeny of a single pair, owned in Arizona in 1891. Other subjects treated are Korea, Russia's wheat crop, and the hurning of clay roads, an economical method of good road-making originated in Mississippi by the Office of Public Roads.

The Century Co. has brought out a "trade" edition, at a reduced price, of Gen. Horace Porter's "Campaigning with Grant," available hitherto only in a limited edition. The chapters originally appeared serially in the *Century* magazine in 1896-97. The lapse of time has not changed the general impression produced by the work at its first appearance. It is in no sense a formal or comprehensive history of Grant's campaigns; indeed, it does not pretend to be such. It is, rather, a sketchy account of Grant's personal life from day to day by one who stood close to him during the Virginia campaigns, and who has industriously noted the personal habits and tastes of the great commander, his comments on men and events, and the happenings, grave and gay, of camp and battlefield. The book is undeniably entertaining, and in its present attractive dress should have a new lease of life.

The new issue, in one volume, of B. E. and C. M. Martin's "The Stones of Paris in History and Letters" (Charles Scribner's Sons) presents no important change save the correction of a certain number of errors of detail to which attention was originally drawn in our columns. The authors still hold that the philosophical or literary vitality of Rousseau is an extinct quantity nowadays (p. 206), likewise that all he knew of music was "by intuition." In all essential respects the work holds its own as an interesting guide to the antiquities of *Lutetia Parisiorum*.

The possession of a photograph of a manuscript copy of Lincoln's Gettysburg address, which, upon examination, turned out to be a photograph, not of the original of November 19, 1863, but of a copy made by Lincoln in April, 1864, has led Dr. Henry S. Burrage into a minute study of the history of this famous address, with special reference to the changes in phraseology which the address underwent in manuscript and print. The results of the inquiry form about one-fifth of the contents of a volume entitled "Gettysburg and Lincoln" (Putnam). The rest of the book contains a readable description of the Gettysburg battle, an account of the dedication of the national cemetery and its subsequent history, and a detailed history of the national park and its administration. The text is embellished with numerous pictures of the localities described.

The last issue of the "American Jewish Year Book" (Jewish Publication Society, 1906) is of even more melancholy interest than usual. Thirty-five pages are given to an elaborate, tabulated history of "pogroms" from Kishineff in April, 1903, to Bialystok in June, 1906, and 254 are reckoned. The narrative is plain, unsensational, and heartrending. Dealt with more shortly are the Jewish situation in Morocco—brought out in connection with the Algeciras conference—and the new laws on immigration and naturalization. The account of the past year has the usual strong interest of history from an unfamiliar angle and the touch of nature which makes kin.

Under the title "Briefs for our Times," the Rev. Morgan M. Sheedy, Rector of St. John's Church of Altoona, Pa., issues a volume of some thirty-five sermons (New York: Thomas Whittaker). Mr. Sheedy seems to be a fearless, straightforward

preacher, with a turn for the moral and practical, and with ability to couch his thought in vigorous English. It cannot be said that he has anything surprisingly new to convey, or that his thought rises much above ordinary reaches, but in spheres in which the majority of people are at home, he deals out common-sense, good morals, and a modicum of religion, in a trenchant and pleasing manner. His subjects embrace ethical topics such as "The Value of Self-Control," "The Duty of Service," also social themes like "The Gospel of Wealth," "Social Unrest," with now and then a more specifically religious subject.

The first volume of the noteworthy German work on the New Testament edited by Prof. Johannes Weiss of Marburg, "Die Schriften des Neuen Testaments, neu übersetzt und für die Gegenwart erklärt," appears in a second and enlarged edition (Göttingen: Vandenhoeck und Ruprecht). Professor Weiss has had the coöperation of some of the most eminent scholars of the liberal school, among them Professors Gunkel, Jülicher, Bousset, and Baumgarten. The endeavor has been to afford an historical understanding of the New Testament, and to provide for the non-specialist a clear presentation of the results of critical inquiry. The success of the undertaking has been notable, and the volume in hand is a striking witness to the painstaking diligence and the powers of insight of German Biblical students. The Synoptic Gospels and the Acts of the Apostles are treated in Volume I, and a second volume covering the remainder of the New Testament is promised before the new year.

One of the most important psychological texts in the history of philosophy is certainly Avicenna's concise little treatise on the existence and faculties of the soul. It took up the Aristotelian and Platonic systems and classifications, recast them in a queer combination, and was very largely formative of Muslim thought on the subject. Thus it may be said to have stated the standard Arabic position on the functions of the brain; other systems might diverge, but they were philosophically heretical, more or less. In mediæval Europe it was also formative in Latin versions; through it Chaucer could speak of Arcite's "celle fantastyk." But the only accessible form of it for non-Arabists has hitherto been Landauer's German version hidden away in vol. xxix. of the *Zeitschrift* of the German Oriental Society. It seems worth notice, therefore, that an English version has now been published by Dr. E. A. van Dyck ("A Compendium on the Soul," by . . . Ibn Sina. Verona: 1906. Pp. 94). Dr. van Dyck translates very literally, as he has in mind students in Egyptian schools, but his version will be generally intelligible. To the references on Avicenna he might have added Shahrastani's extended treatment as translated by Haarbrücker ("Religionspartheien," ii. 213-332); De Boer's book, also, which he mentions, is in German, not Dutch.

In his "Enigmas of Psychical Research," Dr. James H. Hyslop was occupied with certain abnormal or supernormal psychical events, which, although as he supposed attested by competent witnesses, were as yet incapable of explanation. In his new vol-

ume, "Borderland of Psychical Research" (Boston: Herbert B. Turner & Co.), he deals with certain abnormal phenomena which have been or which can be explained. Among them are illusions, hallucinations, frauds of the medium, and self-deceptions of the credulous. He explains certain hallucinations and apparitions by changes confined to the organs of sense, which have no extra-organic cause. He traces the history of spiritualism, and maintains that the contempt of philosophers, not the inherent absurdity of its claims, has put it so completely in the hands of charlatans. He notices also the mistakes made by observers, owing to the dexterity and the tricks of false mediums. But the discussions contained in these 400 pages and more, are long and diffuse; and the "Enigmas," his earlier work, is more entertaining by reason of its naïveté and credulity. Those who are interested in the issue between parallelism and interactionism should read Dr. Hyslop's chapter on "Mind and Body." He opposes the former theory, and presents some strong reasons for believing that there is a causal relation between the psychical and the physical. Since the book is written for "the laity," we refrain from wondering why so much old psychological lumber has been put into Dr. Hyslop's earlier chapters.

Many years ago Budget Meakin determined to do for Morocco what Lane had done for Egypt in his "Modern Egyptians." Thence came a three-volume thesaurus of really great value and one fatal defect. Mr. Meakin had, evidently, not thought it worth while to learn Arabic thoroughly as Lane had done; he contented himself with learning to talk the Moroccan dialect after a fashion. His information, therefore, wherever it touched upon book knowledge, was fantastic and unreliable, though his eye and instinct for life were evidently keen and his industry great. It is natural then that his last book, "Life in Morocco" (E. P. Dutton & Co.), as a series of sketches should be more uniformly successful. Barring a few unlucky wanderings into Arabic, its pictures and impressions, dashed in, it is true, in a broad, exclamatory style, are very vivid, interesting, and substantially correct. The spirit of the life of the masses, too, has been caught, though of that of the educated and learned, after Moorish fashion, there is not a sign. Mr. Meakin might, perhaps, say that there is no learned, educated side to Moroccan life, but that is hardly so. There are students of theology, canon law, poetry, and history still. Instructive, but not so brightly interesting, are the inevitable chapters on the political situation, the moral—probably sound—of which seems to be, Don't believe anything in the newspapers about Morocco. The last chapters are short views of Algeria, Tunis, Tripoli, Spain, as contrasted with Morocco. The French colonizing method in Algeria—to make of it an "Africa Provincia" or "Afrique Mineure"—the modification of this in Tunis on more English lines, the Turkish rule in Tripoli, are well brought out. The chapter on Moorish remains in Spain is the weakest; everything in it has been said and said again. The illustrations are all good.

It marks an improvement in the requirements for the doctor's degree in our universities when, instead of a dissertation

lahoring, as is often the case, some insignificant point in early English phonology, candidates for that degree are permitted to present as a proof of their capacity an edition of a work of some standard writer—especially in the older periods. The change unquestionably means a gain for the culture of the individual student, and, so we believe, is in the interests of scholarship in general. An example of a recent "thesis" (if we may extend the meaning of the term) of this character is Ezra Lehman's edition of "The Tragedie of Chahot Admirall of France," by George Chapman and James Shirley, which has appeared among the publications of the University of Pennsylvania (1906) as vol. x. of the Series in Philology and Literature. The edition consists of an exact reprint in every particular of the original quarto of 1639 (of which the university possesses a copy), without change of punctuation or even of passages obviously corrupt. In a well-written introduction prefixed to the text of the play the editor discusses the relation of its plot to Pasquier's "Recherches de la France" (1621), the only source hitherto identified—also the question who bore the chief part in the composition of the play. His conclusion that Shirley merely revised Chapman's work is manifestly correct. On the other hand, the editor is not very happy in his explanation why this play failed on the stage. "The first four acts," he says, "have all the elements of serious comedy; there is nothing in them to prepare for the tragic scene of the fifth act." This is stretching the use of the term "comedy" with a vengeance. As a matter of fact, if the first four acts had been comedy, provided they were good comedy, the men of Chapman's time would not have bothered about the rest. The real cause for the failure, however, lies on the surface, viz., that Chapman was deficient in every quality of a good dramatist. In this play there is far too much talking in proportion to action; the characters, with the possible exception of Chahot, are mere shadows, and the language, though habitually elevated and often even beautiful, is too involved and labored to suit a popular audience. In the formal speeches of the trial scenes Chapman's dramatic incompetence is most apparent. The editor has given only a few notes to the text and even of these some are very elementary. In this respect the edition appears to great disadvantage when compared with the editions of Ben Jonson's plays in the corresponding Yale series, even after allowance is made for the different character of the works of the two authors.

Just what is being accomplished in post-graduate research in Columbia, particularly in the Department of Germanics, may be seen in Dr. John Louis Kind's thesis, "Edward Young in Germany," issued by the Columbia University Press. Young, though at times a wearisome personality, has always been of interest to the student of German literature, because of his contemporary repute and the influence which he exerted on many writers in Germany. Dr. Kind, sometime Carl Schurz fellow in German at Columbia, has apparently well surveyed the field. Chapter I. deals with Young's relation to early English writers of the eighteenth century, and

gives an outline and a critical consideration of the "Conjectures on Original Composition." Chapter II., taking up the "Conjectures" in Germany, gives a general survey of German thought on original composition prior to 1760, notes the translations of 1760 and 1787, the *Litteraturbriefe* and the Idea of Originality (1759-65), picks out the same theme in the *Hamburgische Dramaturgie*, and discusses Hamann and Herder and their attitude toward Young. Chapter III. contains an historical survey of the "Night Thoughts" in Germany, and sets forth its influence on the Swiss School, the didactic poets, Gottsched and his followers, the philosophical poets, and the Göttingen *Dichterbund*. Some thirty-two well-known authors are considered in detail, not to mention those of lesser fame. A part of the chapter of unusual interest is that devoted to the reaction against the "Night Thoughts." Wieland, who early fed on Young, rejected him later; Lessing and Herder also cooled in their admiration for the English poet, and even Goethe, who wrote to his sister in 1766 that he had learned much English from studying Young, and who reflected Young in his "Werther," forsook him later. The other works of Young and their audience in Germany are also presented, and there is a bibliography. The hook is printed in the simplified spelling.

Books on bridge whist are as thick as the autumn leaves. The latest are "Dalton's Complete Bridge" (New York; Stokes & Co.), and "Bridge Ahrided" (New York: Duffield & Co.). In the former there is little variation from the many that have preceded, except that Mr. Dalton, in writing on the discard, makes the astonishing statement that American opinion is about equally divided between discarding from strength or weakness. He makes some good arguments in favor of strength, and then cavalierly dismisses them with the statement that "they are not convincing." They appear, however, to be better than his own in favor of the discard from weakness. In "Bridge Ahrided," Annie Blanche Shelby follows in general the beaten track, but differs from Mr. Dalton on the question of discard, declaring herself in favor of strength.

"The Arab Horse," by Spencer Borden (New York: Douhleday, Page & Co.), is an interesting history of the animal, both on his native heath and in the countries to which he has been exported. Considerable space is given to the Arabs in America; and their pedigrees and history are interesting to the lovers of the breed.

An important work in a new field of American bibliography is Charles T. Harbeck's "Contribution to the Bibliography of the United States Navy," just from the press. The bibliography now printed had its beginning (Mr. Harbeck says in his Preface) in the collecting of titles of books not in his possession, with the view of adding these books to his library. The volume which now appears is based, primarily, on Mr. Harbeck's own collection, but with copious additions. He has had the assistance of Miss Agnes C. Doyle of the Boston Public Library and of Axel Mothe of the New York Public Library, who have added titles from those two great collections. Though of lesser interest to

the reading public and to the book collector, the various publications on the navy by the different departments of the Government are actually of the greatest importance to the student or historian. The lists of United States documents are very full. The lists of naval registers are the most complete and accurate yet printed. In a first work of this kind there are certain to be numerous omissions, how numerous or important only use will determine. Although the 1865 reprint of "Two Letters from W. Graves, Esq.; respecting the Conduct of Rear-Admiral Graves in North America during his Accidental Command there for Four Months in 1781" is recorded, the original edition, printed in 1781 or 1782, is not. The Battle of Lake Erie has a separate section, and several entries refer to the dispute between Commodore Perry and Capt. J. D. Elliott, but the "Review of a Pamphlet purporting to be Documents in Relation to the Differences which subsisted between the late Commodore Oliver H. Perry and Capt. Jesse D. Elliott, By a Citizen of Massachusetts, Boston, 1843" has been overlooked. A number of titles of hooks by Commodore Goldshorough have been entered, but not his "Reply to an Attack made upon the Navy of the United States by Samuel Coues, Portsmouth, 1845." Nor do we find the original pamphlet by Samuel Coues, which brought forth the reply. According to Sahin this was a thin tract of eight pages published in Boston by the American Peace Society with the title "United States Navy. What Is Its Use? By Samuel E. Coues." One of the rarest of hooks on the Navy in the Revolution, the Narrative of Nathaniel Fanning, has also been omitted. As first published it had the title: "A Narrative of the Adventures of an American Navy Officer, who served during part of the American Revolution under Paul Jones. New York, 1806." The first issue is without the author's name. Two years later the title was reprinted, and in this later issue it reads: "Memoirs of the Life of Captain Fanning, an American Naval Officer, who served during Part of the American Revolution under . . . Commodore John Paul Jones. New York, 1808." The hook is a large octavo of 256 pages, in large, clear type, with wide margins, in an edition of 350 copies. The compiler, for his personal use, will be glad to know of additional titles relating to the United States Navy which are not included in his Bibliography. Inquiries may be addressed to Charles T. Harbeck, No. 32 Broadway, New York.

The city of Berlin has inherited from the lately deceased book-dealer, Cohn, a valuable Shakspeare bibliography, which, however, is still fragmentary, although Cohn had given the titles of more than 30,000 hooks and articles. The authorities of the city have determined to complete this list, and the managers of the city libraries at a late meeting made arrangements with the indefatigable German Shakspeare Society to have the work done. Ten or twelve years' work will probably be required for this task.

Sotheby, Wilkinson & Hodge of London will sell the library of the Duke of Sutherland at auction November 19 to 24. The 1,787 lots, however, include few items which can be considered of the first class.

Among those likely to interest American collectors are the following:

Coryat's "Cruities," first edition, 1611, a large copy, but with the Strasburg clock, as usual, slightly cut into.

Davenant's "Gondibert," the 4th edition, 1651 (the 8vo of the same date is generally considered the first), having an original signed poem by Sir John Denham on the fly-leaf.

Esquemeling's "Bucaniers of America," 1684, first edition, and with the fourth part published in 1685.

"The Spectator," "The Examlner," "The Guardian," and "The Englishman," all in the original folio numbers.

Florio's "First Frutes," 1578, and his "Second Frutes," 1591, both first editions.

Froissart's "Cronycles," translated by Lord Berners, the first edition in English, printed by Richard Pynson; the first volume in 1523, the second in 1525.

A series of Gould's books on birds, described as an original subscriber's copy.

Gower's "De Confessione Amantis," second edition, printed by Thomas Berthelet, 1554.

Higden's "Polycronicon," the edition printed by Peter Treveris in 1527.

Vol. I. of Ben Jonson's "Workes," 1616, first edition, large paper, but with one sheet supplied from a smaller copy.

A Third Folio Shakspeare, 1664, described as "a perfect and very sound and clean copy, but shortish and outside margins of two of the preliminary leaves cut close."

An English manuscript on vellum of the fourteenth century, containing a poem, "Speculum Vitæ or Mirror of Life," composed by Richard Rolle of Hampole, who died in 1349.

The family of the late Herman Melville, author of "Typee," "Moby Dick," etc., are collecting materials for a memoir and would be grateful if any persons having letters by him would lend them to Miss Elizabeth Melville, "The Florence," Fourth Avenue and Eighteenth Street, New York. Such letters will be carefully kept and promptly copied and returned.

Waldo G. Leland of the Carnegie Institution, Washington, D. C., and Prof. William E. Dodd of Randolph-Macon College, Ashland, Va., are endeavoring to collect for publication the letters of Chief Justice Marshall. Since comparatively few Marshall papers are known to have been preserved—except those in the Library of Congress—it becomes necessary to "rake the country" for the remnants of a correspondence that must have covered a period of nearly fifty years. Any one who has knowledge of the existence of Marshall letters will confer a favor by reporting the fact to either Mr. Leland or Professor Dodd.

The literary remains of Theodor Mommsen, as reported by the *Nationalzeitung* in Berlin, have recently been put into the possession of the Royal Library in that city. Of chief interest among these papers are four large chests of letters, which Mommsen declared should not be published till thirty years after his death. To these letters received by Mommsen the library will try to add as many as possible of the thousands which he himself wrote. This collection of material will throw much light on the political and literary history of the last fifty years.

The annual report of the Boston Public Library, just issued, offers some striking contrasts to that of the New York Library, which was summarized in the *Nation* of October 18. The New York Library gained 115,851 volumes; Boston, 7,883; in New York the increase of registered borrowers was 101,161; in Boston, 3,450; in New York

the gain in circulation for home use was 1,061,128; in Boston there was a loss of 594. When, however, the difference in population is taken into account, it will be seen that the Boston Library is still ahead in relative resources and work done. To equal the per capita circulation for Boston the New York Public Library must add more than a million to its present circulation; and to supply this city with books in the same ratio to population as in Boston, the New York Library must increase its present stock of books threefold. In current fiction the Boston Library confines its purchases to books of the highest merit according to a rather conservative standard. This policy has been justified; for, as the report says, "the experience of several years has shown that nearly all of the works of fiction which for various reasons we have found it impossible to buy, have failed to demonstrate their ability to live for even a few months. The demand for some of them was insistent for a short time; now their names are for the most part forgotten, and nobody cares to read them. If we had purchased a considerable number of these volumes, the money, so far as present demand is concerned, would have been wasted." Out of the year's total output of fiction, only 161 titles were accepted. From these titles, 1,230 volumes were bought, costing \$1,260. The total expenditure for all books was \$34,460.

The recent annual report of the City Library of Berlin shows that the average German takes more kindly to solid reading than the American. Of the 45,129 volumes carried home, no less than 22,327 were of a strictly scientific character, history and biography leading, with 4,088 works. The tendency in this direction is apparently growing. The percentage of scientific works this year was 33, while a year ago it was only 31. These data are significant, as 52 per cent. of the readers belong to the working classes, and the educated and professional classes constitute a very small proportion of those drawing books.

Dean Andrew F. West of Princeton has decided to abide by his present duties as director of the Graduate School, but the moral value of his call to the presidency of the Massachusetts Institute of Technology remains. It confirms, as we have pointed out, the late Francis Walker's belief that scientific education should also be liberal, and it sets a precedent which trustees of technical schools must consider for the future. It may be inferred that Dean West would hardly have refused so attractive an offer if he had not had assurances that the Princeton Graduate School would be rapidly developed in a university direction.

The idea of an international exchange of professors is being applied on a large scale by the city of Hamburg in the arrangement of its academic winter course, which has now been enlarged to cover many of the departments of a full university. Hamburg has secured the services of five foreign scholars: Prof. J. H. B. Masterman, Birmingham, who lectures on Robert Browning; Professor Rosset, Grenoble, the poetry of the Romance languages, and especially Victor Hugo; Dr. W. H. Tolman, New York, industrial reform movements in America; Consul Dr. Solé y Radriguez, Uru-

guay, the export trade and industry of his native land; and Miss Gelati, Italy, on the literary movements in Italy. It is proposed in the course of a few years to establish in this commercial metropolis of Germany a fully equipped university.

The Leinster Training College for Irish will soon be opened in Dublin for the purpose of promoting the study of the modern spoken language and training teachers for primary and secondary schools. The School of Irish Learning, founded several years ago by Dr. Kuno Meyer and others, is chiefly devoted to the study of Old and Middle Irish texts.

RECENT VERSE.

"The Two Arcadias," by Rosalind Travers (Brimley Johnson & Ince), is that rare thing, an altogether readable first volume of verse. Miss Travers has an exuberant poetic fancy; she has a great deal of literature—though she imitates methods rather than effects; and she has true poetic humor. The opening piece, which chiefly gives the atmosphere of the little book, is a dramatic phantasy entitled "Arcady in Peril." To Silvio and Phoebe, engaged in woodland love-making in the Arcadian fashion of strict poetic tradition, enter two cockneys, Albert and Maria, attended by a chorus of "trippers." The sharp contrast between the old ideal and the present reality makes possible some entertaining business between the four, including the conventional interchange of lovers. Phoebe thereupon invokes Diana's aid:

O Forest Queen!

Hear from thy dreamy bowers
Far in the secret, cool, and winding glen,
Where quenched sunbeams fall in sparkling show-
ers

(Dark houghs between)

On strange and starry flowers,
Azure and silver-streaked, unknown of men,

Hear, and give aid, O Queen!

By the moorland, wild and wide,
On the sunny mountain-side;
By the torrent, cool as snow,
Murmuring to the fields below;
By the pinewoods, breathing halm;
By the moonbeam's holy calm;
By all nature's joys, that he
Tameless, strong and pure as thee,
Hear, and give aid, O Queen!

Diana naturally gives heed to so melodious an incantation and promises her succor. A monster is introduced, which Silvio takes to be a dragon, but Maria, his moment's paramour, undeceives him:

Sil. Ye gods!!—there is a fearful dragon yonder!

Mar. O-o-ooh! Where?

Sil. On the near highway—his squat and bulky scarlet form rests on four short, gray paws—his huge eyes glare—the earth shakes at his breath—oh, terror!—oh, hideous monster!

Mar. Let me see, though—let me see! (*Scrambling up the mound.*) Why, you silly cuckoo, it's nothing but a motor-car!

Silvio refuses to "touch the accursed thing," which is "too loathly-formed, too vile." Maria thereupon returns to Albert, and they make off with the motor. It blows up, in accordance with the goddess's plan of vengeance, hurling the trippers far cityward; and Silvio is restored to the arms of Phoebe in a reestablished Arcady. The piece then concludes with a significant chorus of nymphs:

Where the hues of sunset fall,
Where the sky is primrose-pale,

And the silver moon hangs low;
Faint and few the starry gleams,
'Tis the land of fancy-dreams:
Thither, mortals, let us go!

Westward burns the splendid sky;
There's the Realm of Poesy,
Sought of many, found of few.
In that lambent air and fire
Fragile-winged thoughts expire;
Withered, drop to earth anew.

But to Fancy's paler sphere
Ye may journey free of fear,
Even as our light verses fly.
Ye have wings, though cramped and small;
Fancy-flights upbear you all;
Mortals! spread your wings and try!

Miss Travers was particularly discreet in choosing to draw her pastoral air from the artificial Arcadias of Ramsay, Milton, and Sidney, thus limiting herself resolutely within the sphere of Fancy. And fantastic as the fable is, it is made poetically convincing by the delicate *flair* of the author.

The second of the two Arcadias is found in "The Suburbia," a celebration in the manner and metre of Pope of

Mammon's gay mistress crowned,
The willing nymph Suburbia.

The hectic, gaudy life of climbing suburbs is pictured with a metrical neatness and a firmness of satiric tone that, coming after the long disuse of the *genre*, have an effect of pleasing novelty. But a deeper poetic spirit moves under the satirical surface than one at first suspects: as we near the end, we come upon a passage which, read in connection with some of the shorter and less whimsical pieces in the volume, gives high hopes of poetic pleasure from Miss Travers's future work.

Yet many a City man may slowly fare
Riverward, seeking peace and twilight there.
But all in vain pale dreams of far delight
Steal o'er the dusky violet-beds of night;
While great elms slumber in the meadows gray,
And the white moon begins her tranced way.
For still his anxious purpose never leaves
The hope of gain; still cunning nets he weaves
To catch the elusive gold; dark webs that lie
Sad o'er the thought, and cloud the wistful eye.

"Ah, could I plunge deep in some quiet river!
And rise, newborn in splendid strength, to shiver
The old, unshapely life to pieces! tear
Away the tawdry vain-delight; lay bare
The waste of years, the wrong of mean desires
and sordid care!

Then build the home anew, on pillars firm;
Of comradeship and trust which years confirm;
With simple joys and kindly neighborhood,
And general labor for the common good!"
Thus will the sad, suburban father dream;
Resting his gaze upon the cool, slow stream.

Then, breaking the couplet's bonds—

Look up, O men!
Shnt in with little miseries, futile task,
And meanest self-inflicted care, arise!
Fling wide the dusty windows of your soul
On spring and sunshine, melody and mirth!
A newer morning breaks o'er field and town;
The sad air quickens; kindly gods are near!

The "Poems" of Anne Whitney, privately reprinted with some rearrangement, forty-eight years after their original publication, are a gracious echo from that *tempus acceptabile*, the transcendental period. One could hardly be young in New England in the thirties and forties and not write poetry, certainly not a person of Miss Whitney's temperament and receptivity. Her poems are full of the engaging agitation, the alert catholicity, the earnest joyousness of those eager emancipated years. The defects of the transcendental quality are hers too, and not a few of the pieces have a cer-

tain mystical prolixity that reminds us that they were written in the day of utterances. Yet Miss Whitney has, probably as the result of a vivid artistic temperament, a distinct quality of her own. In the concluding poem, the only new piece, we believe, in the volume, she is seen at her best:

Even as a rose,
Fulfilled of beauty and desire,
Lets fall its petals one by one,
The good day goes.
Subsides with mellow note the wave's long
swell;

The twilight gathers in the dell,
And all hues melt in one. A small bird tops
His cedar on the cliff

And in the listening quiet of the copse
Trills forth his evensong.—'Tis evening's own—
The rest, the peace,
The strife of day outgrown.

We know the sign and heed the low command;
And hand in hand,
Bearing our treasure safe above the blight
And waste of years—the slow surcease
Of Life's full fount—we journey free
With trust in the great Mystery
Toward the fast-coming night.

The easily-won, temperamental optimism, the gentle if somewhat thin piety, which marked the poetic work of Susan Coolidge and won many readers, is the most notable trait in her "Last Verses" (Boston: Little, Brown & Co.). How much may be attained without great heat of imagination, distinction of thought, or richness of style, by sensitive perceptions and a fluent and lucid manner, may be seen from these lines on Helen Keller:

Behind her triple prison-bars shut in
She sits, the whitest soul on earth to-day.
No shadowing stain, no whispered hint of sin,
Into that sanctuary finds the way.
There enters only clear and proven truth
Apportioned for her use by loving hands
And winnowed from all knowledge of all lands
To satisfy her ardent thirst of youth.

Like a strange alabaster mask her face,
Rayless and sightless, set in patience dumb,
Until like quick electric currents come
The signals of life into her lonely place;
Then, like a lamp just lit, an inward gleam
Flashes within the mask's opacity,
The features glow and dimple suddenly,
And fun and tenderness and sparkle seem
To irradiate the lines once dull and blind,
While the white slender fingers reach and cling
With quick imploring gestures, questioning
The mysteries and the meanings: to her mind

The world is not the sordid world we know;
It is a happy and benignant spot
Where kindness reigns, and jealousy is not,
And men move softly, dropping as they go
The golden fruit of knowledge for all to share.
And Love is King, and Heaven is very near,
And God to whom each separate soul is dear
Makes fatherly answer to each whispered prayer.
Ah, little stainless soul, shut in so close,
May never hint of doubt creep in to be
A shadow on the calm security
Which wraps thee, as its fragrance wraps a rose.

The title of William Byron Forbush's "Ecclesiastes in the Metre of Omar" (Boston: Houghton, Mifflin & Co.) is perhaps a little misleading. It is not so much a consecutive rendering of the words of Koheleth as an imaginative construction of the Rubaiyat he might have written, made by a very eclectic assembling of words, phrases, and images from the Scripture, woven to a single texture and skilfully colored and cadenced to resemble the manner of FitzGerald. It is none the less, despite some roughness, a successful bit of work—in its sympathetic insight as well as in its technical ability. The brooding, skeptical old poet, who has had the odd fortune to retain for so long a place among the canon-

ical writers, is well represented by such stanzas as these of "The Fulness of Life," based chiefly upon the ninth chapter of the book:

Above the endless Fury, Fever, Fret,
Above the grief of suns that rose and set,
The Silent One answers my ceaseless Quest
When I have learned one lesson—to forget. . . .

So go thy way in garments white to dine,
And with rare ointments make thy visage shine.
Forget the Door of which He holds the Key,
But not the one which holds thy cherish'd wine.

"Drink! since to-morrow life may all be o'er?"
Nay, drink because to-morrow may bring more.
The voice may speak from out the brooding
cloud,
A message waft us from the Silent Shore.

And seek to prove Life's solace year by year
With one whom thy fond heart may find most
dear.

Her will may be the wind's will, yet to thee
The home-bound breeze that brings the Haven
near.

She never has the Eternal Puzzle guesst.
A portion has she borne; nor sought the Quest.
Ah! but the heaven of her patient arms,
Her little palms' soft hollows full of rest!

If we mistake not, all or nearly all of the poems in Richard Watson Gilder's "A Book of Music" (New York: The Century Co.) have already appeared in preceding collections of his work. Yet it was a fortunate thought that grouped them between covers. We have long held Mr. Gilder's interpretations of the moods of the listener to music to be his most distinctive and enduring work. This opinion is strengthened by the grouping. The concluding sequence, "Music in Solitude," "Music at Twilight," "Music in Moonlight," and "Music in Darkness," is poignant and lovely poetry, which, with very little of the *Andersstreben*, common in poems of music, weaves, nevertheless, a musical spell over the reader's mood.

"Panama Patchwork," by James Stanley Gilbert (Cooke), though handicapped by a high-erected "foreword" by Tracy Robinson, is a volume of interesting, if not at all memorable, verse. Mr. Gilbert's quality was that of a talented gentleman who writes with ease. Ease, indeed, as with his avowed master, John Payne, was often his undoing. Many times in his book we find the effect of some vivid exotic picture, some striking bit of sentiment or humorous conception, distorted by a lapse into fluent poetic commonplace. At his best, however, as in these first three stanzas of "A Frijoles Washer-Girl" before the initial energy of concentration is dissipated in undue and ineffective detail and trite classical allusion, Mr. Gilbert's work is highly picturesque:

A dream in living bronze is she,
A dusky goddess full revealed;
Clad in Nature's modesty—
Her wondrous beauty unconcealed.

Half to her knee, the rushing stream
An instant pauses on its way;
The ripples in the sunshine gleam,
And tiny rainbows round her play.

Lithe as the bamboo growing near
Within the tangled tropic glade;
As graceful as the startled deer
Half hidden in the distant shade.

"Night and Morning," by Katrina Trask (The John Lane Co.), is the story of the woman taken in adultery retold in picturesquely colored blank verse, with the imaginative addition of the personality of her lover, a "subtle Greek" Leonidas. As set forth by the author in "The Argument," the

purpose of the piece is to elucidate the divorce problem by maintaining the "higher, inner law of love itself which in itself is the highest freedom," and which is "a Beatitude rather than a Law." The poem is not very explicit in its embodiment of the argument, and there is some contradiction. The meaning seems to be the rather hazy one that the higher love being a state of Beatitude demands the renunciation of human relations—though just how this bears upon the crux of marital infelicity does not clearly appear. The mood of the poem is admirable throughout, and the workmanship respectable.

CURRENT FICTION.

The Dragon Painter. By Mary McNeil Fenollosa. Boston: Little, Brown & Co.

Unfortunately, statistics are hardly attainable as to the actual proportion of fond little Japanese maidens who have been willing victims to the triumphant allurements of large, inconsiderate foreign lovers. In the Japanese stories we read—usually written by ourselves—this theme is so prevalent that our general conception of love in Japan might be visualized by a collapsed female figure weeping in the wake of a departing steamer. Mrs. Fenollosa, in her study of the artistic temperament in Japan, entirely avoids this hackneyed subject. "The Dragon Painter" is smoothly told, full of careful and satisfactory descriptions. It also gives an idea of contemporary Japan, a Japan of enterprising daily papers, whose print makers hang about old Kano's gate, endeavoring to snatch a likeness of his famous son-in-law.

Kano himself is in the uncomfortable position of the enthusiastic artist who suddenly finds himself cast for the rôle of hide-bound ignoramus by the discovery of a genius at once greater and more untrammelled than himself. Since Kano adores this Katsuo and only wishes to instruct and cherish him, it is not a public discomfiture, but merely a case of complete, unconscious blanketing. To secure the genius (lacking a son of his own) Kano marries the wild mountain lad to his own carefully brought-up daughter. Instead of barely suffering this alliance from filial piety, Umè-to falls undutifully, not to say indecorously, in love with her husband, and the pair have so pleasant a honeymoon that no earthly power will induce the genius to get back to his brushes.

The most interesting part of Mrs. Fenollosa's story is her description of the painter, his feeling toward his art, and towards the foreign invasion. If the rest of the book contains nothing particularly striking, it is at least one more able revelation of the spell which Nippon never fails to cast upon the conquering stranger.

Beyond the Rocks. By Elinor Glyn. New York: Harper & Brothers.

All the parents who were in doubt about letting their débutante daughters browse upon "The Visits of Elizabeth" may turn them loose upon "Beyond the Rocks" without a twinge of misgiving. Laying aside satire and cynicism, Elinor Glyn tells a straightforward love story of the kind specially suited to young ladies in their teens. This statement must, however,

be qualified by a confession that the spotless Theodora is kissed, and vulgarly speaking, hugged, on several occasions by her irresistible lover, Lord Bracondale. Nevertheless, as her invincible goodness transforms him from a thorough-paced Lovelace into a patient and considerate Ritter Toggenburg, the impression left by her history is one of unflawed discretion. Her sweetness furthermore transforms Josiah Brown, her plebeian husband, into as fine a gentleman as King Mark of Cornwall; and after exactly the suitable amount of despair, danger, and nobility on the part of the lovers, Josiah opportunely succumbs to a trifling ailment.

The curious fact about this story is that it should ring so very old-fashioned, not in theme—since an innocent young girl sacrificed by rapacious relatives belongs to all time—but in manner and treatment. The witty and frivolous pen of "The Visits of Elizabeth" has quite lost its Gyp-like audacity. Unfortunately, with the audacity, the sparkle also evaporated. The light touch, the exaggerated modernity, have vanished with the malice, till ladies who once thrilled over the "Duchess" may (with the assurance that Elinor Glyn's syntax is more solid) feel no apprehension when they see their young daughters similarly thrilling over the temptations and triumphs of the lovely Theodora.

The Call of the Blood. By Robert Hichens. New York: Harper & Bros.

Not long ago we were hearing much from persons who for one reason or other read many novels, of a story by Robert Hichens called "The Garden of Allah." Here at last, we gathered, was a work of real importance, something which could be counted on to arrest the attention of the most indifferent or the most skeptical. We read it with care, and were disheartened to find that it could not do for us what it had apparently done for others. We found here and there descriptive passages which were undoubtedly "vivid" and picturesque. Elsewhere we found a pomp of phrase and portentousness of mien which at second glance appeared to be empty—like a brocade supported by its own stiffness, and really containing nothing human. The tale and the persons, like the style, seemed hollow inventions. Yet we observed many earnest people applying a reverent ear to this artificial shell, and announcing that they heard the ocean.

The "Call of the Blood" is in many ways a better book—a sincere book, if not a great one. It contains less speech, and more matter. The emotional tone is less forced, and the utterance less strained and oracular. We are not expected to gasp at every scene or thrill at every situation. A Southern setting is again employed. An Englishwoman, past her first youth, marries a young Mercury, nominally English, whose temperament is really determined by a strain of Sicilian blood. At the bride's instance, they go to Sicily for their honeymoon. Presently, being a person with an advanced sense of duty, she leaves him to nurse an old friend, a man whom she might have married. The bridegroom is sufficiently magnanimous to approve of this act; but, left to himself, he listens to "the call of the blood," seduces a peasant girl, and is killed by her father. This

consummation hardly amounts to tragedy, for the culprit is not so much a person as a temperamental victim of heredity. He does not greatly engage the sympathies, and the details of his error rather pall in the rehearsal. Nor are Mr. Hichens's erotic touches grateful to a normal palate; they smack of that sentimental voluptuousness which has marred and, one fears, popularized not a few modern novels of merit; for example, those of James Lane Allen.

In the end one is impressed with the fact that the true theme of this story is not suggested by its title. As a study of true friendship it is worthy of note. The faun-like hero, whose acquired sense of duty, whose true affection even, is not proof against the working of inherited temperament, is hardly more than a foil for the contained virtue of the friends who suffer by his existence.

The Cruise of the Violetta. By Arthur Colton. New York: Henry Holt & Co.

Arthur Colton has in the past proved himself too accomplished a story teller to turn out with impunity a bit of fooling so mediocre as "The Cruise of the Violetta." He writes admirably, sees and describes with unusual charm, and possesses a marked and delightful sense of fun. But in this case the humor is forced. He approaches the ticklish realm of burlesque with too great cocksureness. After a beginning as promising as the opening to "Mrs. Lecks and Mrs. Aleshine" (a conscientious, Presbyterian lady from the Middle West scotching a Haytian revolution with knock-out drops is worthy of Stockton at his pleasantest) the pace is not kept up. Or, to be exact, the story turns into a sort of musical comedy libretto, in which the comic intention is more apparent than the achievement. By the time that Mrs. Mink has settled the affairs of Hayti, outridden a tornado, married the doctor, spanked (vicariously) a Kanaka king (incidentally settling a bout of Polynesian politics), picked up an orphan in the Malay Archipelago, buncoed and kidnapped a high-class Hindu fakir, and taken a hand in the electric light system (and revolution) in a small South American seaport, you are fully convinced of Mr. Colton's cosmopolitanism, but rather tired of fantastic adventure.

After reading "The Cruise of the Violetta," to regain faith in Mr. Colton's ability and intention, one has, however, only to read, or re-read, his earlier volume, "The Belted Seas."

Princess Maritza. By Percy Brebner. New York: T. J. McBride & Son.

The hero of Mr. Brebner's "Princess Maritza" is an English officer, who, convicted, unjustly, of course, of cheating at cards, is cashiered and turns his back on his country to dedicate his sword as a soldier of fortune to the service of the King of Wallaria. This small but important State, which may be supposed to stand for Servia or Bulgaria, since its affairs rivet the attention of all the European cabinets, has all the equipment of a novel of the type of "The Prisoner of Zenda": a stupid puppet of a king, an intriguing queen, a lovely pretender to the throne, the copper-haired Princess Maritza, and, not least,

the reckless English captain of horse. The incidents are numerous though unconvincing, the streets run with blood, the best-dressed and most frivolous women of the court turn out to be expert diplomats, more than a match for a seasoned English ambassador, and mysterious signals are given from every house and street corner. But all this may be present and one thing be lacking. The personages do not live, we are indifferent to their fates, and when a lovely countess dies, in the main square, a case of heroic self-sacrifice, we feel that we could have watched the heroine fall instead, without a qualm. This is not so with the Seraphinas and Flavias of the masters of this type of fiction.

The German Workman: A Study in National Efficiency. By W. H. Dawson. New York: Charles Scribner's Sons. \$1.50 net.

Agitation of the "fiscal question" in Great Britain has had at least one wholesome effect; it has marvellously stimulated interest in the economic and social policies of those countries which are felt to be her chief rivals in the contest for the markets of the world. Of this fact William Harbutt Dawson's useful volume is the latest and not least significant bit of evidence.

Unlike Ashley's "Progress of the German Working Classes," the book is not concerned with the industrial effects of the German tariff; nor does it, like Shadwell's "Industrial Efficiency," deal broadly with all important factors in national economic progress. Confining himself to the social legislation by which for a generation past the Germans have sought to guarantee workers a tolerable standard of living, Mr. Dawson undertakes to investigate the methods employed and results achieved, to the end that his own countrymen may profit by the experience of their redoubtable competitor. Previous study had qualified him thoroughly for his task, and he has produced a volume which, if not attractively written, is probably the most convenient guide for English readers who would venture into the mazes of German *Sozialpolitik*.

One's head fairly swims as one contemplates the various and complicated institutions which a paternal Government has created for the benefit of the working classes. Decent housing for the married laborer, temporary shelter for the homeless, hospitals for the sick, convalescent homes to insure a permanent cure, crusades against such plagues as tuberculosis, medical treatment for children in the schools—these are some of the provisions designed to promote health and industrial efficiency. Public employment bureaus, lodging-houses for the entertainment of travelling workmen, labor colonies for travellers who do not desire to find work, insurance against unemployment, relief works for the actually unemployed, and information bureaus for those who need nothing but seasonable advice, cooperate in keeping able-bodied men from becoming public charges. When these agencies fail, there are the poor laws, which, although not perfect, are administered by men of intelligence and practical sense; and not, as often in England, by persons "without special qualifications, who join boards of guardians for the mere pleasure of over-assessing their neighbors' property and under-assessing their own."

But further than this, as we all know, German legislation provides insurance, on a national scale, against sickness, accident, and old age; and it is upon these topics that Mr. Dawson's volume is disappointing. Since the beneficiaries of the industrial insurance laws are now numbered by the tens and scores of millions, and the system in some of its branches has been in operation long enough to enable one to estimate fairly the results, there is opportunity here for a more searching investigation than any foreign observer has yet made of the actual outcome of the legislation by which Bismarck sought to outbid the Social Democrats. German writers, it is true, assure us that the results of compulsory insurance have been generally favorable; and there is no reason to doubt the intelligence and honesty of their reports. But it is to be wished that some one who can write with more detachment would undertake a searching, first-hand study of the entire problem. Our own Prof. Henry W. Farnum has made one or two successful forays into this field; and it is to be regretted that Mr. Dawson did not essay something of the sort. Instead of this, however, he gives us merely a conventional summary of the provisions of the law, and describes the machinery through which it operates.

Our author is not blind to the possible dangers of the experiments which Germany has tried; neither, it is fair to say, are some of the Germans, who have shown no little "horse sense" in administering undertakings which approach very closely the danger line. In Frankfurt, for instance, where it has become the established policy to provide "relief" work in seasons of unemployment, the town council has deliberately avoided committing itself to the doctrine that the municipality should find work for all its citizens. It proceeds consistently on the theory that the relief work is undertaken simply "to prevent any extensive call for public relief," and denies that its obligations extend any further than such safeguarding of its financial interests. Nor does Mr. Dawson allow his reader to suppose that every arrangement which works well in Germany would operate equally well in Great Britain; on the contrary, he never fails to make due allowance for differences in national temperament, institutions, and inherited traditions. Yet, upon the whole, his verdict is distinctly favorable to the work which the Germans have been pushing with persistence and intelligence for a full generation. He believes that in social legislation, as well as in science or technology, Great Britain has much to learn from Germany; and his book should bring not a few of his countrymen to a hopefully receptive frame of mind.

Lectures on Modern History. By Lord Acton. New York: The Macmillan Co. \$3.25 net.

The late Regius Professor of History at Cambridge has been so lauded by those who came under his influence that it is perhaps worth while to inquire what should be the exact measure of his praise. For such an inquiry, the volume before us

will serve as a convenient starting point. In the first place, then, it may be asked, How great a scholar was he? To answer the question a standard must be adopted, and as to gauge Acton the highest will be necessary, we may select Mommsen for the purpose. The component factors of Mommsen's worth may be said to have been erudition, criticism, expression. In each one of these he was great: great in learning, great in critical sense, great in literary output. But now, what of Acton? In erudition he was, if not the equal of Mommsen, yet unquestionably great; in critical sense he was weak; in production—we have the present book and the promise of another course of lectures, in book form.

Leaving his critical faculty and literary output for the moment, it must, however, be added that Acton's chief merit was one just alongside of the scholar's work—his influence on others. His curious personality and burning enthusiasm aroused attention and inspired effort. Crowds of interested listeners nearly elbowed the undergraduates out of his lecture room; while his former students, among whom are the editors of this volume, have continuously voiced their admiration. One of the most brilliant and enthusiastic, John Pollock, has put it on record that one of Acton's lectures "was, in truth, an emotional performance of the first order; . . . a wonderful work of art." There was his strength; he struck the imagination of his hearers.

Acton was not, however, a critic. It was his vast store of accumulated details that kept him near truth, not his critical sense. His Roman education had subtly warped his mind, so that when he revolted from the decisions of the Vatican Council, he was yet unable to free himself from the dull burden of Authority. He was, in fact, a living paradox, and perhaps that explains why his mind turned so constantly to epigram for relief from the restraint under which it suffered. At their best his flashes of wit were charged with the very essence of historical thought; at their worst they were an intellectual bad habit. At their best we have the already famous dictum from the letters to Mary Gladstone, that the Council of Trent erected the dogma of an austere immorality; at their worst we find, in the volume now under review, such statements as the following on Peter the Great and Frederick William I.: "Without the first Europe might be French, and without the other it might be Russian."

And lastly, as to Acton's literary output. His letters to Mary Gladstone constitute one of the most remarkable and stimulating volumes of correspondence published of recent years, but correspondence cannot be treated as the chief product of a scholar. His admirers have been anxious that his name should be associated with something more directly representative, and the two very competent editors of this volume have set to work to elaborate these "Lectures on Modern History" from the notes of one of the courses he delivered at Cambridge. The result is, on the whole, disappointing, and the reasons for this are not far to seek. To begin with, notes for lectures generally make poor books, and it is

so in this case. Again, the subject is too large for the space in which it is treated, and suffers from overcompression. For in nineteen lectures, Acton covers modern history from the fall of Constantinople to the framing of our Constitution in 1787. This need for compression, coupled with his almost morbid desire for stating generalities, produces occasionally whole paragraphs in which history gets strangely distorted; of these, perhaps, the most conspicuous example is the last paragraph of the book, in which, within the space of six or seven lines, he commits himself to the following propositions: that our Civil War arose from the lack of a definition of State rights in the Constitution; that "weighed in the scales of Liberalism" the Constitution "was a monstrous fraud"; and that the principle of Federalism has made our present community more powerful, more free, and more intelligent than any other in the world; in all of which propositions, the reader will easily discern the dangers of hasty generalizing from part truths. In the lectures as a whole the stress is laid on the early period, the wars of religion; while the eighteenth century gets very little attention. This is doubtless owing to the fact that in his following course, on the French Revolution, Acton dealt largely with the movement of opinion in the years preceding. Running through the book may be traced the dominant phase of Acton's thought, that, from the Renaissance to the present day, the mainspring of Western history is the change from the superiority of religion over politics to that of politics over religion. As to this line of thought, pregnant though it be, the student may take this word of warning, that Acton was not at his strongest on questions of economics.

As to the editorial work, it should be noted that the editors do not vouchsafe one word about the text they have used; and that they make no attempt to correct the not infrequent errors of detail.

Tarry at Home Travels. By Edward Everett Hale. Illustrated. New York: The Macmillan Co. \$2.50 net.

Dr. Hale's new volume embraces with but little alteration the series of papers contributed to the *Outlook* under the same general title during the past two years. The literature of travel, he thinks, is noticeably scant in the section devoted to the United States. If we limit ourselves to formal books of travel, written by Americans, this may be true, but Dr. Hale's own effort to supply the gap contains ample proof that the literary traveller here at home is hard pressed to find much of an objective character that a well-informed reader has not already met with in one form or another. Formally, the volume is divided into sections dealing with the six New England States in order, New York, and Washington city. It is in the guide himself, however, and not in the localities visited or the historical incidents related, that the reader will find his chief interest. On the whole, we should classify the book rather with the stream of personal reminiscence that has been flowing out of New England so copiously of recent years than with the literature of travel strictly so called. On that score, however, the work loses none of its potential value.

One defect of the work we may illustrate by a quotation: "'A little college,' Daniel Webster said; 'but she has children who love her.'" Now that is just what Mr. Webster would have said if he had been Mr. Hale, but being Mr. Webster his words were, "It is, sir, as I have said, a small college. And yet there are those who love it." We would not overrate the importance of what is in itself a mere trifle, but it is typical of an inexactness against which one must always be on his guard in reading Dr. Hale, or any other writer who falls into the habit of drawing upon a richly stored memory without checking results by the aid of external authorities. There are nearly two hundred illustrations, on the whole well selected.

Drama.

Sir Henry Irving, a Biography. By Percy Fitzgerald. Philadelphia: George W. Jacobs & Co.

It is too soon yet to look for anything like an authoritative and judicial estimate of the histrionic genius of Henry Irving—for genius he undoubtedly possessed, though it was limited by arbitrary bounds. Already he has been the subject of a considerable mass of printed matter, but most of it has proceeded from enthusiastic eulogists, either intimate friends or interested scribblers. Mr. Fitzgerald belongs to the former category, and reveals the relationship clearly enough in many of his glowing periods; but he is not so blinded that he cannot see the spots upon his luminary. Moreover, he is a practised workman in biography, and his book gives a really comprehensive view of the actor's career. It would be better if it were a little more conservative and a little less discursive, but as a rule his selection of matter and his arrangement of it are both good, while his comment is generally pertinent and well informed.

Without indulging in repetition of wearisome details, he shows how much Irving was indebted for his mastery of the technical business of the stage to his long training in the old stock companies, and especially to his service, or rather servitude, in Dublin and Manchester. Bills were often changed half a dozen times a week, and it was a common thing for him to play three parts in an evening. He acted in pantomime, farce, comedy, and tragedy. Even then he attracted attention by the care he devoted to his make-up. He would spend his last penny to get a correct costume. From his earliest boyhood he frequented Sadler's Wells to study the acting and elocution of Phelps in Shakspeare. In earlier days his speech was almost entirely free from the tricks which disfigured it later. His first marked successes in London, as Chevenix, Rawdon Scudamore, and Digby Grant, were due to the minute finish of his work rather than inspiration. He was not suspected of having any peculiar power of emotional expression until he found himself, so to speak, in Hood's "Dream of Eugene Aram" and in "The Bells"; and it is worthy of note that to the end of his career, in tragedy or melodrama, it was in the portrayal of the terrors of a guilty conscience that he chiefly excelled. His Louis

XI, Vanderdecken, Richard III., and Macbeth are cases in point. It is curious that Mr. Fitzgerald, generally a pretty sound critic, seems to prefer Coquelin's dull Mathias to Irving's imaginative conception.

Speaking of Irving's Macbeth, Mr. Fitzgerald notes that it underwent many changes. At first its moral and intellectual feebleness excited much derision. Later on it became firmer and bolder, though never a satisfactory impersonation. In reading the part on the platform he made it much more impressive. His Hamlet, although the cause of much controversy, was always popular. Mr. Fitzgerald regards Philip, in Tennyson's play, as one of his masterpieces in the portrayal of eccentric character. When the famous production of "The Merchant of Venice" was made, the event was celebrated by a great supper, at which many illustrious persons were present. An awkward situation was brought about by Lord Houghton, who, in a satirical speech, intimated that Shakspeare had been entirely eclipsed by the scenery. Irving parried the attack with smiling good temper, and thus averted what might have been a painful scene. Lord Houghton's complaint, according to Mr. Fitzgerald, would have been much more justifiable in the case of "Romeo and Juliet," when Shakspeare was, he says, literally "smothered in scenery." Irving's Romeo he describes as absolutely grotesque. His Iago, on the other hand, was, he says, one of the best things he ever did. He prefers it, apparently, to that of Edwin Booth, but his judgment in this case will not be generally accepted. Perhaps there is a little prejudice in it, for he intimates that Booth, who had been treated with great generosity by Irving, did not attempt to return the compliment when the English player was in the United States. It would be interesting to know whether Irving had any grievance on this score.

But it is impossible to note all the interesting points in Mr. Fitzgerald's pages. Only one or two more can be mentioned. It certainly is not generally known that "Twelfth Night" had a hostile reception when first presented at the Lyceum, and that Irving was forced to make a protest before the curtain. It appears that his Malvolio, an admirable conception, was quite misunderstood. That his Joseph Surface, played at a memorable benefit, was an utter failure, is not surprising. He tried to play it along new lines, and seems to have spoiled it utterly. Mr. Fitzgerald traces the beginning of Irving's decline to his separation from Ellen Terry. He draws a pathetic picture of the last few months of the great actor's life. Misfortune after misfortune overtook him. He lost his theatre, his great stores of scenery were burned, he was crushed by debt, and his health was failing. He was broken both in mind and spirit, but he struggled on courageously in the hope of making money enough to keep him in old age. In his prosperity he had been recklessly prodigal both of money and of strength, and in his need he had neither the one nor the other. Death was merciful, saved him from humiliation, and crowned him with honor in Westminster Abbey, before the memory of all his triumphs, theatrical and social, had begun to grow dim.

The new classic tragedy, "The Virgin Goddess," the first work of a new dramat-

ist, Rudolf Besier, which has just been produced at the London Adelphi, appears to be a remarkable work, in spite of some faults, largely due to youth and inexperience. It is, as we noted in our issue of October 25, written upon the lines of the old Greek plays; and it is said to be as interesting as it is bold and imaginative. Artis, a legendary city, is in peril of the enemy. Cresphontes, the king, is willing to make a disgraceful truce, but his Queen Althea and his people are all for resistance. Althea then sends for Hæphestion (*sic*), the exiled brother of her husband, who alone can reanimate the fainting troops. He returns, and as the king still insists upon capitulation, kills him. As the king's dead body is borne to the temple of Artemis, it is met by his mother, who calls for vengeance. She consents to pardon Hæphestion, however, if the deed was really done for love of country. In the next act there is but one scene; Althea and Hæphestion are alone, and the latter confesses that it was for her, and not for country, that he slew his brother. She reciprocates his passion, and both rejoice that there is nothing to bar their union. But Artemis, the Virgin Goddess of the city, will not permit the crime to go unpunished; she proclaims, through her oracle, that Cresphontes must be avenged, that Althea must be put to death by no other hand than that of Hæphestion, or Artis and all its people shall perish. Moreover, adds the oracle, Hæphestion shall not stir from the altar until this vengeance be accomplished. In the fourth act Hæphestion is disclosed at the altar steps. The troops are clamoring for their leader; the enemy is advancing. But Hæphestion cannot move. Again and again he strides forward, defying Heaven; again and again he is paralyzed by an unseen force. Powerless as he is, he cries out that Artis may fall and all its people perish, but he will not slay the Queen. The contempt and rage of his mother and cries of the despairing women cannot change him. Not till Althea herself comes and tells him that this is the crown and glory of their love does he lead her within the temple, there to fulfil the decree of Fate. Soon he returns and announces, "The Queen is dead." At the words victory comes, and the enraptured people shout their joy. But he stands rigid, a figure of stone, and so the play ends. It seems to have been acted very finely. Miss Brayton was a noble figure as Althea; Miss Genevieve Warde acted the old blind Queen mother with wonderful effect; while Oscar Asche made Hæphestion heroic in his fierce love and furious despair. The representation, as a whole, seems to have been one of the most notable of recent events on the English stage.

Whatever degree of success—and it is likely to be considerable—awaits Arthur Conan Doyle's military romance, "Brigadier Gerard," which was produced in the Savoy Theatre of this city Monday evening, must be placed to the credit of Kyrle Bellew, who played the hero with a dash and grace which few, if any, of his younger contemporaries could equal. The play itself, although pretty well furnished with more or less picturesque incident, is but poor stuff dramatically, the plot being a mixture of very old stage materials, and the rough

machinery at times creaking rather dismally.

Charles Scribner's Sons publish in an attractive little volume three farces by Richard Harding Davis. "The Dictator," "The Galloper," and "Miss Civilization," all of which enjoyed a considerable measure of popularity upon the stage. They are illustrated by photographs of various scenes with the groups of actors who played in them, which will gratify the collectors of such theatrical souvenirs.

Next week Houghton, Mifflin & Co. publish "The Struggle for a Free Stage in London," by Watson Nicholson, an instructor in English at Yale. The book gives the history of the theatrical monopoly which reigned in London until 1843, and has lessons for the present day.

The Early English Drama Society announces that it has under collation all the plays that were included in its first six volumes without such treatment, and that future issues will in all cases be compared with the original texts or photographic copies. The society will also issue as an extra volume to its first series the recently recovered plays, "Wealth and Health" and "Impatient Poverty," with other matter of interest.

Music.

THE SAINT-SAËNS CONCERT.

It had been arranged that M. Saint-Saëns should make his American début in Boston; a temporary indisposition, however, made necessary a rearrangement of dates, and thus the honor of welcoming France's greatest composer fell to New York. He was announced for two appearances with the New York Symphony Orchestra, last Saturday and Sunday; but the demand for tickets was so great that two extra concerts, with Saint-Saëns programmes exclusively, were scheduled for November 15 and 18. He was welcomed to Carnegie Hall with a cordiality that contrasted sharply with the coldly polite greeting accorded last season to another French composer, Vincent d'Indy, who represents the Parisian branch of the modern school of cacophony. Unlike D'Indy, Saint-Saëns believes in using dissonance as a means, and not as an end, and the musical public is certainly with him.

With his fresh and abundant melody, his piquant harmonies, his sparkling rhythms, his polish, and his never-failing musical *esprit*, Saint-Saëns represents the true French spirit in music—the spirit of Auber, Berlioz, Bizet, and Gounod. The pieces which he played, and which were new to New York concert-goers—his "Africa" fantasia, an "Allegro Appassionata," and a "Valse Caprice," oddly entitled "Wedding Cake" (perhaps because of its delicate rhythmic "frosting")—were all unmistakably French. They sounded amazingly juvenile for a composer who has passed his seventy-first birthday; indeed, Saint-Saëns is still what he was called twelve years ago, *ce jeune maître*. The sparkle of youth is in his playing, as well as in his eyes and his music. His playing perhaps resembles that of Mr. Joseffy more than that of any other pianist known here; it has the same

dainty charm, clearness, and elegance without being in the least cold; the same subtle accents and tints; and when he plays his own pieces there is the super-added charm of being in direct communion with one of the greatest masters of our time.

M. Saint-Saëns will give an organ recital in Brooklyn on December 3, either at the Plymouth Church or the Baptist Temple. He was organist for nearly twenty years at the Madeleine in Paris. While in that position he composed an immense amount of music for the organ, especially for the church festivals, but all these compositions, which are said to include some of his most inspired work, lie buried in the library of the Madeleine. They belong to the church, according to the organist's contract, and will be published only after Saint-Saëns's death.

Modern Music and Musicians. By R. A. Streatfeild. New York: The Macmillan Co. \$2.75.

Mr. Streatfeild uses the word "modern" in a very comprehensive sense, inasmuch as his book begins with chapters on Palestrina, who was born in 1514, and Bach and Handel, who were born in 1685. He was led to undertake the book, he says, by the hope of being able to trace, in a study of the works of the great composers, the growth of the idea of a poetic basis in music, and he hopes that this will tempt some one else to write a complete history of programme music. He believes that music is not a mere science, such as the advocates of absolute music would have it, but that it is a means of expressing human emotion as definite and incisive as any of its sister arts. After this preamble one is rather surprised to find so little about programme music in the volume. That, however, we do not note as a fault. As a matter of fact the subject of programme music has received, in recent years, rather more than its share of attention.

There is a good deal that is insular in Mr. Streatfeild. To him Handel is the Shakespeare of music, and he has the usual English aversion to deep musical emotion apart from the religious sphere. One reads with mingled amusement and weariness that "over all Chopin's music lies the deadly trail of disease," and that Tchaikovsky "sinks to morbid pessimism, he rises to hysteria." In his remarks on two English idols—Purcell and Mendelssohn—our author shows, on the other hand, a surprising degree of emancipation from insular prejudices. He often feels sorry "for earnest students who, after reading the glowing eulogies showered upon Purcell by historians, turn to his works and find in them so much that is puerile, ineffective, and absurd that they give up the composer and his eulogists, bag and baggage, as a set of humbugs." Purcell's strong and weak points are judiciously balanced by the writer. He has the courage not only to say of Mendelssohn's "St. Paul" that the music is "often arid and expressionless, and not unfrequently suggests the laborious scholar, rather than the inspired musician"; but that dramatic oratorio, in spite of "Elijah," remains "a hybrid and unsatisfactory form of art."

Other opinions of Mr. Streatfeild that will make some nod assent, others dissent

violently, are that "Gluck's achievements as a reformer have been overestimated"; that "Wagner was great, not because of his theories, but in spite of them"; that at the present moment "Italy is the only country in which opera is a living force." Concerning this last sentiment may we gently suggest to the author that there is more real genius in the "Shamus O'Brien" of the Irishman, Charles Villiers Stanford, than in all the combined operas of Mascagni, Leoncavallo, and Puccini, none of whom reaches even to the knees of Verdi, Italy's last great master.

Puccini's opera, "Madama Butterfly," will have its first New York performance, in English, at the Garden Theatre on November 12.

A monumental life of Chopin is being prepared by Ferdinand Hoesick. The first volume, of 881 pages, is out in Polish, and is being translated into German, French, and English. It is said to contain not only new and interesting details, but corrections of numerous errors in previous books on Chopin.

Wilhelm Tappert has brought out a new edition of his "Erking" brochure. It contains a list of settings of Goethe's great ballad by seventy different composers, together with critical comments (Berlin: Albert Stahl).

Art.

TREASURES FROM THE ARTEMISIUM AT EPHEBUS.

LONDON, October 31.

Archæologists who are looking forward to a complete account of the latest finds in the Artemisium of Ephesus during last winter will have to wait until spring, when D. G. Hogarth's official work on the temple is published by the British Museum. The objects themselves are all destined for the museum at Constantinople, where, unfortunately, only a limited number of scholars will find them within reach.

Mr. Hogarth has been fortunate enough to discover one of the most valuable pockets of antiquarian treasure which have yet come to light, whether artistic, archæological, or contributory to the history of religion. Although much has been unearthed of various dates in the great temple, the present treasure includes approximately 4,000 objects, which must be attributed to dates roughly comprised between 700 B. C. and 600 B. C.; that is, they antedate the time of Cræsus. The only considerable exception to this limit of antiquity must be made in the case of the coins, many of which run to remoter periods, and, probably, antedate any known existing coins. Some must certainly be attributed to the eighth century before Christ. Among them are mere lumps of metal without any impression or mark of stamp. Others, very archaic, are imprinted with four characters, Digamma, Alpha, Lambda, Digamma—which have been interpreted as the first four letters of the name of King Alyates, supposing that his name had been spelled with two digammas as the first and fourth letters, which subsequently dropped out. But as there is no other evidence that his name

was thus spelled, the matter must remain pure conjecture.

The Artemisium excavated last year is not the Temple of Diana of Ephesus, which was the scene of the exploits of Demetrius and the silversmiths. That was a much later temple, the seat of a more decadent form of worship. The most interesting, if intrinsically less valuable, portion of the find, to many will be the rude terracotta figures of Artemis, of which there are several examples. She is nowhere represented as the luxuriant many-breasted figure of later date. Her form is straight, stiff, but not ungainly. Sometimes, and these figures are the most archaic of all, she has an infant in her arms in an attitude strongly recalling many representations of the Madonna and Child. In this connection it is worth while to recall that probably the worship of motherhood was a legacy transmitted from prehistoric times to Christianity in this very city of Ephesus. It was at Ephesus that the Council of the Church was held which condemned Nestorius and raised the worship of the mother of Christ into a Catholic rite. It was said that the passionate devotion of the populace to the sanctity of the Virgin largely contributed to the decision of the council.

Other figures of Artemis show her accompanied by two images, or one, of her sacred bird, the hawk. Sometimes, as in an exquisite tablet, she is shown winged, with a lion suspended by the tail in each hand. The hawk is probably the most ancient and most frequent of her emblems, appearing in the most curious disguises. There is one extremely rude, squat figure, absolutely novel, painted black, with yellow spots, only recognizable as a bird or hawk by its eyes and hooked beak. In others, minutely finished in silver or gold, the hawk comes to resemble so nearly an owl or an eagle that only its association with Artemis enables one to recognize it.

When on exhibition, the objects will probably be classified by their materials: jewels and crystals, amber and beads, bone and ivory, bronzes, articles made with gold, silver, and electrum. This latter compound raises an interesting question as to how it came to be used. It might well be an intentional amalgam of gold and silver, but for various reasons it seems probable that the Ionians found it in a raw state and so used it. Pliny speaks of a natural mixture of gold and silver being found in the Hierius sands. Another circumstance which confirms this view is that the objects made of electrum show all variations of the compound, but with the gold largely predominating. It is improbable that this would have been the case if any artificial alloys of the metals had been used, which must necessarily have conformed to some standards as a mere affair of habit.

But as a matter of description it is perhaps simpler to adopt another classification in accordance with the purpose of the offerings or their character rather than with their material or value. The primary interest attaches, as mentioned above, to the representations of Artemis herself, of which there are surprisingly few, and those of a character which indicate an elevated religious feeling. Her attributes and accompanying emblems are far more common. There are innumerable

able hawks in gold, silver, bronze, stamped in relief, or carved in the round. Almost more frequent still is her bee—the *melissa*—which appears again symbolically everywhere. An elaborately worked bee is one of the most beautiful of the gold jewels. The bee's body and wings are the basis, too, of many stereotyped patterns and ornaments.

Besides these especial emblems, there are various animals which by their style and shape connect Ionian art with the civilizations of which it was the common meeting-place. There are Egyptian scarabs and sphinxes; Persian sphinxes; a lion passant with a strong Assyrian character. Harpies, too, are frequent. There is a peculiar couching boar; also a rough sketch of a calf, which strongly recalls in shape some of the latest finds made by Mr. Bosanquet at Sparta. Add some frogs and sheep, but curiously enough no cows or horses.

Next to the goddess and her emblems come in the range of interest, though hardly in artistic merit, the various *ex voto* offerings. It takes one with a jump from Ephesus to Lourdes, over 2,500 years, to see a pathetic pair of hands and arms beaten in thin gold and joined above so that they resemble a delicate pair of sugar tongs. Yet this represents, perhaps, a cure of leprosy or some curious wound on both arms. There are thin plates of gold just distinguishable as eyes or ears; legs, feet, and hands in plenty.

Among objects once in use the largest is a three-wicked marble lamp. There are bronze bowls, knives, ivory knife handles, musical pipes, and some large cowries, which may have been currency or mere necklace ornaments like beads. There is a large and important set of *astragali*, the earliest form of dice. They are mostly carved in bone and ivory, and are of all shapes, from mere knucklebones to elaborately carved ivories, studded with gold and amber, resembling nothing so much as two draughts joined at one edge. The *astragali*, with differing sides, were thrown by the petitioner to the goddess in order to ascertain by their fall whether his prayer would be granted or not. In connection with the *astragali* there are some mysterious circular rock crystal disks with fluted edges, which may be of this character, except that they were always found singly, and no one could fit another exactly. Another explanation may be that they were worn as buttons on some ceremonial dress, but their purpose cannot as yet be exactly determined.

The kernel of the treasure is, of course, the abundant stock of personal ornaments mostly made of the precious metals, but some also of bronze and lead. There are more than a thousand of these made of gold and electrum alone, with a small quantity of silver. They range from heavy bracelets, chains, *fibula*, and earrings down to the most minute trinkets. There is a wonderful collection of repoussé gold plates, evidently intended to be sewn on dress materials. Some patterns which are of the purest design and highest artistic value are multiplied to serve the purpose of embroidery on a very rich dress. On the repoussé work and especially on the *fibula* is repeated the *melissa* pattern, and also, though not so frequently, that of the *labrys*, or double axe, which played so large

a part in the Cretan discoveries. The *fibulae* and earrings predominate among the gold jewels, and next to them come a large number of hair ornaments, some obviously hairpins, but others of a more mysterious shape. Probably no woman could now compass their use, but their appearance suggests that a single lock was placed within them and given a double twist, to keep it apart from the rest of the hair.

The hypothesis as to the vast number of precious ornaments is that they were devoted by pious worshippers to the personal use of the goddess. They were found segregated from the other and more bulky part of the treasure in the very centre of the temple site, buried within a small rectangular space, which was situated at the crossing place of the two long halls forming the building. Evidently this must have been the base of the statue of the goddess herself, and this rather naïve devotion of material wealth to her tends to confirm the early date of the find and the value of the objects.

The presence of the large number of coins and the tendency of some of the inscriptions, which are, however, at present conjectural, lead one also to suppose that the temple at this early date or perhaps later served some secular purpose as a treasury or even as a mint; but whether this be so or not, we must wait for Mr. Hogarth's book to explain to us. G. B. D.

Frits Thaulow, whose death at Volendam, Holland, was announced this week, was the first Norwegian painter of modern times to receive international recognition. He was born in 1847 at Christiania, studied with Soerensen at Copenhagen, and with Gude at Carlsruhe, but his painting was chiefly influenced by the example of the French impressionists, whose mode of vision, if not technical method, he fully adopted. In the representation of snow scenes and of frozen rivers he was remarkable. For more than twenty years past he had been settled at Paris, making occasional visits to this country, where in particular he painted some pictures of the steel foundries at Pittsburgh. In his later years, owing to over-production, the pressure of dealers, and removal from his home scenes, his painting lost much of its vitality and charm. Honors and prizes of all sorts were showered upon him; and while by no means a great artist, he is likely to be remembered as a cunning practitioner in landscape.

The Watts Memorial Gallery has recently been opened at the artist's country home at Limnerslease. Among the important works to be seen there are "Progress," "Paolo and Francesca," "Godiva," "The Slumber of the Ages," "Green Summer," "Diana and Endymion," and portraits of Walter Crane, Joachim, Swinburne, Meredith, Mrs. Langtry, and others. There are also many drawings and studies; and when the sculpture gallery is completed, the models of the artist's statue "Physical Energy," his statue of Tennyson at Lincoln, and the tomb of the Bishop of Lichfield will be placed on view.

A new portrait, presumably of Charlotte Brontë, acquired by the National Portrait Gallery of London, has provoked a sharp controversy. This portrait was attribut-

ed to Paul Heger, who was acquainted with Miss Brontë about 1844 in Brussels. This attribution has now been upset by a letter from Heger's son, who says that neither he nor his father was either painter or draughtsman. Nor can the dates involved be made to fit by five or six years.

The exhibition of works of art of the eighteenth century at the Bibliothèque Nationale comprises proofs of works by the finest English engravers of the latter half of the eighteenth century, hanging side by side with examples of French aquatint, stipple, and rare engravings printed in color. As lack of space made it impossible to exhibit oil paintings to show the sources of the inspiration of the engravers, a collection of miniatures and gouaches is exhibited for the same purpose. To these are added medals and "biscuits de Sèvres," a collection containing more than a thousand examples.

M. S. Prichard writes correcting an inadvertence in the editorial, "Museum Extension in Schools," in our issue of November 1. He was never "acting-director" of the Boston Museum of Fine Arts, but had been assistant director, and was bursar at the time of his resignation to take the secretaryship of the Committee on the Utilization of the Museum by the Schools and Colleges.

Science.

Theory of the Algebraic Functions of a Complex Variable. By J. C. Fields. Berlin: Mayer & Müller.

This is a serious and daring essay in one of the most difficult fields of modern mathematics. While the subject is primarily analytic or algebraic, its investigation has been mainly carried on since the great memoirs of Puiseux in 1854 and of Riemann in 1857 by the powerful assistance of geometric considerations. Indeed, geometric notions have dominated to such an extent in the leading developments that the student scarcely thinks of the subject in other terms; and the chief treatises, such as those of Neumann and of Appell and Goursat, are little else than expositions of the doctrine in terms of the theory of Riemann surfaces. All the advantages of that fertile and illuminating method will be missed by the readers of Professor Fields's volume, for the method is purely algebraic. This mode of treatment is undoubtedly legitimate, and may have certain purely logical advantages of its own, but it will hardly win the approval of that larger mathematical constituency that Klein and Poincaré have called intuitionists. At all events, the author should not, we think, have failed to indicate explicitly the connections of his own exposition with the masterful geometric treatises of his predecessors.

Not only is Professor Fields's method purely algebraic, but it aims at perfect generality; that is, it undertakes to give a theory for any algebraic equation whatever, reducible or irreducible, no matter how complicated the singularities and no matter what its character at infinity. Here surely is an impressive programme, and

at many points it is well performed. The summit of the steep ascent is reached in chapter xii., where we encounter the commanding "complementary theorem": the number of arbitrary constants involved in the expression of the most general rational function constructed on a given basis of coincidences, added to half the sum of the orders of the coincidences explicitly required by the basis, is equal to the like number constructed with reference to the complementary basis. From the eminence here attained one is permitted to behold readily a variety of classic propositions that have hitherto been found only by difficult and circuitous paths. In this service is found, we think, the chief claim of the work to distinction; for the propositions thus disclosed to view are such as the Riemann-Roch theorem, the reciprocity theorem of Brill and Nöther, the so-called gap theorem of Weierstrass, and the related theorem of Hurwitz.

The volume contains an excellent table of contents, but no index. The page is a delight to the eye. In the interest, however, of accentuation and convenience, important theorems should have been set apart and italicised.

While opinions may differ as to the need of more such books, it must be admitted that the "Manual of Anatomy" (vol. 1: Osteology; Upper Limb; Lower Limb) prepared by Prof. A. M. Buchanan of Anderson's College, Glasgow (Chicago: W. T. Keener & Co.), is an eminently practical book, convenient in form and beautifully printed. The illustrations are numerous and for the most part clear and helpful, the judicious use of color playing no inconsiderable part. The text is clear and concise, with constant attention to the demands of the dissecting room and the training of the surgeon, the rational treatment of topographical matters being particularly commendable. On the other hand it is to be regretted that varieties and abnormalities are not noted more fully, and that the more important questions of comparative anatomy are not brought to the notice of the student. The index is liberal, but contains no mention of the ligament of Poupert.

For the use of schools, Little, Brown & Co. have published an "Atlas of Physiology and Anatomy of the Human Body," made up of nine figures, each consisting of a number of leaves, or layers, to show the parts as they appear when the region or organ is dissected. A very brief descriptive text has been supplied by Dr. A. M. Amadon. Such a book may be helpful to students when a manikin or good models are not accessible, but it must be used cautiously, as some of the figures are difficult to understand, or are actually wrong, as, for example, the relation of the liver to the duodenum, on the fifth leaf of the first plate. The appearance of the skeleton on the third leaf is very unsatisfactory, and the textual statement (p. 31) that the vagus supplies "the heart with motion" is bad for the beginner, even though his teacher be a "neurogenist."

With the title "Tuberculosis, its Origin and Extinction" (The Macmillan Co.), Dr. W. Pickett Turner has printed an enlargement of a lecture given by him on this sub-

ject. His theories are novel, but the evidence presented is far too fragmentary and inconclusive to appeal very strongly to those who are familiar with the questions involved. Dr. Turner's contention is briefly that the extinction of tuberculosis is to be brought about by actinism, *i. e.*, by the action of the ultra-violet rays which are supposed to penetrate the body and affect the bacteria either directly or indirectly.

Dr. Dudley A. Sargent of the Harvard gymnasium has given much valuable information upon physical training in his book of that title (Boston: Ginn & Co.). Reasons for exercise are many and varied, and the value of almost every kind is set forth clearly. There is much of interest in the volume.

"Farm Animals," by E. V. Wilcox (Doubleday, Page & Co.), is a practical book for general farm use, judiciously arranged for the largest helpfulness to the largest number of readers. It does not furnish essays on any one animal, nor does it give anything like complete information on any single topic; that is, it will not make a good dairyman or a good shepherd, nor will it cover all the needs of a stableman. It is rather an excellent compend of general information about the horse, the mule, beef cattle, dairy cows, pigs, sheep, goats, and poultry. The chapter on dairy stock is the best in the book, but every chapter is good. The illustrations have the advantage of being well related to the subject. Every part of the discussion is brought down to date, and nothing is admitted which has not passed scrutiny at our agricultural experiment stations.

A new feature of the New York Botanical Garden will be an economic patch, devoted to specimens of growing plants which are of practical use to man. A great many economic plants have already been brought together in the conservatories, but these are, naturally, from warm or tropical regions, and the new collection is intended to show such as are hardy in this latitude. Planting will be begun very soon, and will be continued next spring. Following the classification of the plant products in the economic museum, the groups of the species grown here will consist of food, drug, and fibre plants, and those yielding miscellaneous products used in arts, sciences, and industries.

The chemical industry in Germany is the principal subject treated in *Petermann's Mitteilungen*, number nine. The facts are taken from the returns of the census of 1895, the main purpose of the author, Dr. W. Dall, being to show the geographical distribution of the industry throughout the Empire. Some details are given of a few of the works, and from the accompanying map we learn that the largest number, 12,000 hands, are employed at Ludwigshafen, in Baden, where are the greatest aniline and soda factories in the world, and where artificial indigo was first put upon the market. N. A. Busch describes a journey through the northern Caucasus region for the purpose of studying its botany, especially that of the Alpenzones.

Sir David Gill, who has been His Majesty's astronomer at the Cape of Good Hope since 1879, has offered his resignation, to take effect next February.

Finance.

SNATCHING CONTROL OF RAILWAYS.

The ousting of Stuyvesant Fish from the presidency of the Illinois Central Railway, this week, by vote of his own directors acting in the interest of E. H. Harriman, has again directed attention to the effort of powerful financiers to increase, by hook or crook, the number of railways under their personal control. This movement reached remarkable proportions at the time of the excited financial "boom" at the opening of 1901. During two or three successive months, such announcements were made as the purchase of the \$101,000,000 Southern Pacific Railway, by the Union Pacific; of the \$98,000,000 Chicago, Burlington, & Quincy, by the Northern Pacific and the Great Northern; and of the \$27,000,000 New Jersey Central, by the Reading. All of these purchases, some of them made in open market at extravagant prices, were paid for with proceeds of bonds, issued by the purchasing companies and sold to the eager investing public. The "game of grab," as it was called even then, culminated in the famous fight between Union Pacific and Great Northern for control of the Northern Pacific's \$80,000,000 stock. The movement came to an end when the markets broke down in May, 1901, under the load of new securities.

Efforts of the same sort were renewed when the Stock Exchange got its breath again. Shares of half a dozen great railways were bid up to unheard-of figures by capitalists trying to get control in open market. In 1902 a band of stock-jobbing adventurers started in to buy up, with borrowed money, shares of some of the few independent railways. These people thus secured possession of the \$10,000,000 Chicago, Indianapolis, and Louisville, and of the \$52,000,000 Louisville and Nashville. They could not have kept their purchase; but their object was to force banking interests, connected with rival railways, to take over the stock at a still higher figure, rather than risk demoralizing competition in rates. The blackmailed bankers meekly paid the price, and issued bonds of their own railway companies to raise the money.

To this kind of performance the financial collapse of 1903—the "rich men's panic"—put an end; and it was two years before the talk of "buying up other railways" was heard again in Wall Street. But with the country's recent great prosperity, and the revival of daring speculation, on the part both of the public and of the railway millionaires, the attempt to capture independent railways was resumed. The achievement was not so easy as in 1902, however, and for several reasons. Resources of capital had been so overstrained by heavy trade and extensive speculation that new bonds could not find a ready market; such operations as those of 1901 were therefore too dangerous. Again, the Wall Street millionaires who arranged the "railway deals" of 1901 had the surplus of life insurance companies placed at their disposal, to guarantee the undertakings. This was no longer possible after the Armstrong investigation. Finally, owners of the independent roads had in the interim fortified their own position, and with many of

them, control could not be bought at any price.

The Illinois Central episode shows what expedients were at the last adopted in the "game of grab." E. H. Harriman of the Union Pacific wanted the road—partly for a southern outlet from his own lines; partly, so Wall Street inferred, because Stuyvesant Fish had, as chairman of the Mutual Life trustees' investigating committee, pushed his inquiries uncomfortably close to certain large capitalists on the board. His investigation was blocked by President Peabody of the Mutual, but the incident was not forgotten. Harriman was unable to buy up Illinois Central stock; it was too securely lodged with real investors. After attempting unsuccessfully to obtain control without purchase—through organizing a "holding company" in which Illinois Central shareholders were invited to place their stock—Harriman secretly organized a revolt against Mr. Fish in his own board of directors.

By what means he prevailed, it is not easy to say; but on Wednesday of this week, at a "snap" meeting of the board, called when one of Mr. Fish's supporters was ill and another likely to be kept away by political engagements, the directors voted to unseat Mr. Fish in favor of a tool of Harriman. Among the directors working and voting against Mr. Fish was Charles A. Peabody, president of the Mutual Life, who had refused to put Mr. Fish's inquiries to the trustees, who is a director in Harriman's Union Pacific Railway, and who has lately won distinction for his letter threatening those agents of his insurance company who did not support the administration ticket.

This particular "railway capture" has been marked, in a quite unusual degree, by intrigue and treachery. It also provides an instance where one of the few remaining independent railways has been seized without the annoying preliminary of buying it. The incident is in this respect suggestive. The orgie of railway speculation in the seventies came to a climax by very much such methods; but they marked its approaching end.

NOTABLE BOOKS AND GIFT BOOKLETS

Putting the Most Into Life

By Booker T. Washington
Author of "Up From Slavery." 12mo. cloth, 75c., limp leather, \$1.50.
(Postage 8 cents.)

A series of practical addresses before the students of Tuskegee Institute, well worth printing in permanent form for readers generally. The author's ability to draw forceful truths needs no comment.

The Spirit of the Orient

By George William Knox
Special type designs, 30 illustrations from photographs. 12mo. cloth, \$1.50 net. Postage 15 cents.

No more important problem is now engrossing the attention of the civilized world than this of the awakening Orient. The present is one of the clearest, sanest, and most enlightening studies of the subject that has yet appeared. India, China, and Japan—their national traits and attitude to the world about them—are explained from within and logically.

Every Man a King or, Might in Mind Mastery

By Orison Swett Marden
Author of "Pushing to the Front." 12mo. cloth, \$1.00.
(Postage 10 cents.)

The latest of Dr. Marden's popular books is a powerful plea for mental control, the mastery of self, and the training of latent forces to the highest ends.

THE CHISWICK SERIES

SIX NEW VOLUMES. The finest line of dainty gift books obtainable at their price. Each book contains distinctive features of workmanship in the way of special type or illustrations. 12mo. cloth each 50c net. (Postage 5 cents.)

The Beauty of Kindness. By J. R. Miller. A popular ethical booklet, fully illustrated by Harold Copping.

Friendship. By Henry D. Thoreau. One of his most delightful essays. Beautifully printed.

Germelshausen. Translated from the German of Friedrich Gerstacker, by Clara M. Lathrop. The quaint tale of a buried German village which came to life again one day in each hundred years. Frontispiece by E. Boyd Smith.

Longfellow Calendar. By Anna H. Smith. Appropriate quotations from this "household poet" adapted to each day in the year. Special type designs.

Saint Francis of Assisi. By Oscar Kuhns. A delightful study of the life of this famous church saint. Illustrated from rare prints.

The Man Without a Country. By Edward Everett Hale. A classic of patriotism which every one who has not read should read. Frontispiece by Clyde De Land.

THE NATION

an independent weekly journal, was established in 1865. Its contributors include the most prominent names in literature, science, and art, both in this country and abroad. It is emphatically found in the homes of people of culture and refinement. No intelligent American, desirous of keeping abreast of the best political and literary thought of the day, can afford to be without it. Subscription price, \$3.00 a year, postpaid.

Address
PUBLISHER OF THE NATION,
208 Broadway, New York City.

CHAUCER A Commentary on the Prolog and Six Tales. Rich in new material. Price \$2.00. Circular on application. Address, H. B. Hinckley, 54 Prospect St., Northampton, Mass.

English Monumental Brasses
The valuable collection of Brass Rubbings of the late J. E. LUNN, B.D., for disposal. It consists of upwards of 1,800 rubbings. Write E. A. LUNN, Bookley, Worcester, England.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 16, 1906.

The Week.

Our escape from Hearst does not free us from the duty of weighing rightly the forces which alone made him formidable. Recognition of this is general. Major Henry Higginson of Boston observes that in Massachusetts, too, corporations and the rich at ease in Zion had their fright. On this, Major Higginson remarks with point: "It is the old story about a larger and wider philosophy and religion which have got to come to the front and choke such nonsense as Hearst and his followers put out." Governor-elect Hughes gives gratifying proof that he is alert to the demands of the hour. Frankly stating that many who voted for his opponent did so in an intense desire to "end abuses," Mr. Hughes asks their support in the task of "squaring the administration of the Government with the interest of the people." But what can he or any man do? Well, Mr. Hughes can apply with great advantage his rare business talent to the business of the State. He can introduce method, economy, efficiency, where they are sorely lacking. Useless commissions, the surplusage of employees, dawdlers fattening on the treasury, he can cut away. The Railroad Commission he can make a really effective instrument to bring railway corporations to their senses and the people to their rights. Above and beyond all this, however, something must be done to satisfy the deep craving for a more perfect establishment of justice in our public affairs. It is the rankling sense of injustice somewhere that lends to the Hearst movement its real significance. Wild impossibilities will, no doubt, be demanded. Hearst promised them freely; Hughes will be asked to execute them. But the State can guard no man against the consequences of idleness and vice. There are economic laws, and especially moral laws, beyond reversal or even tinkering by the Legislature. Yet there is a root of dissatisfaction and suspicion which can be torn out by an upright Governor and an honest Legislature. It is the special privilege, the bought favor, the sinister influence, the corrupt alliance which have so often made Albany execrated. And it is to the removal of this prevalent feeling that wealth and political power can freely work their will at the seat of government that Mr. Hughes should bend his best efforts.

President James J. Hill's address before the Merchants Club of Chicago on

Saturday evening, a re-statement of the case for reciprocity or, if possible, free trade with Canada, is marked by a powerful grasp of fact and a prophetic sense of inevitable business developments. No one can question his mastery of the commercial problems of this continent. The demonstration of his knowledge lies in his past achievements in the Northwest; and his present large projects across the border attest his faith in the speedy coming there of a vast production and immense markets. With a fine sweep of business imagination, Mr. Hill showed how nature had indicated a unified growth of agriculture and industry and transportation on this continent. Stupid national policies for a time hinder progress. But a mighty development in western Canada is impending, whether laws favor it or hamper it. The question for Americans is simply whether they mean to get into natural relations with it, and profit by it, or to keep up the foolish tradition of isolation and antagonism. The same idea is urged by that veteran champion of close political and commercial relations between the United States and Canada, Prof. Goldwin Smith: "Reciprocity is the voice of nature, and her dictate to all whom she has made partners in her bounty on this continent." Thus the wide-awake business man agrees with the philosophical writer and publicist; even if a protective tariff attempts to expel nature with a fork, she is bound to come back. Politically, Mr. Hill's speech serves to point afresh the lost opportunity of the Democrats in the recent campaign. They threw away a winning issue of statesmen to chase after the false and losing issues raised by demagogues. But it is not yet too late to move upon Congress and the President. Mr. Roosevelt would doubtless sympathize with appeals from New England and the Northwest. Secretary Root would be more than favorably to reasonable proposals of reciprocity.

President Roosevelt has decided upon a punishment of the colored soldiers of the Twenty-fifth Infantry which is without precedent in the annals of the army. Because some of their number, under great provocation, "shot up" the town of Brownsville, Texas, killing one man and seriously wounding a policeman, three companies of this brave regiment are to be dishonorably discharged by executive order, the innocent with the guilty. The special reason for this action is that, when threatened with this fate, the soldiers still refused to tell who were the guilty ones. That many thus summarily treated are innocent of any wrongdoing, or even of knowledge of the

wrongdoers, is admitted by the Southern-born officer who advocated this drastic punishment. The seriousness of the original offence we cannot and would not mitigate. It was a gross breach of discipline—not unheard of, however; for the Ninth Cavalry had a similar fracas in Texas in 1899; and the white soldiers of the Fourth Cavalry, when stationed at Fort Walla Walla, Washington, formed a mob, stormed the town jail, and lynched, on April 22, 1891, a civilian who had killed one of their comrades. Yet no companies of the Fourth Cavalry were mustered out. Their colonel, Charles E. Compton, was tried for neglect of duty, found guilty, and sentenced to suspension. This is the correct military procedure. In every foreign service the officers are held accountable for the conduct of their men. Mr. Roosevelt should first have asked the white officers, How did your men get out of hand? How was it that they obtained their arms and ammunition? Where were the officer of the day and the officer of the guard? Knowing the provocation, where were your precautions? If these officers had failed to give satisfactory reasons, then they would have confessed their lack of fitness for command. But even if it was necessary to punish the troops for failing to "peach" on one another, the regiment might have been stationed for a probationary period in Alaska, just as a rowdy battalion of the British Guards was sent to Gibraltar. Many of the men, and particularly the non-commissioned officers, have served for upwards of twenty years with honor, on the frontier, in the Spanish war, and the Philippine insurrection, with the promise that they would be retired on a pension after thirty years' service. Now they are turned out to shift for themselves. Thus the President's action constitutes a grave breach of contract, which has been almost unanimously condemned by the press.

The part that luck plays in men's lives was never more clearly exemplified than in the career of the late Major-Gen. William R. Shafter. An excellent regimental officer in the Civil War, he was content at its close to apply for a lieutenant's commission in the regular army. By the error of a clerk, he was appointed a lieutenant-colonel, thanks to which he became in 1879 colonel of the First Infantry. In this position he displayed every necessary quality. For years Shafter's First Infantry was unequalled in the service for discipline and efficiency. On the outbreak of the war with Spain, fate again gave Gen. Shafter an unexpected promotion. The

original intention of the McKinley Administration was to make a mere reconnaissance about Santiago, with perhaps five thousand men in all. For the command of this expedition, Gen. Miles named Gen. Shafter as an excellent brigadier. Subsequently, as the Santiago expedition became of dominant importance, Gen. Shafter was forced into a part for which nature had never intended him. How he bore the responsibility is well known. That the expedition did not turn out a complete failure was not his fault. But with Secretary Alger's backing, it was easy for him to say that he had in one hundred and thirteen days done what President McKinley had asked—take Santiago and end the war. Fortunately, however, the sense of humor of the American people prevented any such hero-worship of Shafter as later marked the career of Admiral Dewey. Neither President McKinley nor Secretary Alger could make a great man or great soldier out of Gen. Shafter. With admirable sanity, the public estimated him at his precise worth, and felt that the major-generalcy which Congress subsequently bestowed upon him was sufficient reward for what were at best painstaking and honest services.

From fighting bosses, Secretary Bonaparte has gone through the stages of being something of a Maryland boss himself, and finally of coming to believe that a party boss would be a pretty good thing if only he got his office by election, not bribery. Mr. Bonaparte just "throws out the idea" for others to work up. Most such ideas are just as well left "thrown out"—upon the rubbish heap. The notion seems to be that a political party is capable of one supreme act of virtue and wisdom in choosing a boss, but that thereafter it must confess itself unable to pick out intelligently so much as a candidate for sheriff. In effect, this is much like calling upon a man to exercise his reason long enough to choose an infallible guide, and then never to trust reason again. But the theoretical objections to Mr. Bonaparte's plan are no stronger than the practical. Bosses cannot, in fact, be made in the way he suggests, nor will men cease trying to prove their powers in the rough and tumble of party contests. Instead of producing harmony, it would only multiply strife to have an elective boss parcelling out all the offices. The Secretary's scheme, which is, so far as outlined, pretty vague and dreamy, falls singularly ill with the greatly heightened power and importance of party primaries, under the direct system. Just when voters are having more to do with nominations than ever, Mr. Bonaparte tells them that they are really not equal to that job at all, and should call upon a Hercules in the form of a boss to relieve them of it.

A cynic might find a certain amusement in the suddenness with which this city annually becomes artistic. After a six months' torpor there is an explosion. The dealers wake up on Fifth Avenue, the artists' exhibitions begin, the clubs start their periodical shows, and this year, as if the fixtures were not enough, the Metropolitan Museum founds a department of Egyptian antiquities, and the National Arts Club formally opens commodious new quarters, especially dedicated to the cause of industrial art. Surely, if art languishes, it is not for the lack of delicate, or at least expensive, attentions. It is very evident that on the commercial side—always an important one—art depends on the handful of people who can and do spend lavishly upon the furnishing of their houses or upon collecting in the stricter sense. Doing something for art means, at bottom, attracting the dollars of this class. Its taste regulates the demand which the artist must meet, or lack clients. If art is at a low ebb among us, it is because such patrons usually have no personal taste of any sort. Their barbaric love of simple acquisition is directed by the flattery of dealers and furnishers. The result is that the mansions of this country present an aspect that recalls the imperial days of Rome. There is an indiscriminate mixture of the best and the worst. Beside the Renaissance bronze stands the modern forgery. In the same room with the priceless carpets of old Persia are base imitations of ancient tapestries. Throughout such houses or collections the story is the same; and frequently the intrinsically poor or fraudulent object has been paid for at the highest price, and is correspondingly valued by the infatuate owner. Anything like personal quality is of the rarest. There prevails a frightful monotony of expensiveness—the same rugs, the same porcelains, the same portraits by the same fashionable painters. Everywhere one witnesses merely the focussing of a little group of commercial interests upon a pile of new money. There is every reason to believe that the collectors of Roman times and of the Renaissance were in a humbler attitude towards art. They sought the acquaintance of artists, and trained their taste by discourse with the competent. Their pride was in the beauty of the work they possessed, not in the price they had paid for it.

The bitter cry of the ill-paid college professor is filling the land. In report after report our university presidents—Schurman of Cornell and Butler of Columbia have just spoken—have pictured the unhappy lot of the occupants of professorial chairs. These teachers and investigators are compelled to see the bills of prosperity go on mounting while salaries remain stationary. From the point

of view of organized labor, the cause of the trouble is as clear as the remedy is simple. College professors have no unions. They neither keep down the number of apprentices, nor sbut out "scab" competitors. We sometimes hear of college students going on strike—for this is what a "student rebellion" really is—but the hard-worked professors on small wages never nail up the recitation rooms or smash the windows of the college treasurer. While the Erie Railway employees are vigorously demanding more pay, and threatening to tie up the road, the non-unionized professors are being driven to such desperate expedients as marrying rich wives. With a book agent the nearest thing they know to a walking delegate, they suffer on in helpless patience. They cannot dig, but their presidents are not ashamed to beg for them.

The founding of the *Atlantic Monthly*, with James Russell Lowell as editor, was a notable event in American letters. In celebration of its fiftieth year in 1907 the magazine promises a series of papers by living ex-editors, William Dean Howells, Thomas Bailey Aldrich, and Walter H. Page. To one long familiar with the *Atlantic* perhaps the most striking thing is its consistency of character; the motto of its jubilee number might well be *qualis ab incepto*. At times it has leaned a little to that ultra refinement known to mockers as Cambridge weak tea. Again, it has stiffened up and sought for strength in too hasty a reflection of the problems of the day. But in general it has been remarkably successful in combining refinement and strength—a difficult ideal. It is the ablest of our monthlies, standing on a level above even the most attractive of the New York illustrated magazines, whose aim is to flatter the taste of *l'homme moyen sensuel*. Taking all things into consideration, we are inclined to regard it as the best of the general magazines published in the English language to-day. And we regret that its home is not in New York. The influence of such a magazine in the centre of our publishing business would do much to counteract the tone of flashy commercialism that is the mark of New York in literature.

Various heroic clergymen, in this city and elsewhere, are resorting to extreme measures to induce people to come and listen to them preach. Meanwhile, the sermon-problem is being attacked by others in a different way. Arthur C. Benson, himself the son of an Archbishop of Canterbury, has an article in the November *National Review*, in which he argues, not for increasing the supply of hearers, but for diminishing the supply of sermons. One a Sunday is all, he thinks, that weak human nature ought

to be expected to endure. Moreover, he would have those of the clergy who cannot, even in the considerate judgment of mothers in Israel, preach in an edifying or even tolerable manner, frankly give over the attempt, and read a discourse by a great preacher. Mr. Benson writes in full and charitable perception of the enormous difficulty of preaching acceptably to the same congregation twice a Sunday, year in and year out. What is really demanded of a preacher, if he is to minister successfully to the same flock for a decade or two, is that he should be an orator, a literary man, a saint, and a man of the world, all rolled into one. That such a combination is rarely found, is not surprising. By way of comfort to the minor prophets, Mr. Benson declares:

If I had to take my choice between hearing, say, Chrysostom, or Bossuet, or Newman, twice a week for the rest of my life, and never hearing them at all, I should not hesitate to choose the latter alternative.

Weariness with sermons is common, and apparently deepening, but people hear a born preacher as gladly as ever. Truth made living and instant through a personality is still the greatest source of inspiration in the world—in church or out. When the rare genius is found who can stand up before the great congregation and catch up their vague aspirations after a better life into the soaring utterance of a Robertson or a Liddon, a Beecher or a Brooks—to name only the dead—it is a cruel pity that the church has not some division of labor by which such men could be set aside exclusively for the work of preaching. To make them grow haggard over church finances, or to dissipate their energies at bazaars or in the multiplied business of the modern "institutional church," is little short of a crime.

Minister Briand's statement that the French Separation Act will not be enforced against the Church until a year from December 11 next indicates that the Government sincerely wishes a settlement with the Vatican. During that interval, associations may be formed agreeably to the law, failing which, confiscation by gradual legal process will begin. This respite leaves in a rather ridiculous position the ultra-clericals, who have represented the Government as desiring persecution and courting civil warfare. The truce should give a good opportunity for revising the Papal interdict on the associations. The protests against them have been based upon the assumption that the Government would not observe good faith in the matter. It was even said that fraudulent or anti-religious associations would be allowed to obtain control of the churches. M. Briand's decision is a quiet but effective rebuke to insinuations so intemperate and ill-founded. Unless the Vatican

is wholly implacable, the year should bring forth a *modus vivendi* acceptable alike to the Government and the Catholics of France.

The old Slavophile party in Russia is apparently moribund. The movement has almost come to an end in the face of Western ideas and the revolutionary propaganda. Unlike Pan-Slavism, Slavophilism was originally not a political, but a romantic and mystical theory. It was late that Slavophilism assumed a determinate political form. Its earliest exponent was Kircevsky, who, during the earlier part of the nineteenth century, sought to combine Russian mysticism and romanticism with the thought of Western Europe. But Kircevsky set his face in opposition to the institutions of the West. Like the anti-Napoleonic romanticists of Germany, he clung with almost bigoted devotion to the Russian throne and religion. The French Revolution had wrought a reaction against the idea of universal empire; the dread of Napoleon increased this reaction. The Slavophiles, besides their romanticism in literature, dreamed of a future golden age, under a theocracy. They also looked for the subjugation of other nations, and for their conformity to this holy ideal. No Russian, Kircevsky maintained, could feel pride in exotic institutions. He saw a religious halo above the crown, and maintained that the way to the establishment of a theocracy lay through the awakened feeling of the nation. Visionaries and poets gathered about him. Thus Slavophilism was like a survival of mediævalism, in the midst of the rapid progress towards democracy. Its strength has been in the *croyants* and the reactionaries; but it will die, or, rather, reappear transformed in reconstructed Russia.

The fall of the Prussian Minister of the Interior, Von Podbielski, is announced. Since the discovery that he was connected with the firm of Von Tippelskirch, the army contractors who have been growing rich out of the war in Southwest Africa, he has been subjected to volleys of ridicule and denunciation almost without parallel in the history of the Empire, coming, indeed, from all sections of the press. The Emperor's persistent refusal to remove him led to the rumors of a Chancellor crisis, and to astonishingly frank complaints that the court "camarilla" kept the Emperor in ignorance of the feelings of the people. Even such strong Government supporters as the Berlin *Kreuzzeitung* and *Post* recently published severe criticisms. The Emperor's impulsive and personal direction of the Government is particularly deplored. Of this policy the recent appointment of Bernhard Dernburg, as director of the Colonial Office, is cited as an example. It

is a selection which deeply offends the merchant class, as well as the aristocracy, and the Chancellor is supposed to be by no means pleased by it. As yet, however, there is nothing definite to show a breach between the Emperor and Von Bülow.

M. Santos-Dumont, by a flight of more than 200 metres in his airship, becomes the first skipper of a flying machine who has risen from the level, flown for an appreciable distance, and landed without serious mishap. The latter part of the performance is the most remarkable, for, as the falling Irishman remarked, "It's the landing that hurts"; and Santos-Dumont's landing was made under circumstances of unusual confusion. Still, Monday's experiment remains rather of scientific than of practical value. At least, its practical applications seem at present remote. The bold young Brazilian has done successfully what the late Professor Langley tried in vain; building upon the experiments of Hiram Maxim, he has produced a motor-driven aeroplane that can be controlled in a limited course, and near the ground. Evidently, it is a far cry from a performance of this sort to deserving the proud title of the "Bird of Prey."

One of the darkest spots on the chart of modern civilization is the high rate of infant mortality. How largely this is preventable is shown by an experiment of the Mayor of Huddersfield, England. He offered a prize of \$5 for every child, born during his term of office, which lived at least twelve months. Though several epidemics occurred, the mortality was reduced from 122 per thousand to 44, largely by the aid of women who instructed mothers in sanitary matters. While maternal ignorance and carelessness are thus shown to be important factors, another of prime importance is the source and quality of milk. It has long been established that intestinal troubles caused by improper food (chiefly cow's milk) account for the largest number of deaths of infants under one year. It has also been frequently suggested that a great improvement could be effected by substituting the milk of goats for that of cows. A plea for goat's milk is contributed by Dr. William Wright to the London *Lancet*. He points out its great superiority in the three essential points of cleanliness, digestibility, and freedom from disease germs. Among the 130,000 goats and kids brought to Paris for slaughter every year, the meat inspectors have failed to discover a single case of tuberculosis. Weight for weight, the goat yields twice as much milk as the cow, and if the animals are properly fed, their milk has no flavor to distinguish it from cow's milk.

THE NATIONAL ASPECT OF THE
ELECTION.

To those who had hoped for a strong vote against Republican policies, and particularly against the Republican "standpatters," last week's Congressional elections come as a distinct disappointment. The two most devout worshippers of the Dingley tariff, Messrs. Cannon and Dalzell, have been triumphantly reelected; and there is nothing in the result to make them abate adoration for their idol, or to induce the President to resurrect his long-buried tariff reform message. So far as the voters have indicated their choice, the Republican party is still licensed to grant special privileges to those manufacturers who are ready to pay for them.

If the overthrow of this intolerable injustice is still postponed, the Democrats have themselves alone to blame. Hardly convalescent from the Bryan illness, the party fell a victim to an even more virulent disease, the staying of which in New York, Massachusetts, California, and Illinois became the duty of the hour. With what patriotic readiness independent Democrats have again stepped into the breach, the returns attest. But even if there had been no Hearst and his agitation to draw attention from the contest for the House of Representatives, the Democrats could hardly have obtained control. A nerveless, stupidly inefficient campaign was that of the Democratic Congressional Committee; its literature was dull, its strategy infantile. From the beginning it lacked vigor and sincerity; it practically abandoned efforts weeks ago. The leaders cannot take much credit even for such successes as have occurred, for they are largely due to factional strife among Republicans, or to local causes of small importance. But the defeat of Congressman J. T. McCleary of the Second Minnesota District, because of his "standpattism" and his record on the Philippine tariff, shows clearly that, with serious and intelligent direction, tariff reform might have been made a winning issue.

It is this utter want of Democratic leadership which is the chief lesson of the contest as a whole. The election of Democratic Governors in both Rhode Island and North Dakota, together with the recapture of Missouri and the reelection of a Democratic Governor in Minnesota, proves what hard fighting can accomplish where there is confidence in the integrity and sanity of the Democracy. If any headway is to be made during the next two years, it can be only by rendering the Democracy a genuine Opposition in and out of Congress. John Sharp Williams has done his best in the House, but the character of many of his Southern associates, such as Tillman, in the party councils, has handicapped him, to say nothing of the dubious nature of support from such a

Northerner as Bourke Cockran. A party can grow stronger only by pounding away at the weak points in the enemy's armor. Failure to adopt aggressive tactics will leave the Democracy in an equally helpless position two years hence.

It is not as if there were no stirring issues upon which to appeal to the country. Republicans steadily furnish grounds for attack. But of these possible issues none is so important as the alliance between the party and the Trusts. President Roosevelt and his Attorney-General may tilt all they please at Standard Oil and dissolve a combination here and a Trust there. So far as any real far-reaching reform is concerned, their spectacular efforts are of no value save as object-lessons in the enforcement of the law. They constitute no remedy for the disease; and no remedy will be proposed while the corrupt partnership between the Republican party and the tariff-made monopolies continues.

To the Democratic party is more than ever granted the opportunity to come to the rescue. It alone can undertake clean-handed the reform of conditions which rendered Hearst as a political captain possible, and has suddenly made of Socialism a live issue. Americans will be content with their political conditions only when they are convinced that they are getting a "square deal." As long as Congress legislates for a few, thousands will go on demanding a new form of government which will make such favoritism impossible; and no one can deny that justice is on their side. Should the results of the elections deceive the Republicans into thinking that all is well with them, that, as Mr. Cannon maintains, their house does not need to be set in order, then are they far along the road to disaster. For the Democrats who have maintained their party's honor in this crisis, the path of duty is plain. If, with the fine energy and enthusiasm which has just spurned Hearst and Moran, they do not work day and night to regain control of their party machinery, they will find themselves without an organization to register their will.

ABSORBING THE CONQUERED.

More than a century after the partition of Poland the Prussian Government is busier than ever assimilating the Poles within its territory. Within the last few weeks there has been a fresh outbreak of racial distrust and hatred which has affected even the school-children. A cartoon in *Ulk* represents their plight. The teacher whips the school-boy for praying in Polish; his father beats him for praying in German; and the priest uses the birch if he does not pray at all. As a result, the boy's hand is against all the constituted authori-

ties. Recently, an unpopular teacher who had threatened his scholars with arrest for failure to answer questions in German, awoke to find his house in flames and his family at the point of suffocation. In the town of Baronowo there has almost been bloodshed because German children were not only prevented from taking a short-cut to the village school, but were repeatedly driven away with whips by the highly aroused Polish youths.

This really serious state of affairs arouses in Germany mingled anger and astonishment. There was a time several centuries ago when Prussia absorbed Polish subjects without difficulty. Thirty or forty years ago Germanization seemed to be progressing satisfactorily, if slowly. Suddenly there came the change. The Prussians attribute it to the Polish nationalist movement. They can see no difference in their own attitude or policy. To them this resistance is ingratitude, pure and simple. Yet what are the facts? About 1870 many Polish workmen in upper Silesia, to cite one example, were wholly free from any antagonism to the Germans. Indeed, they eagerly learned the language, realizing that its use widened their field of labor. To become a German at that time meant to be free; to be a German property-holder was to be beyond autocratic official interference. In short, to become a Prussian citizen meant the right to rise socially. Unfortunately, a change was at hand. The Pan-Polish movement could never have become what it is had there not been a Pan-German movement to offset it, to stimulate it, and to fan the dying embers of race strife.

First came increased protective duties and the limiting of imports, which at once made the Poles feel that they were worse off than their cousins in Russia or in Galicia. The cost of living rose by leaps and bounds, furnishing precisely the acute grievance the nationalist agitation needed. Then came blundering on the part of the Prussian bureaucracy in religious matters; the law unfortunately prescribed the teaching of religion in Prussian schools, and laid down the lines along which it must be taught. It made no allowance for differences in schools or in the character of their attendance; hence the teacher in Polish sections was inevitably brought into conflict with the village priest. It would, as a writer in the *Berlin Nation* points out, have been a wise and far-sighted policy to have abolished all religious instruction in Polish schools. Instead, the bureaucracy made the incredible mistake of requiring that it must be given in German. If a prize had been offered, says the *Nation*'s writer, for the action which would give the Polish agitators the very best weapon for their propaganda, nothing better than this could have been devised. Through it the school, which should be

the best medium of friendly Germanization, is now the place above all others in which race hatred is created and intensified.

Curiously enough, the very Prussians who insist upon Germanizing the Poles by force are the same ones who bitterly resent efforts in Russia, Hungary, and elsewhere to make loyal Russians, Magyars, and Czechs of those who speak German and retain their German customs. Side by side with associations for the creation of German communities in Polish Prussia, flourish societies to oppose the anti-German movement in Bohemia and Hungary—and no one seems to perceive the absurd contradiction. Only few have as yet been keen enough to notice that whenever the Germans undertake a new line of action, it provokes a similar move by the Poles. Thus when the Government began to buy up large estates and settle German emigrants upon them, the Poles founded banks whose special business it was to do likewise for their own people as a purely business affair, with the result that the number of Poles owning small land-holdings has increased faster than the number of small German land-owners.

In the general inference to be drawn from this German experience the United States has a special interest, because of our new oversea burdens. It is a fatal policy to deprive a people of its language or its customs. To try to make Americans of Malays, Russians of Finns, and Germans of Poles or Magyars, is merely to intensify the earnestness with which they cling to ancient customs and mother tongue. To attempt to strike down a people's nationality by force is not a sign of enlightened patriotism, but of political and social decadence. Let him who doubts this face the facts—the amazing Gaelic revival in Ireland, the success of the Hungarians against the Austrians, the failure of Russia in Finland, and elsewhere. Let him then turn to Switzerland as the country in which people using three languages have for centuries lived side by side in peace and harmony. The lesson should be carefully conned, for the call for the Philippine Assembly is out, and our pro-consuls in Manila need more than ever to be warned against any attempt to force Filipino development along other than their own racial and national lines.

EXCAVATING HERCULANEUM.

After long negotiations, Prof. Charles Waldstein's plan for excavating Herculaneum under international auspices has been accepted in principle by the Italian Government. The delay has had to do with the control of the excavations, which is to be unconditionally Italian. One cannot doubt, however, that the foreign scholars who have labored to make this great archæological enterprise pos-

sible, will have a favored position as associates in the work. For a layman, it is difficult to realize the importance of this project, so far have the sensational discoveries at Pompeii dazzled the popular imagination.

From the point of view of art, however, all that has been found at Pompeii is of slight importance compared with the results of casual excavation at Herculaneum. The remarkable Greek and Greco-Roman bronzes that are the pride of the Naples Museum came from a single villa at Herculaneum. The few scraps of wall painting that give a hint of the dignity of Grecian painting have the same origin, but are relatively obscured by the showier examples of plasterers' work from Pompeii. The ruins of the latter city have not furnished a single manuscript; Herculaneum, practically unsearched, has already given up a large library—medical and scientific, to be sure; further investigation may well bring us substantial additions to classical literature. In short, when we look at Greco-Roman antiquity through Pompeii, it is as if some thirtieth-century archæologist should judge American civilization from the remains of Saratoga or Long Branch; whereas Herculaneum will represent the polite tastes of early Imperial Rome as truly as, say, Newport or Manchester-by-the-Sea might represent those of our own Rooseveltian dispensation. Furthermore, Pompeii had been greatly damaged by earthquake, and flimsily rebuilt in the taste of the decadence, before it was overwhelmed by the falling cinders; but Herculaneum, when the mud rolled over it, still kept intact the treasures of the most cultivated Romans—Hellenizers of the generations of Lucretius and Cicero.

The value of these hidden treasures, the wildest imagination is not likely to exaggerate. Suffice it to say that here is an important classical site locked up in a perfect preservative—hardened volcanic mud—a site that has never been sacked by armies, rifled by pilferers, or drained by the insistent demand of wealthy amateurs. The history of archæology hardly affords a parallel. The excavator of to-day breaks into an unknown Pharaoh tomb only to find that a sneak-thief had preceded him by a thousand years. The Greek marbles of ancient Rome are mostly in the mortar of the mediæval city, but here are the summer homes of cultured Rome of the Augustan period and earlier, only awaiting the careful use of the pick and spade.

As if to provide against such a prize being enjoyed too cheaply, nature has sealed Herculaneum under about eighty feet of volcanic concrete, and fate has willed that some twenty thousand Neapolitans should swarm above the villas where Roman patricians dwelt in spacious ease. To uncover Herculaneum will be an expensive business, involv-

ing the condemnation of much land, and then the most cautious methods of excavation. The nature of the work dictates patience all around. No one should expect quick results at the cost of irreparable damage to the beautiful objects imbedded in the stiffened mud. On the other hand, we can imagine no investment of capital by an art-lover that is more certain to bring handsome returns. The uncovering of a single villa like that which contained the large bronzes of the Naples Museum would amply justify any expenditure likely to be made.

We discern a peculiar appropriateness, too, in the fact that this great project is to be international in its scope. Many times in the history of Western civilization a quickening of national culture has been due to a sort of vision of Grecian art through Roman eyes. Italy has from the first been the mediator of the Hellenic tradition, and when the amateurs and archæologists of Western Europe and America unite to reclaim Herculaneum for Italy and the world, they merely acknowledge in money and good will a greater if a more intangible debt that has been accumulating interest through the ages.

THE LITERATURE OF BUSINESS.

Not long ago it was the fashion of purists to complain of the bulk of advertising in the magazines. But discussion of the matter in the press brought out numerous champions of the advertising pages. It was warmly asserted that they constitute a most interesting addition to the reading matter, and could about as ill be spared as the so-called literary features. Certain readers, who appeared sincere but may have been malicious, actually expressed a preference for the literature of soups, underwear, real estate, correspondence schools, firearms, and motor cars—a passion which has recently obtained notable confirmation through the confession of an editor. Edward W. Bok has declared that he will do his modest best to make the literary section of the *Ladies' Home Journal* as good as the advertising section, though clearly he despairs of attaining so high an ideal.

We hasten to add that the editorial policy of pretty nearly all the magazines we know is happily approximating the advertising policy. In a superb miscellaneousness, in timeliness, in direct and vociferous appeal to the reader, the editors are, after all, not lagging so much behind. They have recently taken up the evidently useful practice of commending their own wares—discreetly setting forth the merits of their best contributors, or more specifically declaring the current features, as they issue from the press, to be substantial additions to permanent English literature. When the editors are so alert in following a promising lead, no one should too

rashly despair of the future of periodical journalism.

In all seriousness, a very little study of the literature of advertising will show that the writers command a rhetoric remarkably well adapted to their purpose, and if persuasiveness is a chief merit in style, the nameless contributors to the front and back pages must fairly outrank the æsthetes and muckrakers who fill the middle pages. Indeed, by maintaining an aloofness that a seasoned advertising writer would scorn, the literary fellows frequently fail to establish confidential relations with the reader. The reason for the success of advertising rhetoric James H. Collins (in an amusing article, "The American Grub Street," unconscionably buried in the middle portion of the *Atlantic Monthly*) finds in the following fact:

Advertising requires versatility of a high order; . . . the writer of advertising must combine human interest with strict accuracy; his subject is constantly changing. . . . To-day he studies the methods of making cigars and the many kinds of tobacco that enter therein; to-morrow he writes a monograph on enamelled tin cans, investigating the processes of making them in the factory; and the day after that his topic may be breakfast foods, taking him into investigations of starch, gluten, digestive functions, diet, and health, and setting him upon a weary hunt for synonyms to describe the "rich nutty flavor."

A fair inference from this description is that the superiority of the advertising writer lies in his greater seriousness, which is not perhaps the "high seriousness" that Matthew Arnold advocated, but still a quality removed from and above the dilettanteism that inspires the mere author. In any case, such experience makes for worldly experience, and we can imagine a successful advertising writer, finding himself placed at dinner between, say, William H. Howells and Dr. Henry van Dyke, repeating Goethe's phrase:

Prophet to right, prophet to left,
The World-Child between.

Scoffers of the ultra-literary sort have affected to scorn the advertiser as a new and humptious apparition. Bumptious he may or may not be, but new he emphatically is not. In the most technical sense the profession is very old, while on a narrower rhetorical basis the parallel between the modern advertising writer and the Meistersinger, the member of a Northern Puy, or of a Southern Floral Association, is worth recalling. Like these mediæval predecessors, the modern advertiser writes to order, in competition frequently, and on set themes; he is judged, moreover, rather by the effectiveness of his style than by the pith of his argument. To be sure, the Meistersinger and the banded poets of the Rhone celebrated springtide, love, or, more abstractly, the relative merits of the rose and lily, or of water and wine, whereas their mod-

ern successors exalt bootblacking, scouring soap, baking powder, ready-to-wear clothes, grape juice, and influenza cures. But the change of subject matter should blind no one to a stylistic unity which is all-important. It boots not that one write a *Remedium Amoris* or extol a corn cure; the spirit in which the work is done is what really counts.

How effective the work of the advertising writer is, very little perusal of the magazines will show. In all that makes for persuasion his art is supreme. We know that an appealing and well-waistcoated youth can sell our real estate, however barren or remote; we long for fences and sheds that another engaging gentleman may paint them with the ideally best pigments. Our heart flutters whenever we read of the ravages of coffee and the value of cereal beverages. Can one deny to writing of this force the name of art? A poster, not in print, but prominently displayed, shows the stylistic refinements that may enter into this sort of composition; we learn of a certain whiskey that it is "mellowed by eight years' repose in the wood." Only note the value of that word "repose." How bald and unconvincing any other asseveration of age would be! But so long as we preserve the image of that brown and fragrant fluid peacefully reposing in its charred prison-house, pure food committees may expose the brand in vain. Who could doubt a stimulant that has not merely grown old, but grown old so gracefully?

REAL PREVENTION OF DISEASE.

The gay young spark in Molière who sought a cure for the ills of intemperance received from his physician a lecture on hygiene. In the midst of it, the impatient youth broke in: "Yes, yes, all that I know, but can't you give me a pill?" This attitude is very human. Our chosen path is pleasant, and if it happens to lead into trouble, why, we'll ask the doctor for a pill. In our Western world, the habit is to seek medical advice only when we are sure we need it, but we might with profit copy the Chinese. They retain their physicians to keep them well, and demand the return of their fees if they fall sick.

The great benefit that medical science has brought to humanity in the last half-century has been chiefly through preventive medicine. The plagues that swept the Old World in the Middle Ages are no longer possible. An epidemic of typhoid fever is now a reproach to the infected community for having neglected the means which science has placed in its hands. But preventive medicine has concerned itself mainly with contagious diseases which threaten wholesale, and deals but slightly, in the popular conception, with individuals. The result is that there has grown up in the public mind a feeling of careless-

ness regarding disease except where the state is supposed to protect us. We are much concerned about the purity of our drinking water, but few stop to ponder the fact that a majority of us will die of some chronic disease which in its incipency might be arrested. For protection from acute infection we may depend upon boards of health, but for safeguarding against chronic disease we must trust to the physician. He, however, can do nothing to prolong our days unless we give him an opportunity to detect a malady in its early stage. Health is without price, yet how many periodically submit themselves to their doctors for thorough examination? That such a periodic examination is the wisest of precautions, is shown by the rejected applications in every life insurance company. Thousands were boastfully proud of their robust health until some life insurance physician rated them "bad risks."

The conditions under which Americans live in large cities are particularly adapted prematurely to age the heart and arteries. In all probability, these conditions will not soon change, and the only way one may guard oneself is by measuring the wear and tear on one's organism. Medicine has grown rich in methods and instruments of precision for the detection of subtle changes indicating the onset of disease. A manufacturer with a fortune in machinery would not neglect to employ an expert engineer to scrutinize it from time to time. Very likely, however, the same man has omitted to ascertain through a physician whether his manner of life has worked ravages with his heart or arteries. Almost every one goes to a dentist at least once a year; why should one not go to a physician? We constantly hear that nephritis is a menace, and cancer is becoming more common. Cancer is curable if a surgeon is called in time, and one may live his allotted days, despite nephritis, if he be told how to live. Oliver Wendell Holmes once said that the way to live to old age is to become the victim of a chronic disease and then take care of yourself. The real danger in the chronic type of disease is the insidious progress that gives its victim no warning, until the period when medical aid avails is past. Preventive medicine cannot be of use until men have learned to hunt out dangers before they appear. The White Plague is no longer captain of the men of death; pneumonia has taken its place; and physicians tell us that the really awful mortality in pneumonia is due in great part to latent heart and kidney disease. The physician to a large hospital in this city has said that he could have saved half of his pneumonia patients had they come to him five years earlier and been directed how to live in respect to their kidney trouble.

Doubtless it is true that many men

would rather "drop in their tracks" than live to an invalid old age. But the possession of a pet chronic disorder is not an unmitigated evil. It often means that a man who has worked like an express locomotive will content himself with slower service. He may be advised to play more golf and less market. He can find good excuses for longer vacations, more time to read, and to cultivate old friendships that have been allowed to lapse. Well-known men in this city, having early found their danger, have so regulated their lives that they appear as active as ever and enjoy life more than before. It is not inconceivable that the prompt recognition of a bad heart, say, would be a real blessing to many a driven man of affairs.

THOREAU AND GERMAN ROMANTICISM.

(Continued from last week.)

One might follow the transcendental movements of New England and of Germany step by step—through irony, aloofness, and sacred idleness, through their flowering in musical reverie and communion with nature—and show how they develop on parallel lines, always alike on the surface, yet always with some underlying difference more easily felt than named. And this difference is felt more strongly, is indeed then only to be understood, when we go back to that free individualism which is the root of all this varied growth. "Contemplation," says Schleiermacher in his second Discourse, "is and always remains something single, separate, the immediate perception, nothing more; to connect and bring together into a whole is not the business of the senses, but of abstract thought. So with religion: it is hers to abide by the immediate experience of the being and activity of the universe, by the individual perceptions and feelings; each of these is a work existing in itself without connection with others or dependence upon them. Of derivation and association religion knows nothing; of all things that may touch her, these are the most contrary to her nature. . . . It is due just to this absolute individuality that the sphere of contemplation is so infinite." Here certainly—and we are at the very heart of German romanticism—is a doctrine which the wise men of Concord would have been the first to repudiate. Infinity to Schleiermacher was only another word for endless variety of particulars, amid which the soul of man, itself a momentary atom in the stream, moves in a state of perpetual wonder. The ideal of Emerson was that self-reliance by which the individual, shaking itself free from the mere conformity of manners and tradition, might rise to the community of the higher nature figured by him as the over-soul: "In all conversation between two persons, tacit reference is made as to a third party, to a common nature. That third party or common nature is not social, it is impersonal; it is God." And Thoreau represented friendship by the symbol of two lines divergent on the earth and converging together in the stars. I cannot find the equivalent of this in Schleiermacher. I find rather that, like the rest of the romantics, when he sought for the basis of man's nature, he turned to pure

emotionalism, the very power and faculty by which we are bound within the limits of our individuality. We have seen that to Schleiermacher "the essence of religion is neither thought nor action, but contemplation and feeling." Let us see in what colors he pictures this passive surrender of the soul to the impression of the world. Thus he continues in the "Reden":

Only do not suppose—this is indeed one of the most dangerous errors—that religious contemplation and feeling at their beginning in the first activity of the soul (*des Gemüths*) are severed in any such way as they necessarily are in our discourse. Contemplation without feeling is nothing, and possesses neither the right source nor the right power; feeling without contemplation is likewise nothing; both are something only when and because they are originally one and unseparated. That first mysterious moment, which comes to us with every sensuous perception before contemplation and feeling have drawn apart, . . . fleeting is it and transparent, like the first exhalation wherewith the dew breathes upon the awakened flowers, demure and tender like the kiss of a virgin, holy and fruitful like the embrace of marriage. Nay, not like this, rather it is all this. Quickly and magically an appearance, an event, unfolds itself to a likeness of the universe. And so, as the beloved and ever-desired form takes shape, my soul flees to her, and I embrace her not as a shadow, but as the holy essence itself. I lie in the bosom of the infinite world; I am in that moment its soul, for I feel all its powers and its infinite life as my own. . . . At the least jar the holy union is blown away, and then first contemplation stands before me as a separate form; I gaze upon her, and she mirrors herself in the open soul as the image of the departing loved one in the open eye of the youth. And now first feeling rises up from within him, and spreads like the blush of shame and desire over his cheek. This moment is the highest flowering of religion.

Could anything than this be more essentially at variance with the product of Concord? The nearest approach to it in substance is the hedonism of Pater as expressed in the "Conclusion" to his *Renascence* studies. For what in the end is this religion of Schleiermacher's but that culture of the fleeting artistic impression which Pater taught: "Every moment some form grows perfect in hand or face; some tone on the hills or the sea is choicer than the rest; some mood of passion or insight or intellectual excitement is irresistibly real and attractive for us—for that moment only"? It is but the modern decking out of the ancient philosophical heresy of Heraclitus that all things move and flit away, which the English writer places as the motto of his essay. I would not be unappreciative of the great German divine, but I cannot sever his unctuous preaching of emotionalism from the actual emotions which ruled among the coterie to whom his discourses were addressed. When he turns from his image of the bridal of the soul and the universe to the fable of Paradise, and declares that only through the coming of Eve was Adam enabled to lift his thoughts heavenward, when he makes of love the only source of religion, he is, of course, speaking within the acknowledged rights of the preacher. Yet I cannot forget the morbid life of Rousseau, from whom all this *Gefühlphilosophie* is ultimately derived; I remember more particularly Heine's yearning for some wilderness apart from the world where he might like a Platonic sage pass his life in saintly studies—with Lais at his side. I am afraid of a religion which accords so easily with

this blending of Plato and Lais, and which serves so well a literature whose principle as announced by Tieck was briefly this: "The decency of our common prosaic life is unallowed in art; in these happy, pure regions it is unseemly; it is among us even the document of our commonness and immorality." I am Puritanic enough to dislike and to distrust these confusions; and it is because I do not find them in Thoreau that I can turn to him after reading much in the *romantische Schule* with a sense of relief, as one passes from a sick-chamber to the breath of the fields. Concord is remote and provincial in comparison with the Berlin and Jena of those days; it lacks the universality and culture of those centres; above all, it lacks the imposing presence of a Goethe and a Schiller, who, however loosely, were still connected with the romantic brotherhood; but it possessed one great offset—character.

"Life shall be the living breath of nature," might have been the motto of Thoreau as it was of a great German. He, too, went out to find the God of history in nature, inasmuch as man is but a part of the whole, a brother to the worm—but the ways of their search led them far asunder. We have seen how on the surface the mystical reverie of Novalis's "Lehrlinge zu Sals" is akin to the ideals of Thoreau: yet follow the two to the end. We shall see one of the scholars of Sals journeying through a tropical clime to the shrine of Isis; we shall see him in an ecstasy before that veiled goddess of nature; "then lifted he the light, gleaming veil, and—Rosenthalchen sank into his arms." It is only Heine's Plato and Lais, or Schleiermacher's Adam and Eve if you will, under other names. There is a taint of sickness in all this. It corresponds too well to the "heavenly weariness" of Novalis himself, as he might be found at the grave of his Sophie, vowing himself to death for a lofty ensample of love's eternal faithfulness, and in a short while after discovering his religion incarnate in another woman.

Now there was no Sophie in Thoreau's life, no sentimental identification of a dead Sophie with a living Julie, and above all, no rapturous embrace of both together in the person of the goddess of nature. It may even be granted that the absence of primitive human emotion is so pronounced in his diaries as to render them thin and bloodless. To lay bare the sources of this difference between Thoreau and Novalis it would be necessary to analyze a score of influences silently at work beneath the surface of his culture—the inheritance of Puritan religion, denied indeed, but still making any real return to mediævalism impossible; the British notion of practical individualism expressed in the philosophy of Adam Smith; the lesson of Wordsworth's austerity in the devotion to nature; the spirit of fine expectancy derived from the poets of the seventeenth century, who were Thoreau's chief mental nourishment; the incalculable force of Emerson's personality. It comes at the last chiefly to this: the freedom of the romantic school was to the end that the whole emotional nature might develop; in Thoreau it was for the practice of a higher self-restraint. The romantics sought for the common bond of human nature in the *Gemüth*, Thoreau believed it lay in character. In the *Gemüth*

(the word is untranslatable; heart, with the connotation of sentiment, mood, revery, is the nearest equivalent) Schleiermacher found the organ of religion, to the absolute exclusion of the reason and the will; there Novalis looked for the inspiration of all art; communion with nature was desirable only because in her, too, might be discovered "all the variations of an endless *Gemüth*"; and to this organ of the individual person was reduced in reality the high-sounding I of Fichte. *Gemüth*—character, *Gefühl*—conduct; in that contrast lay the divergence between German and New England transcendentalism. "What are three-score years and ten hurriedly and coarsely lived to moments of divine leisure in which your life is coincident with the life of the universe?" asks Thoreau in his Journal; but he continues: "One moment of life costs many hours—hours not of business, but of preparation and invitation. Yet the man who does not betake himself at once and desperately to sawing is called a loafer, though he may be knocking at the doors of heaven all the while, which shall surely be opened to him. That aim in life is highest which requires the highest and finest discipline." Man's life, he says elsewhere, "consists not in his obedience, but his opposition, to his instincts," and genius was to him another name for health. This was his resolution and his prayer:

I pray that the life of this spring and summer may ever lie fair in my memory. May I dare as I have never done! May I persevere as I have never done! May I purify myself anew as with fire and water, soul and body! May I gird myself to be a hunter of the beautiful, that naught escape me! May I attain to a youth never attained! I am eager to report the glory of the universe; may I be worthy to do it; to have got through with regarding human values so as not to be distracted from regarding divine values. It is reasonable that a man should be something worthier at the end of the year than he was at the beginning.

And so, despite its provincialism and its tedium, the Journal of Thoreau is a document that New England may cherish proudly. It is the mirror of a life, the record of romanticism striving to work itself out in actual character, and shows thus, as clearly as the far greater writings of Emerson, wherein the originality of the Concord school really lies. The dangers of transcendentalism are open enough—its facile optimism and unballasted enthusiasms—dangers to the intellect chiefly. Any one may point at the incompatibility of Thoreau's gospel with the requirements of society. To follow him, as to follow Walt Whitman, a man must needs shun the responsibilities of the family and state, and walk in solitary ways. Yet, withal, there is brave inspiration in the scornful independence of this botanizing vagabond. For the motto of his Journal one might choose the familiar lines of Matthew Arnold:

For most men in a brazen prison live,
Where, in the sun's hot eye,
With heads bent o'er their toil, they languidly
Their lives to some unmeaning taskwork give,
Dreaming of nought beyond their prison-wall.

And the rest, a few,
Escape their prison and depart
On the wide ocean of life anew.
There the freed prisoner, where'er his heart
Listeth, will sail;
Nor doth he know how there prevail,
Despotic on that sea,
Trade-winds that cross it from eternity.

Awhile he holds some false way, undebarr'd
By thwarting signs, and braves
The freshening wind and blackening waves,
And then the tempest strikes him. . . .
And he too disappears, and comes no more.

Put out of mind the wild hurtling words Thoreau was so fond of uttering, forget the ill taste into which his narrower circumstances often led him, and there remains this tonic example of a man who did actually and violently break through the prison walls of routine, and who yet kept a firm control of his career. If his aim was to refine his senses so that, like an Æolian harp, he might quiver in response to every impression of mountain and field and river, at least he sought for this refinement by eliminating all the coarser and more relaxing emotions of his breast; by disciplining his will into harmony with the pure and relentless laws of universal being. And if the terms of his practical philosophy may be traced back through the German romanticists to Rousseau's ideal of a return to nature, yet his sympathetic knowledge of hard savage life among the Indians and the tradition of New England's struggle with the wilderness kept him, always in act and generally in words, from sentimental softening of the reality.

Correspondence.

WASHINGTON'S PROPOSALS FOR EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: Speaking of agricultural colleges in your issue of November 1, you make the following statement:

Thomas Jefferson was the first American to urge the importance of such schools. Writing in 1803 he deplored the overcrowding of the trades and of the learned professions. He recommended that a professorship of agriculture should be established in every college.

No one will, I believe, endeavor to in any way belittle the effort made by President Jefferson. History should be kept straight, however. In his first message to Congress, January 8, 1790, Washington expressed the hope that "The advancement of agriculture, commerce, and manufactures, by all proper means, will not, I trust, need recommendation," and continuing:

Nor am I less persuaded that you will agree with me in the opinion that there is nothing which can better deserve your patronage than the promotion of science and literature. . . . Whether this desirable object will be best promoted by affording aids to seminaries already established, or by the institution of a national university, or by other expedients, will be well worthy of a place in the deliberations of the Legislature.

It is to be noticed that agriculture and a national university for the promotion of science and arts were closely associated by Washington.

In his last annual message he writes:

It will not be doubted that with reference either to individual or national welfare agriculture is of primary importance. . . . Institutions for promoting it grow up, supported by the public purse; and to what object can it be dedicated with greater propriety?

Apparently, then, remembering that he had in his first message called attention

to the great subject of agriculture, he adds:

I have heretofore proposed to the consideration of Congress the expediency of establishing a national university, etc.

R. C. BARRETT.

Iowa State College of Agriculture and Mechanic Arts, Ames, November 5.

[We can hardly regard the vague proposal of Washington, suggestive though it be, as really forestalling Jefferson's definite plan for education in agriculture.—ED. NATION.]

THE HONOR SYSTEM OF EXAMINATIONS.

TO THE EDITOR OF THE NATION:

SIR: The "honor system" is of long standing in several Southern colleges. It has been introduced recently into two New England colleges; and a third is experimenting with it. The institutions which have it profess to like it, and say that it works well.

Working well, however, is not a final test. As every manufacturer knows, efficiency may be secured by materials or processes that cost too much. The chief objection to the honor system is that it is ethically extravagant. You can get sap and syrup in springtime by tapping the maples on your lawn. You can haul clay by harnessing a thoroughbred trotter to a dump cart. But these devices are not economical. Neither is it a prudent expenditure of the deepest ethical resources to tap them for the prevention of a little cribbing, and hitch them onto the tail of an examination paper a dozen times a year.

The honor system involves a double standard. The students in a Southern college will run out of town and ruin forever a man convicted of cheating in an examination; yet they look lightly on sexual offences, which cut infinitely deeper into the sentiments which honor should support, and leave on character far more lasting scars. A student who entered a Northern college which has no honor system from a Southern college where it had prevailed was found guilty of cheating at the first opportunity, and offered as a sufficient excuse that he had not been put on his honor. In one of the New England colleges that has adopted it, an instructor was recently asked at the beginning of a brief quiz whether it was to be conducted on the honor system or not. The president of the senior class in that same institution recently said in a speech at an alumni dinner that he knew that cheating was still going on under the honor system. Yet he, like all the rest, had given a solemn promise on honor to report any cheating that he knew.

This promise, by the way, to report any violation of the honor system seems to be an essential part of the honor system, wherever it is applied. The honor of every student appears to need watching and reporting by the honor of every other. Yet it is a significant fact, one more creditable to the students than to the devisers of the system, that in one of the New England colleges now trying the experiment every case of conviction for dishonesty since the system was introduced has been based on internal evidence drawn from the blue

book; in no case has evidence come voluntarily from the students who have been pledged to give it.

It is a serious thing to drag out of its natural soil in the subconscious the delicate, sensitive sentiment of honor, which ordinarily comes to the surface only under some such stirring experience as love or war, and at the end of every examination make each student declare that he has neither given nor received aid. In a recent discussion of the question, President Eliot of Harvard declared that there never was a time when he could have been brought to sign that statement. It assumes that the desire to cheat is normal and universal; and only under special stress of honor can the temptation be overcome.

The evil of cheating in examinations can never reach very serious proportions in a well-conducted institution. There is no college where student sentiment, left to itself, tolerates cheating to win a prize or an election to Phi Beta Kappa. Such cheating as student sentiment condones is confined mainly to cases where a dull or lazy student aims to escape being dropped. Then student sentiment undoubtedly does say, "Poor drowning devil, let him clutch the forbidden straw." Limited to this restricted sphere, cheating in examinations is not sufficiently important, either as an aid to rank or an injury to character, to warrant erecting the sentiment of honor into a system for its eradication.

The evil can be cured by cheaper means. In a certain college for a series of years the greater part of all complaints of cheating came from a single department. This was taken as one of several evidences that the teaching in this department was less vital than in the other departments, and the department was reorganized. A good instructor sets papers of such a nature that illegitimate aids are of little avail. Grasp of a subject, the relation of part to part, judgment on critical questions, application of principles to problems—these can be extemporized no more with than without adventitious aids. Vital teaching, frank and friendly personal relations, firm administration when required, can secure at moderate ethical cost results quite as satisfactory as those achieved under the honor system. It is therefore the part of a wise ethical economy to refrain from all attempts to superimpose the systematized sentiment of honor on the uncovenanted judgment of the right.

WILLIAM DEWITT HYDE.

Bowdoin College, Brunswick, Me., November 6.

NEWMAN ON JANE AUSTEN.

TO THE EDITOR OF THE NATION:

SIR: Here is a tribute from Cardinal Newman to Jane Austen, which perhaps has not been brought to the notice of many of her admirers:

He used to say that he read through "Mansfield Park" every year, in order to perfect and preserve his style.—"Reminiscences of Oxford," by the Rev. W. Tuckwell, p. 184. Cassell & Co., 1900.

I. F. WILSON.

Cincinnati, November 7.

Notes.

Houghton, Mifflin & Co. are preparing a series of volumes after the model of Curtis Hidden Page's "Chief American Poets." They announce for early publication the following: "The Chief Elizabethan Dramatists" (except Shakspeare) to the close of the theatres, edited by Prof. William A. Neilson of Harvard University, the editor of the new single-volume Shakspeare; "The Chief British Poets of the Sixteenth and Seventeenth Centuries," and "The Chief British Poets of the Eighteenth Century," edited by Prof. Curtis Hidden Page. The selections will cover the full practical needs of college courses, and each book will be furnished with biographical, bibliographical, and explanatory notes.

Three more volumes are promised for this autumn in the special Riverside Press Editions of Houghton, Mifflin & Co., viz., "The Idyls of Theocritus," translated by C. S. Calverley (300 numbered copies for sale); "The Song of Roland," translated by Isabel Butler (200 numbered copies); "A Bibliography of Oliver Wendell Holmes," by George B. Ives (500 numbered copies). There are no more tastefully made books on the market to-day than the volumes of this series.

Doubleday, Page & Co. will publish early in January "The Autobiography of a Southerner," by Nicholas Worth, which has been appearing in the *Atlantic* in serial form.

Bertram Dobell is proposing to publish by subscription various unknown and unedited works of the sixteenth and seventeenth centuries. We have already mentioned his "Centuries of Meditation," by Thomas Traherne, and the "Gleanings from Manuscripts." To these should now be added "The Poetical Works of William Strode," "The Letters, Speeches, and Poems of Sir Nicholas Bacon" (1509-1579), and "The Partial Law, a Tragi-Comedie" (circa 1620-1630).

It was only a little while ago that the Oxford University Press published a new text of Keats's poems with elaborate annotations by E. de Selincourt. The poetical works are now to be added to the "Oxford Library Editions," with textual notes by H. Buxton Forman. The volume will include some lines hitherto unprinted.

Gilchrist's "Life of Blake," published in 1863, will now be reissued by John Lane in a cheaper edition. W. Graham Robertson has edited the text, written an Introduction, and added a large number of reproductions from the most perfect of Blake's drawings and pictures.

Much the best piece of critical work Swinburne ever wrote is his volume, "William Blake," which has long been out of print. A new edition now issued by E. P. Dutton & Co. is therefore really worth while. Mr. Swinburne adds a Prefatory Note, only a few pages long, but abounding in his polyphloisboian eloquence.

E. P. Dutton & Co. issue a new edition of "The House of Quiet," with an Introduction announcing the author as Arthur Christopher Benson. He says frankly that the chief reason now for giving his name is that it seems foolish to go on trying to keep a secret that is no secret at all.

We begin to believe that Mr. Benson, like Andrew Lang, is no longer the name of an individual, but of a society of writers. However, he continues to be always interesting and always to write with the appearance of artistic leisure.

We are to have more of Lord Acton's correspondence. His son has written to the *London Times*, stating that after a suitable lapse of time he will publish the letters to Döllinger.

Charles Scribner's Sons announce a book on bridge whist by P. F. Mottelay. It will contain the collected opinions of the best-known authorities regarding the declarations, leads, and different emergencies of the game.

Mr. Mosher's *Biblots* for October and November contain, respectively, "Giordano Bruno," by Walter Pater, and "The Last Days of John Addington Symonds," by Margaret Symonds.

With the publication of the fifth volume of Brandes's "Main Currents in Nineteenth Century Literature" (the sixth came out a year ago) that standard work in criticism is made complete in its English dress. The Macmillans now issue the set with illustrations, and to the sixth volume a full index is added. Brandes's views are so well known that any detailed review of the fifth volume, on "The Romantic School in France," or of the work as a whole, would be superfluous. He wrote in the full tide of liberalism, and his opinions are manifestly colored by political affiliations, but he writes always with spirit; is always interesting, and at times (notably in the volume on "The Romantic School in Germany") shows the faculty of plucking out the heart of a complicated movement. The translation in the present edition is idiomatic, and, so far as we have examined, accurate.

Following hard upon Winston Churchill's full and official biography of his father, Lord Rosebery's essay, "Lord Randolph Churchill" (Harper's), is, as he himself says, merely a sort of debt of friendship. He was much thrown with Lord Randolph, and it is personal appreciation of which his volume is made up. Political sympathy there could be little between the two men. But the audacity, the perversity, the brilliance of Randolph Churchill appeal to Lord Rosebery, if only as matter for neat description or sententious comment. Of this there is plenty given, if little real information. It is put beyond doubt, however—though it was never really in doubt—that, in the great crisis of his career, his resignation as chancellor of the exchequer, Lord Randolph was merely bluffing, and did not expect Salisbury to take him at his word. Lord Rosebery declares that when the time comes for the private letters of those two to be published, there will be tidbits for intellectual *gourmets*. His own style retains all of its point. The long decay of Lord Randolph's faculties, along with his loss of political power, is put into this epigram: "He was the chief mourner at his own protracted funeral, a public pageant of gloomy years." There are many such Roseberysisms in the book.

Henry C. Shelley's "Literary Bypaths in Old England" (Boston: Little, Brown & Co.), is a thoroughly readable book. It is so easy for literary pilgrims to be dull

and to force on the reader a rehash of the old anecdotes and descriptions, that Mr. Shelley is the more to be commended for furnishing in each of these eleven studies some new ingredient, if only a birth certificate to prove that Hood's tombstone is wrong by a year, or more intimate particulars of the career of John Hamilton Reynolds, Hood's brother-in-law, the friend of Keats. Most people will think that the chapter on Hood is the most interesting. Mr. Shelley prints for the first time some of Hood's "witty and tender" letters and gives us new glimpses of the family into which he married and the interests of his life. These documents were procured through Hood's nephew, the late Towneley Green. The anecdotes gleaned in the Carlyle country are all unpleasing, and maintain the tradition that Carlyle needs to be saved from his biographers. Those who have not themselves visited Ecclefechan and Scotsbrig, may be surprised to learn that their scenery is not desolate or bleak. The road that connects the two places "lies between luxurious hedgerows and flower-covered banks." On the haunts and homes of Spenser, Sidney, Penn, Gray, Gilbert White, Goldsmith, Burns, and Keats, Mr. Shelley has in each case something to contribute. His style is pleasing and impersonal, and his illustrations from photographs are numerous and well reproduced.

Constance Elizabeth Maud's "Felicity in France" (Charles Scribner's Sons) is a lively and well-written account of a summer spent in Normandy and Brittany by Felicity and an energetic aunt. If this is a faithful record of their experiences, the pair must have fairly shattered the French illusions as to the reserve and stiffness of the British tourist. They made friends with all classes, and were equally at home in a boar hunt at Fontainebleau or sharing the market cart of a peasant. Everywhere they found resentment and grief at the secularization of the convents, and never anything but reverence and pity for the nuns, who in many cases have been quartered in the houses of the hospitable townspeople and spend their time in nursing and teaching, buoyed up by the hope of a turn in political sentiment. The most interesting chapter is an account of the homes of the *Félibres* in Provence, those enthusiasts who, fifty years ago, began the work of restoring and perpetuating the old language of Provence, the *langue d'Oc*, which was fast decaying into a *patois*. Felicity visited Mistral himself, the soul of the movement. Mistral complained bitterly of the motor cars, which make it easy for parties of tourists to descend on him at all hours of the day and night. "I have the misfortune to be now in their catalogue of monuments." The whole volume is entertaining and attractively got up. It would be an excellent guide for tourists, especially women who wished to travel in the more remote villages of France and to stay in convents, while there are convents left, rather than in big hotels.

A new book by Stewart Edward White no longer needs any recommendation. As an open-eyed forest Rambler and mountain climber he is easily in the first rank of nature writers, though, of course, without the peculiar literary flavor and the varied background in wider experience of

life which one finds in the outdoor books of a Henry van Dyke. The present volume, "The Pass" (New York: Outing Publishing Co.), is devoted to mountain climbing in eastern-central California, in the region of the Great Western Divide of the Sierra Nevada range, with Cloudy Canyon, Deadman's Canyon, and the valleys of King's River and Roaring River for immediate surroundings, and the peaks about Yosemite and the Tuolumne Valley in the far distance. Mr. White was accompanied by his wife, but their experiences are not likely to make the region popular as a summer resort for society women. Mr. White pays a high tribute to the good sense and fidelity of the official forest ranger of this region, and puts in a plea for an extension of this service and more adequate compensation.

It is a poor year that does not bring to our table one or more text books upon elementary economics, and this season's crop begins with Prof. Charles Lee Raper's "Principles of Wealth and Welfare" (New York: The Macmillan Company). The book offers little that is novel in method or arrangement, and—very wisely—does not attempt to "reconstruct" economic theory for the benefit of high-school pupils. The style is clear, if sometimes oracular; and the doctrine generally sound.

Dr. Paul Marcuse's "Betrachtungen über das Notenbankwesen in den Vereinigten Staaten von Amerika" (Berlin: C. Heymann) is an attempt to describe for German readers the national banking system of the United States. After a brief account of American banking prior to the Civil War, Dr. Marcuse treats of the growth and present position of our national banks. Particular attention is given to note issues, but other aspects of the subject are not neglected. For American students the book has little value or interest, and German readers will be misled as often as aided by it. The introductory chapter upon banks of issue prior to 1864 is particularly open to criticism. On his first page the author states that colonial banking experiments were unrestrained by the home Government; whereas in 1741 Parliament extended to the colonies the rigorous provisions of the "Bubble Act." He thinks that the first bank of the United States was chartered primarily as a means of reforming American banking, rather than as a fiscal agent of the American Government; and that it prevented a "rapid increase and extension of other banks." He imagines that the notes of State banks used to circulate only in the State in which they were issued. The overflowing revenues of the national Government in 1835 and 1836 he attributes to the "new protective tariff system"; whereas duties were steadily falling at that time under the provisions of the "Compromise Tariff," and the inordinate increase of the revenues was due to the phenomenal sales of public lands. He writes an account of the second bank of the United States without making use of Professor Catterall's indispensable volume; and throughout displays but a superficial acquaintance with the literature of his subject. Dr. Marcuse would have served his readers better had he been content to begin his narrative with the founding of the national banking system. As it stands, we

cannot commend it to the constituency for which it was designed.

Alessandro Luzio, director of the archives at Mantua, has won a commanding position as an authority on the *Risorgimento*. His "Profili Biografici" just published (Cogliati, Milan) is a collection of articles mostly reprinted from the *Corriere della Sera* and dealing with Italian personalities of the nineteenth century. The author's style is as agreeable as his erudition is extensive, and, unlike most Italian scholars in this field, he is abreast of the German and English literature of his subject.

One of the most valuable of recent contributions to the history of religion is Professor Bousset's "Das Religion des Judentums im neutestamentlichen Zeitalter." The author, who is a professor at Göttingen, has bestowed much labor on the rabbinic and apocryphal and pseudepigraphic literature; and the extent and accuracy of his information of Jewish writings from the pre-Maccabean time onwards is widely recognized. His book is *gründlich* in the real German manner. Professor Bousset is not only a master of facts, but also a competent historian and clear writer. His monograph presents graphically the development and characteristic features of Jewish piety, with light on the religion of the masses as well as the more easily discoverable religious system of the scribes. The book has proved to be more than commonly useful, as is evidenced by repeated references to it, both in scholarly and popular works. We note the appearance of a second edition, thoroughly revised and enlarged. (Berlin: Reuther und Reichard.) An English translation of this valuable work would be most acceptable, and would serve to dissipate many popular illusions in regard to Jewish religion in the time of Christ.

The Swedish Tourist Traffic Society in Stockholm has issued a small volume, the character of which is well described in its title: "Sweden: A Short Handbook on Sweden's History, Industries, Social Systems, Sport, Arts, Scenery, etc." The opening chapter, by Emil Svensén, entitled "Sweden's Place in History," gives an interesting bird's-eye view of the history of the country, with constant reference to that of Europe at large. The other chapters give reasonably full accounts of the material resources and intellectual and social conditions, curiously enough omitting any mention of Swedish literature; the last describes "Sweden as a country for tourists." The volume is illustrated by excellent photogravures. An index would have enhanced its value as a work of reference.

The German Asiatic Society of Japan issues in Band x, Teil 3, five papers of unusual interest. The first, presented with illustrations, is upon Japanese Falconry, by D. A. Schinzinger, and embodies the result of much study of native literature upon this subject. Dr. Miura of the Imperial University treats of the Japanese literature of dreams and the canons of interpretation. In discussing the question of the naturalization of Japanese trees in Europe, Mr. Hofman points out the climatic possibilities of the most important of the trees of Nippon and tells something of native forestry. The famous, but now obsolete,

sport of *inu no mono*, or the hunting of dogs with blunt arrows by archers on horseback, which was only rarely cruel, is treated in text and by picture.

The Asiatic Society of Japan sends forth vol. xxxiv, part 1, of its Transactions, in a pamphlet of but fifty-nine pages. Yet in weight and value few of its issues have exceeded this one. John Carey Hall, the British consul-general, who has a perspective of thirty-six years of residence in Japan, furnishes a translation of what may be regarded as the literary basis of Japanese feudalism, the magisterial code of the Hojo power-holders, promulgated A. D. 1232. The code existed in manuscript until the seventeenth century, when it was printed, not for public knowledge, but for official use. The translation has been done with great care and the explanatory notes are illuminating. Besides being of the highest interest to the student of feudalism, it confirms the view held by literary scholars, that the position of the Japanese woman in the early and middle ages was much higher than under the Tokugawas, when the Chinese philosophy and ethics fettered not only the national intellect, but swayed the social customs of the Japanese. A brief paper on Chomei, "the Japanese Wordsworth," and an unusually practical paper on the study of Korean, from the point of view of a student of the Japanese language, complete this number.

The Imperial Cabinet of Japan has issued the tabulated statement which shows the movement of the population of the empire in 1903. The brief text and terms are in French, and the details of births, marriages, deaths, divorces, and diseases furnish data for conclusions as to the advance in public hygiene. On the whole the figures are encouraging. Such a conclusion is more than confirmed by the "Résumé Statistique de l'Empire du Japon," which, in its twentieth issue, for 1906, gives the statistics, in condensed form, though none later than 1904. Within the memory of living men there were no public hospitals in Japan; the exact number in 1903 was 909. Of the 37,180 physicians, probably 30,000 practise according to modern science. Of epidemics in 1904, dysentery and typhoid fever claimed the greatest number of victims. Recent legislation has strikingly diminished the number of divorces. Instead of one divorce to every three marriages, the figures for 1902, exclusive of Formosa, show 394,165 marriages and 64,139 divorces. The Ainu, like our Indians, so far from dying out, seem to hold their own.

The *Nuova Antologia* of November 1 contains an important article upon the "Legends of Trajan." The author is the director of the excavations in the Roman Forum, Giacomo Boni, whose discoveries in regard to the Column of Trajan were discussed in a letter from Rome printed in the *Nation* of July 26. He not only gives the results of his recent researches in and about the Column of Trajan, but brings together a unique collection of photographs of tapestries, sculptures, frescoes, engravings, and pieces of majolica of the Middle Age and the Renaissance, illustrating the origin of the legends of Trajan, and showing their transformation as they were passed on from century to century.

Rudolf Haupt in Halle announces the publication, under the editorship of Dr. Johannes Luther, of a collection of Title Borders of the Time of the Reformation, for the purpose of aiding in determining the place of printing of undated books and pamphlets of this period. During this time of free and unrestricted reprinting, at that period hardly yet regarded as piracy, a pamphlet that aroused any general interest and comment was reprinted by booksellers in various parts of Germany, though very often without place or date. The ornamentation on the title pages even was copied, though not always on the same publication on whose title page it had originally been found. Bibliography is here used directly in the service of the history of culture, inasmuch as the determination of the imprint place of these undated pamphlets will throw light on the spread of the Reformation ideas. The work will be issued in six to eight parts, each containing fifty plates. In order to facilitate the use of the work for the purpose of comparison, each plate is accompanied by a duplicate on transparent paper.

Selections from the correspondence of the late Cyrus W. Field were sold at auction in this city last Friday by the Merwin-Clayton Company. The highest price paid was \$101, for a letter from W. E. Gladstone to Mr. Field after reading "Thirteen Months in a Rebel Prison," a copy of which Mr. Field had sent him. The original cable message read by Mr. Field at the Crystal Palace in this city, September 1, 1858, the day of the carnival celebrating the laying of the Atlantic cable, was sold for \$30.

On Monday, November 19, the Merwin-Clayton Sales Company will offer at auction a collection of Lincoln literature, including some scarce items; also a few Confederate pieces and some fifteen books about John Brown. One of the latter is Redpath's "Echoes of Harper's Ferry," 1860, which contains the first publication of Thoreau's "Plea for Capt. John Brown," two speeches by Emerson, and Whittier's poem "Brown of Ossawatimie."

The library of L. M. Dillman of Chicago, which ranks as one of the great American collections of first editions of nineteenth century English authors, will be dispersed this season by the Anderson Auction Company of this city. Mr. Dillman's collection is especially rich in books of Lamb, Coleridge, Shelley, Keats, Rossetti, and the Brownings. His copy of "Pauline," 1833, was Reuben Browning's, with inscription on the title-page in his autograph: "By Robert Browning, his first publication, privately distributed. This copy was given me by his father, my eldest brother. Reuben Browning." This identical copy has already appeared three times in the auction room. At the George T. Maxwell sale in April, 1895, it brought \$260, being bought by a firm of bookseifers who sold it to Alfred J. Morgan. When part of this library was sold in April, 1902, the book brought \$720. In the sale of the library of Daniel F. Appleton, April, 1903, it brought \$1,025. Although "Pauline" is probably the most valuable single book, the Keats, Shelley, Lamb, and Coleridge collections include rare items. Many of the volumes are in the original boards, uncut.

On Thursday, November 29, Hodgson & Co., the London auctioneers, sell a small collection of books, mainly English literature, and including a few volumes of great rarity. The most important of these is the second edition of Spenser's "Shepherd's Calendar," the title-page without date, but with colophon: "Imprinted at London by Thomas East for John Harrison, the younger, . . . 1581." The first edition of 1579 is one of the rarest and most valuable of English books; no copy has come into the market for many years. The earliest edition described by the Grolier Club in its first volume of "Collations and Notes," 1893, was the third, of 1586, and we know of no copy of either the first or second in this country. The sale also includes several early Shakspeare quartos: "The Whole Contention betwene the Houses of Lancaster and York," the undated edition printed by Thomas Pavier in 1619, being the third edition of Parts II. and III. of Henry VI.; "The Merchant of Venice," 1637, the third edition, but with the imprint cut from the title-page; "Hamlet," 1637, the sixth edition, a large copy; and "Pericles," 1635, the sixth edition, but lacking the title. There is a fine and perfect copy of the first collected edition of "Shakespeare's Poems," 1640, with the rare frontispiece by Marshall; also two copies—one lacking three leaves of text, the other perfect—of the spurious play, "The History of the Life of Sir John Oldcastle," 1600. Another book of Shaksperian interest is John Taylor the water poet's "Heads of all Fashions," 1642, rare and entirely uncut. On the title-page are seventeen "heads," one of them being that of Shakspeare. Of more modern books, the most valuable are the little college magazine, "The Gownsmen," which issued seventeen weekly numbers in 1830, and which, it is supposed, Thackeray had a hand in editing; Tennyson's "Poems Chiefly Lyrical," 1830, uncut; and Pope's "Essay on Man," first editions of the four parts.

An even rarer series of views of New York streets, than those of Jones & Newman, described in the *Nation* of October 25, is one published by Alfred Tallis, called "Tallis's New York Pictorial Directory and Street Views of all the Principal Cities and Towns in the United States and Canada." The views were engraved on steel, whereas Jones & Newman's were lithographs. The covers state that "the engravings will be executed under the direction of Mr. John Rogers and Mr. John Kirk of this city." The "Directory" was issued in parts, each containing two plates and two leaves of text, one side of the leaf being matter descriptive of the buildings, the other side advertisements. Apparently eight parts, containing sixteen plates, were issued, though this full number is not owned by any one collector. Several of the plates exist in different states, new names being added on the fronts of the buildings from time to time, as the occupants were induced to become advertisers in the series.

The *Athenaeum* notes that W. H. Hulme of Cleveland, Ohio, has found in Worcester Cathedral Library a valuable MS. in Middle English of the late fifteenth century which has not yet attracted the attention of students of English literature and his-

tory. Among the contents of the MS. are a version of Peter Alfons's collection of Oriental tales called "Disciplina Clericalis," known in old French poetry as "Le chastolement d'un père à son fils." This Worcester version is the only one yet discovered in Middle English literature.

Gaston Boissier, after forty years of service, gives up his chair at the College of France in order to devote his time to the study of the Hellenization of Rome.

Henry George Raverty, an Oriental scholar of rare attainments and large performance, has just passed away in England. He entered the military service of the East India Company in 1843, served in the Punjab campaign of 1849-50, and in the first frontier expedition of 1850 against the tribes on the Swat border. In 1863 he attained his majority, and retired in 1864. Before he was transferred to the Northwest he distinguished himself for his proficiency in Urdu, Persian, Marathi, and Guzerathi. On the Northwest frontier he devoted himself to the study of Pashtu and Sindi. When he began the study of Pashtu no grammar of that language had been composed, and he was compelled for his own convenience to make one in outline. This he corrected and enlarged and eventually published in 1885. After his retirement he devoted himself to Oriental studies, and won a place in the first rank of historians of the Moslem East. One of his great achievements is his translation of the "Tahakat-i-Nasiri," to which he added copious notes drawn from contemporary authors. It is a storehouse of minute information regarding the earlier period of Mohammedan rule in India and the countries on its Northwestern frontier. The journal of the Asiatic Society of Bengal contains many of his papers, some of which are practically independent historical works. He was engaged in later years upon a history of Herat and its dependencies and the annals of Khorasan.

The Rev. Henry Martyn Baird, dean emeritus of the University College of New York University, died Sunday at Yonkers, at the age of eighty-four. After graduation from New York University in 1850, he travelled in Italy and Greece, and then studied at Union Theological Seminary and Princeton Theological Seminary. In 1859 he returned to this city and became professor of Greek in New York University. This chair he occupied until 1902; and during part of that period he discharged the duties of dean. His writings include "Modern Greece," 1856; "Life of the Rev. Robert Baird," 1866; "Rise of the Huguenots of France," 1879; "The Huguenots and Henry of Navarre," 1886; "The Huguenots and the Revocation of the Edict of Nantes," 1895; and "Theodore Beza, the Counsellor of the French Reformation," 1899.

Wisconsin Germans have decided that part of their memorial to Carl Schurz shall take the form of a professorship at the State University. This is to be filled each year by the appointment of some well-known professor from one of the German universities. The movement appeals particularly to the descendants of the many thousands of Germans who, like Carl Schurz, settled in Wisconsin between 1848 and 1860. The fact that Mr. Schurz was a regent of the State University, empha-

sizes the appropriateness of the memorial. For the present, the professorship will be "one-sided," but it is hoped some day to double the endowment so as to provide for an American lecturer in Germany.

The committee of German educators, which has in charge the preparation of the programme for the Second International Congress for School Hygiene, to be held in London in 1907, has submitted to the cultus minister of Prussia a series of proposals for reform in the secondary schools. The chief proposals are: (1) All compulsory class work to be restricted to the forenoon hours, and to this end periods of recitation not to be longer than forty to forty-five minutes; (2) the amount of work done at home to be materially decreased and to fall away entirely in the middle and lower grades; (3) one afternoon each week to be given entirely to sport and exercises, and no written work assigned for next day.

A theological diploma for women, S.Th. (student in theology), is the latest advance in the higher education of women in England. It has been established by the Archbishop of Canterbury to supply a training for teachers in schools where religious instruction is required. The examinations, of which the standard is approximately that of the honor schools of theology, are in five subjects. Three of these—introduction and subject matter of the Old and New Testaments, and the history of Christian doctrine—are compulsory, and two may be chosen at the option of the candidates from a varied group. A knowledge of New Testament Greek is necessary; Hebrew is one of the optional subjects. Diplomas were given last month to five successful candidates, one of whom was an American. The next examination will be held in July, 1907.

An account of the travelling library system carried on in Belgium by the Ligue de l'Enseignement is given in a recent issue of the *Revue des Bibliothèques et Archives de Belgique*. The league has forty-three libraries, containing from 110 to 135 volumes each. These libraries are sent gratuitously to a teacher in any place not having a public library, on condition that the books be put at the disposal of the residents of the locality at least one day a week. The library is lent for two years, and is then exchanged for another. If at the end of four years interest has not been sufficiently aroused to organize and support a local library, the league abandons the place as unworthy of further effort. Seventy-seven rural communities have been visited, and two-thirds of them have founded local libraries.

SHAKSPEARE AND POPE.

The Text of Shakspeare: Its History from the Publication of the Quartos and Folios down to and including the Publication of the Editions of Pope and Theohald. By Thomas R. Lounsbury. New York: Charles Scribner's Sons. \$2 net.

In his two previous volumes on "Shakspearean Wars" Professor Lounsbury dealt at length with the controversies that had raged over Shakspeare as a dramatic artist. In the present volume he begins the history of the attempts to restore the text. His original intention of completing this in

one volume has been interfered with by the necessity of a treatment of the Pope-Theohald controversy much more elaborate than had been foreseen, so that the book before us is really an account of the "Dunciad," its origin, growth, and results, with a few chapters prefixed on the earlier history of Shakspearean editing.

These introductory chapters give an admirable summing up of the circumstances surrounding the writing and printing of plays in the late sixteenth and early seventeenth centuries, and bring out clearly the facts that there was nothing exceptional in Shakspeare's apparent indifference to the publishing of his plays, and that the corrupt state of the early prints was the natural outcome of the casual nature of their transmission in manuscript and committal to the press. In illustrating the risks which the text later ran from the backwardness of linguistic scholarship in English in the eighteenth century, Professor Lounsbury states the case in a somewhat unfortunate way. In such a line as

Whose own hard dealings teaches them suspect,
the eighteenth century critic naturally jumped to the conclusion that "teaches" was merely a mistake in grammar, due to the compositor, and proceeded to emend the line, either as the editor of the Second Folio had done, by reading "dealing" for "dealings," or, as Pope did, who read "dealings teach them to." Modern textual critics retain the original reading, and it is on the ground for this retention that Professor Lounsbury's discussion leaves something to be desired. He explains the -es of "teaches" as a peculiarity of the Northern dialect, which, in the time of Shakspeare, he believes to have been still contesting a foothold against the -e derived from the regular Midland -en ending of the present indicative plural. This tendency he regards as parallel to the supplanting of the -th ending of the third person singular of the present indicative by the -s which is now the normal termination. But it is more than a dozen years since it was pointed out to Professor Lounsbury, on the appearance of his "Studies in Chaucer," that this last ending was West Midland as well as Northern, and that Northern influence was unnecessary to explain it. Thus, as a support to his explanation of the -es in the plural, it has no force. Many, if not most, English scholars find it more likely that the -es in such passages as that quoted is merely an extension of the familiar construction in which a singular verb follows a subject plural in form but singular in idea. He has, of course, a perfect right to prefer his theory of a Northern dialect origin, but hardly to state it as if it were the only alternative to the belief that the troublesome final -s was due solely to the depravity of seventeenth-century printers.

The last twenty chapters form a contribution to the literary history of the eighteenth century of the highest importance. They clear up an obscure and tangled controversy, throw light on the character and conduct of the greatest poet and the greatest Shakspearean critic of the age, and make clear the origin of its greatest satire. Much of this investigation of necessity wanders far from Shakspeare; but it is difficult to see how it could have been avoided, and the substantial results of the

author's researches ought to silence the critic who is inclined to quibble over the appropriateness of the title of the volume. "The 'Dunciad,'" Professor Lounsbury declares, "owed its existence to the revelation which had been given of Pope's incapacity as an editor, and to that alone." The absence of any accessible edition of the completed "Dunciad" of 1729, and the prevalence of the later version in which Cibber replaces Theobald as hero, have combined to obscure this all-important fact, and to deprive the satire of much of its true significance. Not only does the present volume reveal the real origin of the work, but it also corrects many serious misconceptions that have clouded the whole matter for a century and a half. The pretence of Pope that his aim was to purge society from the nuisance of petty scribblers who assailed the great, is completely unmasked; and the satirist is shown to have sought in his "Discourse on the Profund" to draw out attacks which would seem to justify such castigation as he purposed in the "Dunciad." In this he was largely disappointed, but he nevertheless proceeded to create the impression that he was being persecuted, and he deliberately falsified his statements as to the treatment accorded him in the pamphlets and journals of the day, in order to provide a justification for what was in reality a vent for his private spite and mortified vanity. The success of his efforts has lasted to the present day; and readers of English literature have been induced to believe not only that Pope's victims were malicious, but that they were really dunces, and that the "Dunciad" annihilated them. All of this now appears to be untrue. Pope is further shown, in spite of his denials, to have used the *Grub Street Journal* as a personal organ, and later to have left its editor, now for the first time identified, in the lurch, when the paper no longer served his needs.

The painful impression produced by such additional evidence of the degradation of a great writer is partly compensated for by the rehabilitation of Theobald. While this critic can by no means be freed from the charge of having stooped at times to undignified methods of controversy, he is shown to have been on the whole honest and disinterested as well as scholarly; and his position as the greatest of textual critics of Shakspeare is made clear. Many inaccuracies of detail concerning his methods and actions are corrected, and abundant evidence is produced of his learning and acumen.

"Let it not be fancied," says Professor Lounsbury in conclusion, "that I delude myself with the belief that the facts here presented, incontrovertible as they are, will reverse the verdict passed upon the man by ages too prejudiced to consider fairly, too indifferent to feel concern, too indolent to investigate. The world cares very little for justice." We may be permitted to hope that such pessimism reflects only a passing mood in the veteran scholar who has in his time labored so well for the cause of truth. Already the acknowledgments of Messrs. Clark and Wright, and the efforts of J. Churton Collins and others, have done much to give Theobald his due. The present volume will do more; and though the immediate effect may be confined to a limited circle of specialists, sooner or later the truth is sure to reach the general reader,

and even for Pope and his victims will the whirligig of time bring in his revenges.

Meantime, we wait for the conclusion of Professor Lounsbury's survey. With some restraint of his besetting sin of diffuseness and repetition it should be possible to cover the remainder of the history of the text in one volume, and the series will then stand as the most comprehensive account we possess of the posthumous fortunes of any English author.

CURRENT FICTION.

A Lady of Rome. By F. Marion Crawford. New York: The Macmillan Co.

Mr. Crawford has no distinct message to deliver, or problem to suggest. He is essentially an entertainer. To him a novel is not a vaudeville turn or a drawing-room discourse to the initiate. The simplicity, fluidity, and vigor of his style are characteristic of his conceptions. Subtlety of temperament or character often interests him, but never mere subtlety of mind.

This story reintroduces us into the Roman circle to which "Saracinesca," "Pietro Gbislari," and the rest gave us access long ago. The theme is that one inexhaustible theme, an unlawful love and its consequences. Its treatment is refreshing; for these sinners are not invented that a punishment may be invented, nor are they dealt with according to the familiar conventions of prosaic retribution or poetic justice. The suffering to which his lovers are brought is a human suffering, not expiated by final renunciation or death, but, as chances, terminated by a stroke of fate which unites them by all bonds. There is a casualness in the event which may seem unduly ironical, or even immoral, to persons who wish to believe that human affairs go by rote. From the dramatic point of view the dénouement is certainly inconclusive. But a novel does not follow the rules of melodrama or tragedy. If the bit of human experience which Mr. Crawford here chronicles is to be considered as data, its inconclusiveness need not be taken as insignificance. The story has the familiar swing; like its forerunners, it is decidedly a book to be read at a sitting.

The Poet and the Parish. By Mary Moss. New York: Henry Holt & Co.

One is grateful to Miss Moss for having depicted, in these days of drivelt about the artistic temperament, a poet who, however socially irresponsible, is by no means morally invertebrate. He loves and marries a stupid and conventional woman, and remains faithful to her, even continues to love her, by virtue of an innate purity and fidelity of nature which "the parish"—that is, Mrs. Grundy—is incapable of understanding. He has not sinned in Adam's fall, but is a man of sound nature, whom gross temptations cannot assail. Consequently, he is blandly indifferent to the little rules of propriety which are the fruit of social expedience or of social prurience. Having suffered much from his fool of a wife, and come to despair of any sympathy from her, he leaves her for a time. Circumstances lead him into what society calls "compromising circumstances," involving a perfectly good girl, a young actress. The

wife, believing everything against him, goes back to her parents. The girl is subjected to scandalous notoriety, industriously fostered by her manager. Self-respect forces her to leave the stage, and further circumstance throws her, in a sense, upon the mercy of the poet. Believing himself finally abandoned by his wife and feeling the appeal of the girl's helplessness and trust, he is about to become her protector (we use the word in no smirking sense), when the sudden knowledge that his wife is to bear him a child recalls him, not to submission to the parish point of view, but to a renewal of the relation which he himself could never have willingly dissolved.

The story, we think, would have been more powerful, if not more immediately effective, if its tone had been less light and satirical. We are in danger of finding ourselves rather amused than aroused by the irony of the situation. It should, perhaps, be enough that there are no dull or meaningless persons or events, and that a deeper note seems to sound beneath the trebles and tenors of the social-comedy strain.

The Breath of the Runners. By Mary Mears. New York: Frederick A. Stokes Co.

Tales of the "artistic temperament" and the Bobemian life continue to multiply; apparently the market for that kind of commodity continues firm. Just now (perhaps "The Divine Fire" set the fashion), no story of the order is complete without its production of one or two masterpieces by the gifted hero or heroine, or both. It is not enough that we should observe the artistic temperament in its rather lamentable minor incarnations struggling along the high road toward the goal of a decent mediocrity. We must find productive genius presiding over whatever shabby studio we may chance to peer into, and a great work upon every second easel. We are required to love the smell of paint and the studio jargon, and to snatch a fearful joy from the spectacle of one or other pair of young idiots of different sexes being unconventional over a pint of wine in some snuffy café. This, it appears, is Youth, and Art, and Life.

These young innocents are all after Fame or Glory, and most of them "arrive," or "succeed." The standard of success is, to be sure, not very exacting; one has to distance a rival and make the critics "sit up and take notice." "The Breath of the Runners" describes the race between two young women, sculptors and close friends, for this kind of goal. The writer has a serious purpose. "So long," reads the Preface, "as our cities are centres of inflamed and abnormal activity into which all types are drawn and set acting and reacting upon one another in a relentless and incessant struggle to attain preëminence, just so long the parable contained in 'The Breath of the Runners' must have weight." What is the parable? Two poor American girls make their way to Paris and the inevitable Quartier. One is honestly in pursuit of excellence; the other desires to be praised, and particularly to be praised above her friend. Each produces the expected masterpiece and is given place in the year's salon. Then something happens which the author re-

gards as tragic, but which to us seems nearly farcical. Enid, the self-seeking artist and faithless friend, has made a daring group of a death-angel giving a cup to a dying soldier. The angel, "mysterious and buoyant, is gay even to laughter. Her eyes meet the observer with a deep, inexplicable mirth, and like the eyes of some pictures, they follow him wherever he goes." This work, at first hailed with applause, is presently pronounced by the critic as sensational and insincere. The group represents not the joy of death, but the joy of life. The other girl's work grows in favor. Enid determines to prove the sincerity of her work, and, according to the author, effects this perfectly by drowning herself in the Seine. The critics take it all back, and the immortal merit of the work is assured by a supreme manifestation of insane vanity! If it were not for this absurd person and the incidents which concern her, the novel would be exceptionally good of its kind. There is plenty of material in the story of Beulah Marcel, a really credible and desirable woman, and her experiences of art and of love, without resorting to the motive of morbid rivalry.

Henry Northcote. By J. C. Snaith. Boston: Herbert B. Turner & Co.

Thirty-four out of the thirty-nine chapters of this story we read with scant patience. The narrative passages are written in the worst style imaginable, turgid, affected, diffuse, with a minimum of grammatical soundness and a maximum of rhetorical effort. "Why not demand it with all the fervor of his nature, like others who had sought their opportunity had done so often?" "All the subtle implements of his nature could not resolve such a potency as that." And so on. For the substance of the story not much more can be said. Most of the characters are shadowy nuisances, and the hero is a fantastic bore. There is much fumbling at psychological analysis of nothing in particular, and much detailed reporting of what is declared to be the matchless eloquence of the cheerful Northcote. We might be reading the first literary effort of some grocer's clerk whose literary enthusiasm hung fire between Marie Corelli and Anna Katherine Green. It is only the hope that the latter is really the presiding genius of the narrative that carries us through those thirty-four chapters. We seem to be following, though at a snail's pace, the scent of some "detective" mystery. Henry Northcote, a half-starved barrister, receives a brief for the defendant in a murder trial. The accused is a prostitute, who has killed her lover of the moment under singularly brutal circumstances. Northcote's speech in her defence is a tissue of lies and sophistries, but it wins the verdict. And here, some three-quarters of the way through the dawdling volume, a real story begins. Out of all this verbiage and sentimentality emerges something distressingly like the naked truth. At his moment of triumph Northcote wakes to a sense of his own perfidy; and perceives to his despair that the price of his achievement is moral wreck. He has prostituted his youthful ideals and his manly powers to the service of unworthy ambition. He has destroyed his faith in himself.

Outface it as he might, the flaw was

in himself. It had been there from the beginning. . . . Better a thousand times not be distinguished from the mediocrity he was never weary of despising, than to be at the mercy of a genius that would compass his destruction.

In this hour of possible regeneration comes to him the woman whom he has saved from merited punishment. She, it seems, is a victim of heredity and circumstance, and with all her villainess not utterly lost. She looks to him with hope as the possible saviour of her soul as he has been of her body. He is pitiless with himself and with her. He tells her that he has saved her not in the hope of a higher justice, or in a spirit of Christ-like compassion, but to advance his own fortunes. He is no longer worthy or capable of the task which she proposes for him. So he extinguishes the last ember of soul in her, and she, reverting to the wiles of her trade, usurps his body. Having dragged him to her level, she wishes to die at his hand, and at length by force achieves her end. He then quite deliberately plans and effects the concealment of the deed, and the final destruction of his own soul. Nothing remains of him but his genius and his ambition, and they are allowed to go scot-free. The brutal directness and simplicity of the means employed to effect this partial escape are impressive in a manner strangely yet logically at variance with the vague inconsequence of the narrative up to the point of climax. However reluctantly, one must yield to such a book the admiration due to a thing of crude force.

Portraits and Jewels of Mary Stuart. By Andrew Lang. New York: The Macmillan Co. \$2.75 net.

Among all the uncertainties by which Mary Stuart is enveloped the two most baffling relate to the authorship of the Casket Letters and the Queen's personal appearance. Mr. Lang, whose courage is above reproach, grappled with the Casket Letters in his "Mystery of Mary Stuart." He now brings to the study of the portraits his usual willingness to state and defend a distinct opinion. "I hold," he says, "that some portraits do more than is commonly supposed to vindicate Mary's character for beauty, and, above all, for charm. I shall be taxed with credulity but that is a charge which does not afflict me."

One follows naturally the process of exclusion, and in the case of Marian portraiture it can be pursued almost as far as with the pictures ascribed to Leonardo and Giorgione. At the Glasgow International Exhibition of 1901 there were displayed eighteen portraits or miniatures, of which Mr. Lang at once declares fifteen to be spurious and misleading. Most of these "hopeless effigies" represent false types that can be traced to the seventeenth and eighteenth centuries or even to a period not more remote than the regency of George IV. The "round-faced nun-like person," the lady with a crown and crucifix, the Book-of-Beauty heroine, are all there, together with several miniatures on ivory, though this material was not used by miniature painters for a hundred years after the axe fell at Fotheringay. However, since Henri Bouchot will admit the authenticity of only four portraits among the hundreds named after Mary Stuart, the

management of the Glasgow Exhibition did well to secure as many as three for which something can be said. Mr. Lang, however, is less skeptical than M. Bouchot. Distinguishing between portraits of whose authenticity there is complete proof and those that stand in close relation to the authentic portraits, he enumerates thirteen likenesses which have a true historical value. The list embraces three drawings, five miniatures, two portraits, and a medallion.

One fixed feature of all the authentic portraits is the long, low, straight nose. The Queen is also known to have had a rather long face. Most people believe that Mary Stuart was very beautiful, and undoubtedly a large part of the interest bestowed upon her career is traceable to this impression. In the portraits, however, it requires an uncommon degree of enthusiasm to discover any sign of exceptionally good looks. Some of the devotional portraits reveal dignity, but they are not the most authentic, and, besides, like most of the others, they are a long way from suggesting beauty. Yet the fact remains, as Mr. Lang has phrased it: "Mary was either beautiful or she bewitched people into thinking that she was beautiful." For purposes of contemporary effect it made little difference whether her beauty was apparent or real, but at this distance of time it is a matter of considerable interest to determine what she actually looked like.

For ourselves we much prefer the crayon sketches which were done in France between 1559 and 1561. No one seems to dispute the pedigree of "Le Deuil Blanc," by François Clouet, and there are good grounds for placing confidence in the sketch of Mary, as Dauphine, by Jehan de Court. The hardness of these artists is well known and can be allowed for. Expression is their weak point. But in the delineation of features they were careful and can be depended upon to furnish a pretty accurate chart of the face as well as a most punctilious reproduction of costume and jewels. They give no impression whatever of the Queen's animation or *natural*, but the elements of physiognomy are there.

Mr. Lang takes a great interest in the Melville portrait, so-called because it is the property of the Earl of Leven and Melville. It has undoubted merit and claims to be authentic on the score of the jewels which it introduces. The picture belongs ostensibly to 1559-60; the costume is ascribed by experts to a date not earlier than 1572; while, in the opinion of the late Sir George Scharf and Lionel Cust, the style of painting bespeaks a period still later. Against these considerations Mr. Lang's strong point is that the jewels shown in the portrait are distinctly set down in the inventory of Mary's personal possessions and could not have been known to an artist of the seventeenth century. On the question of date he is willing to yield a little, but he stands firm on the main issue:

It will be conceded, I think, that if the Leven and Melville portrait is not an original, probably painted in France about 1560, it is a very good copy of such an original, and not an archaeological reconstruction of the seventeenth century.

The reason why this particular portrait merits Mr. Lang's championship is that it

has a glow of life which one does not get in the crayons of Clouet and Jehan de Court. But even allowing its essential authenticity, the charm of Mary Stuart must have come from her temperament rather than from her features.

Especially in its account of the Queen's jewels this study is a valuable addition to the knowledge of all who have not the advantage of being Scottish antiquarians.

A Queen of Queens: The Making of Spain.

By Christopher Hare. Illustrated. New York: Imported by Charles Scribner's Sons. \$2.50 net.

The history of Spain, first and last, gives admirable scope for picturesque writing. The commonplace of the bourgeois never meets its historian, and if he has commonplaces he brings them himself. Distinction is the note; even the peasant, if not somebody's son, has his sense of hood and difference: he is an old Catholic, with no drop of unchristian blood, or he is secretly proud of his Oriental inheritance from Hebrew or Arah ancestry. So, too, the church stands apart; treats equally with Rome and makes Rome yield; the Cid of legend cannot endure the papal chair above that of Spain. And not without cause did the last knight-errant run there his gallant career, and follow ideal if wandering fires, and the last chronicler of the spirit of the middle ages in melancholy irony close and crown the record of that period with the tale of its noblest son. Good two centuries were to pass before the modern world appeared and laid Don Quixote's lance again in rest; and over that space the most idealistic figure is the brain-struck Spaniard. And now in the awakening Spain there stirs the same spirit of distinction, in art, in letters, and in life. It may give visions far removed from ours of comfortable subjection to the opinion of the many, but the commonplace cannot rule it. If, in Oriental fashion, there is unrest and disturbance, there is, too, Oriental color and spontaneousness.

As a seeker of the picturesque, then, Mr. Hare has turned from his Italian studies to the story of Isabella the Catholic. Her and her fortunes he frankly regards as such material; he makes no claims, we take it, to independent historical research. Rather guided by previous leanings, he has endeavored to gain such familiarity with her achievements and her entanglements as may enable him to put all these vividly before the more casual reader. And the material has answered to his hand. We have here, if not a minutely and conscientiously scholarly, yet a brilliant, an intelligible, and a fairly correct picture of her and her times.

The first fifty pages are given to Moorish Spain from the conquest until the birth of Isabella in the little walled town of Madrigal in Castile. From this point there is a wealth of illuminating detail. If we cannot be sure that the elaborate disentangling of motives is sound, evidently sound are the broad sketches of character: the devoted and queenly Isabella herself; her enigma of a husband, a strayed figure from the Italian Renaissance, uneasy in the simpler Spain; her daughter Catharine of England, a child in a foreign land, driven to set her wits against the unscrupulous keenness of Henry

VII.; Henry VII. himself a fit opponent for Ferdinand; Margaret of Austria, now lying in marble in the church of Brou; the persistent Columbus; Cardinal Mendoza of the Polyglot, Granada, and the Inquisition; and, long surviving all the rest, Queen Juana, *la loca*, "the Mad," dying only in 1555, and at last permitting her son, the Emperor Charles V., to seek rest in his cell. If the Moorish figures are mere shadows flitting across the stage, no other historian has succeeded in making them real. In all treatments, this war of the last reconquest looms like a fight with ghosts, or at best with the puppet heroes of a romantic legend. They were of an alien world, one of which the historians of Spain have so far had little direct knowledge, and could in no wise make to live; and among them no great personality stood out with convincing reality, as had done the earlier Saladin. Not even a pathetic interest is created; Boabdil, himself, missing his true fate in his last battle for his own, strikes no such tragic note as the great refusal of Charles Edward at Culloden. His last sigh might come from an opera.

But on the Spanish side all the events are great and weighty, and it is always plain that the world is the stage. The reconquest, the Inquisition, the New World, Ferdinand's scheme of European empire, are unravelled here as definite facts, even though they are made subject to the picturesque. The great outburst of Spanish energy, the breaking into a new over-seas life, the essential dignity, force, and difference of the Spanish character, all make Mr. Hare's treatment possible and even successful. That he is somewhat given to adjectives is only natural, and that his enthusiasms run high is still more natural. The historian would be scientific, in sad truth, whom Isabella the Catholic would not carry off his feet. That he seems hardly to have read his proof-sheets is another matter; to be balanced perhaps by the excellent illustrations.

A History of Higher Education in America.

By Charles F. Thwing, LL.D. New York: D. Appleton & Co. \$3 net.

The president of Western Reserve University, a graduate of Harvard thirty years ago, has rendered a good service to the students of education, in this country and abroad, by the preparation of an historical volume which is full and comprehensive, though it does not profess to be exhaustive. He informs us that it is the result of twenty-five years' study (not exclusive, however) of that most interesting problem, the origin and development of American universities, colleges, and other higher institutions of learning. The scope is wide, and yet it is restricted. For example, the great scientific societies, the museums, and observatories receive only incidental mention; and the independent foundations of Smithson and Rockefeller are not described. There is an intimation, however, that in a future "history of education, in all grades in this country, during forty years," the writer will discuss certain subjects which are briefly considered in this volume.

One-third of the volume is devoted to the pre-revolutionary period. Of course, Harvard, William and Mary, and Yale receive the most attention; but

Princeton, Pennsylvania, and Columbia come in for briefer notices; and Brown, Rutgers, and Dartmouth are not overlooked. Then follows an account of later foundations in all parts of the country, and special chapters on Finances, the Education of Women, Undergraduate Affairs, Professional Schools, Courses of Study, earlier and later, with a brief final résumé on "the general results" of all these efforts and undertakings.

The volume is very readable, and its pages are enlivened by many personal sketches of men who were prominent in educational movements. It is not surprising that in so wide a survey there are occasional slips on the part of the narrator, and that there are omissions which the friends of each institution that is named will regret. The work should have been more thoroughly revised. There is no attempt to give a philosophical review of the various forces which have contributed to the intellectual progress of the country. On the other hand, there is no other volume which contains such a full account of the manifold, intelligent, self-denying, and successful endeavors of the American people to secure for their youth the highest advantages of liberal culture.

It is fortunate that the endeavor to secure higher education both in New England and in Virginia was developed in the very earliest colonial days, and that the colleges were established on the principles and with the methods of the universities of Great Britain. These original colleges were established in a period when the university idea was suppressed in Oxford and Cambridge by the growth of funds, discipline, and usages more strictly collegiate, and it was long before the word "university" was used with any freedom on this side of the ocean. As the country increased in population and in resources, the English ideas, modified and adapted to new conditions, were transmitted to every one of the United States, so that "the college" represents to this day, from Maine to California, substantially the same conception. Dr. Thwing brings out this fact especially in his narrative of the origin and growth of Southern and Western institutions.

The original colleges were largely, but not exclusively, governed by ecclesiastics. Ministers of the Gospel were the educated class, and before lawyers, physicians, and the laity in general made themselves felt, the ministry cherished and guided the infantile establishments. This affords no reason for regrets. It was the best thing that could be done in those simple and impecunious days. Even now there are many who prefer this mode of control, as is shown by the large number of denominational foundations established in recent years. On the other hand, the establishment of non-sectarian State universities in the original Northwest Territory has had a wonderful influence for good. They have been free from ecclesiastical control, but they have stood firmly and effectively for the promotion of sound learning and for the advancement of professional training, schools of theology being purposely omitted.

During the last half century a third class of universities has come to the front. Cornell, Johns Hopkins, Chicago, Leland Stanford, and Tulane are conspicuous examples, where private munificence has establish-

ed self-perpetuating boards of control, independent alike of States and churches.

On the whole, every patriot may follow with Dr. Thwing his appreciative review, rejoicing that so much has been done, and on the whole so well done, for the support of higher education, the preservation of the lessons of the past, and the encouragement of literature and science; and the supporters of superior education are certainly grateful to the author for bringing together such a mass of details on this important subject.

A Priced Lincoln Bibliography. By William H. Smith, jr. Privately printed.

The interest among collectors in everything relating to Abraham Lincoln has been increasing of recent years, and as a subject for collecting, books about Lincoln may even rival the older favorite of American collectors, books about Washington. The interest in a line of book-collecting may be gauged, with more or less accuracy, by the number of bibliographies on the subject. The first attempt at a Lincoln bibliography was compiled by Charles Henry Hart and Andrew Boyd, and published by the latter in Albany in 1870: "A Memorial Lincoln Bibliography; being an Account of Books, Eulogies, Sermons, Portraits, Engravings, Medals, etc., published upon Abraham Lincoln," etc. Bartlett's "Literature of the Rebellion," 1866, should perhaps have precedence, for, though covering a larger field, it included some three hundred eulogies, sermons, poems, etc., on the death of Lincoln. In 1900, Daniel Fish of Minneapolis compiled his "Lincoln Literature: A Bibliographical Account of Books and Pamphlets Relating to Abraham Lincoln," published by the Minneapolis Public Library. The next issue of this character appeared from the Government Printing Office in 1903: "A List of Lincolniana in the Library of Congress," by George Thomas Ritchie. The latest contribution is "A Priced Lincoln Bibliography," compiled by William H. Smith, jr. There is also announced for immediate publication a new and much enlarged edition of Mr. Fish's book, to be called this time a "Lincoln Bibliography." This latter was prepared for publication in the Gettysburg edition of Lincoln's works, and only forty copies will be issued separately, each to be interleaved, for additions.

A comparison of Fish's "Lincoln Literature," 1900; Ritchie's "List," 1903, and Smith's "Priced Bibliography," 1906, does not show, as it should, that the last is the best. If the author had called it a "Priced List of Books about Lincoln" instead of a "Lincoln Bibliography," he would have done something to disarm criticism. A bibliography it is not. The titles are much condensed, and in some cases badly condensed, and many of the collations are faulty. The prices will doubtless be a useful guide, but while they are said, "with very few exceptions," to be those paid at auction, nothing is said as to the condition of the book or the circumstances of the sale, and in no case is more than a single price noted. In some cases several copies of the same book have presumably been sold, but whether the price given is the highest or the lowest, or an average, we know not. The Library of Congress

"List" is the most accurate bibliographical, and naturally, for no books were described except those directly before the cataloguer. The titles are sometimes condensed, but condensed according to well-known bibliographical rules. In Fish's book the titles are transcribed, generally at full length, and the collations are full for the most part, from the books themselves. The collations of some books, not seen by the compiler, are faulty. In Mr. Smith's "Bibliography," no printer's or publisher's name is given; explanatory matter, which by Fish was inclosed in square brackets to indicate that it was not on the title, is sometimes printed without the brackets; and the preliminary pages are, with possibly a very few exceptions, omitted from the collations. For example, where the Library of Congress "List" gives the collation as "xiii., 476 pp." and "(2), xv., 471 pp.," Smith says only "pp. 476" and "pp. 471." These are not isolated cases, some fifteen cases having been counted among the entries under B alone. Smith's "Bibliography" in its 64 pages of books contains something like 1,100 entries, but a considerable number are more or less general works on the Civil War, and volumes of verse containing one or more poems on Lincoln. Taking the entries under the letter B as a basis, the Library of Congress "List" (excluding references to collected works) shows 89 entries of books actually in the library; Fish's 1900 list contains 105; and Smith's compilation, excluding general works, bibliographies, volumes of verse, and a few such books as "'Old Abe,' the Live War Eagle of Wisconsin," which are dimly and distantly Lincolniana if such at all, contains 119 entries. Several of these are books issued during the last five years.

The Principles of English Verse. By Charleston M. Lewis, Professor of English Literature in Yale University. New York: Henry Holt & Co. \$1.25 net.

So far as it goes, this little book is excellent. Apparently it is made up from the lectures, more or less recast, which have proved useful to the author's students in verse-composition. The style is informal and readable and the treatment is marked by good sense and great clarity; clarity and good sense combined are alone enough to give some distinction to a work on English versification. Of originality the author does not claim much. The general line of procedure is indicated by the chapter headings: "Rhythm and Metre," "The Pentameter Line," "Blank Verse," "Rimed Pentameters," "Miscellaneous Metres," "Embellishments of Verse." Some clever demonstrations are furnished by partly rewriting well-known passages in a way to illustrate the points in question.

The serious defect which led us to begin with the cautionary phrase, "so far as it goes," unfortunately, touches the very basis of Professor Lewis's doctrine of rhythm, which is perfectly sound, but which requires an addition to make it adequate. "Rhythm may be roughly defined," he says, "as a recurrence of similar phenomena at regular intervals of time." He goes on to set forth admirably two well established principles. First, the rhythm of speech, in verse and prose alike, is merely one manifestation of our

instinctive tendency to give a rhythmic form to all recurrent muscular efforts. Second, our æsthetic sense rejects, after early childhood, a rhythm that is too mechanically perfect; a certain degree of conflict between the ideal scheme in the mind and the actual series of sounds, which plays about and reveals, but seldom reproduces perfectly, the ideal scheme, is essential to continued pleasure. Mr. Lewis also restates very well another important fact, that the place of a stressed syllable in the ideal scheme is often filled satisfactorily by a syllable that is normally unstressed; the time is kept sufficiently, and rhythm is a thing of times. But accepting all this, and returning now to the ideal scheme, is the rhythm of our verse adequately described by saying that the stressed syllables recur at equal intervals, and that the number of intervening syllables is limited thus or thus? Mr. Lewis shies at the notion of the foot in English. He is willing to use the ancient terms, dactyl, iambus, and the rest, in the modern naming of syllabic groups; but since "feet are not organic elements of rhythm" (italics ours), he concludes that "analysis of verse by feet is like analysis of pictures by square inches." But the illustration is imperfect and misleading. He should have taken, not a picture, but a design that is really analogous to a rhythmic scheme—as a meander, a Doric frieze, a Bokhara rug. Designs like these can be analyzed only by a process very like the analysis of verse by feet. But a better comparison is with music. "The single melody is the molecule of music, the smallest element in it that cannot be subdivided without loss of character," says William Gregory Mason. But the musician would laugh at the idea that analysis of music by measures is like analysis of a picture by square inches. The foot and the measure alike are real units in the rhythm of verse and music, respectively. Without such a unit there is no rhythm. To describe the measure, to indicate the relation of its parts to each other, is the first step in describing a piece of musical rhythm. Shrinking from the analogous step in describing verse, Mr. Lewis has no means of indicating some of the commonest phenomena—for instance, the obvious difference of rhythm between

The world was all before them
and

To bicker down a valley.
By his traditional method both alike are

Nor can he indicate the characteristic rhythmic type of such lines as these:

Home came my gude man, and hame came he.
John Brown's body lies a moldering in the grave.
Who found me in wine you drank once?

It is not enough to say that frequently there is "no light syllable at all between stresses."

In short, having once recognized that rhythm concerns time-intervals, why need one fear to take the next step, logically inevitable? The time-relations between the syllables in each group are what chiefly characterize each kind of rhythm. Without the notion of the foot there is no way of clearly marking or describing rhythm in verse, as there is no way of describing musical rhythm without the measure, or bar. Mr. Lewis's definition of rhythm is both clumsy and less complete than the

ancient one, "a regular arrangement of time-intervals." The foot is a group of times which by repetition, with or without variation, characterizes and measures a longer series. The relation between up-beat and down-beat, arsis and thesis, within the foot is an essential part of the characterization. If we use the ancient marks of quantity in their original sense, and mark ictus or rhythmic stress by the acute accent, and then divide the feet as we divide music by the bar, the first two examples above are

$\cup | \cup \cup | \cup \cup | \cup \cup |$
 $\cup | \cup - | \cup \cup | \cup - |$

and

This notes the differences accurately. The examples of the second group are all in even time, up-beat and down-beat being equal. Why reject a method so simple and adequate? If Mr. Lewis could take this one logical step, he might give us a hook which would reveal, to all who care to penetrate it, the whole heart of the mystery of English verse-rhythms.

The Passing of Korea. By Homer B. Hulbert. New York: Doubleday, Page & Co. \$3.80 net.

Books on Korea may be named by the dozen, but this is *the* book. Professor Hulbert has the genius of research. Whatever is Korean interests him, and during two decades he has sought knowledge in every direction, from nursery rhymes and verbal folk-lore to private manuscript and printed encyclopædia. Having founded the *Korea Review*, he has been not only editor, but chief contributor. What our own S. Wells Williams did for China, he is doing for Korea, and the present volume is the result of personal observation, literary research, intelligent industry, and of the cooperation of native scholars. His style is bright and rapid, his examples and illustrations from personal experience are abundant, and, happily for his readers, he has a sense of humor. Sometimes, indeed, he seems to care more for fun than for severe dignity of style.

On the Korean language, Professor Hulbert is an authority. In treating of literature, art, folk-lore, woman's position, manners and customs, he writes with easy command of resources. The book is handsomely printed, and there is a good index. The pictures are all full-page, and are from photographs, mostly new, several of extreme interest.

The historical narrative, which is condensed from the author's "History of Korea," already printed in his *Review*, though presented in very readable form, does not satisfy all the rigid requirements of modern criticism. There are no notes or references. The fact is, however, that in the field of ancient and mediæval history the materials are not yet ready upon which a critical historian can work. We cannot feel that in these stretches of time Mr. Hulbert has always carefully separated what may be called a reasonable view of actuality from superabundant legend and tradition. There is slight proof of any severe examination of Chinese sources, while most of that which is solid ground in Japanese history seems to be an unexplored land to the writer. When he comes to modern history, he is clear and full, and, on the whole, surprisingly ju-

dicial. We use our words advisedly, for Mr. Hulbert does not conceal the fact that he has all along, and sometimes with heat, protested against the seizure of Korea by Japan; he even came to the United States, and acted in Washington as the Korean Emperor's private emissary. The opening chapter, on the modern history of Japan, is extremely one-sided. It is, moreover, curious that the one foot-note in the book is from that piece of caricature and extravaganzas entitled "The New Far East," a quotation which seems an arrant absurdity to those who know Japan fairly well. Yet with all deductions this work leads all books on Korea in richness of information, and the conclusion shows the author's broad-mindedness. He says:

Korea can gain nothing by holding back and offering to the plans of Japan a sulky resistance. They are face to face with a definite condition, and theories as to the morality of the forces which brought about the condition are wholly academic.

His concluding paragraph is a noble plea for education and American sympathy.

Drama.

Kate. A Comedy in Four Acts. By Bronson Howard. New York: Harper & Brothers. \$1.25.

After a prolonged silence, Bronson Howard comes forward with an international comedy in four acts, called "Kate," presented in narrative form; that is to say, the dialogue is pieced together by the aid of the stage directions and other explanatory or descriptive matter with which the up-to-date dramatist ekes out the limited imagination of the modern actor. It is a play with a moral which, reduced to its simplest expression, is that marriage, when contracted solely for the sake of money or rank, is little better than prostitution. Written in the vein of the best of his previous plays, "Aristocracy," it exhibits similar virtues and defects. It shows observation, inventiveness, and timely purpose, together with a considerable amount of constructive skill, but these good qualities are marred by an unfortunate extravagance both in types and incidents and an occasional descent into rather crude sensationalism.

Few thoughtful persons will dispute the truth of the general proposition that marriage without mutual affection is nearly always unwise and very often degrading, but it does not follow that a fiery mutual passion is the sole and sufficient justification of the tie matrimonial. Between love and passion the distinction is very wide indeed—although they may be coexistent—but of this fact some of Mr. Howard's characters seem to be ignorant. The heroine, the lovely daughter of an American multi-millionaire, is engaged to the heir of an English duke, but is in love with his brother, a clergyman, whom she encounters at a masked ball where they gazed into each other's eyes without speaking. Later on, when she is about to be married and he is engaged, they meet again and the flame kindled by that fatal glance is renewed. Her betrothed, it appears, has ruined one of his father's dependents, and the complications lead to discussions of the marriage relation which could scarcely be

spoken on the stage and, in any event, are more radical than judicious. In the end matters are straightened out *more theatrical* by a reassessment of partners, but the assurance of "happiness ever after" is by no means strong. The play is interesting reading, but carries no conviction with it.

"The attempt and not the deed confounds us," cried Lady Macbeth. This motto was illustrated in the representation of Browning's dramatical poem "Pippa Passes" in the Majestic Theatre on Monday afternoon. The projectors of the hazardous experiment deserve credit for their courage, liberality, and manifest pains. This episodic, phantasmagoric piece, with its subtle psychology and complicated utterance, is singularly lacking in the coherence and sequence so vital to acted drama, and the only chance of successful performance must lie in a brilliant interpretation of its text—a vocal realization of its imagery and a clarification of its more recondite passages—and a vivid portrayal, amounting to incarnation, of the leading characters. None of these requirements was fulfilled on this occasion. Mrs. Le Moyne has long been known as an effective and intelligent reader of Browning, but she has not the temperament or other qualifications for the embodiment of such a part as that of the enchantress Ottima, with her fiery passion and supple guile. She spoke her lines with sufficient elocutionary skill, but lacked passion and plastic grace. The Seald of William Beach was utterly inadequate. There was some glow of fervor and romance in the Jules of Charles Gotthold, but the Phene of Eleanora Leigh had no quality to account for the spell which she was supposed to exercise. Mabel Taliaferro, whose acting is full of promise, gave a clever girlish performance of Pippa, but the long opening soliloquy of the play contains too much for her present powers of expression. The literary side of the entertainment, indeed, fell far short of its intent and possibilities. But the scenery was wholly admirable in its beauty and appropriateness, and the musical accompaniment, written by William Furst, if not remarkable for originality or invention, exhibited a sense of what was fitting, and was played by an orchestra of rare excellence for a theatre.

The Russian actress, Madame Alla Nazimova, who in her native tongue has already established for herself a position of considerable prominence on the local stage, played in English for the first time in the Princess Theatre, on Tuesday afternoon, and, if she did not actually triumph over all difficulties, fully justified the hope that she may do so in a not remote future. She appeared as Ibsen's Hedda Gabler, a part which has been accounted among her best achievements, and marked its most obnoxious characteristics with an almost lurid emphasis. The strange language was plainly a great handicap and enforced a deliberation which created an effect of melodramatic artificiality, but her conception was original, hold, and consistent, and illustrated at times by striking eloquence of pose and gesture.

Miss Ellen Terry will begin her American tour in January. According to present plans she will make her first appearance

here in "Captain Brassbound's Conversion," but she will have several other plays with her, and is likely to be seen in Portia and other favorite parts.

The Paris theatrical season has opened with two successes, one of which was bound to have considerable merit. Both deal, though differently, with the everlasting marital event and its consequences. The "Passagères," by Capus, who is still the most popular of high-class amusers in Paris, gives the series of adventures befalling a husband, so good-natured that his daughter's governess, his wife's milliner, and his own cousin in need, to whom he wishes to do charity, take him away from the wife whom he loves. Parisians laugh, even the *jeune personne*, who, under the new régime, is brought to such plays. The "Préférée" of Lucien Descaves is quite different, full of the tragic emotions caused by the uncertainties of the Everlasting Feminine. The hero has two daughters, of whom the younger is his "preferred." Some busybody persuades him that she is not his own, and the wife, already repentant through many long years, confesses. Hence much fine fury and the packing off of mother and hitherto preferred daughter into outer space—until the man finds he loves the girl too much.

The English Drama Society proposes to give a series of representations of the old Chester mystery plays in the city of Chester, and has secured the consent of the mayor and other local authorities. The dean of Chester, however, and his bishop have entered a protest against any such proceedings, on the ground that to many persons they will be offensive if not actually blasphemous.

Music.

"MADAM BUTTERFLY" AS AN OPERA.

One of the most complete operatic fiascos on record was that of Puccini's latest work, "Madam Butterfly," when it was first produced at Milan on February 17, 1904. The score was thereupon withdrawn and revised, and in the new version it proved a sensational success in London. The great cast with which it was presented (it included Miss Destinn and MM. Caruso and Scotti) no doubt was an important factor. The performance of an English version at the Garden Theatre on Monday night by the Henry W. Savage Opera Company afforded the first opportunity in this city of weighing the merits and demerits of the novelty. After the first act it seemed easier to understand the Milan failure than the London success; but the second and third acts made a more favorable impression.

Mr. Savage has certainly staged "Madam Butterfly" beautifully. There is a picturesque view of Nagasaki lighted up at night, and there are Fujis and Buddhas, and shoshi, and kimonos, and a nako, and wistarias, and "cherry" blossoms galore. The music, too, is full of Japanese local color, and that constitutes its principal charm. Puccini not only introduces genuine Japanese airs, but so harmonizes them as to emphasize their exotic quality. Some of them recur as leading

motives, and by this repetition gain much in impressiveness. In other respects Puccini has learned from Wagner—in the art of subtle and varied orchestral coloring and in the saturation of his score with voluptuous chords of the ninth *à la* "Tristan und Isolde." One thing, unfortunately, he could not learn from Wagner—the art of originating new melodies. The absence of melodic originality is his weak point. What makes his operas popular now is that Puccini understands extremely well how to write effectively for singers as well as for players. The love duo in the first act of "Madam Butterfly" will never fail to arouse enthusiasm when well sung, as it was on Monday by Mme. Szamosy and Mr. Sheehan. The manifold charms of the orchestral score were fully revealed under the conductorship of Walter Rothwell.

DR. MUCK AND THE BOSTON ORCHESTRA.

The interest in orchestral concerts is growing in New York city. The Philharmonic Society has had an advance sale of season tickets exceeding by several thousand dollars that of any of the other sixty-four years of its existence. Walter Damrosch has felt called upon to give four Saint-Saëns concerts (with the coöperation of that composer) instead of two; and when the Boston Symphony Orchestra gave its first Carnegie Hall concert, last Thursday, not only was every seat taken, but there was a brisk demand for more tickets than could be supplied. This state of affairs was the more significant inasmuch as there was no singer, pianist, or violinist to give the variety and popular interest commonly supposed to be essential to a successful orchestral concert.

The soloist's place was usurped by Dr. Muck, Boston's new musical pilot. Would he prove to be a man of mere polish and precision, like Gerike; or of excessive energy and misplaced accent, like Paur; or a true poet and interpreter, like Nikisch? Inasmuch as only two composers were represented on the programme, a decisive answer to such questions would be premature. Still, Dr. Muck's way of interpreting Beethoven's fifth symphony and three Wagner numbers—the "Faust Overture," "Siegfried Idyll," and "Meistersinger" prelude—probably gave a fair measure of his artistic stature and traits. It cannot be denied that Beethoven's symphonies have become somewhat faded through excessive repetition. To freshen the interest in them we need strongly individual interpretations. From this point of view, Dr. Muck proved disappointing. While not strictly metronomic, he is, on the whole, conventional, and if he nevertheless succeeded in making the music sound bright, this was owing chiefly to an animation which seems to be his chief trait, and which he is able to impart to his players. In the Wagner numbers the new conductor proved a great improvement on his predecessor. For once the brass players were allowed to make themselves heard where the music is marked fortissimo. Yet climax-building is not Dr. Muck's strong point. The "Meistersinger" Vorspiel left much on that score to be desired. In the "Siegfried Idyll" one missed the subtle contrasts and miniature climaxes, so to speak, with the aid of which

Seidl used to make this *sinfonietta domestica* seem so beautiful. At the Saturday afternoon concert Dr. Muck proved himself an excellent Brahms conductor, and there was more poetry in his interpretation of Weber's "Oberon" and "Frelschütz" overtures than in any of his performances at the first concert.

There was a time when pianists had to stoop to conquer; even the greatest of them, Liszt, was obliged, early in his career, to indulge in daring feats of virtuosity calculated to astonish rather than to exalt his hearers. Rubinstein did not have to do this; nor has Paderewski ever done it. In this there ought to be a lesson for Moritz Rosenthal, who began his fourth American tour last Wednesday at Carnegie Hall. For more than two decades this Galician pianist has been famed for his skill in mastering difficulties, but a place among the greatest was denied him because technical skill was so much more in evidence than artistic feeling. There had been reports from abroad that he had begun to curb his virtuosity and subordinate it to more musical impulses. His choice of Brahms's "Variations on a Theme by Paganini"—an abnormally difficult but absolutely empty show piece—and his playing of his "contrapuntal study in thirds" on a Chopin valse, which degrades one of the loveliest pieces into a vulgar show piece, seemed to indicate that the leopard had not changed his spots. Luckily, his interpretation of two concertos—Chopin's E minor and Liszt's E flat major—revealed him in a far more favorable light. While he played these, no one thought of the technique, but only of the beautiful music and the exquisite art of the interpreter. It was authoritative playing—poetic, tender, graceful, and with an admixture of interpretative genius.

The grand opera season begins at the Metropolitan in Thanksgiving week. The programme for the first week includes "Roméo et Juliette" (with Farrar, Plançon, and Rousselière, who has taken the place of Jean de Reszke at the Paris Opéra), "Marta," "Tannhäuser," and "Fedora." Probably there will also be a popular performance of last season's success, "Hänsel and Gretel."

The season at the Paris Opéra opened with an event of the first order—Massenet's new piece, "Ariane," with its libretto by Catulle Mendès. These two—Massenet at sixty-four, Mendès at sixty-six—are veterans, each in his own art. Massenet has evidently striven valiantly to rise above the prettinesses of his prime. The poet, whose voluminous rhyming has often been too precious and easy, has now given the same care to a mere libretto which he devoted to the classical drama of "Medea," all his own.

Art.

THE NEW YORK WATER-COLOR CLUB.

The seventeenth annual exhibition of the New York Water-Color Club is open at the American Fine Arts building, No. 215 West Fifty-seventh Street, till December 2. The 361 pictures are not as a whole above the

average of mediocrity. The fashion remains in this exhibition, as elsewhere, to seek in water-color almost any effect but those most properly characteristic of the medium. There are plenty of effects of oil or pastel or lithograph, but very few examples of pure wash-drawing or handling that reveal transparent color and deftness of touch.

An instance of the falsification that may come of overconfidence in the "blottesque" technique is the "Moonlight in Katwijk," by Arthur Feudel, in which, as in certain atmospheric effects by Cazin, the surface of the house seems to be sloughing off a kind of luminous slime. Truer to nature are two moonlight scenes by Adelaide Deming, which suggest with much charm, through low tones indistinguishably rubbed together, the soft glow of dusk. One feels at once with relief, in turning to the two New England coast scenes by Childe Hassam, that one of the elements of their superior strength is their boldness of touch. The boldness, indeed, is almost blatant, but, with this reservation, the manner is a marvel of summary handling, and the pictures themselves, with a third, his "Newfields Village," are unsurpassed in the exhibition of deftness, vivacity of color, and force in the presentation of a vivid and authentic impression. Two scenes by George Wharton Edwards, "Early Morning—Monhegan" and "Irish Fishermen Entering Port," are fresh in feeling and sufficiently vigorous in handling. Three scenes by Fred. Wagner are remarkable for their pleasantly strong and crude color and for a certain blunt directness of drawing. Charles Warren Eaton is represented by several landscapes quiet in tone and Dutch in derivation. Several Moorish scenes by Addison T. Millar show with an appropriately simple handling a charming feeling for architectural quaintness. "Pittsburg," by John Edwin Jackson, is an interesting impression. The drawing in the background is too definite to give the proper suggestion of atmospheric vagueness, but the treatment of the sordid homes in the foreground and of the children playing in the street is effective, and the artist has put into the contrasting nearness of the homes and mills something of its tragic meaning. "The Fourth Watch," by Charles Austin Needham, representing Christ walking the waves, achieves an impression of mystery. He would have achieved an impression of the miracle if he had made the waves look less like terra firma. "The Mystic," by Albert Prentice Button, is a delicate twilight river view, sure in its gradations of tone. R. Wilkinson in the "Mission of San Juan Capistrano," and Alon Bement in "1812" strike quiet notes of gray and brown, the gray and brown of old parchment. The feeling in this work is more interesting than its technical accomplishment.

The figure pieces are fewer and of lower average interest than the landscapes. The Beal prize was awarded to M. Petersen for the "Coppersmiths," an interior of a workshop with the four or five coppersmiths at work. The lighting and values in this picture are far from carrying authority, and there is on the whole more life and interest in the same artist's "Fruit Sellers." "Evening in the Park," a little pastel by Alfred Feinberg, and two park scenes by Marianna Sloan show alert observation of

typical bits of city life. Two scenes by F. Luis Mora, "New Americans" and the "Spanish Fair in Goya's Time," make with considerable cleverness a show of realism that keeps an eye out for theatrical effectiveness. "A Study of John Burroughs," by Mathilde de Cordoba, is, on the whole, the best of the few portraits in the exhibition.

In the November *Bulletin* the Metropolitan Museum of Fine Arts announces important acquisitions. A Holbein portrait of the Basle period, dated 1517, shows the master near his beginning. In the strong shadow and a bas-relief in the background we see his keen attention to chiaroscuro. The interest of a colossal Triton, strikingly like a Rubens, but probably by Van Dyck in his Genoese period, is chiefly technical. Artists will appreciate better than laymen what a splendid bit of flesh painting it is—solid, harmonious, brilliant. The Museum is to increase its Egyptian collections. A. M. Lythgoe has been called from a curatorship in the Museum of Fine Arts, Boston, to take charge of this new work. Most of his time for the near future will be spent in actual excavations in Egypt. In the department of classical sculpture the collections are the richer by a marble statue of Eirene, headless and armless, but of beautiful execution, being an early Empire copy of a Greek original of the fifth or fourth century, B. C. It is more attractive than its duplicate, the much restored Eirene and Ploutos of the Munich Glyptothek. In the New York example, the style of the draperies is in every way more refined, as may be seen from the parallel illustrations in the *Bulletin*.

Some eighty of the Whistler etchings and dry points from the royal collection at Windsor Castle, and some eighty others, principally from the collection of the late J. H. Hutchinson, are now on view for the month at Wunderlich's gallery in this city. The 161 numbers of the collection offer a comprehensive view of the scope and development of Whistler's art on copper. Among the finest and rarest pieces are several examples of the Amsterdam series, representing Whistler's latest manner.

An exhibition of Rembrandt etchings, dry points, and drawings may be seen at Kappel's gallery in this city. There has been nothing for some years in New York to equal this collection of Rembrandt prints, and though it makes no pretence to being exhaustive, the ninety examples are a large number to be found together in America. They represent in proofs of beautiful quality the three great classes of Rembrandt prints: the portraits, the landscapes, and the Scriptural pieces. It is interesting to note in this exhibition how much Legros, the greatest living etcher, owes to Rembrandt.

The 102d annual exhibition of the Pennsylvania Academy of Fine Arts will open on January 21 and close on February 24. The exhibition of water colors, pastels, and works in black and white will follow in March.

J. Pierpont Morgan has given permission for a popular edition of the privately printed catalogue of his porcelain, loaned to the Museum. This admirable handbook, prepared by William

L. Laffan, will soon be accessible in an inexpensive form.

In the excavations at Cape Sunium in Attica, carried on by the ephor, B. Stais, two colossal archaic statues have come to light. As early as 1884 Dr. W. Dörpfeld's excavations at Sunium revealed the fact that the marble temple of Poseidon—to which belong the twelve columns still *in situ*—is built on the foundations of an older temple. It has been conjectured that this older temple was destroyed by the Persians in 480 B. C. The newly found statues probably fell on the ground during that catastrophe, and when later, in the second half of the fifth century B. C., the temple of Poseidon was erected, they were built into the terrace and thus saved for posterity. They belong to the so-called "Apollo" series, of which the Apollo of Tenea in the Glyptothek at Munich is the most noted example. The Sunium figures are said to surpass this statue both in execution and in artistic conception. They are of good preservation, though one figure has lost its head; it is possible, however, that this will still be found in the excavations.

The site of the ancient Phœnician city of Motye has been purchased by Mr. Whitaker, and this month excavations are to be started under the supervision of Professor A. Salinas, the director of the National Museum in Palermo. Motye, near the western extremity of Sicily, was one of the three strongholds to which the Phœnicians retired when the Greeks of the eighth and seventh centuries B. C. began to establish themselves in Sicily. It is hoped that the excavations will shed some light on the history and art of Phœnicia—a subject on which our direct information is scanty.

Paul Cézanne, the painter, died recently at the age of sixty-six, at Aix-en-Provence, his native city, whither he retired some years ago. He went to Paris a little before the war of 1870, for the purpose of studying painting. For ten years he worked almost exclusively in the Louvre, copying chiefly the French artists of the eighteenth century and the Venetians. Meantime, in the suburbs of Paris or in his native country, he painted landscapes, which, whether from negligence or from a temperamental inability to carry his work to a finish, he left usually in the incomplete condition of sketches. This peculiarity led him, to his horror, to be classed in the impressionist group. But though he regarded his art as classic in tendency, his preoccupation with the problems of light clearly relates him to the luminists. His landscape, however, is a late reflection of Corot, and in carrying on the Corot tradition he showed the way to many young artists who had revolted from the impressionist formula. As exemplifying thus a somewhat conservative tendency which adopted some of the qualities of the impressionists, he found himself the head of a school, and exercised a wide and wise influence.

Samuel J. Kitson, the sculptor, died in this city last Friday at the age of fifty-eight. He was born in England, but he pursued most of his art studies in Rome, where he became imbued with the religious spirit which marked much of his later work. He came to this country in 1878, after having won many prizes in Europe.

The first year he was in New York he modelled busts of Longfellow, Bishop Potter, Ole Bull, Samuel J. Tilden, and others. Among his other works are the Sheridan Monument at Arlington, Va.; the frieze of the Soldiers' and Sailors' Monument at Hartford, Conn., and a medallion for the Holy Cross Cathedral in Boston.

Science.

THE MATHEMATICAL TRIPOS IN CAMBRIDGE.

CAMBRIDGE, England, October 29.

On October 25, the Senate of the University of Cambridge adopted a plan for thorough reform of the Mathematical Tripos, which had been prepared by the Special Board of Mathematics. The first part of the proposal was a rearrangement of the mathematical requirements for a degree, and the second part abolished the traditional ranking according to merit in Part I. of the Tripos, and with it the Senior Wrangler. This last change meant the surrender of the chief glory of the Tripos, as the prestige of the Senior Wrangler, which goes back more than a century, has been world wide. It is no wonder that the greatest opposition was to this part of the reform. The leaders of the forces against the change consisted for the most part of the older mathematicians and honor men who had gone into other kinds of work, while for it were the mathematicians and scientists who are actively teaching mathematics and kindred subjects and who had great influence because they were best prepared to know present conditions. Every one, however, felt that some change was needed.

Twenty years ago the whole of mathematics taught here, beyond the most elementary subjects, was centred around the Mathematical Tripos; but since then the number of candidates for the Tripos has fallen off about half, while those in physics and engineering have increased largely. It is hoped that the new plan will improve matters, not by restricting pure mathematics, but by bringing about a closer relationship between pure and applied. So absorbing is the preparation for the Mathematical Tripos examinations, that the candidates have little time or inclination to study scientific applications. On the other hand, as mathematics is not classed in the Science and Engineering Triposes, lectures in it are rarely or never elected by students in the Science Tripos, who certainly need a moderate amount of higher mathematics. That is, study in pure mathematics now ends with most students of physics when they enter the University. Fortunately, this evil is diminished by the fact that the schools are prepared to carry their scholars through the calculus.

The examinations, since 1882, of candidates for honors in mathematics are divided into two parts. Men who obtain honors in Part I. are graded according to merit, with the Senior Wrangler at the head. Then those who have obtained sufficient honor are eligible to that "nightmare of examinations," called Part II. In this there are four examiners, and generally about as many candidates who have been found willing to go through the ordeal. So

special and difficult are the questions that it is pure chance if a brilliant student answer one of them completely. Nor does the Senior Wrangler of Part I. have any surety of being able to get even a place in the first class of Part II. The proposed change is a relatively easy Tripos, taken after one or two years of residence, which shall be called the Mathematical Tripos Part I. In this, difficult analytical developments will be omitted, and stress will be laid on fundamental physical and mathematical conceptions. Candidates will then pass on, either to physics, engineering, or mathematics proper. It is believed that in this way more men will pass through the Mathematical Tripos, and that the number of mathematical teachers and investigators may be retained at the old level, a result to be desired in the interests of research. For the mathematical students who are to be teachers and investigators there is to be the Mathematical Tripos, Part II. The tripos will contain some elementary questions, so that, as heretofore, the man whose mathematical ability is not of the highest and who will make a successful schoolmaster, can obtain his degree in honors. For the rest, it is a compromise between the "second four days" of the present Part I. and the present Part II. There will be no Senior Wrangler in Part I. with its elementary subjects.

The plan seems to be eminently reasonable. Cambridge since the time of Newton has about monopolized the teaching and writing in mathematics in England, and today students from all parts of the world come here to carry on this tradition. That the best mathematicians here, Profs. Sir Robert Ball, Sir George Darwin, Forsyth, Hopkinson, Larmor, and J. J. Thomson, are responsible for this reform, argues much for its need and its success.

The Behavior of the Lower Organisms. By H. S. Jennings. New York: The Macmillan Co. \$3.

The tenth volume of the Columbia Biological Series, entitled "The Behavior of the Lower Organisms," by Prof. H. S. Jennings, brings together some of the most recent results in a subject known to the older naturalists as the study of instincts. Behavior, as understood by the author, includes instincts as well as simple reflex movements, and also the so-called tropisms or orienting reactions shown by the lower forms of animal and plant life. Two opposed theoretical points of view are held at present by workers in this field. On the one hand the animal is described as turning directly away from or towards a stimulus, hence as orienting itself positively or negatively. This is the point of view of the tropism theory, advocated by Loeb especially, who follows the earlier botanists. Opposed to this interpretation is that maintained by Jennings, who shows by many closely followed experiments that the orientation takes place from the "selection of overproduced movements," that is, by the method of "trial and error." The behavior of one of the lower animals may be compared to that of a blind man who runs into a wall, backs away from it, turning at the same time a little to the right or left, towards "a structurally defined side," and then advances again only to run into the wall at

a different point. He reacts again in the same way, and strikes the wall at a new point. In time he either finds the end of the wall and passes by it, or the turning may suffice to start him off in a new direction, when he continues to move forward in a straight line until he runs foul of another obstacle. While the earlier writers looked upon external stimuli as the cause of movements, Professor Jennings looks upon the movement as a necessary consequence of the "metabolic changes" that take place in the animal. From this point of view external stimuli only prevent continuous movement forward in the same direction.

Another general point of view emphasized by the author is that the great variety of behavior shown by the lower organisms depends on their "physiological states." Each motion or change of motion, may in itself induce a change in the "physiological state" of the animal, so that a second time it behaves differently to the same external stimulus. This is only a general recognition of the familiar fact that a man after a square meal behaves differently from the same man hungry. Applied to the lower organisms the idea appears to unlock many of the vagaries of their behavior. The older tropism theory looks upon the behavior of the lower animals and plants as stereotyped and regular, but Professor Jennings's observations emphasize the differences rather than the similarities of behavior.

The life habits of amoeba and paramoecium are treated in minute detail in the opening chapters; other infusoria fill the remainder of the first part. Part II. deals with the behavior of the sea anemone and its allies; Part III. deals with the results described in the preceding chapters in somewhat more general terms. Conflicting theories are weighed and analyzed. The closing chapters consider the evolution of behavior. Here the author points out that the experiences acquired by the individual may be transmitted directly to the descendants, wherever the descendants arise by direct division of the parent's body—a common method of reproduction of the protozoa. The wonder is, if such transmitted experience is possible, that these organisms have learned so little throughout the ages, and that still, after all their experiences, they go blundering ahead with their overproduced movements. As though appreciating this objection, the author accepts the theory of natural selection as a more probable hypothesis of the origin of the behavior than the inheritance of acquired characters; that kind of behavior of the individuals that is most conformable with survival being selected. It is assumed that "random movements" offer a better solution of the complexities of existence of the organisms than definite turning movements. However this may be, the fact remains that the animals continue their overproduced movements despite the experience of each generation tending to short-cuts and to the selection of more definite modes of reaction.

Professor Jennings's admirable presentation of the results of his observations in this most attractive field of study will appeal to professionals and laymen. The style of the book is clear, straightforward, and convincing. Some repetition of state-

ment seems necessary, and may serve to emphasize the main points.

The American Association for the Advancement of Science will hold its fifty-sixth meeting in this city December 27 to January 1, with Columbia University as the place for most of the sessions. In addition to the American Association, about twenty affiliated societies will hold meetings here at the same time. Among them are the American Society of Naturalists, the Astronomical and Astrophysical Society of America, the American Physical Society, the American Chemical Society, the Geological Society of America, the Botanical Society of America, the Society for Horticultural Science, the Society for the Promotion of Agricultural Science, the American Society of Zoologists, the Association of Economic Entomologists, the American Society of Vertebrate Paleontologists, the Society of American Bacteriologists, the American Physiological Society, the Association of American Anatomists, the American Anthropological Association, the American Psychological Association, and the American Philosophical Association. The first general session will be held at 10 o'clock Thursday morning, December 27, when the retiring president, Prof. C. M. Woodward of Washington will introduce the president of the meeting, Dr. William H. Welch of Johns Hopkins University. At night the retiring president will deliver an address, and the trustees of Columbia will give a reception. Friday evening is reserved for dinners and meetings of special societies and groups. On Saturday afternoon, in the American Museum of Natural History, will be the unveiling of ten marble busts of pioneers of American science, presented to the institution by its president, Morris K. Jesup. In the evening there will be a reception at the New York Academy of Medicine, with an exhibition of scientific progress by the Academy, including demonstrations and short addresses. In the course of the session meetings will also be held at the New York Botanical Garden, the Rockefeller Institute of Medical Research, and the College of the City of New York. The American Association is divided into ten sections. The officers who will preside over them at the coming meeting are as follows:

Section A, mathematics and astronomy, Dr. Edward Kasner, New York; B, physics, Prof. W. C. Sabine, Cambridge, Mass.; C, chemistry, Clifford Richardson, New York; D, mechanical science and engineering, W. R. Warner, Cleveland, O.; E, geology and geography, Prof. A. C. Lane, Lansing, Mich.; F, zoology, Prof. E. G. Conklin, Philadelphia; G, botany, Dr. D. T. MacDougal, Washington, D. C.; H, anthropology, Prof. Hugo Münsterberg, Cambridge, Mass.; I, social and economic science, Charles A. Conant, New York; K, physiology and experimental medicine, Dr. Simon Flexner, New York.

The official speakers will be:

Section A, W. S. Eichelberger, United States Naval Observatory, Washington, D. C.; B, Henry Crew, Northwestern University, Evanston, Ill.; C, C. F. Mabery, Case School, Cleveland, O.; D, F. W. McNair, Michigan College of Mines, Houghton, Mich.; E, William North Rice, Wesleyan University, Middletown, Conn.; F, H. B. Ward, University of Nebraska, Lincoln, Neb.; G, Erwin F. Smith, United States Department of Agriculture, Washington, D. C.; H, George Grant MacCurdy, Yale University; I, Irving Fisher, Yale University;

K, William T. Sedgwick, Massachusetts Institute of Technology, Boston.

One of the most important ethnological expeditions sent out from Harvard University in recent years is being organized by the Peabody Museum for the object of collecting information about the little-known Indian tribes located on the eastern slopes of the Andes Mountains in South America. The members of the party, which is to be absent about three years, will be Dr. W. C. Farabee, instructor in anthropology, who will head the expedition; Louis J. de Milhau, '06, and J. W. Hastings, '05. A physician will also be included. The headquarters of the expedition will be at Arequipa, Peru, where Harvard has its South American astronomical observatory. The party will seek to reach the tribes near the headwaters of the Amazon and Parana. This region has never been traversed by American scientists, and the reports upon it by Europeans are meagre and relate to only a small part of the territory.

A complete report of the German expedition made under the leadership of Dr. Rosen to Abyssinia, is to be published in the near future under the title "Eine deutsche Gesandtschaft in Abessinien," with about 160 illustrations. The expedition, consisting of nineteen Europeans, traversed some 2,000 kilometres, visiting, among other places, the Gala districts, the headwaters of the Blue Nile, and the ancient Aksum.

The International Commission of Scientific Aeronautics held its fifth conference at Milan during the first week of October. The members visited Pavia, where M. Gamba conducted them through the observatory, and liberated two *ballons-sondes*. At one of the sessions Dr. Erk urged the necessity of making ascents near or among the Alps, in order to study local phenomena, such as the Föhn. In a discussion of the relative value of *ballons-sondes* and kites for atmospheric study to a height of 5,000 metres, the balloons were strongly urged by Professor Hergesell, while kites were considered as far preferable by Gen. Rykatchew and M. Berson. A paper on American ascents of *ballons-sondes* was given by Prof. A. Lawrence Rotch, director of Blue Hill Observatory. M. Teisserenc de Bort gave an account of the expedition to equatorial regions of the Atlantic, organized by Mr. Rotch and himself, from which exceedingly good results were obtained. In the upper air far lower temperatures were recorded over the Equator than at corresponding heights in temperate latitudes, a result contrary to expectation. Future conferences will be held every three years.

The recently published report of Prof. H. H. Turner of the Oxford University Observatory for the year ending April 30, 1906, directs attention to the fact that the working staff is chiefly busy with proof-reading of the Oxford section of the "Astrographic Catalogue," and little new work has been attempted. The catalogue will consist of eight volumes, of which the first is now practically ready, and its printing begun. It contains the measures of 66,000 star-images on 160 plates.

Among other scientific papers contained in the seventy-third annual report of the Royal Cornwall Polytechnic Society, is a

verbatim account of one of Sir Norman Lockyer's lectures, "An Early Chapter in the History of Cornwall." He explains that the work he has inaugurated with reference to the mysterious stone circles and other stone monuments has but just begun. Yet evidence seems to him already conclusive that their erection depended upon the utilitarian necessity for regulating the calendar by observations of celestial timekeepers. In his opinion, Cornwall researches amply confirm similar conclusions resulting from the study of Egyptian temples. Photographs of the principal circles, "The Hurlers" and "The Merry Maidens," are shown in lantern slides, and maps and tables prove the wonderful similarity of purpose in the sight-lines, even when, owing to local conditions, their directions are dissimilar.

J. Philippe Lagrula, of the University of Lyons, has been appointed by the Ecuador Government as director of the observatory at Quito.

One of the most important questions now before chemists is the procuring of a new source of nitrogen (N), an essential element in a fertilizer. At present there are three sources of nitrogen for agricultural purposes: first, natural deposits of nitrates, such as those in Chili, which are insufficient for future need; second, organic waste, blood, tankage, fish or meat scrap, ordinary stable manure, and sewage, enormous quantities of which are recklessly thrown into the ocean—a waste of just what, with chemical change, the world needs; and, third, the nitrogen of the air, which in special cases is made available by certain bacteria that live only on pod-bearing plants, such as garden peas. For years chemists, aware of this yearly depletion, have striven to draw on the inexhaustible supply of atmospheric nitrogen. It must be combined chemically to make ammonia (NH₃), which bacteria convert into a form suitable for plant life; or it must undergo some other chemical change producing the same result. The problem, therefore, has been to convert the nitrogen of the air into ammonia or into nitrates themselves, which fertilize the soil without change by bacteria. It is now believed that practicable methods of using the nitrogen of the air have been discovered. Two important papers were recently read on this subject. The first by Professor K. Birkeland, before the Faraday Society in London; the second, by Professor Adolph Frauk, before the International Congress of Applied Chemistry in Rome. The first paper was on the Birkeland-Eyde process in Norway, in which nitrate fertilizer is made by electric arc discharges through the air. The combination of the nitrogen and oxygen of the air, together with water, makes the nitric acid; and that in turn is easily converted to calcium nitrate, available for plant food. The second paper was on the cyanamide process in Italy, in which nitrogen distilled from liquid air is passed over calcium carbide in an electric furnace, forming calcium cyanamide (CaCN₂). This, with water, yields ammonia gas (NH₃), in which the nitrogen is indirectly available for plant food. By an extension of this process the oxygen of the liquid air, which distils at a higher temperature than the nitrogen, can be used to oxidize

the ammonia to nitric acid. This method of making the acid is claimed to be more efficient than the Birkeland-Eyde process. It has been reported that there is one drawback to the cyanamide process, for recent experiments show a detrimental effect of the cyanamide on seed germination. This fact makes it undesirable to employ the cyanamide directly on the soil.

Edmund Howd Miller, professor of analytical chemistry and assaying at Columbia University, died last Thursday of typhoid fever. Born in 1869, he graduated from the Columbia School of Applied Science in 1891; in 1892 he received the M.A., and two years later the Ph.D. From the position of assistant in chemistry he rose rapidly to a full professorship in 1904. He had complete charge of the department of analytical chemistry since Dr. Rickett retired seven years ago. He has written several treatises, the most important of which is "Quantitative Analysis for Mining Engineers." He was chairman of the New York division of the American Chemical Society, and he was also a member of the executive committee of the Society of Chemical Industry of London.

Finance.

THE DEFICIT IN NEW YORK BANK RESERVES.

Last Saturday the weekly statement of the New York Associated Banks, showing a "deficit in reserve," threw the money market into commotion. It was particularly noted that this was the third deficit of the year, the others having occurred in the statements of September 8 and April 7; that not since 1899 had any year included three "deficit weeks"; that not since 1890 had three deficits occurred in three separate months; and that the statement foreshadowed extremely high rates for money. In view of these facts, it is worth while to consider in detail what such recurrent "deficit" really signifies as to banking operations, what it involves to the borrowing community, and what is the duty of public officers in regard to it.

The National Bank act of 1864, as subsequently amended, provides that whenever the holdings of lawful money (excluding, of course, bank notes) in the hands of a national bank in specified "reserve" cities falls below the ratio of 25 per cent. to its deposits, and whenever the similar holdings of a national bank elsewhere fall below 15 per cent., such a bank "shall not increase its liabilities by making any new loans or discounts, otherwise than by purchasing bills of exchange payable at sight," until the prescribed ratio is restored. In other words, liabilities must not be increased. Lending on bills of exchange is excepted, because that is a means of drawing foreign gold and replenishing reserves. The Comptroller of the Currency may warn a bank showing such deficiency to make good its reserve at once. If it fail to do so within thirty days he may, with the concurrence of the Secretary of the Treasury, force it to stop business.

He may do so, not *must*—an important distinction. There are two ways in which the ratio of reserve to deposits may be

brought below the 25 per cent. dead-lino. A market's currency reserves may be drained by demands of interior centres, by gold exports, or by the accumulation of cash in the national Treasury. Unless loans are cut down in a still larger degree, the 25 per cent. reserve, which is required in New York city, may thereby be impaired. Or, without any actual loss of cash, deposit liabilities may be so increased, through the making of loans at a reckless rate, that the reserve will be less than the legal ratio. The outright drain on the reserves is worst in such panics as that of 1893, when bank depositors are withdrawing and hoarding money; the undue expansion of loans is commonly seen in "boom times," when every one is speculating and borrowing, and the banks are providing the credits. In a panic, the fall of the reserve below 25 per cent. may be wholly unavoidable; in the "boom," it is likely to result from recklessness. Hence the discretion on the part of the Government authorities, either to do nothing or to force the offending bank out of business.

In the present instance the banks were not brought to a deficit by influences beyond their own control. Money has indeed been drawn from New York partly by needs of active internal trade, partly by the Treasury's accumulations. Since the beginning of August, however, the Treasury has deposited \$18,000,000 in the banks; and \$40,000,000 gold has been imported; nevertheless the cash reserve of the New York Associated Banks has decreased \$35,000,000. But this is a perfectly familiar phenomenon of the season. It occurs because, when trade is dull at interior cities, bank liabilities light, and, therefore, need for reserve money reduced, interior banks send cash to New York. They do so, not only because they no longer need the currency, but because New York banks, which can lend on Wall Street at all seasons, offer 2 per cent. interest for use of this money of interior banks. With these fresh reserves, the New York banks expand their loans. In prudent banking, this expansion will be cautious, especially as autumn approaches; because at harvest, the interior bank will ask for its cash again. Tens of millions in actual currency must be sent to the farming districts to pay off hands; in addition, the trade of a prosperous farming season requires that inland banks themselves should increase loans to customers, and hence, should need more reserve money.

If New York banks have used these borrowed resources carefully—in particular, if, on the eve of the "interior demand," they have brought their reserves to a figure 10 or 15 per cent. above the bank law's minimum, the return of money is easy. This year, the New York banks did nothing of the sort. In the middle of last August, reserves stood at only 25½ per cent. of deposits. With the banks in so weak a position, and with the largest legitimate interior demand in the history of the country just before them, powerful Wall Street capitalists, controlling certain important banks, started a stock speculation of such magnitude as to strain all the credit resources of New York. By September 8, a deficit was reported. With the help of the Treasury and the foreign markets, a surplus was restored; but it was perfectly evident that only by abandonment of Stock

Exchange speculation, sale of the stocks jacked up with borrowed money, and consequent reduction of bank liabilities, could normal conditions be restored. The gambling millionaires had no such intention; they continued their operations; as a result, in spite of help from Europe—at present apparently cut off—the banks are again below the required reserve.

One hears occasionally, even among intelligent people, that the 25 per cent. reserve is "for use when needed"; and that, since at this moment somebody needs it badly, nothing could be more commendable than "dipping into the reserve." Eminent financiers have suggested that, while the 25 per cent. requirement is well enough for dull midsummer markets, the ratio for the autumn ought to be put at 15 per cent. or less. This is absurd. The arbitrary 25 per cent. was fixed, not because that was exactly the sum required to meet a "run," but because some line has to be drawn beyond which deposit institutions must not inflate liabilities. In 1857, when American banks largely arranged such matters for themselves, and when half of them had lost their heads in wild speculation, an almost general bank suspension followed. Government and people learned the lesson. The required ratio for "reserve" cities might conceivably have been 15 per cent.; it might conceivably have been 35. Whatever it was, the business of the banks was to adhere to it. Under the circumstances their successive deficits of the present season have provided a chapter in American banking history of which no American can be proud.

What is probably the most interesting, most comprehensive, and most authoritative book on Panama will be issued Tuesday

Four Centuries of The Panama Canal
 By WILLIS FLETCHER JOHNSON.
 With 16 illustrations and 6 colored maps. 480 pp. 8vo, gilt top, \$3.00 net. By mail \$3.27.

Dr. Johnson, author of "A Century of Expansion," has been, since de Lesseps' time, a close student of, and frequent writer on Isthmian Canal affairs, especially for the *New York Tribune* and the *London Times*, and has studied them on the spot with Secretary Taft, to whom, by permission, the book is dedicated.

Just issued, a superb gift book for nature lovers

The Log of the Sun
 About 250 illustrations (52 in color) by WALTER KING STONE, with text by C. WILLIAM BEEBE. 8vo, \$6.00 net. Carriage 35 cents.

Ready To-day.

The Interpretation of Nature

By C. LLOYD MORGAN, LL.D., F.R.S.

Crown 8vo, net \$1.25

This thoughtful treatise aims to show that a belief in purpose as the casual reality of which nature is an expression is not inconsistent with a full and whole-hearted acceptance of the explanations of naturalism within their appropriate sphere. He contrasts two modes of interpretation: First, that which works outwards through human life as a centre, and explains the world in terms of purpose analogous to the purposes of man; and, second, that which works inward from external mechanism to the human brain with its associated mental states, and explains the universe in terms of natural law.

NEW BOOKS OF UNUSUAL MERIT

American Character

By BRANDER MATTHEWS

Special type designs, 12mo, cloth, 75 cents. Limp leather, \$1.50 net. (Postage 8 cents.)

Are we Americans "money mad" and "devoid of ideals"? These and other sweeping condemnations by foreign critics are here answered by an eminent scholar and writer.

The Hope of Immortality

By CHARLES F. DOLE

16mo, cloth, 75 cents net. (Postage 8 cents.)

The "Ingersoll Lecture," delivered before Harvard University for the year 1906. An able summing up of the arguments which have induced mankind in all ages to a belief in an after existence.

Daily Joy and Peace

By ROSE PORTER

Illustrated, 200 pages, 18mo. White back, violet paper sides, 50 cents. Cloth, 50 cents. Limp leather, \$1.00.

A pleasing little book packed with counsel and words of cheer, culled from great writers and arranged for each day in the year.

Success Nuggets

By O. S. MARDEN

In two colors from special type designs, 16mo, cloth, 75 cents net. Limp leather, \$1.25 net. (Postage 8 cents.)

The well-known editor of "Success" here collects some valuable little nuggets mined from many men's experience. The original form and attractive pages make the book one hard to lay aside.

WHAT IS WORTH WHILE SERIES

This popular line of dainty little gift books has sold to the extent of hundreds of thousands of copies since it was inaugurated a very few years ago. The constant effort is to add new titles worthy of the series' high reputation.

Four New Books, beautifully bound, 12mo, 30 cents each. (Postage 5 cents.)

THE CHALLENGE OF THE SPIRIT

An intimate personal experience by a well-known writer who here uses an assumed name.

By Ellis A. Ford

CHRISTMAS MAKING

A holiday message from this optimistic author is bound to be one of wholesome cheer.

By J. R. Miller

DOES GOD COMFORT ?

An anonymous story of sorrows and trials which yet led to the light.

THE POWER OF PERSONALITY

Some practical hints by a practical writer on the value of personal appearance as a business asset.

By O. S. Marden

Send for Free Illustrated Book List

THOMAS Y. CROWELL & COMPANY, 426-8 WEST BROADWAY, NEW YORK

IMPORTANT AUTUMN BOOKS

The Secret of the Moor Cottage

By H RIPLEY CROMARSH

12mo, 285 pages. Price \$1.25. The mere statement that this new novel is written by the sister of A. Conan Doyle is enough to awaken public curiosity. It is a story of mystery and adventure that naturally involves a detective, who ultimately works out the puzzle that surrounds him and later writes about it himself.

Latter-Day Love Sonnets

Edited by LAURENS MAYNARD

8vo, 100 pages. Price \$2.00 net. Postage 10 cents. The latest addition to the Love Sonnet Series, comprising the most brilliant Love Sonnets of nearly one hundred poets of the present day, both British and American—a notable group of poems and of authors, issued in the handsome style characteristic of this series.

The Cheerful Cricket, and others

By JEANNETTE MARKS

Large 8vo, 100 pages. Price \$2.00. The life and doings of diminutive creatures of nature, expressed not in dull natural history facts, but in animated incident and action. Written in delightful language, with fascinating pictures in four colors. The most beautiful and entertaining juvenile of the year, written by the professor of English Literature in Mt. Holyoke College.

The Electric Theft

By NEIL WYNN WILLIAMS

12mo, 311 pages. Price \$1.50. For one who likes action, and not analysis; an unbacked plot, original and novel, but reasonably probable; a love romance knit into the thread of incident, with a titanic struggle between two strong rivals, who make the very earth tremble in their efforts for mastery—for such a one this is a book well worth while.

Father Pink

By ALFRED WILSON BARRETT

12mo, 326 pages. Price \$1.50. A lively narrative of the wily machinations of a seemingly harmless priest, in which large property rights are involved, including a hoarded pile of diamonds, with eager rivals for the hand of a woman who owns the property in question. The priest, as the cleverest actor in the drama, is an unusually interesting character.

Intimations of Immortality

Compiled by HELEN B. PATIEN

12mo, 280 pages. Price \$1.50 net. Postage 12 cts. The brief but salient comments of the great and learned of olden and modern times on immortality—a compilation of remarkable diversity and value, arranged under such topics as The Testimony of the Ancients, The Speculations of Philosophy, The Voice of the Church, The Vision of the Poet.

Stella's Adventures in Starland

By ELBRIDGE H. SABIN

8vo, 175 pages. Price \$1.50. For children it would be hard to find a more entertaining book than this. Prompt action, frequent incident, bright conversation, do not allow curiosity to flag. Mercury the Messenger-Boy, Ill-Tempered Mr. Moon, Venus and her School, Mr. Mars and Neptune are characters that, with the pictures, will delight any child.

With Walt Whitman in Camden

By HORACE TRAUBEL

8vo, 500 pages. Price \$3.00 net. Postage 20 cts. This illuminating diary record has been truly likened to Boswell's Johnson in the fullness and veracity of the revelation of the poet's daily life and thought. His conversations and his correspondence with a host of world-famous men-of-letters show afresh the breadth of his human interest and the acuteness and candor of his critical judgment.

SMALL, MAYNARD & CO., Publishers, Boston

THE NATION

FOUNDED IN 1865

A Weekly Journal Devoted to Literature, Drama, Music, Art, Science, Finance and Politics

The Nation aims to present from week to week a report of the intellectual progress of the world, notices of the most important books, plays, musical events, and the principal exhibitions of art, here and abroad, the development of science, and the significant movements in foreign and domestic politics.

Its book reviews, its art criticism, and all its other articles are written by the most competent specialists in America and Europe.

The Nation stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms and into thousands of families.

The circulation is chiefly among thinking and substantial people—lawyers, physicians, teachers, clergymen, and other professional men; in short, it goes to the homes of cultivated people.

Sample copies for three weeks sent free upon request.

The cost of a subscription for one year is \$3.00; for any less period a proportionate rate is charged.

The Nation

206-210 Broadway, New York.

A BOOK FOR EVERYBODY.

EATING TO LIVE.

By JOHN J. BLACK, M.D. With special advice to the Gouty, the Rheumatic, and the Diabetic. Cloth, \$1.50 net. J. B. LIPPINCOTT CO., Philadelphia.

NAPOLEON IN POLAND

Account of Campaign 1806-7. By F. LORRAINE PETRE. With maps and plans. 8vo, \$3.50 net. Postage 22 cents. JOHN LANE CO., The Bodley Head, N. Y.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 22, 1906.

The Week.

Even the suspension for a day of the Presidential order, discharging without honor three companies of the Twenty-fifth Infantry, is a welcome sign that the general public disapproval of the President's arbitrary act is having its effect, at least on Secretary Taft. The War Department has been flooded with letters and telegrams of protest; resolutions and appeals have been pouring in from churches, religious societies, and mass-meetings; and hardly one newspaper in the North has affirmed that the punishment of the innocent with the guilty is just or regular. Fortunately, there is still ground for hope that the President's order may ultimately be revoked. If the new facts he asks for can be laid before him, his love of fair play will induce him to do justice where he was by inadvertence about to do injustice. If some of the men who are about to be discharged without honor were absent on furlough at the time of the Brownsville riot, the President will certainly not insist upon their being punished. Some one may also call the President's attention to what happened when the Fourth Cavalry lynched a murderer in 1891. As we have already pointed out, Col. Compton was at once tried and punished, though the officers of the Twenty-fifth Infantry have not yet been held accountable for the misdeeds of their men. Moreover, a soldier of the Fourth Cavalry who offered to betray his fellows was promptly punished for advising and abetting the lynching, and permitting the carbines to be taken from their racks. Even aside from these details, President Roosevelt will find military men unanimous in their belief that his procedure was incorrect from the technical point of view. The *Army and Navy Journal* feels that the President's procedure "savors too much of Oriental methods," and declares that Mr. Roosevelt violated the army regulations. These specifically state that every soldier who is discharged without honor has the right to have his case considered by a board of officers before his commanding officer can give him such a discharge.

Secretary Root's speech at Kansas City Monday night was conceived in the high spirit of his addresses in South America. It is pleasant to find him laying down the same principles to his fellow-citizens that he enjoined upon Argentines and Brazilians. This shows that he was not simply trying to butter their parsnips with fine words. From

even the meagre reports of his remarks before the Kansas City Commercial Club, it is clear that he stood for good morals in diplomacy, which he said were as obligatory in that sphere as in private life. Between nations, he declared, the same rules of conduct should be followed as between individuals. He called this "the new diplomacy." Yet the contrast is not merely with the old, but with many ingenious dressings of the old in new and deceptive phrases. There is "the larger good," for example, of which we have heard so much in recent years as an excuse for overriding the rights of the weak by the strong. That would have to be given up, in the light of Mr. Root's definition, as would also the "reason of state"—that moral "abyss," as Clarendon termed it—namely, the pretence that a Government can lie or cheat or bully without moral turpitude.

It is easy to understand why Senator Thomas C. Platt should be indignant at all this talk that he ought to resign. What new reason is there in this latest disgrace, which has resulted in his separation from his wife? His reputation, of a sort to make his reception in a decent home impossible, has been perfectly known for twenty-five years; but what difference has that made? He has had the highest honors of his party in this State. He has been deferentially consulted by Governors and Senators and the President. He has been received at the White House, not only officially, but socially. So what is all the row about? From Platt's point of view, the whole thing is clearly unintelligible. He is not at all conscious now of being more unfit to be Senator from New York than he has been all these years. Why this sudden squeamishness on the part of his faithful Republican supporters? Not even his dear pastor now comes forward to defend him as before. We admit, however, that the question ought not to be determined by Platt's own *mens conscia recti*. The feelings of the State really come in, absurd as that may seem to Platt. It is even necessary to consider the honor of the Republican party. Surprising as it may appear, there are people who assert that his continuing in office is a shocking example to youth, and a standing source of public demoralization. Even newspapers that have in the past grovelled before him, or slobbered him, are now demanding that he quit the scene. Taking these things into the account, and disregarding Platt's natural wonder that anything he has done has changed public opinion about him, we think that the first act of the Legislature should be

the passage of a joint resolution calling upon him to deliver the people of New York from the ignominy of having him as Senator.

A comparison of the power of the labor vote in the Congressional elections, with that of the tariff revisionists, is much in favor of the latter. Three prominent standpatters were defeated, the best-known being McCleary of Minnesota, whose plurality of 9,059 in 1904 was this year turned into a plurality of 1,500 for his Democratic opponent after a campaign in which the tariff was almost the only subject discussed. Lacey of Iowa, one of the readiest protectionist debaters in the House, and a staunch Shaw partisan, was beaten by about 2,200 votes in a district which gave him 9,373 plurality in 1904, and even this year was carried by Cummins for Governor. In Indiana, a plurality of 8,185 in 1904 for Frederick Landis, a high-tariff orator, became a plurality of 1,000 for his opponent. Several Republicans of the Ways and Means Committee had a rough road to travel. Chairman Payne and John Dalzell had their 1904 pluralities more than cut in half, while Watson of Indiana and Curtis of Kansas managed to retain their seats by bare pluralities. On the other hand, two Democratic members—Champ Clark of Missouri and Granger of Rhode Island—more than doubled their pluralities of two years ago. In Massachusetts, Samuel W. McCall, an avowed Republican revisionist, carried his district by a greater vote than that given to Roosevelt in 1904. These figures indicate that a bold and energetic tariff-revision campaign throughout the country might have cut the Republican majority much lower. Mr. Gompers's American Federation of Labor made a poor showing in its campaign against certain Congressmen. Speaker Cannon's plurality, while not reaching the high figures of 1904, was still about 1,000 greater than his lead of 7,600 in 1902. Lilley, Representative-at-large from Connecticut, against whom one of the bitterest labor fights was waged, was reelected by a plurality less than that of two years ago, but greater by about 8,000 than that of 1902. In Maryland, Mudd, though losing largely in the Baltimore city districts, obtained a plurality considerably larger than that of 1904. Representative Gardner in New Jersey, another of Gompers's dearest foes, was elected by over 9,000, a plurality nearly up to that of 1902. Indeed, the only real successes that can be attributed even indirectly to labor influence, are those of Nicholls and Wilson, two miners' representatives, in Pennsylvania; Cary, who won a Republican nomination in Wisconsin at the primar-

ies; and McDermott of Illinois, a union-labor man who represents the "Packing-town" district.

Hearst's sworn election expenses of more than \$256,000, not only break all records, but outrage all propriety. While Hearst was shouting that the other side intended to purchase the election, he was throwing in his quarter of a million with the coolness of a hardened gambler, betting on what he thought was a sure thing. The poor man's champion, with a corruption fund of hundreds of thousands in his right hand, is a novel and repulsive and ominous figure. But this publication, portentous as it is to reflecting citizens, may simply make the politician breed lick their chops. Let's get him to run again! For the love of Heaven, have him nominated for something else! In all seriousness, such huge and growing payments by candidates for office in this country are an evil that we shall soon have to deal with. We shall have to take a leaf out of the English Corrupt Practices Act, and limit by statute the amount that any man can spend to obtain office. When Gov. Higgins returned \$30,000 as his campaign expenses, two years ago, we all gasped a little. But this year a successful candidate merely for the State Senate has sworn to more than \$31,000. In Massachusetts, Mr. Draper has laid out some \$50,000 to be made Lieutenant-Governor. And now comes the loud dumping of Hearst's barrel. Where is this to stop? If the offices are really to be auctioned off, a thrifty people will surely set bigger plutocrats than Hearst to bidding.

The indictment of Mayor Schmitz of San Francisco and of "Abe" Ruef, his boss, for blackmailing disorderly resorts, is a sign of hope. Not in the whole depressing history of our municipal misgovernment has there been a more flagrant alliance between the authorities and the forces of evil. The system, of course, pleased the corrupt railroads and corporations, the merchants who profit by illegal favors, and all the elements that make money out of a "wide-open town." A year ago, the decent citizens of San Francisco made an effort to rescue the city by electing as Mayor John S. Partridge, a young lawyer of integrity and courage. He came within a few thousand votes of winning, but the dissolute, the criminals, the grafters, the labor unions, and those affiliated with corrupt corporations were successful in retaining Schmitz, or rather Ruef, in power. The former was originally elected Mayor as the representative of union labor. A defender of organized labor as a political force must be speechless in view of its San Francisco record. It

has owned the city and the judges. Gompers himself declared three years ago that "every non-union man in San Francisco must get out," and the threat was nearly fulfilled. When a ship-owners' association asked for protection for non-union workmen, Schmitz told them that he would not allow "his police" to protect a lot of strike-breakers, and he did not. When the great fire was over, the labor-leaders stated in a proclamation that no union would be allowed to raise wages, and that non-union men would be allowed to work. This was hardly published before non-union men were driven from the ruins, and there is not a trade to-day in which wages have not been raised from 20 to 30 per cent. Labor agitators have long dwelt on the halcyon days certain when everybody would be unionized. Well, the plan has been tried in San Francisco, and the whole world can read the result. In the face of a great calamity the city's hands are tied; its name is besmirched. Union control has meant simply license to rob.

The decision that the Rev. Algernon S. Crapsey is a heretic is now confirmed by the highest tribunal of the Episcopal Church. He wished to test the sense of the Church, to ascertain how much it would tolerate in latitude of doctrine. He has discovered that the Church cannot contain a man who repudiates the dogma of the Virgin Birth. Whatever clergymen of the more advanced school may think, the controlling powers hold that this tenet is one of the fundamental verities. We do not, we confess, see how the Court of Review could reach any other conclusion. Until some body, such as a general convention, entitled to speak for the Church, declares that belief in the Virgin Birth is a non-essential, the Court was bound to construe the words of the creed according to their obvious acceptation, the meaning which they have carried for centuries. If Dr. Crapsey holds that Christ was the son of human parents, his place is in some organization which admits that view. Furthermore, he should not be made the sole martyr in this cause. If he is driven from his parish, all brother-clergymen who think with him are logically and morally bound to abide by the sentence passed upon him. If they really are spiritual leaders, they must speak out and take the consequences with him, rather than stultify themselves by silence. The easy way is to smother conviction and say nothing; but the clergyman who allows Dr. Crapsey to suffer while he himself, guilty of the same offence, escapes, knows in his soul that he is unfit not only for the ministry, but for association with honest men.

The election of four architects to be

Associates of the National Academy of Design is a step we are glad to note. Whatever is to be said, or left discreetly unsaid, about modern architecture, it is unquestionably the ground on which art and great wealth most nearly meet. The architect is the natural intermediary between the wealthy individual or corporation and the painter or sculptor. The four men just promoted to academic honors have all in varying capacities been ambassadors to capital for mural-painting and sculpture. In the present chaotic state of American civilization, such mediation has been most necessary and useful. It should be said also that, as compared with other artists, the architects have been socially minded, and have perhaps done more for the education of taste than any other single class. In fairness, we must add that American architecture has suffered terribly from commercialization. The secluded position of the other arts has been, if unwholesome, a safeguard also. There are some who feel that a fine landscape by Homer Martin outweighs in æsthetic importance all the building of the decade; but such comparisons are unprofitable, and the Academy certainly does well to acknowledge the courtesy it has so long enjoyed at the hands of the architectural profession.

The state of mind of a man who could explode a bomb in the first church of Christendom is difficult to analyze; but some sort of consuming hatred is the chief motive of the crime—a hatred that embraces both the past and the present. It is curious to recall that the apparent fiend who would slay and mutilate his fellows by scores, may entertain some paradisiacal vision of the future. He is willing to blow any of us up *pro tempore*, in order that posterity may be freed from the shackles of Church, state, and all organized institutions. Such a state of mind clearly borders on the insane, but it would be an indignity to the most unfortunate class of humanity to identify the anarchists with them. We have to do, rather, with a monstrous depravity, in which the emotions are subdued to some persistent fallacy of the mind, or rather merged in the single emotion of hatred. How to deal with such avowed and formidable enemies of mankind is indeed a most difficult problem. Law seems pretty nearly impotent in the case, for the wretch who tried on Sunday to make a slaughter in St. Peter's, may, on Saturday, have seemed the most benevolent of doctrinaires. In short, we have to reckon with a disease of the emotions that seems to evade both the medical and legal professions. And public abhorrence is an equally futile resource, since complete self-sufficiency has ever been the chief characteristic of these fanatics.

The Berlin Conference on Wireless Telegraphy which recently adjourned, reached conclusions that will be of great value in the development of this new method of communication. The convention, which was signed by Great Britain, Germany, the United States, Argentina, Austria-Hungary, Belgium, Brazil, Bulgaria, Chili, Denmark, Spain, France, Greece, Italy, Japan, Mexico, Morocco, Norway, the Netherlands, Persia, Portugal, Rumania, Russia, Sweden, Turkey, and Uruguay, contains, as its most important provision, an agreement that the signatory Powers will make arrangements for wireless communication between their coast stations and vessels of all nationalities. Great Britain, France, and Spain, together with Portugal, Italy, Japan, and three minor Powers, reserved the right to exempt certain stations, but in return bound themselves to provide "open" stations. The United States and Germany led fifteen other Powers in expressly renouncing the right to close any of their coast stations to passing ships—a broad and liberal policy, which will go far towards ending any narrow rivalry between companies and systems. From the first, the United States insisted upon the obligation of general communication and transmission, not only between ships and land, but between all ships. If Great Britain had endorsed the proposal, the success of the American delegates would probably have been complete. The English representatives argued that the obligation was too onerous to be imposed upon general shipping, which includes private yachts. In the licenses which will be issued by the British Government to ships with wireless outfits, this requirement will not be inserted, but probably her ships will readily receive and transmit wireless messages, as hitherto they have never failed to answer signals of distress or requests to report ships in trouble. There was at first an effort to reserve certain exclusive rights for the Marconi companies. Fortunately, the technical and commercial experts maintained that the opening of the Marconi stations to other messages was, in the long run, far better for the Marconi interests. And as these arguments coincided with still broader international and humanitarian views, the battle against monopoly was won.

Writing of Moscow as he found it, a correspondent of the *New York Outlook* said:

Except for the strikes, business is nowhere seriously disturbed, and men buy and sell, "eat, drink, and are merry," as usual. The big pleasure resorts—the Aquarium and the Ermitage—were full to overflowing each evening, and I have never seen the people gayer or more given over to pleasure.

This failure to appreciate the momen-

tous nature of the issues now being worked out in Russia is not unexampled. Russia to-day can show atrocities surpassing the traditional iniquities of the Inquisition: martyrdoms (like that of the girl students of Cronstadt descending into the very lupanars to gain the ignorant sailors for the revolutionary cause) equalling those of mediæval legend; exaltation, excess, superhuman ferocity, and almost superhuman devotion. Perhaps the daily sensation of the newspaper has destroyed the sense of proportion, and with it the sense of wonder. But there is a more pertinent reason. After all, why should the spectators be seized with the awe of great events when the actors themselves go at their tremendous tasks in so light-hearted a fashion? War is war, and revolution is revolution, but hunger and clothes and the desire for social intercourse are also facts, and though the Russian student be quite ready to offer his life for his cause, he can see no reason why he should also sacrifice his glass of tea or his cigarette. To the younger of us, to whom the Civil War is the name for a great national agony, it will never cease to be somewhat of a puzzle to read of the gayety that marked the "flush times" of the war; to think that Edwin Booth was giving the first of his productions of "Hamlet," and that Longfellow was putting the finishing touches to the "Tales of a Wayside Inn" in the year of Gettysburg. That a great contemporary movement should now and then be tainted with sordidness, that a living hero should be occasionally a bit of a blackguard, and a saint of our own days something of a simpleton, does not surprise us; but the past is different, and wears a halo. We may repeat the name Mukden a half-dozen times, and remain comparatively cold. But Waterloo, we are sure, must have been fought while the world attended with bated breath. That is partly true. But it is also true that of Waterloo a great author wrote with fine insight:

All the country and Europe was in arms and the greatest event of history pending: and honest Peggy O'Dowd, whom it concerned as well as another, went on prattling about Ballinafad and the horses in the stables at Glenmalony, and the claret drunk there; and Jos. Sedley interposed about curry and rice at Dumdum; and Amelia thought about her husband and how best she should show her love for him; as if these were the great topics of the world.

The anniversary of the granting to Russia of the so-called Constitution was observed by some Russian newspapers by footing up for the year the roll of deaths by violence. Incomplete the figures must be, since only a part of the facts found their way to the press; yet the total of 24,239 deaths in riots or at the hands of the executioner, is enough

to make the world aghast. No less than 22,721 persons are known to have perished in pogroms, riots, conflicts with the authorities, and punitive expeditions. That this is not all of the bloody record appears from the fact that hundreds, if not thousands, of the massacred Jews were never accounted for. Official executions disposed of 1,518 lives, and thus proved beyond dispute how useless is capital punishment, when a whole nation is aroused. Of the political agitators, 851 were given penal sentences, aggregating 7,138 years. In the effort to control public opinion, 523 newspapers and reviews were suppressed, and 647 editors prosecuted. During the year, 31 provinces were wholly, and 43 partially, under exceptional laws (state of siege or war, etc.). To these figures the *Strana* adds that during the past twelve months there were 1,629 agrarian riots, while 183 secret printing offices and 150 depots of arms were discovered. The depots contained thousands of rifles and revolvers, tons of powder and explosives, and several machine guns. Bombs to the number of 244 were thrown at officials; while no less than 1,955 armed burglaries were reported.

The English Secretary for War, Mr. Haldane, whose career, in office is a close parallel to Secretary Root's in our War Department, is not satisfied with the creation of a General Staff and a college to educate it. He is convinced that specialists in moving troops and furnishing supplies must also be produced. What he wants is capable business experts—"experts in the whole mechanism of modern business, in accounts, in supply organization, and transport, in all those things for which you train men before sending them to organize railway work or to administer some colossal industrial organization." Since there never have been officers trained for this task, the English public is "only just now quivering with excitement over the spectacle of a great mass of important work badly done to the detriment of the national purse." For aid Mr. Haldane has already turned to the colleges, the London School of Economics having undertaken to make a beginning in training for affairs. A group of men has already been chosen as the nucleus of an administrative staff, which may some day be on the same footing as the General Staff. The question is an interesting one: is the modern army to be clearly divided into two parts, the fighters and the business men? If so, the Continental armies are lagging in the rear; with them supply officers hardly rank as officers at all. Having no important oversea wars to fight, or to be ready for, they naturally are far less concerned than the English with the training of business officers.

DIGNIFYING THE BOOK TRADE.

The London *Times* has been conducting at terrible length a controversy over the circulating library which it organized as a means towards increasing the sale of the paper. The used volumes, it soon offered to its readers at discounts ranging from 35 to 75 per cent. This sales department it advertised conspicuously, describing the books as "virtually as good as new," and inciting subscribers to "a glorified form of bargain hunting." It was much like the competition here between some department stores and the regular bookshops, but even more formidable, for the *Times* Book Club sold all manner of books, and many that would ordinarily not appear for years at a discount or second-hand. Organizations representing the publishers, booksellers, and authors of Great Britain have protested against this traffic, and have even tried to shut off the *Times's* supplies of books. The quarrel is in some respects similar to that of the American Publishers' Association with the cut-rate department stores.

George Haven Putnam expresses a hope that agreements between publishers and booksellers may receive especial legal sanction. But the issues raised by price-cutting and prompt resale of new books as second-hand seem, in fact, to fall less in the category of legal contract than of business ethics. It seems to us unfair for the *Times* to advertise itself at the expense of authors, publishers, and booksellers, by reselling good new books too soon and too cheap; but we doubt if the law will ever take cognizance of the transaction. We may only trust that newspapers will maintain a higher standard of advertising than it has pleased "The Thunderer" to adopt. We sympathize with the feeling that makes publishers wish to cut off all concerns that will not observe the wise and immemorial customs of the trade; but we fear they have no sure redress, except an appeal to the ethical sense of the community.

It is a just sentiment, however, that puts the selling of books on a different plane from that of selling hams or shoes, and requires something like standard agreements for the protection of authors, publishers, and booksellers. The premature second-hand sale of a book does a damage that is done in the case of no other commodity. It depreciates, in short, not merely the value of the particular volumes sold, but all that may be subsequently printed. In this way such an enterprise as the *Times* Book Club may greatly abridge the period of profitable sale of any book. In the case of learned works, for which the demand is slight, a habit of turning them over quickly at second-hand would probably annul all profit. In other words, this sort of premature competi-

tion undoubtedly tends to cheapen the book trade, and debar from its facilities the best class of authorship. It seems just, in fact that every book should have its chance to sell at a living price, before it is dumped on the bargain counter.

Arguments that the publishers are interested in keeping prices up, and pleas for open competition, do not really affect the merits of the question. Of course, the publishers are pleading their own cause; but they are also working in the interest of the author and bookseller, and ultimately of the reader. The author is surely concerned in not having his royalties stopped by too sudden popularity with the second-hand trade; the bookseller properly desires a margin of profit that allows him to keep a creditable stock and sell it with the dignity that becomes a liberal calling; the reader, finally, is the gainer by bookshops where there are facilities for intelligent choice and consultation. In short, the entire business from the author to the reader is really on a quasi-professional basis. It is, or should be, subject to such unwritten laws as prevail in the professions generally. It is not law, but custom, that prevents a reputable physician from advertising, or from practising for a pittance. The damage that comes in the learned professions from disregarding their informal codes is personal, and not legal.

Such analogies make it plain that publishers have in hand a rather difficult campaign of education, which implies, incidentally, the elevation of the character of the publishing trade. They must inculcate the conviction that something like a gentleman's agreement holds all along the line, from author, through publisher, to retailer, and, finally, reader; and of course, the real objective of such a campaign is the reader. When one buys shoes or clothes, one is willing to pay a little more for elbow room, quiet, a select stock, and intelligent service. The same motives, we are confident, will preserve the old-fashioned bookstore in the face of its bustling competitors. But the moral of such controversies as we have noted would be wholly lost unless publishers should realize that wildcat bookselling is not a whit worse than wildcat book-publishing. We are convinced that the berated Book Club and similar institutions may fairly be attacked as *hostes literati generis*; but it behooves few publishers to launch that shaft without much preliminary searching of heart.

CHANGES IN THE FRENCH PRESS.

A French man of letters, Emile d'Arnaville, on becoming the official critic of the *Revue Illustrée*, made some regretful remarks about the expulsion of the *littérateur* from the daily press of his country. This banishment, so far

as it has gone, is significant of recent extraordinary changes in the French newspaper.

Two decades ago, the French press was still a charming, restful backwater in the brawling stream of journalism. In the newspapers of Paris, which might almost have been published in Lotus Land, there was an atmosphere of perpetual afternoon—of about five o'clock, the hour when the café and the boudoir yielded their daily increase of intimate gossip. This was pretty nearly the extreme limit of news-gathering. No other "scoop" was dreamed of in that artificial but not unpleasing Arcadia. The reporter, as we know him, had not been introduced into France. The *chroniqueur* reigned undisturbed. And he was one who expressed his personal opinions on—well, sometimes on his personal fancies; sometimes on books, or other works of art; sometimes on so near an approach to facts as the fashions; very seldom indeed on the gross material of politics or business. A literary *chroniqueur* might make the fortune of a daily—or ruin it by going over to a rival. And what wonder, when his pen was that of a Veillot, or (in our days) of an Anatole France or a Mendès?

Such urgent matters as "foreign and commercial intelligence" received scant attention. The most distant correspondents of these journals were commonly to be found on the boulevards. One of them might be seized now and then by an exotic fantasy, and date his communications from London or Teheran. But this was only an innocent search for the picturesque, and no one thought of judging it otherwise than as an imaginative effect. What Parisian, indeed, in that golden age would have cared two straws for *real* information from London or Teheran? The journalist's task was to show Paris life "across a temperament"; and the chief requirement was that the temperament should be strictly Parisian. In fact, it was a journalism, not of telegrams, but of temperaments.

But what polish went with this concentration! It was the only considerable journalism in history in which form has prevailed over matter. And how much of the matter itself was artistic! What hospitality was lavished on pure literature, when so little was shown either to news or advertisements! For the advertisement-cavasser worked no harder than the news gatherer. There is a story of the editor of one of the chief papers in Paris being altogether put out, not so very long ago, by the arrival in his office of a solitary advertisement. "It will spoil my page!" he cried. "Where the deuce am I to put it?" All that, however, has been changed. The halo of pure literature has faded from the journalist's brow. The

most artistic press in the world has given itself up with passionate suddenness to advertising and news-mongering. The reporter has dethroned the *chroniqueur*. Oh, Villemessant, how art thou translated! But yesterday we were ascribing the serene newslessness of these newspapers to the refined, detached character of the French. Unless their character has changed with miraculous speed, the compliment was undeserved. To-day their principal newspapers are but little more literary than those of London or New York, not vastly inferior to them in respect of news and advertisements.

What has caused this swift transformation? Some of us may put it down to Anglo-Saxon influence. It is a fact that the *Matin*, the pioneer of the new journalism in Paris, arose out of the ashes of an American venture. But the movement has come from a deeper source than that. It has come from democracy and free expansion. The aloofness of the press under the Second Empire was not really a natural outcome of French taste, broadly considered, but of oppression and force. When the unlimited circulation of news and the free discussion of politics were forbidden, the journalist's energy poured itself into other channels. And tyranny became once more the parent of art, to the delight of an elect few. After the Empire fell, the cabined and confined press continued for a while in the narrow artistic attitude which had become habitual to it. But soon a reaction set in towards reckless, brutal, inartistic activity, encouraged by foreign examples, but chiefly inspired by the new freedom, which was at last bringing the journalist into touch with his real public—with the masses of the nation. And thereupon, as if by a law of nature, pure literature began to be ejected by the machinery of the press—even of the French press.

Several other concurrent causes of this brusque transformation of the French newspaper have doubtless operated. But considering all the circumstances, experience does not seem to have supplied hitherto any more crucial instance than this of the perils of journalism under democratic conditions. Others beside M. d'Arnaville may regret the exclusion of the *littérateur* from a democratic press, and may be reluctant to accept it as necessary. Let us hope that it is not necessary. At all events, those interested in these problems will watch the future course of journalism in France with close attention.

EDUCATIONAL TROUBLES OF GERMANY.

A large number of books, pamphlets, and articles are being written in Ger-

many about the urgent need of educational reform. The late Eduard von Hartmann complained in one of his last essays: "Our system of education and examination is approaching nearer and nearer to that of the Chinese"; and a considerable number of his countrymen have reached the conclusion that the ideals of true education are being sacrificed to pedantry and the almost exclusive cultivation of memory, the lowest of the mental faculties.

"Kindermordend"—child-murdering—is the epithet applied to the German educational system by Prof. F. Hueppe, the sanitary expert of Prague. The pupils are overburdened with work. In the instruction in languages, which takes up many hours, there is an excess of grammar, a neglect of the contents of books. History and geography have been degraded to mere memory-work. "We have a school-mechanism, but no school-organism." It may be true that in the high school, *Germania docet* still; but, in general, "our educational system is no longer regarded as a model by foreign experts, as it used to be; but our authorities do not seem to be aware of this." "Our public schools have long been surpassed in other countries." As regards the care of the body, the attitude of the German school is "hostile from the beginning." In England there are only three or four hours of sedentary brainwork to every hour of bodily exercise; in Prussia, 17; in Bavaria, 25; and memory-work is intruded even into gymnastics. Oculists are demanding that the first lessons in reading and writing be deferred from the sixth year to the ninth, because of the great damage done. In many of the schools the lighting arrangements are such as to cause myopia. Indeed, as we noted last week, a committee of German educators has submitted to the Ministry proposals for hygienic reform in secondary schools.

There is too much of the spirit of militarism in German schools, writes J. Tews in the Berlin *Tageblatt*. Pupils are not treated as individuals, but like pawns on a chess-board, without any will of their own; whereas the chief aim of education should be to build up personality. It used to be different. Pupils as well as teachers, he says, were wont, in former times, to recall their happy days together in school, sometimes with tears in their eyes. Present-day references, in conversation or writing, often show, on the contrary, "an unforgiving anger, nay, hatred, toward the school." "How isolated, how embittered, how hard and cold one was made there," one poet has written; while another author writes: "My school-years remain to me, even in memory, the terror of terrors." "It is significant," adds Herr Tews, "that the donations to the lower and higher schools in Germany are so insignificant. They cannot be compared for a moment with the mil-

lions which are bestowed on the other side of the ocean on educational institutions of all grades."

Dr. Julius von Negelein gives details which help us to understand why, to many Germans, the recalling of school-days is the "terror of terrors." Excessive day work, supplemented by night work—in some cases up to midnight!—leaves no time for exercise or sleep:

Whose heart would not turn with a pang if he could hear, as I did a few days ago, a poor child, an anæmic, timid girl of twelve, exclaim: "Oh, if it would only rain! This lovely weather makes me so eager to go out and play!" Thus do we sacrifice to the phantom of an ideal education the joy of life, health, and happiness.

He speaks of a teacher who advised his pupils to drink strong coffee at night so that they might work longer. "Anæmia and nervousness are steadily on the increase among our school children." If a child sinks down exhausted, it is "whipped on like a horse." "I know children who pray to God every day to let them pass their examination, because otherwise their father 'would kill them.'" Professor Eulenburg has collected figures relating to suicides of school-children. There were 950 cases in the period 1883 to 1900.

Columns of such evidence might be cited. A favorite proverb among German teachers is: "Whom the gods hate they make a pedagogue." There are in Prussia alone 10,000 teachers whose pay begins with \$225, and, after thirty-one years of service, reaches a maximum of \$450 a year. The average number of pupils is sixty-three to a teacher. We might dwell on the complaints relating to insufficient pay, too large classes, too short vacations, school books not up to date, and so on; but must content ourselves with one more citation, from an article by Dr. Leo Smolle. Referring to the fact that Gladstone found recreation and delight in Homeric studies in his old age, Dr. Smolle writes: "Name, if you can, a German official, wealthy business man, or *rentier*, who, of his own free will, devotes himself in old age to science and study and takes pleasure in them! The school, with its eternal teaching and examining, has cured them of all desire ever to have anything more to do with intellectual work or intercourse with the Muses."

THE NEW YORK HISTORICAL SOCIETY.

The New York Historical Society celebrated on Tuesday its 102d anniversary by formally opening the completed part of its new building on Central Park West. This fine structure symbolizes enlarged work and influence. Representing in its membership chiefly the New York of the past, secluded by the position of its building, isolated from con-

temporary interests by its dignified traditions, the New York Historical Society has been in many respects a unique institution. In spite of the inadequacy of the present building opposite old St. Mark's Church, many members will face the move to Seventy-sixth Street with something like sentimental regret. If there was an oasis in this new Babylonian Gotham, it was that old building. There in absolute quiet and under the dim light that struggled through dusty skylights, one might delve in the archives of old Manhattan, lazily survey the effigies of its worthiest citizens of by-gone times on the walls, or, ascending to the upper levels, enjoy the soothing companionship of Egyptian bulls embalmed some three thousand years ago, gaze upon the splendid relics of Pharaoh dynasties, or discover in dark corners fine examples of the old Dutch or Italian schools. It was, and is, a rare place, and it will be missed when it is no more.

But the Society is to be heartily congratulated on the move. For years past there have been but the poorest facilities for storing or using the library, or for exhibiting the valuable collections of works of art. Meanwhile, the members were moving away from what was once the best residence district of the city, and it was only the zeal of devoted officers and friends that kept the Society's clientèle and work from actual decline. It was necessary that this venerable institution should get into the current of New York life, and the erection of the building was an obvious measure of rejuvenation. It should mean, before long, a considerable increase in numbers and in working force.

What the scope of the Society will be is matter merely of conjecture. It is safe to say that no abrupt change will be made, and one would not have it otherwise. The Society is eminently the conservator of local tradition; in publishing and popularizing the antiquities of New York, it has a useful function that only needs to be sustained and extended. One should expect that in the future, as in the past, this work, which is indeed its very reason for existence, will have the preference.

One may fairly assume that the move uptown will bring the Society into closer relations with similar institutions. Although it is much more of a private club and much less of a corporation than, say, the Metropolitan or Natural History Museums or the Public Library, yet its aims are in many respects similar; and it is easy to imagine co-operation between them. We mean of an informal sort—a readiness to make scholars' agreements for the general good, without sacrifice of the identity, special interests, or trust obligations of the several parties. On a superficial observation of, say, the Public Library, the Metropolitan Museum, and the New

York Historical Society, it is evident that each possesses things that were better bestowed among the others. For example, the Metropolitan Museum owns many paintings and portraits of high historical interest that would be much more valuable to an historical society than to a general museum. Similarly, the Lenox Branch of the Public Library has a collection of the early American school of painting that is relatively useless to a library, but germane to the purposes of an historical society. Again, the New York Historical Society possesses fine examples of European painting, that are apart from its main work and interests, but would gain double value in a museum of art.

In order not to be misunderstood, we hasten to say that we are not advocating a general exchange of exhibits, and that we are perfectly aware that all three institutions are bound by testamentary conditions which must be respected. We merely suggest that in years to come such readjustment is likely to be made, within certain limits. Meantime, since both the Lenox Library and the New York Historical Society are to be in a transition state while a new building is in progress, it is worth considering if what could not be done permanently might not be done as a loan and as a matter of temporary convenience. Such a bringing together of objects that logically belong together would be a great service to students—even though the arrangement lasted but a few months; it would reflect credit upon all concerned in so liberal and public-spirited a transaction.

But in all these matters we merely wish to note that the drift is in the direction of coöperation—as evinced by the recent alliance between Columbia University, the National Academy of Design, and the Metropolitan Museum—and to predict that the New York Historical Society will neither desire nor be able to maintain its present isolated position.

THE ORIGINAL RECORDS OF CANADIAN HISTORY.

The wisdom of the Canadian Government in appointing Dr. Arthur G. Doughty to the office of Dominion Archivist will be apparent to every one who examines the "Report concerning Canadian Archives for the year 1905." The report is in three large volumes, or will be when published. At present only one volume is ready for distribution; the other two are still in the hands of the King's Printer. The Archivist, recognizing the difficulty of getting to Ottawa to consult original documents, has initiated the policy of publishing a selection of the more important in the annual reports. The late Archivist, Dr. Douglas Brynner, attempted something in this direction, but he was always hampered by the unsympathetic attitude of the Canadian Government, and the material so published

in his reports does not equal in the aggregate that contained in this one report of Dr. Doughty's.

Dr. Doughty outlines various plans which he has formed for gathering historical material and making it accessible. The first thing "is to let the public know what records exist and where they are to be found." As a beginning, he publishes in this 1905 report a summary of the archives found on the Island of Orleans. A similar report has been prepared for many other parishes, and this information will in time be systematically arranged and printed.

The gathering of material for the proposed "Guide to the Manuscript Materials of Canadian History" in the Province of Quebec, is in the hands of the Rev. P. M. O'Leary, D.S.O., formerly professor of history at the University of Laval. Dr. James Hannay, the historian, is investigating the archives of the Maritime Provinces, and his first general report forms a portion of the first volume of the 1905 Archives report. Dr. Hannay summarizes the available historical material in the three Provinces of Nova Scotia, New Brunswick, and Prince Edward Island. Nova Scotia has devoted more care to the collection and preservation of her archives than the other two. Dr. Hannay gives a list of the material in the Provincial Archives at Halifax. He divides it into four classes: documents which relate to the French occupation; those connected with the purely military occupation of Annapolis Royal from 1710 to 1749; those of a later date, from the establishment of Halifax as capital of the Province; and those relating to the Island of Cape Breton. For the French period there is not much at Halifax; the bulk of the material on the history of Acadie is in the Archives at Ottawa. Among the few valuable documents at Halifax, however, are the letters of the Governors of Acadie from 1692 to 1710; the diary of Governor Villebon; and the correspondence of Des Goutin, Bonaventure, and other Colonial officials with the Government in Paris. The most interesting of the documents for the period of military rule immediately following the English conquest of the country, are those bearing on the expulsion of the Acadians. Volume two of the present report will contain a number of hitherto unpublished documents which throw light upon the circumstances leading up to and attending the expulsion. With these documents are published a number of Acadian genealogies prepared by Placide Gaudet, the Genealogist of the Archives. Outside of the Provincial Archives, the most notable collection of manuscripts at Halifax is that gathered by the late Dr. Akins, for many years Provincial Archivist, and now the property of the Nova Scotia Historical Society. There are not many manuscripts, says Dr. Hannay, but "almost everything in the shape of a book or pamphlet which relates to the history of the three Maritime Provinces is to be found here, as well as many files of old newspapers."

An examination of the archives in western Canada has been begun by R. Laidlaw, of the Archives staff, with the coöperation of Dr. James Bain, chief librarian of the Toronto public library.

Some progress has already been made in the difficult field of historical manuscript

material in private hands. Some notable acquisitions, announced in the 1905 report, are a collection of papers, presented by the present Earl of Durham, which were used by his grandfather in the preparation of his famous "Report on the Affairs of British North America," known as the "Canadian Magna Charta." In the Selkirk collection in Scotland were found over three thousand private papers which throw a flood of light on the state of Canadian society between 1810 and 1830. Two other important private collections, the Townshend and Chatham papers, have been removed to the Public Record Office in London in order that they may be examined by officers of the Canadian Archives, and copies made of such documents as may bear on Canadian history.

The third volume of the 1905 Report consists of documents relating to the Constitutional history of Canada, from the Cession to the Constitutional Act of 1791. While some of these documents have appeared in print before, they have not always been in authentic form, and in some cases are now practically inaccessible. Many other documents are printed here for the first time. The whole, accompanied by a full index, forms an important body of material, of interest not merely to the Canadian student, but to any one dealing with the history and development of Colonial government. The editing of this volume, with the introduction and notes, is the work of Prof. Adam Shortt of Queen's University, Kingston.

Accompanying the report are facsimiles of certain hitherto unpublished plans, including York (now Toronto) in 1823; the fortifications of Quebec, by De Léry; the battle of Ste. Foy in 1760, and Quebec in 1660.

L. J. B.

THE BOOK WAR AND OTHER LONDON TOPICS.

LONDON, November 7.

The new Battle of the Books is less interesting than the old combat in which Charles Perrault, Boyle, Bentley, Swift, and other famous men took heroic parts. The modern financial combat is noisy with letters to the press in which authors, publishers, and the manager of the *Times* proclaim their merits and their wrongs. In bad grammar I cannot honestly say that the manager of the *Times* deserves the prize, for I have read very few of the manifestoes, but I do think that it will be difficult for any champion to beat him. One author complains that he did some work for a publisher and received no reward. He had "asked for nothing and got nothing," as the neglected child said at the end of a tea-party, though in what way the circumstance affects the present controversy I cannot divine. People contribute publisher stories to the *Times* as they send dog stories to the *Spectator*, and ghost stories to the *Journal of Psychological Research*. These anecdotes have nothing to do with the propriety of the newspaper's attempt to swallow up the booksellers, and to "sell a bear" of books.

Meanwhile, the subscribers to the Book Club of the *Times* do not really, I think, want to buy books, for which most of them can have no sort of use. They merely want

bargains, like the ladies who purchase wares which they do not need, because these *chiffons*, and so forth, are being sold "at an alarming sacrifice." Few, indeed, are the people who really desire to possess large volumes about the Life and Adventures of the late Lord Randolph Churchill or the late Macchailean Mor. When a man has skimmed through the pages of this sort of literature, he never wants to look at them again, unless he is an historical writer, and the profession of the historian is not overcrowded. What the buyers want is to point to such biographies and say, "Do you see these books? They were published at eight dollars, and I bought them for two!" That is the humor of it, and it is an humor which must pall in the long run.

It is believed that "Lucile" and other poems of the late Lord Lytton were much more popular in America than in England. They appeared when I was still at an age omnivorous of poetry, yet I never read them, though they were admiringly quoted by Miss Braddon in her novels. Why did I not read the work of "Owen Meredith," while I was "turning with nocturnal and diurnal hand" the poems of Keats and Shelley, of Tennyson, Browning, William Morris, Rossetti, and Mr. Swinburne? I can give no reason for this negligence of "Owen Meredith," but certainly his "Letters," edited by his daughter, Lady Betty Balfour, are very well worth reading by the lover of literature, as well as by the student of politics, society, and Anglo-Indian affairs. To quote a line of Lord Lytton's, "One finds one's self quietly falling in love" with the letter-writer, especially when he was young, eager, ardent in pursuit of the laurels, and so affectionate that he addresses Mr. John Morley as "Dearest Morley." His mind was amazingly brilliant without being flashy, and was rich in a hundred interests, while his relations with his father, the famous novelist, were manly, and creditable to him in a remarkable degree. He seems to have been as warmly attached as Dickens himself to Dickens's friend, Forster, remembered by a later generation as "a harbitrary gent." To both of the Brownings he was devoted, though an unexplained coolness arose between him and Mr. Browning, from what cause, poetical, political, or personal, we are not informed. Lady Betty Balfour has done her selective and editorial work with piety and discretion, so that hers is one of the best books about the famous folk of a fading generation.

A biography of Irving (Edward, the founder of a sect, not the actor, for whom consult the book of Mr. Bram Stoker) is also being undertaken, I believe, and ought to be interesting. Mrs. Oliphant's biography of the preacher who reminded Sir Walter Scott of "Satan disguised as an angel of light" did not tell nearly enough about the strange early wave of Scottish religious enthusiasm out of which Irvingism arose among the excitable descendants of the old western Covenanters. These people are Cymric in origin, and are born enthusiasts. Their ancestors were the last burners of witches, and the first to hold modern "revival meetings." I felt sure that the early Irvingites must have floated in the air, or been "levitated," like many saints, many mediums, and many victims of

witchcraft. Mrs. Oliphant told us nothing about this; but, on looking into contemporary records of Irvingism, I found that some devotees were said to float in the air. The subject is made to the hand of Prof. William James. As far as I am aware, the Rev. Mr. Irving himself disliked all these floatings, and gabblings in unknowable tongues, but they were the background of his movement. He was an excellent man, and could not help having a squint, though he need not have worn his hair long.

Among novels it is not possible for me honestly to praise "Prisoners," by Miss Cholmondeley, because the "machinery"—the confession of murder to save a lady's character—simply will not work. Events could not have happened as they are said to have happened, even if people did behave as foolishly as the persons of the drama do behave. Nor am I credulous of a married tutor of a college whose talk would have "brought a blush to the cheek of a baboon." The baboon is notoriously non-moral; compared with him the gorilla is as respectable as that most reputable class of men, married tutors of colleges. Mr. Hope's "Sophy of Kravonia" is in his "Zenda" style of romance, with an adventurous heroine in place of an adventurous hero. To enjoy this kind of novel is not given to all mankind, and women as a rule prefer something less chivalrous. But "Sophy" is good enough for boys and men who have not ceased to be boyish in their tastes, and is better, I think, than the author's second book about "Zenda."

The present writer himself, having finished a book on Homer, and another, in four huge tomes, on that popular subject, the History of Scotland, would like to begin his History of the Maids of Honour. No less than two biographies of James III. and VIII., invidiously styled "The Old Pretender," are "on the stocks." The "Aged P" (as Wemmick might have called him) will appear as a great Christian gentleman, so surprising are the revelations of history. By Thackeray, in "Esmond," and by all our historians, the saintly Prince has been "damned at a venture." His character was really rather like that of Tennyson's King Arthur, but it is untrue that his Queen played the part of Guinevere with, for Lancelot—the Pope! That is a myth of Lady Mary Wortley Montagu's.

ANDREW LANG.

Correspondence.

SPELLING BY SYLLABLES.

TO THE EDITOR OF THE NATION:

SIR: The letter in your issue of November 8, from Prof. J. S. Clark of Northwestern University, on the cause of bad spelling, is confirmed by my own experience. In the examination of students at different times for many years, I find that those who had learned to spell by syllables were usually correct in their spelling, while those who had been taught the word method of reading often had a hard time of it. Professor Clark hits the nail on the head. The "word method" is responsible for much bad spelling.

A. F. BEARD.

New York, November 19.

AMERICAN AND ENGLISH SCHOOLS.

TO THE EDITOR OF THE NATION:

SIR: The papers are paying considerable attention to the visit of 500 English teachers, under the direction of Alfred Mosely, who thinks that American schools are better than those of his own country. Mr. Mosely, who is primarily a business man, does not, of course, speak as an educational expert. My own opinion, if I may venture it, is that he is much in error, so far as secondary schools are concerned.

I am glad he secured for these English teachers so cheap a rate as \$25 for the round trip across the ocean. I only wish that he would do the same for 500 American teachers, so that they might see how much more and better work the English boy of nineteen has accomplished than the American boy of the same age. The daily tasks for boys of sixteen or seventeen in English schools would, if imposed on boys or girls in the highest class of any secondary school in this country, evoke from the pupils rank mutiny and from their parents loud complaint. The requirements for admission to West Point are child's play compared with the competitive examinations for Woolwich and Sandhurst. The same is true of the College Examination Board's examinations in this country as compared with those of the Oxford and Cambridge school certificate examinations in England. The English boy of nineteen goes straight from the sixth form of his school into the Classical Honor School at Oxford or the Classical Tripos at Cambridge. No ordinary graduate of an American secondary school could do that without one or two years' additional study of the classics. The Rhodes scholars who are graduates of our colleges are nettled to find that such boys far surpass them in knowledge of the classics. The course of study for the Sixth Form at Rugby, Winchester, and all the leading schools reads like the curriculum of the sophomore or junior year in an American university.

Let no one, be he editor, parent, teacher, or pupil, lay the flattering unction to his soul that American schools are better than the English, tested by the finished product in mental power, discipline, and accumulated knowledge. Such advice as this is now much needed, considering the steady oozing of virility out of our courses of study, and the steady growth of the sugar-coated-pill theory of education. The New York Schoolmasters' Association demands of the College Entrance Examination Board representation on the committees that frame examination papers, and on those that examine the books; and they get it. Then they grumble because the present moderate requirements are too hard and wish them made easier. Harvard has dropped to the point where she will give a candidate credit if he passes in a single subject, so that he can enter college by piecemeal in the course of a few years.

I know a little about the secondary schools of Germany and France, considerably more about those of England, and a good deal about those in the United States. It is my deep-rooted conviction that, judged by the tests I have mentioned, those of my own beloved country are inferior to the rest in intellectual vigor and most need a virile uplift.

GEORGE L. FOX.

New Haven, Conn., November 12.

"THE PRESENT POSITION OF LATIN AND GREEK."

TO THE EDITOR OF THE NATION:

SIR: I beg to reply to the comments of Professors Child and Kelsey on my article under the above title in the *Nation* of October 4. Professor Child's criticisms are mainly the result of misunderstanding the point of my argument. My point was not that "the degree of A.B. is quite as significant of a certain profitable discipline, whether or no it stand warrant for any Greek at all," but that the effective preservation of the A.B., and *all that goes with it*, can be secured only by broadening the terms on which it may be obtained, and on which students may matriculate for it. The phrase italicized above means, in its context, Latin and Greek—not "the tag and good-will of the old firm," as Professor Child supposes. My contention is simply that the preservation of Latin and Greek is best secured by the effective preservation of the A.B. degree; this degree in turn is saved from practical extinction only by broadening its terms for admission and graduation. This involves no comment, expressed or implied, on the value of the degree thus administered, and hence no implication as to the relative merits of the classics and modern studies. I merely urge that such administration is better for Latin and Greek.

Professor Kelsey's criticisms are directed mainly toward the accuracy of my figures concerning the number of students of Latin and Greek in secondary schools and colleges. He rightly assumes that they indicate only general conclusions; their use for further inference is, I believe, at least hazardous. He notes certain errors in the figures for 1904, but fails to observe that similar errors occur in those for 1894 regarding the number of secondary students in Latin, and for 1901 regarding college students of Greek. Without going into details, I may say that the statistics quoted nearly fulfil the statistician's requirement, *i. e.*, they represent "phenomena of the same class, but existing at different points of time." Since the errors are approximately constant, their elimination would not affect my general conclusions, which were, first, that Greek appears to be declining slowly in the face of a general increase in the secondary school and college population; and, second, that Latin is increasing, both relatively and absolutely, the absolute increase being phenomenal.

Professor Kelsey's data showing the rapid decline in secondary students of Greek, coincident with the abandonment of prescribed college entrance Greek, would go far to refute my statement that this abandonment has not greatly influenced the decline, if he could also prove that the prescription of entrance Greek is the only factor influencing the number of its secondary students. This proof is, of course, impossible. On the other hand, certain other potent influences in the same direction are easily discernible. The administrative difficulty of providing for small classes is one; the rapid drift of matriculants toward college degrees not requiring Greek is another; and still others might be named. These, taken together, seem to me the most powerful influences in this direction; continued prescription could only have delay-

ed an inevitable result, and it might have caused a far more disastrous reaction against Greek.

ARTHUR O. NORTON.

Harvard University, November 14.

THE BIBLIOGRAPHY OF THE NAVY.

TO THE EDITOR OF THE NATION:

SIR: As editor of "A Contribution to the Bibliography of the History of the United States Navy," by Charles T. Harbeck, allow me to correct two errors in the review in your issue of November 8.

The title, "A Review of a Pamphlet purporting to be Documents in Relation to the differences which subsisted between the late Commodore O. Perry and Captain Jesse D. Elliott: By a Citizen of Massachusetts. Supported by facts made known to the world in 1820 and '21 by the accused. Boston: H. B. & J. Brewster, prs., 1834, 55 pp. 8°," may be found on p. 94. "A Reply by L. M. Goldsborough to an attack made upon the Navy of the United States, by Samuel E. Coues, President of the Peace Society. In which a brief notice is taken of the recent Fourth of July oration delivered at Boston by Charles Sumner. Portsmouth: C. H. Brewster, pr., 1845, 23 pp., 8°," may also be found on p. 165.

The Fanning memoir and the Coues pamphlet were obtained too late for insertion in their proper places, and it was considered undesirable to have a section "additions," since a bibliography may be added to indefinitely and never be complete.

AGNES C. DOYLE.

Public Library, Boston, Mass., November 15.

[That these two titles were not discovered shows the weakness of a much classified "Bibliography." The "Review of a Pamphlet" is entered under Perry in the class "Biography, Single Works." Sabin enters it under Elliott, in whose interest it was, we believe, written. The "differences" between these two commanders related to the Battle of Lake Erie, which is the heading of a class in the "Bibliography," and this title should have been entered there, where is found the original piece, "Documents in Relation to the Differences," etc., of which this is a "Review." The Goldsborough piece is entered under "Organization, Administration, Equipment, Defence," and though other titles of books by Goldsborough are entered under other heads, this one should nevertheless have been discovered.—THE REVIEWER.]

AMERICAN FLYING MACHINES.

TO THE EDITOR OF THE NATION:

SIR: Permit me to call attention to an error in your issue of November 15, in which you say:

M. Santos-Dumont, by a flight of more than 200 metres in his airship, becomes the first skipper of a flying machine who has risen from the level, flown for an appreciable distance, and landed without serious mishap.

The previous experiments by M. Santos-Dumont and his winning a large prize for flight in a dirigible balloon have been so widely reported that his latest achievement with a genuine airship without the aid of gas, is popularly accepted as the first of its kind.

It seems certain, however, that to America belongs the honor; and this should be known and recognized now, at the beginning of what is undoubtedly to be the period of successful air-flight by man. The studies of the late Professor Langley resulted in a model of an airship which sustained its own weight in flight for three-quarters of a mile over the Potomac. It is not so generally known that two Americans—the Wright brothers of Dayton, O.—after some years of experiment on the sand dunes of the Carolina coast, with apparatus akin to that of the German Lillienthal, solved the problem of the airship, within the past year, in an enclosed park near Dayton. They made many successful flights, of at first short but later increased duration. Finally, one of the brothers made a continuous flight of about twenty-five miles at an average rate of forty miles per hour; but purposely, as in the case of Santos-Dumont, at no great height above the earth.

These statements were testified to at the time of the convention in New York last winter of those interested in man-flight, and there was published in the New York *Tribune* a testimonial to the facts, signed by officials and other citizens of Dayton. C. H. AMES.

Boston, Mass., November 16.

[It is possible that the brothers Wright have exceeded Santos-Dumont's exploit, but their trials were conducted in such secrecy and so little is known as to the nature of their flying machine, that their record must count as at least doubtful. The *Tribune* itself, to which Mr. Ames refers, said in an editorial note on November 18:

The unquestioned success achieved with his aeroplane by Santos-Dumont makes it extremely desirable that the Wright brothers come to the front and show the world what they can do. Around the pretence of these Americans that they accomplished a year or two ago what Langley attempted in vain there has hung a veil of doubt. Can't it be dispelled?

—ED. NATION.]

Notes.

E. P. Dutton & Co. announce as ready for publication "The Vagabond in Literature," by Arthur Rickett; "Uganda to Khartoum, Life and Adventures on the Upper Nile," by Albert B. Lloyd, author of "In Dwarfland and Cannibal Country"; "Fairy-Gold," an illustrated book of old English Fairy Tales; and two Anthologies, "The Pilgrims' Way," by Quiller-Couch, and "The Wayfarer," by Claude E. Benson.

The Hon. George Wyndham, M.P., former Under-Secretary of State for War, has written a monograph on "Ronsard and La Pléiade," which the Macmillan Company is publishing this week.

The first number of the *American Political Science Review*, dated November, is edited by W. W. Willoughby of Johns Hopkins as managing editor, with whom are associated John A. Fairlie, University of Michigan; Frank J. Goodnow, Columbia;

John H. Latané, Washington and Lee; C. E. Merriam, University of Chicago; Robert H. Whitten, Albany; Paul S. Reinsch, University of Wisconsin; Benjamin F. Shambaugh, University of Iowa; and Eugene Wambough, Harvard; as a board of editors. This issue opens with an article on the "Usurped Powers of the Senate," by A. Maurice Low; and recognizes the ever-growing importance of the Southern problem by two articles. John C. Rose writes on "Negro Suffrage: The Constitutional Point of View," while Gilbert T. Stephenson treats of "Racial Distinctions in Southern Law." Prof. W. F. Dodd contributes an "Index of Comparative Legislation," and there are fourteen book reviews. This magazine bids fair to be a notable addition to the growing group of periodicals carried on by American scholars and university teachers. In excellence of paper and print and general attractiveness, it exceeds them all. It is published quarterly from the Waverly Press of Baltimore by the American Political Science Association.

Sidney Lee's "Life" of Shakspeare has long thrown into the shade an earlier essay, called "Stratford-on-Avon," of which a reprint has just been published (J. B. Lippincott Co.). In the twenty-one years that have passed since its first appearance, there has been industrious revision of the few facts in the poet's life as to which we can feel any certainty, and in the new edition Mr. Lee has made the necessary additions and qualifications. The book has a value as a supplement to the detailed biography, in that it describes the social history of the town, its municipal life, guilds, and local customs, from its first entry into history in the seventh century down to the poet's death. The book is written with the seriousness and caution that are characteristic of all Mr. Lee's work, and is in all cases based on documents. The illustrations are by Mr. Hull, Herbert Railton, and others. The most pleasing are decidedly Mr. Railton's drawings of Charlecote manor, the home of the Lucys.

In "Montaigne: A Study" (Henry Frowde), R. Warwick Bond presents anew the familiar outlines of the essayist's life, together with a number of conventional pronouncements on the man and the character of his work. Where the critic ventures on original conjecture or interpretation, we at times fail to see the cogency of his argumentation. If Montaigne's statement to Madame d'Estissac (II. 8) concerning the point of departure in his essay-writing is "palpably false" (p. 36), why may we not fancy his remarks on women in general to savor often of the mere *boutade*? To proceed from an apparently preconceived notion as to what the man really was, and reject what does not square with the notion, is hardly a convincing way of estimating the marvelously complex psychology of that most engaging of egotists. Any comparison between Montaigne and Shakspeare, which professes to discover the divergences of their respective natures in that the former possessed the comic sense, while the latter conceives "the universe as one great monologue spoken by God," ignores what many a reader has ere now detected between the lines of the "Apologie de

Raimond Sebond." This study is dedicated, in exotic French, to A. I. Feuillerat.

We have seldom seen a better collection of New York views than that contained in Charles Huard's "New York comme je l'ai vu" (Paris: Eugène Rey). M. Huard is an artist who saw a great deal that interested him in the American metropolis. His book contains some 200 capital sketches of New York scenes and types, in pen and ink and charcoal. In a running commentary the artist-author discloses himself as eager to be pleased. If one thing caught his fancy more than another it was the skyscraper; if there was a single thing for which he could find no word of praise it was the cuisine. M. Huard certainly has the distinction, rare among Continental critics, of emphasizing the sunlight rather than the shadow of American life.

Students of the history of municipal government in the United States will find what is perhaps the most valuable single source for the colonial period now made available in the eight volumes of "Minutes of the Common Council of the City of New York, 1675-1776" (Dodd, Mead & Co.). The work is published by authority of the city government, and is ably edited by a committee of the New York Historical Society, of which Prof. Herbert L. Osgood of Columbia University was chairman. The text is taken from two bound manuscript copies, the original manuscript minutes having disappeared. All after the first volume are supplemented by valuable committee reports, and other documents discovered after the editorial work was well under way. There were not many chartered boroughs in America before the Revolution; and the material for a study of them has been meagre. Even the records that exist, like those of Albany and Philadelphia, are much less complete than these. Boston was merely an overgrown New England town, and its records, although complete, offer little of value to the student of early municipal institutions.

It is now seven years since H. G. Graham published his "Social Life of Scotland in the Eighteenth Century." During the interval this work, which originally filled two large volumes in octavo, has been reprinted with various alterations of both size and contents. It now appears (The Macmillan Co.) in a cheaper and more compact form than ever before, having become one of the historical books for which there is a steady demand. Mr. Graham's main conception is that the political crises through which Scotland passed in the eighteenth century are unimportant in comparison with the social changes of that age. Leaving out the Jacobite risings, Scotland has no political history from the death of Queen Anne to 1800. Its state affairs were little more than obscure intrigues of Whig and Tory or the "manœuvres of nobles and placemen who travel southwards . . . to win favor with great statesmen at Westminster or courtiers at St. James's—figures not very real to us to-day as they flit across the stage, 'transient and embarrassed phantoms.'" But over against the poverty of political incident which marks the fifty years following Culloden, there is a great wealth of social and economic interest. A continuous revolution was going on—"a gradual trans-

formation in manners, customs, opinions, among every class; the rise and progress of agricultural, commercial, and intellectual activity, that turned waste and barren tracts to fertile fields, stagnant towns to centres of busy trade, a lethargic and slovenly populace to an active, enterprising race; an utterly impoverished country to a prosperous land." To trace the details of this momentous evolution is a task which Mr. Graham has discharged so well that we are glad to see his book descend from its large and expensive two volumes to the more useful, if humbler, form of a popular edition.

In a substantial volume of nearly seven hundred pages, with the title "Introduction to the English Historians" (The Macmillan Company), Charles Beard of Columbia University has printed for class use extracts from the leading secondary authorities on English history. Much may be said to justify a collection of this kind as an aid to the teaching of large classes for whose use a sufficient number of copies of the original works cannot be obtained. Apart from such use the volume is of no particular value. Even outside Mr. Beard's own classroom it is an open question how far such a collection will find a following. No two men will select the same series of references for classes, and Mr. Beard's list might be duplicated by another or many others equally good. We are inclined to think his selections somewhat severe for college freshmen; and his statement that the works from which these extracts are taken might well form part of a preparatory school library, seems but an expression of youthful optimism. The writings of Maitland, Gneist, Stubbs, and Cunningham can hardly be read intelligently by any student before his third year in college and we doubt if many students are ready to read them even at that time.

In that excellent series, "Early Western Travels, 1748-1846," now in course of publication (Cleveland: Arthur H. Clark Company), there are at hand three new volumes, xxii-xxiv., of unusual interest. Maximilian, Prince of Wied-Neuwied, after fighting in the Napoleonic wars, at last followed his scientific tastes, and, leaving his domain on the Rhine, visited as a scientific traveller both South and North America. From 1832 to 1834 he was in the Mississippi Valley, both east and west of the river, his more important observations being made on the Missouri, which he ascended to Maria's River, far toward the Rocky Mountains. His companion, a gifted young painter, Bodmer, made many sketches, particularly of Indians and their life, perhaps the best ever drawn. The interesting narrative of the Prince, with Bodmer's delineations (to be included in vol. xxv. of the series), constitute together a noteworthy record. Maximilian's Indian vocabularies and essay on sign-language, till now not accessible, add much to the importance of the work, for the studies were made when savage life could be observed under the best conditions. Dr. Reuben Gold Thwaites's Introduction and numerous annotations show his usual care and scholarship, while the publishers present the books in handsome form. In the same series appear also "Travels in the Far West, 1836-1841," by Edmund Flagg, and the "Letters and Nar-

atives" of Father Pierre Jean de Smet, 1840-1842 (vols. xxvi. and xxvii.). Flagg was an industrious journalist, also a writer of books once in favor, who had the power to observe closely and describe graphically. The great States of what we know as the Middle West were in Flagg's time incipient, and his pages relate vividly the beginnings. The account of the Jesuit De Smet is a later chapter in that marvellous story of zeal and achievement which Dr. Thwaites has laid open for all in editing the "Jesuit Relations." Though a later chapter, it scarcely falls behind its predecessors in absorbing interest. The young Belgian priest, setting out from St. Louis, made his way to the country of the Flatheads in the mountains, then the remotest wilderness. He did not fall short of the standard of his great order in devotedness, nor does he lack skill in setting forth what he did and saw. This series throughout is a most creditable enterprise.

The Paris correspondent of the *Nation* writes: The unexpectedness of the Hohenzollern Memoirs is almost as refreshing in France as in Germany. They are not ordinary memoirs, but rather tell-tale impressions of persons and things in the Third French Republic as they were felt by a keenly sensitive and experienced observer. No one ever dreamed that the spare-framed, brick-complexioned German ambassador, sitting silent for the most part, with lack-lustre eyes and head leaning boredly over the right shoulder, was taking interior notes of the passing show, to be transcribed by night with disconcerting frankness and left to be printed. Two prognostications of Bismarck concerning the French republic continue to be of prime actuality. In 1880 he said:

We Germans can only rejoice at France's appropriating Morocco. She will then have enough to do, and we can allow her to enlarge her territory in Africa as compensation for Alsace-Lorraine.

In 1882 he added:

If the French ask the English to leave them free footing in Syria it's all the same to us. Let the French everywhere do whatever they wish—provided they keep away from the Rhine!

The N-rays cleverly effect an entrance into the "New English Dictionary," whose sixth volume reaches N-Niche with the October instalment under Mr. Craigie's oversight (H. Frowde). The discovery is but, three years old, and it is well to be reminded that we owe it to M. Blondlot of the University of Nancy, and the symbolic letter of the name to the initial of the town itself. The present tract of the letter N is commendably catholic in its drafts upon all the languages of the earth, and among its Eastern borrowings Nabob well illustrates our absorbent and plastic mother tongue. We have not only taken it in, but have built upon it a host of derivatives—Nabobess, Nabobship, Nabobery, Nabobical, Nabobish, Nabobishly, Nabobism, Nabobry—mostly with a humorous-censorious implication. In another example, we have fashioned Nanism, Nanity, Nanization, while eschewing the root word, meaning dwarf. Naïf(e) dates back to 1598, whereas Naïve, appearing in 1654, has been very imperfectly naturalized, having still a tendency to be kept foreign by italicising. Dryden's Naïveté, on the

other hand (1673), has held its own against Naïvety. While we have welcomed Renaissance, we would have none of Caxton's ventured Naissance (origin, birth); nor did he fare better with his little boat, his Nacelle, Dante's *navicella*, on which he hoisted his poetic sail after emerging from the Inferno. Apparently by way of Spain, Narrate was an exotic in 1656; a century later it was a Scotticism in the view of Richardson the novelist and of Dr. Johnson, and in 1813 the *Quarterly Review* picked it out of a Scotch work as abominable and absolutely to be proscribed. This was all the more odd because Narration (1432), Narrative, Narratory, Narrator, had long been in vogue through the medium of the French. Such prejudices it is one of the functions of the Oxford Dictionary to suppress, or at least the flaunting of them. We recall Dr. Francis Lieber's objection to Native-born as tautological, but it has the high antiquity of 1500; and we have Natural-born (1583) and Naturally-born (1523). Some of us may have noticed the recent poverty-stricken journalese efflorescence of Nearby for "adjacent," "adjoining," "neighboring," "in the vicinity," etc., etc. The use is, in fact, mostly confined to this country, but George Macdonald exhibits it in 1858. We note here that our periphrastic "in the neighborhood of," for about, crept into the *London Times* in 1893.

It is for the Dictionary to record, not reprobate, modes of speech and of syntax as revealed in their historical map. Purists who endeavor to draw the line between Necessaries and Necessities, will find Miss Mitford a trespasser in the footsteps of Caxton (1481). Foreigners generally monopolize the censure of English for its excess of synonyms, and will have cause on viewing Necessarian, Necessitarian. Necessitudinarian; and, again, Neglectable, Negligeable, Negligible. "Neither—or" occurs in good writers, early and late; and Newman and Ruskin chime in with Shakspeare in coupling Neither with a plural verb. Traces of the mighty are discernible in Nap (Napoleon), for a gold coin, a card-game, a top-boot (so Wellington) and, in the United States, a cannon. The Erasmian trail appears in the first and earliest quotation for Neat (1542), in Udall's translation of the "Apophtegms." "Nailed to the counter" is allotted to Dr. O. W. Holmes in 1842, but it is, of course, a much older locution. Daniel O'Connell applied it scathingly in 1846 to a proslavery judge in South Carolina, one O'Neill: "Let his O be blotted out at any rate, and then *naïl* the rap to the counter." We wonder, by the way, what Dr. Holmes would have said to the definition of Nag (a small riding horse or pony), as covering the raw-boned, ill-favored, but often speedy beast so abundant to view in any shire town of New England. We draw our spinning to a close with three further observations: that for more than a century Negro has prevailingly been spelt with a small initial (as if to emphasize color rather than race); that the Speaker of the House of Commons began to "name" disorderly members in 1792; and that the American inventor of the word Peneplain (correlative to Peninsula) might have paused if he had known of the obsolete Near-isle.

The extent to which the results of modern advanced theological thought is being popularized in Germany can be seen from the phenomenal success of the "Religions-geschichtliche Volksbücher." This series of small books, some of them only good-sized pamphlets, was begun about two years ago under the editorship of Fr. M. Schiele, for the express purpose of bringing the teachings of critical theology to the attention of the people at large. This series has now just passed into the hands of the publisher, J. C. B. Mohr of Tübingen, and in connection with the transfer, it is announced that a total of more than 150,000 copies of the perhaps dozen pamphlets so far issued have been sold. The "Jesus" of Professor Bousset has appeared in 20,000 copies, and the "Paul" of Professor Wrede in 10,000.

The bi-centenary of the birth of Henry Fielding will be celebrated by a dinner in London on April 22, 1907. Sir Arthur Conan Doyle will preside.

A portrait of Dr. Arthur John Evans will soon be presented to the Ashmolean Museum, of which for many years he has been keeper. His distinguished services to archæology, numismatics, and history—especially in connection with the epoch-making discoveries at Knossos—are known to the world of scholars, many of whom in England and Germany have joined in contributing to this memorial tribute. Doubtless, American scholars and others interested in the Cretan disclosures may wish to share in this well-deserved tribute. Contributions may be sent to Messrs. Barclay & Co., Old Bank, Oxford, or to the Hon. Treasurer, G. A. Macmillan, St. Martin's Street, W. C., London.

The American Philological Association will hold its annual meeting at the George Washington University, Washington, D. C., January 2 to 4, in connection with the general meeting of the Archæological Institute of America. The address of the president of the Philological Association, Prof. Elmer Truesdell Merrill of Trinity College, Hartford, will be given at a joint session of the two societies on the evening of Wednesday, January 2. A full programme of the meeting is to be issued early in December.

In the *Empire Review* Hubert Reade gives an interesting account of the proposed founding of a university in Johannesburg, for which the late Alfred Beit left the sum of one million dollars. The university proper will be built in a wooded grove, formerly the property of Beit, near the city. According to the conditions of the will the university must be opened within ten years after the death of the testator.

For the first time the Germans are going to try something like an elective system in their secondary schools. The Cultus Minister of Saxony has published a scheme which next term will be tentatively introduced into four gymnasia of that kingdom. The experiment will be confined to the prima, or highest of the nine classes. This class is henceforth to be divided into two sections, one giving special attention to language and historical studies, the other to mathematics and natural sciences, at the choice of the pupil. The separation will be anything but radical, since in the second section, too, there will still be five

hours of Greek per week and four of Latin. The purpose of the innovation is to make a beginning of the specialization that marks the university course.

The "story hour" at the public library is an expedient for giving wholesome entertainment to children which might be adopted in many cities and large towns. It consists simply in the coming of children at stated times to the library to listen to stories told by a skilled narrator. At the Carnegie Library of Pittsburgh the scheme has proved a marked success, and in Boston the centennial of the birth of Hans Christian Andersen was celebrated by a gathering of children at the public library, to whom—a large and interested audience—a lady told Andersen stories. So great was the interest shown that the examining committee have recommended the establishment of the story hour as a regular part of the library work among the young.

The opinion has recently been expressed by a recognized authority that it is hardly worth while to establish permanent libraries in places of less than 400 or 500 people; that the problem must be met by the travelling library. Yet of the 275 public libraries chartered by the Regents of the State of New York since 1892, 58 are in places of less than 500 population. The total population of these 58 places in 1900 was 16,495; the libraries in them have a total of 79,154 volumes, and an annual circulation of 116,268 volumes. The average population of these places is 286; the average number of books in each library is 1,357, and the average annual circulation is 2,004 volumes. The per capita supply of books is 4.7, and the per capita circulation is 7. To equal these averages, it would be necessary for the circulating department of the New York Public Library or for the Utica Public Library to increase its present circulation threefold, and to increase the present supply of books, the one seventeen and the other seven fold.

At the annual meeting this autumn of the Library Association of England the president, Sir William H. Bailey, said that there are now about 600 public libraries, with 5,809,196 books, and nearly 50,000,000 readers.

The *Bote aus Zion*, the religious quarterly which for nearly a quarter of a century has been edited in Jerusalem by the representatives of the famous Syrian Orphans' Home of Father Schneller, publishes in its latest issue, an account of splendid synagogue ruins unearthed by the expedition of the German Orientgesellschaft at Tel-Hum. This is the probable site of the New Testament Capernaum, and some savants are confident that the remains are those of the very synagogue in which Christ himself preached his first sermon and performed some of his notable miracles. The structure was a massive building, almost square in form, with two parallel rows of columns through the middle. Only one side, the eastern, has been preserved in a comparatively satisfactory condition; but this is so richly decorated with architectural ornaments of a distinctively Jewish type that no doubt as to the Jewish character of the structure can be entertained.

RECENT VERSE.

Young Alfred Noyes, whose epic "Drake" has been received with surprising acclaim in the English reviews, is now introduced by Hamilton W. Mabie to American readers in a volume of selected poems (The Macmillan Co.). Mr. Noyes has drawn inspiration from a rather exceptional range of literature—classic poets, Celtic legends, travellers' tales, English ballads, Holy Writ, tales of the road, and Lord Rosebery on Napoleon; but he has digested this heterogeneous bee-bread with the eupepsy of vigorous poetic youth. There is a gusto in his work, a savor of opulence, variety, and ease that is full of hope. As yet Mr. Noyes is, a little too adventurous in his quest of the striking subject, too proud of the mere muscles of his verse; but these are amiable defects in a young poet who, alongside of highly temperamental rhapsodies on barrel organs and mystical songs of Re-Birth, can compose such pregnant stanzas as these from "Statesmen":

His hands upon the wheel deny
The wild demands of circumstance;
His eyes are on the distant sky
Beyond the clouds of chance:

And when, still heating up the wind,
He slowly brings the Ship of State
Home, though the people chafe to find
How dark it is and late;

With all his tacking courses run
At last beyond the roaring sea,
Men find him faithful to the one
Haven where they would be.

Far other he whose words are free
To flatter weakness and conform;
And help a drunken crew to flee
Full sail before the storm;

He scans the rainbow in the wave
And dazzling spray around him hurled;
Their light will last him till his grave
Obliterates his world.

There is much to be said for the frank "closet-drama" as a literary form. It makes possible the presentation of a vigorous, significant action, with a telling compactness that the novel might complicate with loss; it gives room for the use of a richly colored, impassioned style that the novelist would adventure at his peril; and it has the special advantage of evoking—with the right reader—a wealth of memories of realms of gold. The three plays collected by Olive Tilford Dargan in "Lords and Lovers, and Other Dramas" (New York: Charles Scribner's Sons) make the most of these capacities of the form. "Lords and Lovers" is a romantic play in two parts of the time of Henry III. of England. It is as readable, using the word in its popular sense, as a good novel, while it has the added charm of workmanlike and impressive blank verse and of dramatic situations, possibly not actable, yet conceived with a fine theatrical unction. Without being imitative, it has something of the Elizabethan manner withal, and an easy opulence of mingled comedy and tragedy that is uncommon in latter-day drama. The second play, "The Shepherd," is in prose. It is a powerful presentation of contemporary Russian life, conceived with real force and imagination, though weakened as a work of art—as is also the concluding play, "The Siege"—by an obvious concession to the desire of the sentimental reader for a measurably happy consummation. In "The Siege" we have at once the worst drama, and, super-

ficially at least, the best poetry of the volume. The action is feverish and unconvincing, but the "sentiments" are moving, and the stylistic dress uncommonly rich. A fair specimen is this bit of passionate Marlowesque, given to Aristocles who is drawn, somewhat audaciously, from Plato:

Aris.—My heart, say thou wilt come.
Ara.— "Tis death.
Aris.— "Tis life!
Come now, O now, else we are cast apart
Far as the dismal Night heaves her vast sigh,
Far as the laboring Chaos breathing blows—
Perchance to hurl eternally about
The farthest stars that from opposed heavens
Dart fiery scouts that die ere they have met,
So long their journey is. Or gloomier fate,
Doomed to sit like stoups that once could weep
Forever in the cave of ended things
That deep in some immortal Lemnos lies
Nor ever opens its dank gates to day!
O, come ere we are lost! Be thy fair arms
The rainbow girdle to this longing storm
And its rude breast will pillow thee as soft
As Leda when, cool-rocked on lily couch,
The great down-bosomed god swam to her love!
Come, Aratea, heart of life! O now
This pulse speaks back to mine—this bosom throbs
Like heaven's Artemis unto her own!

(Kisses her.)
O kiss that holds the mornings of all time,
And dewy seasons of the ungathered rose,
Plant once again thy summer on my lips!"

Finer still as poetry is the concluding speech of the play, in which Dion, the true protagonist of the piece, dies after having obligingly bestowed his wife upon the golden-tongued Aristocles:

. . . Farewell, all hearts. My way is new and long,
And strange may be the fortunes of my shade,
But somewhere I shall lay me down in peace,
For death's unmeasured sea must own a strand,
And e'en eternity beat to a shore.

The two qualities that most impress the closest spectator of Percy Mackaye's poetic drama, "Jeanne d'Arc" (New York: the Macmillan Company), are its lyricism and its obvious spectacular possibilities. In part the lyrical flavor is a matter of the verse, which is sometimes elastic beyond, as it seems to us, the proper limits of even the most flexible blank verse. Thus, when in one of her passages of recitative, Jeanne begins:

Once in the midnight, when I saw them sleeping
After the battle, in the still moonshine,—

It needs but a pair of added lines, with alternate rhyme, to give us a jingling quatrain as far as possible removed from the true blank verse flavor. But even more is lyricism inherent in the whole structure and temper of the piece. It is a succession of moods and pictures with no real dramatic knot, and with but one or two dramatic situations; and the traditions of Jeanne d'Arc are sentimentalized to such a degree that they cease to be quite convincing, either as history or as material for tragedy embodying a criticism of life. The whole effect of the piece, with its succession of rich pictures, its lyrical *élan*, its pervasive sentimentality, is—for the reader at least—that of an opera.
